Ten boats are performing the West Indian service, and for the past two months no difficulty has been met with in getting full cargoes both ways. Here again there are undoubtedly excellent opportunities for an interchange of goods. So far sugar has been an important freight, something like 36,000 tons of raw sugar having been brought from Cuba to Montreal during the past season. Among other raw products being brought north for Canadian manufacturers are hemp and logwood, while manufactured goods in considerable variety are moving south. From British Columbia, four cargoes of lumber have been shipped, three to Great Britain and one to Australia. The possibilities of business through Canada's Pacific Coast ports are great and it will be the aim of the Merchant Marine to develop trade as extensively as possible, not only to render the ocean service profitable, but to provide needed traffic for the Canadian National Railways. In addition to Australian service already mentioned, a service from British Columbia ports to the west coast of South America is contemplated, and this will be inaugurated as soon as boats are available. It is also likely that a service to Japan and China will be undertaken, as trade between these countries and Canada is reaching large proportions.

There are various aspects of the shipping situation which should not be overlooked by Canadian manufacturers. As

regards the Canadian Government Merchant Marine in particular, it should be emphasized that the entire outfitting of these vessels is done in Canadian ports and with Canadian goods. In other words, these Government-owned ships are being administered to the advantage of home production. In return it is suggested that manufacturers ought to give the preference in shipping to merchant marine service thereby assisting in strengthening what should be a source of revenue to the country.

Again, it has become the custom to book business through United States houses to a great extent and agents of the Merchant Marine are constantly being referred to shipping companies in New York and elsewhere. This arrangement was all right enough when perhaps it was impossible to get adequate service otherwise, but it is now suggested that, when Canada's own vessels are operating on all the more important trade routes, it would be desirable to do business direct.

Ships on Regular Schedule

The Merchant Marine has another claim on the loyal support of Canadian exporters and importers by reason of the fact that it is aiming to perform a direct service. Its ships are running as far as possible on a regular schedule between Canada and other countries, when they might very profitably be diverted here and there wherever cargoes are offering. This adherence to fixed routes may mean loss of earnings, but it promises better service and accordingly merits the support of shippers.

Another obstacle which must be overcome is the circumstance that the fleet of ships, as compared with other fleets, has cost a lot of money, and fixed charges are high. The Canadian-built ships have cost $215 a ton. The ships of other fleets, while some may have cost as much to build, would average lower because there would be included a number of vessels built in days when costs were lower. Here again is reason for throwing all the support possible to the Canadian fleet so that the value of the ships may be written down to a level where costs will not prove so excessive.

Finally it must not be overlooked that Canada's little fleet of merchantmen is up against the formidable competition of the large fleet of the United States Shipping Board, which is aiming to do for the United States just what the Canadian Government Merchant Marine is trying to do for Canada. As against a modest 320,000 tons for Canada, the United States Shipping Board will soon be operating 12,000,000 tons. Its ships will herd on all the trade routes and, unless Canadian ships get good support, they may lose out to their more powerful competitor.

Canada has built its ocean fleet in order to ensure an outlet for its products and to obviate dependence on the shipping of other countries. It behooves both exporters and importers to make the best possible use of the means now placed in their hands for extending the trade of the country. It is a service that is needed, and now that it is provided it should receive every encouragement.

Royal Bank Enjoys Growth

Bank Celebrates Golden Jubilee by Carrying Assets Over the $500,000,000 Mark

A gain of over $100,000,000 in assets and earnings in excess of any previous year is reported by the Royal Bank of Canada for the twelve months ended November 30. The great strides made by this institution will attract all the more attention, because in some quarters it was thought that the leading banks of the country would experience some difficulty in keeping up the very high totals reached during the war period, when some very large undertakings were being carried out for the different Governments. This period of readjustment, however, does not seem to have had the slightest effect on the progress of the Royal Bank.

Of equal interest perhaps has been the manner in which the bank has been able to help the country in the expansion of its foreign trade, as it enjoyed perhaps the greatest experience of any banking institution in Canada in this particular kind of business, and on this account was able to lend the fullest assistance in the export business of the country, during the period when this has been of paramount importance.

From the public standpoint, of particular interest will be the gain in total deposits of over $80,000,000, notwithstanding the large withdrawals that must have taken place in connection with the recent Victory Loan. With the increase that has occurred during the year savings deposits of the Bank now stand at $259,465,169, as compared with $197,348,439, while deposits not bearing interest gained to $159,656,229, up from $135,243,278 a year ago.

The general statement of assets and liabilities shows that the Bank has crossed another important milestone by placing its assets across the half-billion mark, these now standing at $533,647,084, as compared with $427,512,982 in the previous year. Of this amount liquid assets are represented by $273,908,862, as against $224,982,088, while cash on hand, as represented by current coin and Dominion Notes, has gained to $55,681,547, up from $42,124,658 a year ago. The past twelve months have been noted for their business activity in all parts of the country, with the result that the total current loans of the Bank now stand at $233,834,879, as compared with $183,748,392 at the end of the previous year.

With the larger business that has been handled, the profits for the year have also shown a healthy gain and

In the South American Service

This is the "Canadian Pioneer," a ship of 8,100 tons burden, sailing from Atlantic ports to South America. This vessel is of the type of the "Raider" and "Importer," which will be inaugurating Canadian Government Merchant Marine Service to Australasia

amounted to $3,423,264, after the usual deductions and provisions, including bad debts. This was at the rate of 20.14 per cent. on the $17,000,000 of capital and was an increase of $613,418, as compared with the profits of the previous year, when the ratio was 18.7 per cent.

After deducting $2,862,602 for dividends and other appropriations, the Bank was able to add $561,057 to its Profit and Loss Account, bringing that item to $1,096,418, thus more than doubling the amount carried forward at the beginning of the year.

Assets Nearly $175,000,000

Fifty-fifth Annual Statement Reveals Significant Progress Made During Past Year

With total assets of $175,000,000, the fifty-fifth report of the Union Bank of Canada is the most notable in the history of the institution. Compared with $153,000,000 last year the Bank has added to its assets $22,000,000 which represents a gain of 14.23 per cent. within the twelve month period, a striking achievement having due regard for the vicissitudes of the reconstruction era.

Notable among the year's developments was the addition of $2,000,000 to the Reserve Fund, thus bringing the total to $5,600,000. This was made possible by the application of $1,781,170 premium from the $3,000,000 new capital stock issue and $218,830 transferred from current profits. The addition to this account brings the total reserve up to 70.28 per cent. of capital.

The Bank's liquid or quickly convertible assets are in excess of $76,000,000 compared with $72,000,000 last year and bear a percentage of 47.23 per cent. to public liabilities.

A gratifying feature of the Bank's return is the increase shown in public savings, notwithstanding heavy withdrawals for Victory Loan subscriptions. Deposits show a grand total of $135,496,514 compared with $127,242,698 a year ago. Non-interest bearing deposits actually declined from $58,805,207 a year ago to $51,119,804, but interest bearing deposits which are essentially the savings of the nation, increased by $15,939,219, or 23.29 per cent. to a total of $84,376,709. But for the wide participation in the Government loan unquestionably even larger figures would have been shown, which is direct evidence that the banking campaign based upon the national need for further thrift and economy is accomplishing much of its purpose.

Nova Scotia to Hold an International Exposition

By H. R. THOMPSON
Secretary, Maritime Division, C.M.A.

ON December 3 and 4, a Provincial Conference was held in Halifax to consider a proposal for an Old Home Summer and International Exposition for Nova Scotia. The idea originated with Horatio C. Crowell, a returned soldier who, when overseas, was impressed with the fact that Nova Scotia has not been given due publicity. Mr. Crowell placed his views before the Halifax Board of Trade, and his proposal was endorsed to such an extent that funds were furnished to make it possible for him to visit all sections of the province in an endeavor to have the scheme thoroughly discussed, and if possible, endorsed by many commercial organizations before a general conference was called to consider the proposals in deail and definitely draft the plans for carrying them out.

Early in the Conference a unanimous resolution was adopted endorsing the proposal for the "Old Home Summer and International Exposition" and a provisional committee on "Ways and Means" was appointed to draft definite recommendations for carrying out the proposals as outlined. At the last session the recommendations of this committee were submitted and adopted. In short, they were as follows:

1. That the celebration of the "Old Home Summer and International Exposition" be held in the year 1924.

2. That this Conference appoint an Executive Committee of nine members, this Committee to be trustees of any funds raised for the preliminary work of organization and to be empowered to proceed with the permanent organization of the Old Home Summer Association and International Exposition. The said Executive shall be empowered to employ secretaries and such organizers as may be deemed necessary. They are to carry out the following programme: Draw up letters of incorporation. Prepare necessary legislation propaganda and organization of financial campaign, co-operation with schools and civic bodies for arbor month, May, 1920, and such other matters as may be necessary to carry on the objects of the Association.

3. That the Executive Committee shall be composed of certain gentlemen which were named.

4. That certain gentlemen be appointed to act as conveners of county meetings for the purpose of organization, and that J. F. Masters and R. E. Johnson act as conveners for the New England States and that Miss C. Carmichael, Provincial President for National Council of Women, be Convener for Women's Organizations.

5. That the Executive Committee, together with representatives from the Provincial Exhibition Commission, shall be instructed by this Conference to enquire into all matters relating to International Fairs, devise ways and means for financing the project, confer with the Provincial Exhibition Commission, and report back to the Conference at a date to be determined by the Executive.

6. That the sum of $25,000 be raised by popular subscription for preliminary organization expenses and that the Victory Loan and other organizations be employed for the purpose of collecting the same.

The "Old Home Summer" feature is intended to stem the tide of immigration and to call back on a visit at least some of the former residents of the Province in an endeavor to re-interest them in the land of their birth.

The "International Exposition" will be held at Halifax and is intended as a means towards world-wide publicity and of attracting the attention of commercial interests which have not had a suitable opportunity for studying the possibilities for the favorable investment of capital in the development of the resources of Nova Scotia.

An effort is being made to extend the "Old Home Summer" feature to include New Brunswick and Prince Edward Island, and it has also been suggested that an exhaustive survey be made of the resources of the Maritimes and that an industrial tour be organized to give the visitors an opportunity to study the conditions at first hand.

Among the speakers at the Conference were the Lieutenant-Governor of Nova Scotia; Hon. G. H. Murray, Premier of Nova Scotia; Mayor Simpson, of Dartmouth; Horatio C. Crowell; F. G. J. Comeau; John F. Masters, Vice-president American-British Federation, Boston; R. E. Johnson, ex-President Intercolonial Club, Boston; H. R. Thompson, Secretary Maritime Division, C.M.A.; R. U. Parker, G.P.A., Dominion Atlantic Railway; D. W. Johnson, Director of Publicity, Ottawa, and K. H. Smith, Chief Engineer N.S. and N.B. Water Power Commission.

A Review of Industrial Conditions in Canada

The views of a large number of leading Canadian manufacturers on the state of Industry in 1919 and the Outlook for 1920.

IN the following pages there appear, grouped as systematically as possible according to the different lines of industry, the comments of upwards of two hundred Canadian manufacturers on conditions which have prevailed in the field of industry during the year just closed, together with a forecast of what the present year has in store. These views have been received in response to a request sent out by INDUSTRIAL CANADA in December and are representative of all the principal manufacturing industries of the Dominion. In some few cases the writers have requested that their names be withheld, but the large majority of the contributions to the symposium appear under the names of the manufacturers who have prepared them.

It will be found, in reading through the various reviews, that there is a good deal of unanimity of opinion among manufacturers on certain basic conditions. Thus on the question of labor, it is generally reported that skilled labor has been very scarce and even unskilled labor in short supply. Average efficiency apparently has declined and output has not been maintained on a proportionate scale to the pre-war period. At the same time some improvement over 1918 was noted in various quarters in the matter of labor supply, with better conditions as affecting the relations between employer and employee. The raw material situation has also been a serious factor and at the end of the year was quite as bad as ever. It is at once the cause and the outcome of the high prices which have characterized business during 1919.

Market conditions have been wonderfully strong, with a persistent demand, particularly during the latter half of the year, for practically all the products of industry. This has made selling easy, while the shortage of goods has put obstacles in the way of ready buying. The call has been for quality goods, a feature which is commented upon by many manufacturers and given as one reason for the present high cost of living. The strength of the home market has been detrimental to the promotion of export trade, which has also been handicapped by the unfavorable state of international exchange.

On the outlook, there is unanimity of belief in a continuance of strong and active markets for some time to come. Commentators, however, are averse to prophesying very far in advance and content themselves with expressing confidence in the state of business for 1920. Beyond that there is uncertainty and a note of c a u t i o n is sounded as to the desirability of not extending manufacturing capacity too far under the stimulus of present abnormal conditions.

The Outlook for Canada's Steel Industry

CANADA'S steel industry has weathered the difficulties of the transition period remarkably well. The outlook at the end of the war was none too hopeful, with munition business at an end and no pronounced rush for construction materials. However, as the year advanced, business began to develop on substantial lines and the strike in the United States, throwing orders to Canadian mills, had a very stimulating effect on the industry. The outlook is hopeful, and the steel men who contribute to the following symposium are all optimistic as to the future. New lines are being undertaken and the industry as a whole is being developed along broad lines.

Immense Coke Ovens of the Dominion Iron and Steel Co., at Sydney, N.S.

DEMAND FOR STEEL GROWS GRADUALLY

By Mark Workman

President, Dominion Steel Corporation, Limited, Montreal

Production conditions have been affected very slightly in the steel industry by shortage of labor. There has on occasion arisen a shortage of common labor, but the effect has not been material. The supplies of raw materials used by our company, that is, coal, iron ore and limestone, are owned and controlled by ourselves. We are, herefore, at all times in an excellent position as regards basic supplies. Operating conditions have on the whole been normal, and no unusual conditions have arisen.

The demand for steel during the past year has grown gradually. Had it not been for the industrial unrest in the United States culminating in many strikes, I think it would be fair to assume that the volume of business for 1919 would have been rather more than the last normal pre-war year.

The effect of the situation in the States has been to create a serious shortage of steel in that country. This shortage has been estimated at between three to four million tons. My best information is that the leading interest has experienced a shortage of about two million tons by reason of strikes.

The effect on the Canadian steel market has been felt in many lines, such as Canada has been in a position to produce or on which they had a stock available for immediate shipment. These stocks were picked up very quickly by American buyers, who have been in Canada for the past month.

It is recognized, of course, that this is merely passing business. It cannot be regarded as permanent, and we have not found any great desire on the part of American purchasers to buy for more than about one month ahead. As I have already stated, however, they have cleaned up a great many stocks of the Canadian mills. With regard to new lines, I might say that our company has entered into the manufacture of small rails, that is to say, rails of weights under 60 pounds per yard. You will understand, of course, that we have been operating a mill for several years for the production of rails 60 pounds per yard and heavier. Our company has been exporting various products practically since its inception. We are particularly well situated for export trade, but we do not know that any important development is to be expected in the export market. We have, of course, every expectation that the business will continue.

There is no doubt that the elimination of Germany and Belgium, perhaps only temporarily as competitors, may make a greater demand for steel for export now than there will be when these countries and France as well are producing steel more nearly comparative with their pre-war tonnage. But when conditions were normal we were exporting steel, and we cannot see any reason why it should not continue. Then again it may be that these countries coming back into their own, as it were, will make the competition even harder than it was before.

We believe we will be able to export steel at all times from Sydney by reason of our favorable location on the Atlantic seaboard, and by using our own vessels, which enable us to ship directly from our own works, eliminating freight hauls to the seaboard which are necessary in the case of most of our competitors.

So much has been written on the outlook for the steel industry in Canada, that I am somewhat reluctant to say more than that I believe that the steel industry in Canada is still in its infancy. I feel that all that is necessary for a large development of the manufacture of steel in this country is confidence, fresh vision that we may build up for the future and amicable relations between employer and employee.

GOOD DEMAND FOR ALL LINES OF STEEL

By Robert Hobson

President, Steel Co. of Canada, Limited, Hamilton

The supply of labor during the past year has been very satisfactory. We have had no difficulty in getting our regular supply of raw materials until the coal strike started

on the 1st November. Operating conditions in general, considering the disorganization which took place during the years of the war, have been fairly satisfactory. At our Swansea Works, Toronto, our men were out in sympathy with the Metal Trades strike.

During the first months of the year, trade fell off with us somewhat, but has been picking up well during the later months of the year. It is quite as good now as it was during the last period of the war. I refer now to steel for ordinary commercial purposes. We have a very good demand for practically all the lines of goods that we manufacture. The effect of the United States steel strike was to cause some concerns who largely purchase in the United States, to come to us for assistance.

We have made no new developments to speak of during the year at our plants beyond replacing some older types of machines by new ones of up-to-date design.

We have done a fair amount of export business during the year, but we have been handicapped considerably by the high rates of water freights and to the rates of exchange. During the last few months it has kept us fairly busy looking after our domestic trade.

I am decidedly optimistic as to the future of the Canadian steel industry, both for the immediate future and for the next two or three years.

ALGOMA STEEL PLANT BRANCHING OUT

By W. C. Franz

President, Algoma Steel Corporation, Limited

We have had no difficulties as to production being affected by labor supply or supply of raw materials, and our operating conditions have been favorable; the only reason for curtailed production in the past twelve months has been lack of orders.

There was not much demand for steel this year up to sixty days ago, but at the present time the demand compares favorably with that of the last period of the war. All lines both iron and steel, are in request. The U.S. steel companies supplied quite a large tonnage, both iron and steel, in Canada, and the effect of the strike has, of course, increased the Canadian demand upon our products. Further, we have sold some of our products in the States, principally due to the U.S. steel strike.

We have branched out in our production, the most important of which is the manufacture of structural steel shapes up to 15-inch beams and channels. We are also producing an alloy steel of different kinds, and find quite a demand for this product.

On account of our location, we do not contemplate being much interested in export business. During the past year we sold some steel rails to Belgium, which were shipped by way of Montreal. We do not expect to develop any large export trade.

In my opinion, the future of the Canadian steel industry is looking better to-day than at any time in the past, and with the natural growth of the country there is a great opportunity for enlargement of all steel plants, and an increase in production. This, I think, applies to the immediate future and the more remote future.

OPERATING MILLS TO FULL CAPACITY

By Arch. McColl

Secretary, N. S. Steel & Coal Co., Limited, New Glasgow

Demand for steel fell off materially after the war. In the last period of the war, and in fact for the greater part of the war period, we were very busily engaged in the manufacture of steel for munition purposes. This demand, of course, was cut off completely, and while we were comparatively busy during the first quarter of 1919, the second quarter saw a large falling off in orders; and the third quarter was practically stagnant, and our blast furnaces and open hearth plant were shut down for relining and repairs. In the fourth quarter the demand for steel products has improved and we are now operating our mills at New Glasgow to their full capacity; a large part of our plant, however, being adapted principally to the manufacture of material for car-building, has, owing to the scarcity of business, been closed down for the past six months, and so far no demand for cars is yet in sight. The effect of the

(*Continued on page* 244.)

The Machinery and Metal Industries

IN the wide field of industrial activity represented by the above heading, there has necessarily been a considerable variety of experience during the past year. Common enough to all industries has been the shortage of skilled help and the difficulties and delays incident to the securing of raw materials. These conditions have, of course, been more serious in those special industries which have been experiencing an increased demand for their product. Other industries report a falling-off in demand, since the end of the war and in consequence they have not felt the labor and material shortage to such an extent. On the whole, however, business has been satisfactory and the outlook is regarded as favorable. With building being gradually resumed on a more extensive scale and with enlargement of industrial capacity on all hands, there will be better opportunities for the sale of machinery and equipment and a larger consumption of those metal products which form the raw material of so many industrial processes.

PRODUCTION GETTING BACK TO NORMAL

By H. J. Waddie

President and Manager, Canadian Drawn Steel Co., Ltd., Hamilton

Our experience during the past year or more has been rather trying owing to the following conditions: First, the difficulty of securing adequate labor, and steady labor; Second, the great shortage in raw materials; Third, the shortage of transportation facilities. These three conditions have considerably reduced our output, but we are now getting back to normal. The demand for our products has been very great and we have been quite unable to cope with it. Even with additional labor, the shortage of raw material would interfere with any material increase. Values have an upward trend at present, and must continue as long as wages, freight rates, rates of exchange, etc., continue to advance.

INTRODUCING NEW LINES

By D. W. Robb

Vice-President, Robb Engineering Works, Limited, Amherst, N.S.

Labor has advanced in all lines of our work, namely, machinists, foundrymen, boilermakers, patternmakers, etc., about 20 per cent. during the past year, and fully a third since 1915. We are now working eight hours per day, forty-eight hour week, so that our overtime costs more and, while we have not had any serious labor troubles or disputes, we find there has been considerable disturbance and a tendency to do less work per hour than there was previously.

In our raw materials, consisting of pig iron, boiler plates and other materials of that class, we have had and are having considerable difficulty in getting a sufficient supply, and the prices are very much higher than they were and there does not seem to be any tendency to come down.

Our output increased during the war, due to the manufacture of shells and other war materials, but now that we are getting back to the original lines of work, we find some difficulty in securing sufficient orders to keep us busy, and our output is considerably reduced. We are endeavoring to introduce some new lines of manufacture, including the production of a farm tractor for kerosene burning, and we hope by degrees to bring up output to normal output or increase it, and eventually to get into the export trade in some of the lines.

The hopeful signs in regard to the future, are: That there is a great deal more money in circulation and capital available, both for old and new industries in Canada, than there was before the war, and there is a shortage of a great many commodities, especially food stuffs, all over the world, which is bound to keep up production and increase it for some time to come.

The unfavorable signs are the disturbing conditions of labor and the uncertainty as to the outcome of new investments. We hope, however, that by degrees these difficulties may be overcome, before there is any serious re-action.

HOISTING AND MATERIAL-HANDLING EQUIPMENT

By Geo. Day

M. Beatty & Sons, Limited, Welland

In common with everyone else, we had difficulty in keeping our men satisfied during the war, and immediately after, but by paying them top wages and a bonus, where the nature of the work permitted it, and by taking them into our counsel to some extent, we got along without any difficulty.

Raw materials were difficult to get, but did show a tendency to become easier, until lately. At the moment it is not any too easy to get delivery of necessary raw materials.

General operating conditions to-day are better in some ways than they were, that is labor is a little more tractable, but materials are not quite so easy to get. We did increase our output during the calendar year of 1918 and the first

half of 1919, due to our having long-time contracts for ship winches for the United States Government and French ships, but our production is down again now, due to the fact that no public works of any moment, outside of the Hydro power development at Chippawa, are being pushed.

The demand for hoisting and material-handling equipment, which is the class of machinery we build, is quite poor, due to the reason before mentioned, i.e., that not enough harbor work, canal work, etc., is being done to keep us busy. Values, we feel, are not going to decline; we tried our best to make a reduction in the selling price of our product, but we soon found that it could not be done without loss. Materials seem to be on the upward trend, and it is not likely that labor will be satisfied with less than they are receiving now. We have done nothing whatever in the export field proper.

So far as we are concerned we think the next three or four months at least are going to be slow. The winter time with us is generally a busy one, as usually we have contracts in hand for a dredge or some other big installation which occupies us fully. Just at the moment though, there is nothing of this sort in hand, and unless the Government decides to go on with the Welland Canal, and some other projects, it looks as though that phase of our business would be slack for some time hence.

What we would like to see is a decision to go on with these waterways, both the Welland and the St. Lawrence, and so afford work to a great number of men, and also make provision against recurrence of the trouole we are now experiencing. Money spent in utilizing the power now going to waste on the St. Lawrence, looks to us to be so obvious a thing to do that there should be no discussion about it.

CONDITIONS IN BRITISH COLUMBIA

By J. R. Duncan

Vulcan Iron Works, Limited, Vancouver, B.C.

Conditions on the Coast, from a labor standpoint, have considerably improved. The sympathetic strike which took place in Vancouver in June, seemed to clear the air, but our best advice is that whilst there is no apparent discontent on the surface there is an insidious propaganda being carried on.

Raw materials have been hard to get, and the lack of water transportation from the eastern sea-board has made us dependent entirely on the railroads. We have increased our output considerably during the year, and, as above indicated, our general operating conditions at the present time are fairly equable. We have still a good demand for our lines, and the outlook for the coming year is satisfactory. We find a tendency to accept steel commodities on the present market basis, the consumer evidently having made up his mind that the possibility of cheap steel is not obvious in the near future.

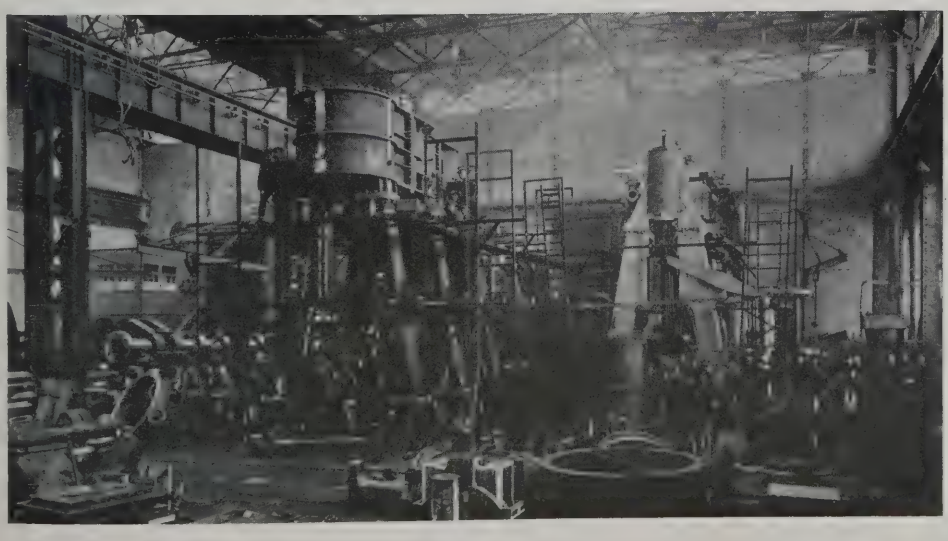
The Dominion and Provincial Governments both have committed themselves to spend large sums of money on necessary development work. Our business is expanding, and, whilst not enlarging our plant, we lose no opportunity to discard old machinery and replace same with the most effective for our class of work. We have introduced the manufacture of pulp mill machinery, such as digesters, evaporators, rotaries, etc., and lines which were heretofore imported from the United States we are making in Vancouver on a strictly competitive basis.

I have just given you these random thoughts, and if you purpose making use of them, you can co-ordinate same to suit yourselves.

BIG DEMAND FOR HEATING APPARATUS

By A. S. Capwell

Canadian Blower & Forge Co., Limited, Kitchener



We find a scarcity of skilled labor for general machine work, and are obliged to depend on inexperienced labor to a large extent.

In our process of manufacture, we use a great deal of sheet steel, and small structural shapes, all of which we have to bring from the U.S.; consequently we have had material on order for a number of months on which we have been unable to secure delivery.

We were engaged in the manufacture of munitions, and increased the capacity of our plant for this work, so that we have been adding to our line in order to provide additional output to take care of the increased manufacturing facilities. This has meant the addition of new machines, and a general increase all along the line.

We have endeavored to keep our prices on the same level as they have been for the past year, but have been obliged to increase in some lines, owing to increased labor and manufacturing cost. As to demand, we are extremely busy and have more orders on our books than at any time for

(*Continued on page* 294.)

Agricultural Implements and Tractors

SHORTAGE of materials and high wages are tending to restrict output and keep up cost of production in the agricultural implement manufacturing industry. These are two factors which are being stressed at present by manufacturers. The lack of materials was becoming a serious matter towards the year-end, aggravated as it was by strikes in the steel and coal industries of the United States. That the situation might become even worse was the opinion of some. So far as the supply and efficiency of labor is concerned, most reports agree in stating that skilled labor is short, while the average of efficiency is lower. Taking all conditions into account, there is no likelihood of any early decline in the price of the finished product.

Assembling Grain Drill Discs in a Canadian Implement Factory

The domestic market has been fairly active, though several manufacturers point out that the high prices are restricting purchases to cases of absolute necessity, and that a drop in prices would undoubtedly stimulate a big buying movement. In the export field, steady improvement is observable, though the serious condition of exchange in many foreign countries may tend to halt export business.

The tractor industry grows in importance with the increasing use of their source of power on the farm. Several new tractor manufacturing industries have been established, and their report is that the outlook for business is favorable. Tariff uncertainties, however, are hampering production in some cases, particularly where competition with the cheaper type of American tractors is encountered.

The experience and opinions of several Canadian manufacturers follow:

GENERAL REVIEW OF IMPLEMENT INDUSTRY

By Chas. L. Wisner
2nd Vice-President, Massey-Harris Co., Ltd., Toronto

Our experience with regard to the various manufacturing conditions the past season has been that the labor situation remains difficult. There is a distinct shortage of men in certain trades, notably the iron moulding trade. The general expenses of operating a factory have, contrary to our expectations, increased rather than decreased, and the whole situation at present points to a more expensive operating condition for 1920 than for 1919.

Production has not been increased and the present output per man does not compare favorably with similar output in pre-war times. Up to about two years ago our factories worked fifty-nine hours per week. About two years ago we established the Saturday half-holiday to apply the year around, and also reduced our factory working hours to nine hours per day—this made a fifty-hour week. Last summer we put our factories on a forty-eight-hour per week basis. In this readjustment of hours there was also a readjustment of piece-work prices and day rates so as to enable the workmen to have the same earning power as they had over the longer working period per week, and it was our hope that the shorter working hours would inspire the men to a little greater effort and that in some degree they would increase production to in a measure overtake the loss of the extra working hours. Our hopes in this direction have not been realized.

There is no change as regards the kinds and qualities of implements for which we have a demand. Prices are remaining at an uncomfortably high level. We had hoped that production costs would begin to show sign of decrease, but from information which we have at the present time regarding 1919 production costs, it would seem as though 1920 prices will have to go still higher. The marketing conditions, so far as Canadian trade are concerned, have not changed in any degree.

Export business has not ceased to be a factor with us even during the four-year war period. Of course our export trade was much restricted during the war, because of the cutting off of business relations with enemy countries where in pre-war times we had enjoyed a large and profitable trade. There is no immediate prospect of resuming business relations with the Central European countries. There is a great demand for our products in the foreign fields and we should look forward to a very satisfactory volume of business in Britain, France, Italy, and the Scandinavian countries were it not for the difficulty that is now cropping up with regard to exchange. We fear that depreciation in the value of foreign currency as compared with the dollar, will have a very serious effect upon our ability to keep up our export business.

In Australia the harvest is an absolute failure. This will mean that largely the stocks which we shipped there for this year's harvest will be carried forward and will result in our having practically nothing to manufacture for that trade for next season.

In the Argentine our information is that for the present the harvest outlook is satisfactory. Should this be the case, a nice clean-up of machinery supplies will doubtless result, and we will hope for substantial estimates from that market for the following season's business. The actual results, however, of the Argentine situation will not be known until the 1st of January.

The outlook, so far as our ability to produce goods is concerned, is satisfactory, providing we had less difficulty in

securing raw materials. Three months' ago we would have expressed the opinion that supplies of steel and other raw materials were going to be easier to secure and that prices were likely to work somewhat lower, but the effect of the steel strike, and later the coal strike, has had a very serious affect on the outlook for the immediate future, and all the indications at the present time point to greater difficulties in securing our raw materials and in a substantially increased cost of both these basic materials and all items of factory expense which enter largely into the cost of our production.

All this is naturally a great disappointment to us as, frankly, the very high cost of agricultural machinery at the present time is an obstacle in the way of doing a satisfactory business, and we have been very anxious to see some signs of reducing operating expenses and production costs so that we could in turn reduce our selling prices, which we know would have the immediate affect of increasing our volume of business, but unfortunately there is nothing in sight at the present to indicate anything but still higher prices for next year.

OUTLOOK FOR DOMESTIC TRADE GOOD

By J. E. Ruby

General Manager, Frost & Wood Co., Ltd., Smith's Falls

In our experience raw materials were more readily obtained, and except in a few of the skilled trades, such as tool makers and moulders, labor was readily obtainable; as a consequence manufacturing operations were carried on with more comfort than during war years.

In Eastern Canada farmers purchased more freely than they did in 1918, when there was a general tendency to defer purchasing in the expectation of a reduction in prices; in Western Canada the light crop had its effect on the sale of harvesting and haying goods in which we are largely interested; our volume of sales throughout Canada showed an increase of 10 to 15 per cent., but our export trade, due to unsettled conditions, following the war, showed quite a marked decrease from the previous season.

Despite increased cost for both raw material and labor, implement manufacturers generally made no advance in prices to consumers during 1919 over the 1918 figures, except an amount sufficient to cover the increased freight rates which were put into effect; there was a marked tendency on the part of consumers to purchase as far as possible labor-saving machines.

Export trade shows little, if any, signs of improvement, nor do we anticipate any change in this respect until conditions become more stabilized throughout Europe, and more particularly until foreign exchange rates are stabilized. The outlook for domestic trade is good for the coming season, but we think present manufacturing facilities are quite adequate to take care of the demand, especially in view of the situation with respect to foreign trade.

OUTLOOK FOR TRACTORS GOOD

By F. R. Bartlett

General Manager, Chase Tractors Corp., Ltd., Toronto

We have just started into the manufacture of agricultural implements during the past year and regret to say that I cannot give you an intelligent answer that would be of any value to the questions asked. However, I will give you what I can. Throughout our various industries we have had no trouble whatsoever regarding labor, material and general operations, with, perhaps, the exception of coal and coke. We expect some difficulty with those above-mentioned two this winter. Those of our industries which we can compare with last year show a marked increase in output compared with a year ago.

Export business has not yet become a factor, but we can say that the development of it looks very promising. Our outlook on the whole situation is very optimistic. We cannot see how the demand can do other than increase for some time to come, and we doubt if the manufacturing facilities will be adequate to keep pace with it. We are enlarging one of our factories in Galt and are contemplating a large addition to our big plant here in Toronto.

OUTLOOK PROMISING FOR NEW YEAR

By Thos. B. Christie

Works Manager, Sawyer-Massey Co., Limited, Hamilton

We find the labor situation in such a condition that it is very difficult to procure skilled mechanics in almost every line of work. There is apparently no scarcity of handy men, and if you have sufficient work of repetition character, it is quite possible to educate these men to do that work. The raw material situation is in a very serious condition, due largely to the steel and coal strike, which has been inter-

Woodworking Department in Implemen Plant, showing the assembling of seeder boxes.

Photo bycourtesy of International Harvester Co. af Canada, Limited.

fering in a general way with all classes of material either directly or indirectly. In as far as our own business is concerned our production has been increased, but not to any appreciable extent during the past year.

We find exceptionally good demand for all of the lines of machinery that we manufacture at the present time, probably due to the fact that nearly all concerns are more or less affected by the labor conditions and therefore are unable to supply the goods, and naturally everybody is making inquiries from every available source of supply.

Our export business has considerably increased during the past year and is developing as rapidly as we can take care of it.

In as far as our own work is concerned, the outlook looks promising for 1920. We believe that we will be able to dispose of all goods that we can manufacture. In fact at the present time, with the programme that we have laid out for 1920, we believe that we have sufficient to take care of us until about the end of August, 1920. We are not anticipating any additions to either plant or equipment at the present time.

OUTPUT SOMEWHAT GREATER LAST YEAR

By Jas. Hamilton

The Peter Hamilton Co., Limited, Peterborough

In connection with a great many other machinery firms in Ontario, we had quite a long strike with our moulders last summer which kept our work back to a great extent. We really did not have any other labor trouble to speak of. Raw materials have come in promptly until this last month or two. Production has been increased to some extent, and our output at the present time is somewhat greater than it was a year ago.

There is no doubt but that the introduction of the tractor will change the types of plows and cultivators used, but we do not think it will affect other implements very much. Taking into consideration the advances which have been made recently in lumber, steel, iron and everything else which goes into the manufacture of implements, we do not consider that any decrease in prices is justified.

The export business has never been much of a factor with us, but we have not as yet reached the same volume in export business that we had previous to the war.

It is pretty hard to size up the outlook just at present. There is no doubt the farmer is looking for lower prices, and with him lower prices mean a radical reduction. It is true, we do not think the average farmer has been buying as many implements the last three or four years as he did previously, so that there should be a real need for them and an increased demand, but whether this will develop this year or not, it is pretty hard to say. We have no doubt that not only ourselves, but other implement firms will be able, with present equipment, to handle the increased demand. We have no present plans for factory enlargement.

FACILITIES BEING TAXED TO LIMIT

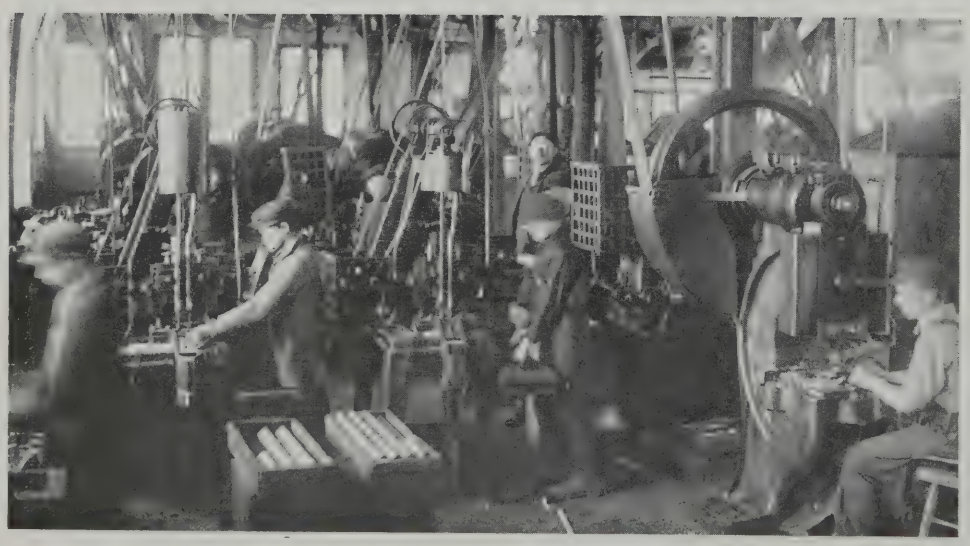
By M. Moody & Sons Co.

Our experience in manufacturing in 1919 has been satisfactory to a certain extent, namely, we have had sufficient labor, but we have not been satisfied with delivery of raw material, and in general operations. Our production during the year has not been increased to any extent. There was a greater demand for harvesting machines than seeding machines. This evidently was caused by a very wet fall in 1918 which interfered with ploughing, so that the farmers did not buy a great quantity of seeding machines for spring in 1919.

We have not yet entered the export business, as all our goods are sold in Canada.

The outlook is very good indeed; the demand is likely to keep up and manufacturing facilities are taxed to their utmost. We have last fall enlarged our wood-working department, and in the spring of 1920 we intend enlarging our foundry to almost double its capacity. From what information we can gather the agricultural industry will be very healthy for quite a few years.

DEMAND FOR IMPLEMENTS ON INCREASE



By Arthur W. White

Manager, The George White & Sons Co., Limited, London.

There has been, and still continues to be, considerable industrial unrest. We find very little difficulty, however, with our labor. We find deliveries of raw materials very slow from the U.S. and we have to purchase a large amount of our raw material in the U.S. as it is not made in Canada. Coal and steel strikes have aggravated this situation.

Demand in Canada is increasing. The tendency is to raise prices, but in our opinion it is very wise for all manu-

(*Continued on page* 244.)

Canada's Automobile Industry Grows

EXPANSION has been the keynote of the automobile manufacturing industry during the past year. Repressed to a certain extent during the war years, the moment that restrictions on production were lifted, plans formulated to increase capacity were at once put into effect and are to-day beginning to bear fruit in greatly enlarged output.

Manufacturing conditions in this particular industry have been somewhat variable. From one quarter comes the report that both the supply of labor and of materials has been satisfactory; from another that labor has been inefficient and supplies difficult to procure. It is probably safe to say that the same difficulties which have beset other lines of industry have been felt by the manufacturers of automobiles. Gratifying indeed is the evidence given that the industry in general is becoming more and more self-contained through the steadily increasing production of Made in Canada parts. The reproach that Canadian plants were largely engaged in the assembly of American made parts is being rapidly removed and more than one company is now practically manufacturing all-Canadian cars.

Assembling a Car in a Canadian Automobile Factory

Photo by courtesy
Ford Motor Co. of Canada, Limited

The market for cars has been extremely active and it is believed that the demand will be strong throughout 1920. The opinion is expressed that, owing to the scarcity of raw materials, it will be impossible for manufacturers to keep up with the demand. Predictions are also made that export trade will become an important factor.

Appended are a number of comments supplied by manufacturers of automobiles and motor trucks:

INCREASE PLANT CAPACITY 100 PER CENT.

By R. S. McLaughlin

President, General Motors of Canada, Limited, Oshawa.

Our experience as regards labor during 1919 is that it has been sufficient and efficient. With the exception of two or three varieties, the supply of raw materials has been quite satisfactory.

With regard to the manufacture of parts, we have developed very decidedly. This year we put up two units of what will eventually be a very large plant in Walkerville, each 600 x 150 ft. The style name of the company is Canadian Products Limited, and is a division of General Motors of Canada. In these plants we are now manufacturing engines and are getting ready just as fast as we can to manufacture axles, transmissions, and other important parts which we have heretofore been importing. Canadian manufacturers of materials necessary to go into engines, axles, and transmissions are co-operating very heartily and satisfactorily. We are very pleased indeed with the progress we have made so far.

Production last year has been increased about 20 per cent., and would have been increased very much more had it not been for the extraordinary and absolutely unfavorable conditions which existed during the early part of the year owing to war conditions previous to Nov. 18th, 1918.

We have experienced a very heavy demand for all varieties of cars of our manufacture, including McLaughlin, Chevrolet, and Oldsmobile. Export business has not been a factor to date, but there is every indication that it will be a very large one in the immediate future. The demand in Canada appears to be unabated. Outside of minor changes and improvements, present types will be continued.

The capacity of our plants here in Oshawa by the first of the year will be increased over last year by at least 100 per cent., as we have put up three very large modern buildings and have added very considerably to the capacity of some of our older plants.

OPERATIONS DELAYED BY LACK OF MATERIAL

By T. A. Russell

President, Willys-Overland, Limited, West Toronto

It is somewhat difficult to answer your questionnaire, owing to the fact that a year ago this country was entirely engaged in manufacturing munitions and was using its whole plant for that work. As a result we have really no data of a comparative nature between the two years. In a general way I might state, however, that our experience of the supply and efficiency of labor is about the same as it was last year, and that was none too satisfactory. The same position applies to the quality and supply of raw material. Supplies are extremely difficult to obtain, and operations are being delayed owing to the inability to secure some essential raw material. We are planning to manufacture the greater part of the cars in Canada, and a very large proportion in our own plant. The market conditions continue good, and as yet in advance of the supply.

AIM TO PRODUCE ENTIRELY CANADIAN CAR

By W. M. Gray

Vice-President, Gray-Dort Motors Limited, Chatham

The labor supply during 1919 has been stringent at times, but, due to our location, we have been successful in combating it. In so far as the efficiency of the labor is concerned, it

has been rather poor, due to the fact that it is almost entirely green help and has had to be trained to our particular purposes.

The quantity of raw materials has been curtailed; shipments have lagged behind and production has been seriously affected on that account. The quality also has been generally lower. The general operation of our plant has been difficult in so far as attempting to maintain our schedule, this being due to the fact that we were trying to increase our production and at the same time recover from war conditions.

We have developed to quite an extent the manufacturing of parts in our own plant, and have put on an exceptionally aggressive plan, in so far as getting our parts made in Canada. We have endeavored at every possible turn, to interest Canadian manufacturers in adapting these parts which we now import, going so far as to communicate with them and endeavor to interest them in regard to getting blue prints, engineering data, etc., and arranging to give them a special contract which gives them exceptionally favorable conditions. We have in view, that within a period of twenty-four months, our car shall be an entirely Canadian-made product; there may be a few little accessories imported, but nothing to amount to anything.

Production in 1919 was not increased to any extent, in fact it remained just about the same as the previous year, and we considered ourselves fortunate in getting away with it. Our present output is two and a half times our last year's capacity, and we are making even larger plans for the following year.

Market conditions are extremely brisk. There has been a remarkable demand for our product, but whether it is due to our popularity in price and covers only our class, the writer is unable to state. He does feel that of course a certain amount of it is due to our name and brand. On the other hand there seems to be a general condition that the market is quite favorable towards automobiles generally. The price tendencies are towards a further increase, and automobiles will be higher before they are sold at a lower price. The large demand for automobiles runs between $1,000 and $2,000.

The outlook is extremely serious this coming year, due to the steel and coal strikes which have been in progress, which makes it hard for us to get materials and get back on a basis where we can keep up production. The demand will be far in excess of the quantity of cars manufactured this year. The types of cars will run between the four-cylinder and the six-cylinder; the multiplicity of cylinders having been discontinued to a large extent, on the market, and the general tendency being for the average person to-day, to wish to buy a four-cylinder car, and those that wish to go in for a little more luxury, sometimes are buying six-cylinder cars, but the average commercial business car to-day is along the four-cylinder line, more than it has been in the past five years.

We have just taken over the entire building and plant of the Wm. Gray-Sons-Campbell Company, which gives a floor space almost twice our present size, and is enlarging our capacity double. Our plants operate on an eight-hour basis, and it is our intention to continue so to do. We have been running on that basis for the past year and a half, and have found it very successful with our men, being appreciated by them, and giving good results.

DEVELOP MANUFACTURE OF PARTS

By Jas. L. Acker

National Steel Car Co., Limited, Hamilton

We have found it very difficult during the year to get good mechanics. There has been a very noticeable shortage of good machinists, tool makers, and jig makers. There has also been a considerable shortage in raw materials and the quality is not up to the standard. As a result general operations have been considerably retarded owing to the fact that we have been unable to get good mechanics and raw materials.

We have developed to a considerable extent the manufacture of parts in our own plant, and we are buying Canadian-made parts, where and whenever it is possible to obtain same. We have in view manufacturing our own parts to a greater extent as soon as it is possible to do so. Our production has been increased quite considerably during the year and our present output, as compared with a year ago, is increased fully 300 per cent.

The demand has been fair for our class of motor trucks, and we have been able to produce up to the demand. Price tendencies are upward. Up to the present time we have not gone after motor truck export business, but we have received

The Biscuit and Confectionery Industry

CONDITIONS in the biscuit and confectionery manufacturing industry, which are elaborated in the following reports from a number of manufacturers, were never more active than at the present time. The important factor has been the heavy export demand which has given a large opening for surplus output. Concurrently with strong markets both at home and overseas, there have been serious obstacles to production both in the way of scarcity of help in factories and shortage of raw materials. This has led in some cases to a forced curtailment of export shipments. So great has been the demand for confectionery, however, that factory enlargements have been quite general and more are contemplated. Practically all manufacturers unite in the opinion that 1920 will prove a busy year, with demand well maintained.

Chocolate Refining Machines in a Canadian Confectionery Plant

A GENERAL REVIEW OF THE INDUSTRY

By F. W. Bean

Bean & Westlake, Limited, Woodstock

The past year has been a most exceptional one in biscuit and confectionery manufacturing in Canada. The British market has been open to take Canadian confectionery in almost any quantity. The home demand has been abnormally large. These two factors, added to the shortage and unrest in labor, together with scarcity of materials and troubles in transportation, have kept the production man on the alert all the time in his efforts to give satisfactory service.

The keen demand at home and abroad has been a great incentive to greater production. Factories have been enlarged, more machinery installed, and generally speaking, the production has probably been the largest in the history of the country. Girl labor has been the one great drawback. In the past four years women have been utilized to such a great extent in so many new callings that confectionery and biscuit manufacturers, almost without exception, have been unable to secure sufficient of this class of help. This has tended to eliminate hand work, and to stimulate machine production.

A remarkable feature of this year's business has been the insistent demand for high-class goods. Quality, rather than price, has been the deciding factor. In fact, the market for cheaper grades of biscuits and confectionery has been almost a negligible quantity. This demand has not been confined to the high-class city trade, but has been as steady in the rural communities as in the industrial districts. The four years' war in Europe, and the consequent cessation of manufacturing in the belligerent countries, has created almost an insatiable demand there for confectionery, and particularly, for high-grade chocolates. This has been especially true of Great Britain, although in France and the Scandinavian countries much Canadian and American export business has been done. A decade ago, Canadian chocolates were not in the first-class, but great strides have been made in the industry in the last few years, with the result that to-day Canadian chocolates are recognized as among the world's best. The re-establishment of British factories will no doubt tend to curtail export from this continent, but it is felt that the intrinsic merit of Canadian goods will continue to command a fair trade, both in Britain and throughout the world.

The year 1920 is looked forward to with the most optimistic feelings by the Canadian biscuit and confectionery manufacturers. It is felt that there will be no diminution of the export demand during the coming twelve months, and that the general prosperity of this country will guarantee ever-increasing home markets. The majority of factories have enlarged their capacity. The floor space of our own plant has been increased twenty per cent., and new machinery added to a like extent. We also propose to further increase the machine production another twenty per cent. this year. By the end of the year, the additions made and contemplated in Canadian factories should be sufficient to meet the requirements of the home market, but this condition will only exist when foreign production has assumed something like normal proportions.

DEMAND FOR CONFECTIONERY INCREASES

By Jas. W. Moir

President, Moirs Limited, Halifax, N.S.

The general manufacturing conditions during the past few years have made factory management a strenuous and difficult task. Raw materials have been scarce, difficult to procure and sometimes some materials were unobtainable. Labor has been scarce and most unsettled. Notwithstanding, our production has been constantly increasing for a number of years, and is now greater than a year ago. With regard to marketing conditions, the demand for the higher-priced and more expensive goods has increased, while the demand for the ordinary qualities and cheaper lines has not increased.

Our export trade has been mostly confined to Newfoundland and Great Britain. Our Newfoundland business has increased during the past few years. In 1914, shortly after the start of the war, we sent a man to England to introduce our

chocolate confectionery. He met with instant success, and from that time until the present, we have been making constant and considerable shipments to England and Scotland, except during some rather long periods, in which we were unable to procure transportation. We believe we were the first Canadian confectioners to make a success in the English market.

We think the outlook in the confectionery business is fairly good. The demand appears to be increasing. The manufacturing facilities in different parts of Canada are being enlarged, and if these capacities do not become too great for the demand, we think the business should remain fairly satisfactory. We have been thinking of factory enlargement, but owing to present high cost of building we have not up to this date decided on any definite plan in this respect.

Regarding our own operations, our biscuit business is not very large, and is confined mostly to Nova Scotia. We ship our high-class chocolate confectionery, which is our chief specialty, to all parts of Canada, and are doing a good business in this line in every province of the Dominion, and in Newfoundland and England. The demand for these goods (our chocolate confectionery) is greater than we can supply with our present facilities.

INCREASED PRODUCTION MATERIALLY

By H. N. Cowan

President, The Cowan Co., Limited, Toronto

Early in 1919 we had some trouble with our girls. Perhaps we were not paying them enough, although we were paying as high wages as other factories employing girls doing similar work. We raised our wages and have made two advances since. We are now paying high wages throughout our factory and we are certain that our work people are contented. Prices for all raw materials have steadily advanced during the year, and we are inclined to think we may still see higher prices in 1920, particularly for sugar.

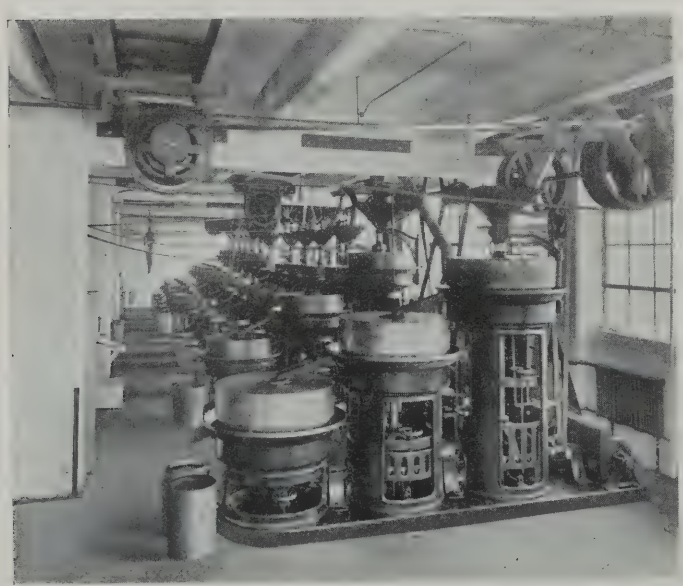
We increased our production in 1919 very considerably over 1918, and our output was greater. Of course we have added very considerably to our plant, but taking this into consideration the increased production is very satisfactory.

There is an increasing demand for goods of the best quality and we are turning out practically no cheap quality goods at all. We are getting good prices and can sell more than we can produce. We are doing some export business, most of it with the old country. We could do more if we could produce the goods.

We look for a big business in 1920, both in Canada and for export. We think the export demand will likely keep up for at least a year. We are building a very large addition to our factory, which, when equipped, will enable us to nearly double our output.

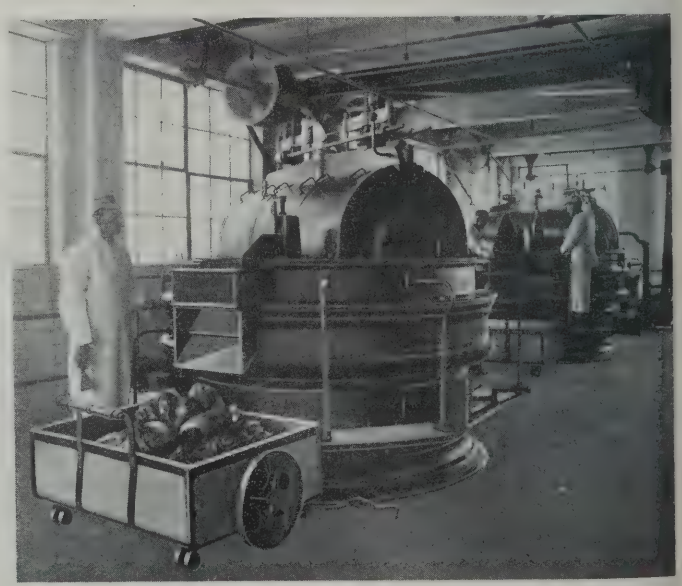
We are manufacturers of cocoa and chocolate and solid chocolate confections. We do not make confectionery or candy. We consider cocoa and chocolate to be very necessary foods and the demands for them is steadily increasing. Even if we have hard times in this country, as Mr. Drury predicts, and we do not agree with him, we do not think it will affect our business seriously, because, cocoa and chocolate are necessities, not luxuries.

STEADY DEMAND FOR QUALITY GOODS



By T. W. McFarland

President, D. S. Perrin & Co., Limited, London



Conditions as regards labor supply in London have not been very satisfactory. It has been impossible to secure sufficient and satisfactory female help. Our own factory's requirements have been short for the last three months, of over a hundred girls. It is judged that the city is approximately short of about 1,000 girl help in the factories. Male help can be had, but of a very indifferent quality. Skilled help is not procurable, and the claim that there can be just as much goods produced in a shorter day is nonsense. Our experience has been that in cutting off one hour of our day, we have a full hour less output. Raw materials have been very difficult to procure in many instances, and we can only get them at a very much advanced figure.

Production has increased over 1918, which in our business was a very poor year, owing to the Food Board's restrictions. The confectionery part of our business shows an increase over 1918, though only slightly over our output for 1917. Biscuits, however, show a considerable increase this year over both 1917 and 1918, largely caused by concentrating

The Boot and Shoe Industry in Review

View in the Welt Department of a Canadian Boot and Shoe Factory

THERE is a good deal of unanimity in the reports of boot and shoe manufacturers regarding conditions in this particular line of industry. Apparently considerable difficulty has been experienced all over the country in procuring skilled help. Ordinary labor has been in better supply. As for raw materials the general report is that these have been scarce in quantity and high in price, though in some quarters an improvement over the preceding year has been felt. Production has been considerably increased both through more active operation of plants and by an enlargement of capacity on the part of several companies. This development has resulted from the strong demand for boots and shoes which has seemingly exceeded the ability of manufacturers to meet. Not only has the demand been keen in the domestic field, but it has also been very active in the export market, and several companies have been doing an active business overseas. To this export demand is attributed a large part of the high costs now prevailing in the industry.

Manufacturers are reporting a demand for goods of the best quality. The people want the best grades of boots and shoes, and seem to be prepared to pay any price for them. This is a feature of the present situation. So far as the outlook is concerned, some uncertainty is expressed, though most manufacturers look for continued strength and activity throughout 1920. Here and there a note of warning is sounded relative to possible over-production through too great an extension of capacity, and mention is also made of tariff uncertainties. Both of these factors should be watched carefully.

INCREASE IN PRODUCTION REPORTED

By A. A. Armbrust

The Lady Belle Shoe Co., Limited, Kitchener

Manufacturing conditions have been somewhat abnormal and conditions vary from time to time. The labor question is serious, as it is difficult to get experienced help. During the winter months more laborers will probably be available. Raw stock is high in price and will possibly continue so for some months in the finer lines. Material, however, is not of a high standard due to inexperienced help. In general it would appear that conditions are on a fair way to readjustment.

There has been a decided increase in production so far as our line in concerned. We are practically 100 per cent. ahead of a year ago as our factory is running as near to capacity as it is possible to obtain help. The demand for good shoes is greater than it was a few years ago and the public are realizing that it is as well to buy quality as style. The writer is also of the opinion that the demand for the coming season will be equally large. We have booked a number of export orders, but find it difficult to get sufficient labor to fill orders promptly. There is no question as to the scarcity of materials in the devastated European countries, but we have found that the buyers for overseas are not so ready to do business as formerly. This is possibly due to the extreme high prices, the matter of exchange being an outstanding feature, and also as to the ability of Germany to produce for export. However, the writer feels that if the Canadian manufacturers can get the European trade for a time, they will be able to keep it.

FINDS LABOR SERIOUS FACTOR

By J. Daoust

Daoust, Lalonde & Co., Ltd., Montreal

The labor situation is not very encouraging to the manufacturer, as we have to advance wages mostly every week, so as to avoid strikes or lock-outs. Girl help is hard to get. Raw materials are not so hard to get as they were in July or August.

As to production, we are not producing any more shoes than last year, but we are producing more leather through an extension to our plant. The reduction of hours of labor has had the effect of reducing the output and consequently, in order to maintain the same output, we had to employ more people.

There is a big demand for shoes, but the demand is mostly on high-grade shoes. There does not seem to be much demand in medium and low grade shoes. Export business has been certainly a factor in keeping factories busy, but the exchange situation is paralyzing altogether this export business, and if there is no improvement, the export trade will be killed. The outlook for domestic demand is good, as apparently stocks were depleted and our salesmen are doing very well. We do not contemplate enlarging our plants, as the export trade is too uncertain. We do not see that the price of shoes could come down when labor is asking increases all the time. At the same time, we believe that the future outlook is pretty bright and the country is generally prosperous.

DEMAND FOR SHOES IS LARGE

By J. E. Warrington

The John Ritchie Co., Ltd., Quebec

Skilled labor, such as is required in the manufacture of our product, has been extremely scarce and production has been held back about 25 per cent. on this account. Wages, of course, have increased considerably as is general throughout the country. Raw materials have not only been

Section of fitting room in a Canadian boot and shoe factory, showing bright and roomy character of the accommodation provided for the workers.

Photo by courtesy Tetrault Shoe Mfg. Co.

high in price, but deliveries are considerably behind the date specified, which has caused considerable delay in filling our own contracts. Production with us has increased about 60 per cent. compared with a year ago, due to a large extent by an enlargement in capacity.

In the market for boots and shoes, the demand is larger than at any time in our experience. There has also been a noticeable demand for better quality footwear than in former years, and while prices have been higher than ever before during the past nine months, it has not been a question of price, but of ability to get the goods. In fact, shoes could be sold for almost any price you wish to ask if you had them for immediate shipment. Consequently, market conditions in general, from a selling standpoint, have been exceptionally good.

There is no question, that, taking the export business for both the United States and Canada together, it has been a factor in not only high prices, but also the demand that has been created due to the shortage of materials and manufactured products.

We look for continued good business and high prices during 1920, in fact, expect to be able to sell more than we can produce, and in spite of increasing our capacity last year more than 60 per cent., we have under construction another large wing which will give us an increase in 1920 of about 50 per cent. over this year's production.

OUTPUT GETTING MORE NEARLY NORMAL

By F. S. Scott

Getty & Scott, Limited, Galt

We have found a general improvement in labor, and the supply of raw materials and machinery. Our production today is more nearly normal than it has been for four years, and we have increased output by about 25 per cent. over last year.

We note no change in general demand as regards quality. The trade are buying our best grades, and prices remain high. Export has been quite a factor in our trade, large orders having been received for England and the continent.

We feel that there is a good deal of uncertainty as to the future. The export market, while it may continue for a year or two on the present basis, is rather uncertain. Added to this, the uncertainty which exists in connection with the tariff will cause manufacturers to go slow in the matter of extensions.

In a general way we find the labor situation to be considerably improved. We have no great difficulty in getting all the help we want, with the exception of female labor. Our production at the present time is governed entirely by this class of help and there is a great scarcity of girls as factory operatives.

SKILLED LABOR REPORTED AS SCARCE

By G. H. Ansley

Perth Shoe Co., Ltd., Perth

We have a reasonable amount of unskilled labor offered us, but we have very great difficulty in obtaining skilled labor, or operators for any branch. Raw materials are scarce and it is almost impossible to buy the grades we require. Deliveries are slow and prices extremely high and firm. We are finding it difficult to keep up to capacity on account of non-delivery of machines, parts, lasts, and almost impossibility of obtaining skilled operators.

Production in our factory has been greatly increased, in comparison with a year ago and our output now is one-third more. We have added an extension of 40 feet to this plant and a third storey, giving us a factory 250 feet by 40 feet, three stories, and a capacity of 1,000 pairs a day, which we cannot reach, for reasons already outlined.

Demand has been greater than we can fill; quality is the demand from us. Prices are of necessity advancing because of increased prices in all raw material and every detail of shoe-making. Marketing conditions are fair with us. We are not exporting direct, but we are manufacturing shoes for concerns that we believe are exporting shoes. The outstanding feature is a different line of models and different detail in shoe-making than those we use for Canadian trade.

The outlook for production and distribution is very uncertain. Undoubtedly, there is at present a strong demand for footwear. Undoubtedly most factories are running to capacity of machines and operators, but an increased supply and better delivery of machines and lasts would enable us to teach operators more quickly, and thereby enable us to increase our production. We are using instructors throughout the factory teaching green help.

The outlook for the next few months is centred in producing orders already accepted. Further than completing our already accepted orders, we are not soliciting further business. The outlook for six months' ahead is absolutely too uncertain. The future raw material market is an unknown quantity. We have the opinion that prices will be firm and little chance for decrease in costs in any department.

My own judgment is that it would be policy to go slowly and not book any orders without having the raw material on

hand, and a very careful study of the possibilities of delivery of orders which, as pointed out above, is governed by increased efficiency through machines, lasts, and operators. To-day, and for the past three months, there has been no difficulty in obtaining business. We manufacture women's high-grade goodyear-welted footwear exclusively, and I believe are the only factory in Canada so specializing.

GREATEST DEMAND EVER EXPERIENCED

By Albert Tetrault

Tetrault Shoe Mfg. Co., Limited, Montreal

Labor has been reasonable and fairly considerate of the employer, as a whole, and we can say that conditions in our own industry in Montreal have been as satisfactory as anywhere in America. This does not mean that the shoe workers of Montreal did not get sufficient advances in their scale of wages, but that these advances were made on a basis of mutual concessions.

We cannot say that there has not been enough raw materials to meet the demand, but rather a scarcity of specially desired materials at certain given times. Conditions are slowly getting normal.

Manufacturers ordering machinery have had to wait many months before getting deliveries. General war conditions as to deliveries still apply as the demand has been unusual for new machinery on account of the necessity of larger plants and equipment to keep volume. Daily ratio of production for each machine has been less.

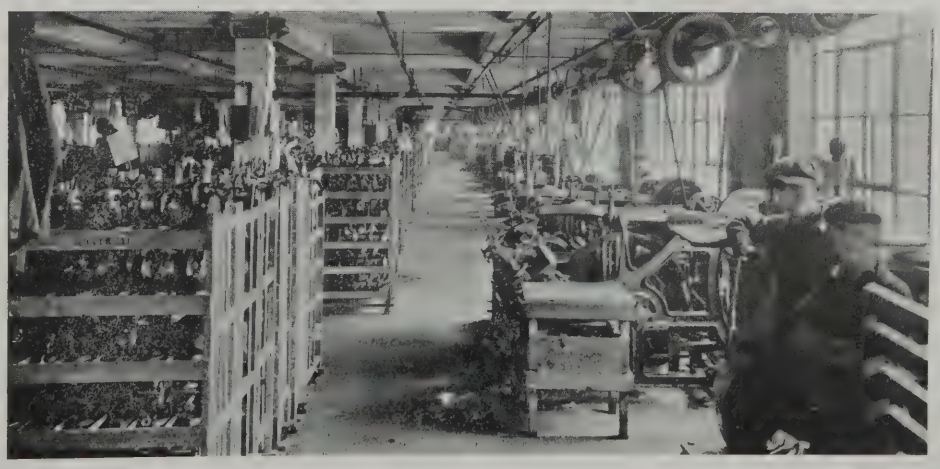
Our own production has been increased by 100 per cent. in a year's time, and will be again increased over another 100 per cent. by March 1st next. We figure our own progress on that score to be altogether out of proportion when compared to the boot and shoe industry in general. Despite this much greater capacity and production, we are sold until June 1st. Of course the reason of this enlargement of our capacity is on account of acquiring another plant with a capacity of about 85 per cent. as much as our original plant.

To this new plant we have built an addition, adding about another 115 per cent. capacity of original plant, making total additions to original plant capacities during the year of between 200 per cent. to 220 per cent., our capacity rising from about 2,700 pairs daily to about 8,000 pairs.

We are experiencing by far the greatest demand for Canadian boots and shoes that ever existed. Shoes are also following the general trend in all articles for better quality and manufacturers are striving and succeeding partly in meeting that demand. Prices of course are sky high, but mainly the result of higher cost of raw materials, but it is a well-known fact that Canadian prices have not advanced as much as American prices.

Though export business has been comparatively very satisfactory, we know that it has not been a factor, as very few firms have had an export policy or export sales organization. Export business is considered by most manufacturers as a source of all kinds of troubles, which they are not willing to tackle. We are rightly considered the largest exporters of boots and shoes in Canada but we must state that our export business has not been 10 per cent. of our total sales.

We believe that with present enlargements, the shoe factories of Canada, for the present, are well able to take care of the demand. We are going to import still less shoes from the United States unless too drastic lower revisions of tariff are made, as in practically all lines Canadian manufacturers can supply the customers' demands. There is no doubt that the average quality of shoes made in Canada is much superior to that of 1914's production. Our plans for enlargements of factories are at present complete, and it will now be up to our own sales force to keep factories running 100 per cent. We feel that for the next six months the retailers will be faced with the hard problem of getting deliveries in time of lines in demand. There is no doubt that it will be a question of having the goods, not of their price. After this period we do not care to prophesy, but we firmly believe that the boot and shoe industry will at least follow Canada's prosperity.



DEMAND AND HIGH PRICES TO CONTINUE

By Maritime Manufacturer

While there has been more labor available during 1919 than during the war, at the same time there is no surplus, particularly in skilled help, and wages have advanced very materially during the past year and are still advancing. In raw materials there has been a considerable scarcity of high-grade leathers, particularly upper leathers. This condition still obtains. Prices of raw materials in leathers have advanced tremendously during the past year. While deliveries of new machinery are slow, at the same time we have not experienced any great amount of difficulty in procuring what we have required in that line. The cost of power on account of increased prices of coal and labor prices has advanced somewhat during the past year. As to general operations we might say that wages of all kinds, from one end of our business to the other, have advanced very materially, and the cost of doing business has been very much increased thereby. Export business has not been a factor with us and we

Section of bottoming department in a Canadian boot and shoe factory, showing extent of capacity provided for this operation.

Photo by courtesy Tetrault Shoe Mfg. Co.

would hardly look forward to it ever being much of a factor in our business on account of the exclusive high-grade quality of shoes that we are making. While undoubtedly there would be some foreign demand for our class of shoes, we do not think the demand would be large enough to ever amount to a great deal. If we were making a medium or lower-priced line we think the foreign demand would be very much larger and the opportunities of doing export business very much greater.

As far as we can size up the whole situation, there will not be any decline in prices on our grade of shoes, as we do not anticipate leathers decreasing to any extent within the next few months. Indeed, in some lines, it is stated by some leather manufacturers, that their prices may soon be slightly higher. We do not look for any lower labor costs, in fact they may be slightly increased. As to distribution and demand in general for our product, we would anticipate as good demand for the next few months or year, as there has been during the past year at least, and if business conditions remain settled and normal throughout the country, our business should show a reasonable increase for the next year.

With regard to output, we may say that the number of pairs that we are making to-day is not nearly as large as it was in pre-war days, probably about 75 per cent. to 80 per cent. as large. The volume in dollars, however, on account of the increased prices of stock, etc., has been very materially increased. As to further factory enlargement, we would hardly feel safe in going ahead with any enlargement at the present time, until at least, such time as tariff conditions in Canada become settled, and we can look forward with reasonable assurance to the continuance, for a number of years, of settled tariff conditions.

Statistics of the Boot and Shoe Industry

Compiled by Dominion Bureau of Statistics for year 1918.

Capital invested (152 establishments)	**$31,493,152**
Land, buildings and fixtures	**5,306,982**
Machinery and tools	**3,313,338**
Materials on hand, stocks, etc.	**14,829,317**
Cash, accounts and bills receivable	**8,043,515**
Employees on salaries—1,065 males; 381 females.	
Salaries paid	**$2,037,529**
Employees on wages—6,760 males; 4,128 females.	
Wages paid	**$6,787,760**
Cost of raw and part. manufactured materials	**$25,227,448**
Leather of all kinds	**18,009,401**
Supplies of all kinds	**7,218,047**
Value of production for year	**$43,332,932**

CONDITIONS BECOMING MORE FAVOURABLE

By Geo. A. Blachford

Blachford Shoe Mfg. Co., Limited, Toronto

During the year just closed our experience as regards labor has shown an improvement. While in our particular line it seems to be impossible to obtain experienced operators on the major machines, still we have succeeded in getting a better class of unskilled labor to teach which we were unable to do previous to 1919.

In the matter of materials, there has been no difficulty in making purchases if one wanted to pay the price, but deliveries have not been all that could be desired and, while during this year we have not been materially inconvenienced through slowness of deliveries, our supplies in certain commodities have been run very close. There has been considerable delay in getting machinery, and at this present time, we have two important machines on order since last June which are still undelivered. One of them we understand is about to be shipped, and the other one may be shipped some time.

In the matter of production a marked increase has taken place as far as we personally are concerned, and from what we hear we think an improvement in this matter has also taken place in other factories, but to what extent we cannot say. The first six months of the year our production was low, improvement starting to show itself the latter part of August, since when our output has shown an increase pretty nearly every week. We took on some additional space last summer which helped the situation, but the fact that we could get people to teach and finally become producers, has been most responsible for this improvement.

The past year has seen a very severe upward movement in the price of footwear commodities with a demand so heavy that we have been unable to keep up with it. Increased prices have apparently had little detriment to purchasing and the trade have continued to demand the very best grades procurable. Domestic marketing conditions have been very easy, and we understand in several instances travellers have had to refuse business, being unable to take care of all that was offered. In our particular instance export business has not been a factor. We have done a small export trade, which, while it has not been a factor, has, however, been of benefit to us inasmuch as the export orders have called for materials and shapes which worked towards a larger production which perhaps we could not have obtained on strictly domestic business.

It is practically impossible to deal with the outlook intelligently. Things are happening to-day that we did not think of yesterday, and we loathe to give very much of our opinion as to the future, because conditions may arise which would be entirely contrary to what we might expect from conditions at this time of writing. Personally, we feel that the next few months may produce a condition whereby the demand for footwear can be met more reasonably on time. The general condition in the world's markets for leather and hides is very uncertain and, of course, just how this develops will have a great deal of bearing on the shoe manufacturing industry and what that development will be we cannot say.

QUALITY GOODS ARE IN DEMAND

By D. Marsh

The Wm. A. Marsh Co., Limited, Quebec

Our experience during the year has been that labor of the skilled variety has been scarce in certain branches of the factory. This, however, is now being overcome to some extent by breaking in new help, but is being offset very largely by the increased capacity which a number of local manufacturers are adding to their factories. On the whole, however, so far as our particular factory is concerned, labor conditions are better than they were a year ago.

Raw materials have advanced very materially in price and some classes are out of the market almost entirely, which has necessitated our abandoning certain lines of shoes and concentrating our efforts on the lines for which materials were available.

Our production has increased very materially over that of a year ago. We would not say that this is general in the trade in Quebec, as our production of a year ago was considerably below normal owing to particular circumstances in our own factory, and our output at present is probably 75

(*Continued on page* 264)

The Canning and Preserving Industries

Sorting Peas in a Canadian Canning Factory

Photo by courtesy Dominion Canners, Limited

SUMMARIZING results for the past year, it may be said that production averaged up about to normal, while demand for all packs continued strong. The cost of operation was heavy, and there is apparently little prospect of any decline in price for some time to come. Export demand has been very heavy, though it is pointed out by one manufacturer that this condition is likely to be only temporary, and that Canadian products may be driven out by the more cheaply produced vegetables and fruits of Italy, when the situation in Europe returns to normal. In the meantime the outlook is very favorable for 1920.

OUTLOOK FOR THE JAM INDUSTRY

By J. Wagstaffe

Wagstaffe, Limited, Hamilton

Our opinion is that jams will be higher next season on account of sugar being higher, farmers asking from 15 to 25 per cent. more for their fruit, labor being higher, and general working expenses all through being higher.

Domestic trade is good, also export trade. Export trade would be better, were it not that exchange is against us at the present time.

We are enlarging our plant about 40 per cent., this being the second addition that we have put on this season.

Generally speaking, the outlook for the next twelve months for the jam business is very favorable.

OUTLOOK IN CANNING INDUSTRY GOOD

By W. R. Drynan

Secretary-Treasurer, Dominion Canners Limited, Toronto

This past year our supplies have been fairly satisfactory, though labor has not been as efficient as it used to be. We have no complaint to make regarding the quality of our raw materials. Our production in 1919 exceeded the previous year on tomatoes and corn, but was less on peas and fruits.

Government regulations have tended to restrict trade and increase costs, though on the other hand some regulations have been beneficial. We have found that demand has been good both for domestic and export requirements, with supply not up to the demand. Shipping facilities on the whole have been quite satisfactory and better than the previous year.

The trend of prices has been higher and must continue high for another year at least, as all of our future contracts for supplies, which we necessarily must make at this season, are at prices not lower than last year and in a number of instances higher.

The outlook is good, provided conditions continue as at present, though we do not look for any marked expansion. Export trade will probably tend to fall off. We do not anticipate any difficulty in securing supplies of raw materials.

REVIEW OF CONDITIONS IN CANNING INDUSTRY

By Hon. E. D. Smith

E. D. Smith & Son Limited, Winona

In the canning business we seldom or ever have efficiency of labor. It is a seasonal business, and by the time we require our help every available man, for many years past, who is an efficient workman, has already secured a permanent job, and so the canner has to content himself with carrying, at great expense, a few absolutely essential men throughout the year, doing his best to try to find some work for them in the off season, and then for the balance take what help he can get which is sure to be inefficient, and so the canner has no easy task at any time. At times like these, when restlessness is more than usually prevalent, the canner

State of the Dairying Industry in Canada

Interior of a Canadian Cheese Factory, showing the Presses and Curd in the Sinks

By J. A. RUDDICK
Dairy Commissioner, Ottawa

THE improvement of transportation and storage facilities during the past 15 years has brought dairy products into the field of international commerce, and it follows, therefore, that the situation in Canada is affected very materially by the conditions which prevail in other countries. Prices are no longer governed by local conditions, but rather by the general demand and the world's total supply.

In order to arrive at a clear understanding of the position of the Canadian dairying industry at the present moment it will be necessary to review very briefly the international situation as it was in pre-war days, during the war, and as it exists to-day.

Down to 1914 the United Kingdom was the principal world's market for dairy products, importing every year, under normal conditions, more than twice as much as all the rest of the world combined. The following figures show the imports of butter and cheese in 1913 as compared with 1918:

IMPORTS INTO THE UNITED KINGDOM.

	1913. Cwts.	1918. Cwts.
Butter	4,139,022	1,614,625
Cheese	2,297,579	2,357,822

Before the war Denmark exported 200,000,000 pounds of creamery butter annually, most of which went to the United Kingdom. During the early part of 1919 Denmark was barely making sufficient butter to supply her own people. There has been a decrease in the number of cows and a great shortage of the concentrated feeding stuffs on which the Danish farmers rely so largely. Further, the manufacture of margarine had ceased in Denmark owing to the impossibility of securing supplies of raw materials. Production has increased in Denmark during the past season and they are now exporting relatively small quantities to Switzerland, Belgium, France, Norway and Sweden. Only a very small supply reaches the United Kingdom because the other countries are ready to pay a higher price than that which can be obtained in the United Kingdom under the system of fixed prices and control of distribution which still prevails there.

Ten European countries exported a total of about 500,000,000 pounds of butter annually previous to the outbreak of war and none of these countries at the present time, with the exception of Denmark, has any surplus for export. On the contrary they are all in the market to purchase limited quantities at very high prices.

While the war was on the United Kingdom was the only country in Europe that was able to secure supplies of dairy produce from overseas, but with the shipping blockade lifted the market is enlarged by the demand from continental Europe at prices exceeding the controlled prices in England. The United Kingdom is still able to secure supplies of cheese and butter from Australia and New Zealand, having contracted the available exportable surplus from these countries to August, 1920, at 38 cents per pound f.o.b. for butter, and 21½ cents f.o.b. for cheese.

There has been some criticism in Canada of the policy of fixing prices and the control of distribution in the Old Country, but one ought to consider the peculiar and dangerous situation which existed and still exists before blaming the authorities in this matter. If the trade in dairy products in the United Kingdom has been left open to competition, the limited supply would have forced retail prices up to such a level as to be prohibitive for the working people, upon whom the supply of munitions and other war activities depended. Very serious results would in all probability have followed such a condition. The policy of control ensures that every person, rich and poor alike, receives the same quantity, and while there is some grumbling, those with limited means accept the situation much more cheerfully when they know that those able to pay any price are obliged to come under the same regulations as they are. The butter ration, which has been 1½ ounce per week for some time past, was lately reduced to one ounce per week, or just about as much as many of us in this country use at one meal.

Dairy production in Canada, Australia and New Zealand was not interferred with by the war, but there would have been a larger increase in production had a greater supply of labor been available. A severe drought is now curtailing production in parts of Australia. Canada is in a fortunate position, being the nearest to the United Kingdom of any important source of supply. A ship will make five voyages to a Canadian port during the time it will take to make one voyage to Australasia, and for that reason there was during the war, and still is, a great accumulation of produce in both Australia and New Zealand. For some time there was practically one year's make of cheese on hand in New Zealand. This accumulation is now coming forward and that accounts for the apparent indifference on the part of the Ministry of Food respecting the 1919 crop of Canadian cheese.

Early in July representatives of the Committee on Food Supplies of the Ministry of Food offered to take 20,000 tons of cheese at 25 cents per pound delivered in Montreal. The full quantity has not been offered to date. Practically no sales have been made for United Kingdom account since October 1st, the available surplus having been shipped to the continent of Europe, or at least purchased with that end in view. The exchange situation is, at the present moment, in-

terfering somewhat with this trade, but the continental market is still nominally higher than the price offered on behalf of British authorities.

The production of milk has increased in Canada during the war period. During the first two years the production of cheese increased, but it fell off again in 1918 and 1919 owing to the diversion of a large quantity of milk to the condensaries and milk powder factories.

The manufacture of creamery butter continues to increase in every province, although Ontario and Quebec continue to produce the great bulk of both butter and cheese. The prairie provinces are becoming every year more important sources of supply. In 1912 there was not sufficient butter made west of the Lakes to supply the local markets. A considerable quantity was imported from New Zealand and on an average of one carload per day was shipped into that territory from Eastern Canada. During the past year the local markets have not only been supplied, but New Zealand butter has been shut out and there has been a large surplus for export. It is only a question of time until a very large dairy industry will be developed in the prairie provinces. The manufacture of creamery butter is also increasing steadily on sound lines in the Province of Nova Scotia and there is a revival of interest in the dairying industry in the Province of New Brunswick. The industry has been well developed for many years in Prince Edward Island.

The manufacture of condensed milk has increased largely since the outbreak of war, and will reach about 100,000,000 pounds in 1919 with a value of something like $18,000,000. The milk powder output is also increasing rapidly. The total value of the cheese, creamery and dairy butter, condensed milk and milk powder, market milk and cream, ice cream, etc., for 1919 will be very nearly $250,000,000, of which about $65,000,000 worth will be exported.

There is no "reconstruction" necessary in connection with the dairying industry in this country. The market is assured. It is easily accessible. Our products generally stand high in regard to quality and are favorably received in the markets abroad. When conditions get back to normal on the continent our exports will probably again be confined almost wholly to the United Kingdom. This market is prepared to take greatly increased quantities of both butter and cheese from Canada. Canadian cheese is the standard article on that market. It leads all other imports in point of quality, price and general favor. The position of our butter on the British market will improve as we increase our shipments, and thus ensure regularity of supply. The outlook for dairying in Canada was never brighter than it is at the present moment.

Statistics of Canada's Dairy Industry

From "Bulletin of the Dominion Bureau of Statistics"

	1916	1917	1918
Number of dairy factories	3,446	3,418	3,371
Number of creameries	993	949	989
Number of cheese factories	1,813	1,900	1,885
Combined butter and cheese factories	624	549	476
Condensed milk factories	16	20	21
Production of creamery butter	82,564,130 lbs	87,526,639 lbs	93,266,876 lbs
Value of creamery butter	$26,966,355	$34,274,218	$41,845,164
Production of factory cheese	192,968,597 lbs	194,904,336 lbs	174,881,957 lbs
Value of factory cheese	$35,512,622	$41,180,623	$39,457,358
Production of condensed milk		32,105,799 lbs	41,195,604 lbs
Value of condensed milk		$3,811,281	$5,740,898
Production of evaporated milk		29,415,012 lbs	38,612,367 lbs
Value of evaporated milk		$2,635,952	$4,048,055
Production of milk powder		3,979,514 lbs	5.530,915 lbs
Value of milk powder		$817,287	$1,388,248

The Canned Salmon Industry of British Columbia

By H. BELL-IRVING
H. Bell-Irving & Co., Limited, Vancouver

WAGES have steadily advanced and are likely to be as high or higher during the coming season than ever before. The price of fish in the open market has never been higher than last season, and is not likely to be less, in view of the probability of fishing being thrown open to all, involving multiplication of gear and reduction of catch per head.

Operating conditions are becoming worse owing to increasing uncertainty of obtaining supplies of fish. The species of salmon of higher quality have become seriously depleted. Whereas fifteen years ago the British Columbia salmon pack consisted almost entirely of the higher species, only about 25 per cent. of the pack is now of that quality. This year's pack decreased about 20 per cent. as compared with the pack of last year.

The demand for canned salmon of the highest grades is excellent everywhere. Prices are higher than ever before. The lowest grade of salmon—chums—can only be sold at a loss. Most of the pack, both this year and last year, is still unsold. The export market in Europe is somewhat stagnant in view of the difficulty in exchange and the high cost of freight.

The outlook for the future of the salmon industry in British Columbia is poor, in view of the ill-considered fishery legislation. No settled policy has been pursued. The administration of the British Columbia Fisheries from Ottawa has been a dismal failure, and has resulted in useless expenditure of money, higher cost to the consumer, and depletion of the fish supply. The once wonderful Fraser River fisheries are now a thing of the past.

The salmon fisheries of British Columbia having for many years past in all important areas been largely overdone, there is no possibility for expansion, except in the packing of lower grade fish hitherto not in favor.

With regard to new lines of business, the packing of herring and pilchards has been taken up by several concerns with varying success. This business is still largely in the experimental stage, but there are probabilities of its developing into a substantial business. The shipment of dry salted herring to the Orient continues on a large scale, and also shipment of fresh fish throughout this continent.

The Furniture Manufacturing Industry

CONDITIONS during the past year in the furniture manufacturing industry in Canada have conformed pretty closely to those in most other industries. That is to say, skilled labor has been scarce and raw materials have been high-priced and difficult to procure. Production on the whole has increased somewhat, though it has not equalled the demand, with the result that stocks on hand have been reduced. The better grades of furniture have been mostly in request and marketing conditions have been unusually easy. Export trade has not been a factor of any consequence, though manufacturers report that they could readily dispose of furniture in overseas markets were they in a position to make it. The outlook for 1920 is regarded as favorable so long as production can be maintained uninterruptedly.

HIGH PRICES INTERFERE WITH EXPORT

By Thomas McGill

McGill Chairs, Limited, Cornwall

Manufacturing conditions during 1919 as regards labor, raw materials and general operations have been fairly satisfactory. Production was slightly increased, and compared very favorably with 1918. As to market conditions, we have found a greater demand for the better class of furniture than in the past. We find that the great increase in prices has interfered with the demand from abroad, and we have been asked to cancel all orders on file. Our opinion is that the prospects for furniture business look very good, but we consider we have an ample number of furniture factories in Canada to supply any demands.

STOCKS LOWER THAN A YEAR AGO

By Thos. Bell

President, The Bell Furniture Co., Limited, Southampton

We cannot complain very much as to manufacturing conditions during the year. Labor has been fairly easy with us. While there has been a certain amount of unrest, it is not serious, and for the past year our factory has been running up to normal. Raw materials have advanced considerably in price, but we have found where contracts were placed early, delivery has been made rapid enough for our requirements. Production has increased considerably over last year, but hardly as much as our sales, with the result that stocks are very much lower now than a year ago.

The tendency has been towards a better quality in furniture, especially in complete suites. Prices are naturally much higher and marketing has been easy during the past six months, as we find the stocks in the hands of the retailer are not heavy and a great many of the factories have gone into making special lines such as phonograph cases, which has curtailed production. Export business has never been a serious factor in the furniture trade. We are, however, finding a great many inquiries from the Old Country. We do not believe, however, that the Canadian factories will be able to take up this matter for some little time, owing to a shortage of goods for the home market.

The prospects for the furniture industry look very good at present. The demand is likely to keep up for some little time. We think, however, the manufacturing facilities of Canada are adequate to keep pace with the demands should the factories be working on their regular lines. We are planning to enlarge our dry kilns so that we may be in better shape to speed up production, but it is not our intention to add to our factory.

UNABLE TO ACCEPT ALL ORDERS

By Beach Furniture, Limited

Skilled labor has been difficult to secure, though we have not been handicapped for lack of same. Raw materials have been soaring continually, and in some cases have been almost impossible to secure at any price. Production has increased probably 25 per cent., though we cannot say definitely as our line has changed considerably.

The demand for furniture has been for the medium and better grade, though retailers would purchase anything offered, owing to the exceptional heavy demand for goods. We have been unable to accept all orders offered for home consumption.

The present outlook in the furniture industry is very bright. While trade in Montreal has fallen off considerably, we find other parts of country flourishing. In fact, orders are very easy to secure at present. We believe the demand for goods at present is caused by the large number of marriages, building, etc., and also due to a certain extent to large wages paid for help.

HIGHER PRICED FURNITURE IN DEMAND

By D. M. Wright

President, the McLagan Furniture Co., Limited, Stratford

Reporting as to the years' experience with regard to manufacturing conditions as they pertain to labor and raw material, would advise first that the problems in dealing with labor have throughout the entire year given us more or less concern, and while things seem to have settled down for the present, we would not be surprised if labor conditions in the early spring might not be more acute in Canada than they have at any time during this past year. With regard to raw materials, the tendency in most lines is still upward, and we are not anticipating any reduction in raw materials generally until the labor market becomes more settled; so that on the whole the tendency for lower prices on manufactured commodities is still somewhat remote.

In the matter of production—while our sales show a very considerable increase over 1918, yet it has been almost entirely made up in the increase in prices, as the actual number of pieces turned out this year is very little in excess of that of 1918. As to demand for furniture this year, we may state that the higher priced goods are very strongly in the lead, and the ability to sell expensive lines of furniture in Canada was never so easy as it is at the present time.

With regard to the opportunity of doing export business, we may state that we are of the opinion an almost unlimited amount of export business would be available to the Canadian furniture plants at the present time, providing they were in a position to bid for the business, but the demand in the home market has been so strong, and skilled labor so scarce, that it has kept the plants fully occupied in supplying the home market. There is also a feeling that the ability

to supply foreign markets at the present time is more or less temporary, and that as soon as things become normal in the European countries, that it would be impossible to compete as a result of their having cheaper labor, etc.

With regard to the outlook for 1920, we would state that we see no evidence of any slackening of the demand so far as the spring trade is concerned, but should there be a railroad strike or any general upheaval in manufacturing or marketing conditions, we believe that there would be a very sudden and very serious break; and we believe that there would be more or less good judgment displayed by manufacturers in being prepared to meet a reaction in trade which might be brought about by the conditions above mentioned.

Many manufacturers are no doubt at the present time in the same position as this factory, namely, their present demand for goods would quite justify substantial additions to their plant, but in view of the extraordinary cost of building and equipment, coupled with the uncertainties of the future, they feel inclined to move cautiously in this direction until labor conditions become more settled.

ONLY RUNNING AT ABOUT HALF CAPACITY

By A. E. Ruby

Secretary, The H. Krug Furniture Co., Limited, Kitchener.

Labor conditions with us seem to be slightly easier, especially for unskilled labor, but skilled labor is still quite scarce. There is some delay in obtaining some classes of raw materials, and prices of some materials are still advancing. We are operating full time, ten hours a day.

Production during the past year was slightly increased, but not to any marked extent, our output being larger but our manufactured stock showing a marked decrease.

The demand for furniture seems to run along the better grade. Prices and marketing conditions have advanced in accordance with the increases in the prices of labor and raw material. We are unable to do any export business owing to the increased demand for home consumption.

The present outlook for the furniture industry appears to be good, but owing to the shortage of help we are able to run slightly more than half capacity, being unable to secure sufficient skilled help. We have sufficient business ahead and would greatly increase our output providing we could obtain help. Under these conditions we have no prospects or plans for factory enlargement.

At the outbreak of the war a number of workmen left the furniture industry, taking up munition work and other occupations where better inducements were offered at the time. The greater portion of this help has not returned to the furniture industry, and has been lost to it owing to better wages being offered in tire and a few other factories in this locality.

NO REASON TO FEAR ANY SLACKNESS

By G. A. Gruetzner

The Hespeler Furniture Company, Limited, Hespeler.

With reference to our 1919 experience in manufacturing conditions, especially labor, we realize that there is only one way to avoid friction, and that is to be liberal with the men regarding pay, and talk matters over with them, in a friendly way, explaining why we insist on certain rules and regulations. Mechanics in the furniture line are very scarce, and they are well aware that trade is exceptionally good.

As to raw material, this is very scarce, and it is almost impossible to purchase same, especially air-dried lumber, on short notice. Besides, the same has advanced from 100 to 200 per cent. and over. Unless firms had a good supply, they would be up against it on account of shipping facilities, as it has taken from one to two months in some cases to receive shipments.

In reference to production, the same has not increased per article, but rather decreased, while sales, on account of the high price of labor and raw material, have increased more than a year ago. Strange to say, the tendency for furniture has been for a better quality than ever before, and considering the shortage of help, and that most of the factories are running with about 50 per cent. of the men they employed in 1913 and 1914, this accounts a great deal for the scarcity.

Even though furniture has increased in price, the demand has apparently been much greater than the increase, which must be accounted for as those who have been successful with war materials, and were receiving large salaries, have no doubt held back from purchasing during the period of the war, and are now anxious to get such articles as they have been looking for. There might be another reason, which cannot be denied, that furniture has been far below its value, on account of cheap labor and cheap material, and in the writer's opinion, will never go back to the old price, no matter what the conditions may be.

There have been all kinds of opportunities to manufacture certain lines for export; for instance, phonograph cases, etc., which, however, could not be entertained on account of the home market requiring the entire output.

As to the outlook for the future, the writer is of the opinion that there is only one thing which could effect same, and that is labor trouble, especially such as the individual manufacturer cannot control, viz., the present coal strike. Should the demand be fairly well supplied in the home market, there would be so many opportunities in foreign markets that in the writer's opinion there is no reason to fear any slackness.

PRODUCTION HAS BEEN DECREASED

By J. E. Campbell

Sec.-Treas., The Hepworth Mfg. Co., Limited, Hepworth

Manufacturing conditions during the year just closed have been bad. We have had difficulty in obtaining raw materials, while labor has been hard to get, and not nearly as efficient as in former years. Production has decreased owing to our plant operating nine hours instead of ten and because of scarcity of labor and materials. The value of output, however, has increased, caused by higher prices.

Market tendencies have been towards higher priced goods, but owing to scarcity all lines are actively in demand. We have had a number of requests to undertake export business, but have been unable to attempt it. Our feeling is that business will be very active in 1920, but we look for a decline in both demand and prices towards the end of the year, and whether mistaken or not, are making calculations for a decline in 1921.

An Ontario Manufacturer.—"Labor is high-priced, inefficient and scarce. Production is only about 60 per cent. of that of 1913. Commodities are still advancing and some are hard to obtain at any price. The highest quality of furniture is most saleable, and lower qualities are saleable provided prices are high. The buying public are madly extravagant. It is impossible for us to export because of home demand and short production. Our plants are running only 60 per cent. capacity, because of labor scarcity. Beginning 1920 we are already three months oversold and have had our travellers off the road for months. We expect a furniture famine all next year."

Leather and Leather Goods Industry

TANNERS are reporting improved conditions in their industry so far as manufacturing conditions are concerned. Labor has been more plentiful and the supply of raw materials has been easing somewhat. Production has increased slightly, stimulated by a demand which has grown to very large proportions. The domestic demand, especially for the finer grades of leather, has become very heavy and looks as if it would continue throughout 1920. On the other hand foreign business, which was very promising, has been curtailed by the adverse state of exchange. The outlook is regarded as rather speculative, with prices so uncertain and exchange in such an abnormal condition.

Leather Cutters at Work in a Boot and Shoe Factory

LEATHER AT THE HIGHEST PRICES

By Charles Robson

Robson Leather Co., Limited, Oshawa

We have plenty of labor in this district providing we could house same. Raw materials are in ample supply and production has been increased 25 per cent. over preceding year. All kinds of leather are in good demand at the highest prices ever recorded. While shipping space is rather limited we have so far managed to secure sufficient space for all shipments, although there has been some delay incurred.

At the present time we are exporting about 40 per cent. of our production. All signs point to a greatly increased foreign business. There will undoubtedly be a very heavy demand during the coming year from foreign countries for leather of nearly all kinds. The supply will be adequate. We have already completed extensive additions to our plant in order to take care of increased business.

Generally speaking, tanners have sufficient orders already booked to keep them busy for the next two or three months. At the present time foreign orders are rather slow in coming, owing to the low rate of exchange and the end of the fiscal year with many. We look for better and bigger business at the beginning of the new year.

BUSINESS HAS BEEN SPECULATIVE

By John Sinclair

Manager, The Barrie Tanning Co., Limited, Barrie

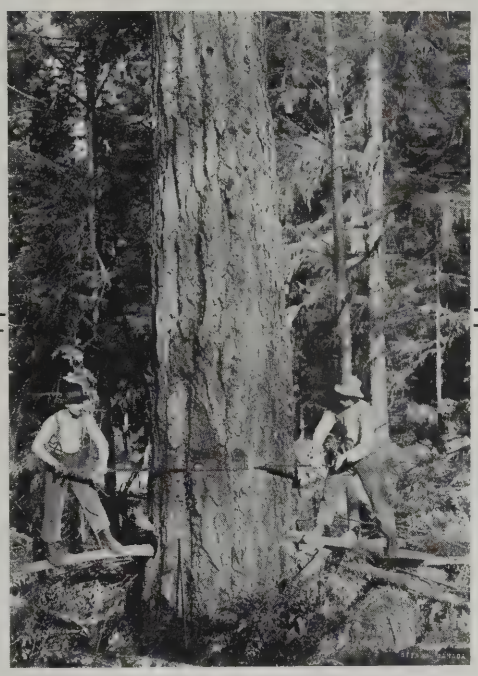
Labor has been very scarce and restless and the production per man lower than what might ordinarily be expected. There is to-day a better supply of unskilled labor, but no improvement in the skilled help situation. The raw material market has witnessed extreme fluctuations in prices, causing curtailment in manufacturing, as prices were too speculative for sound business. Our output is on a par with that of a year ago, but still much below normal.

The demand for best qualities has been extremely brisk, prices during the past summer being no object, the main thing being to get the goods. At present more conservatism is displayed. Export demand has been fair, but shipping and other conditions hampered it very much, and at present overseas demand is cut off owing to exchange conditions.

The outlook is not very encouraging for foreign business, although domestic trade will be good unless some outside calamity, which we cannot foresee, takes place. As already stated, business for the manufacturer has been extremely speculative, interfering very much with volume, as we feel that our best plan is to follow the safety-first policy. Factory capacity in Canada is ample to take care of the domestic requirements of leather and a large export business as well. In fact tanning capacity, if running full, would take care of the home market and export upwards of 50 per cent. of its output, but we doubt if any of the tanners will be running to capacity until conditions become nearer normal, as with the market for raw materials so unsettled, it is too great a risk to load up a plant at to-day's prices, other unsettled conditions being taken into consideration as well.

GENERAL REVIEW OF THE TANNING INDUSTRY

By an Ontario Tanner



The year just closed may fairly be said to have been one of improving conditions for the tanning industry. Labor, while by no means plentiful, has been more easily obtained than during the two years preceding, and while some demands for increased remuneration have been met, the tanning industry has not been forced to make the radical advances in wage schedules that have been the case in some other lines of industry.

Raw materials have been on the whole exceedingly scarce and very high in cost throughout the year. First, because of exceedingly depleted stocks so far as the North American continent is concerned, coincident with a general shortage in the world's supply of all classes of raw materials used in the industry; and second, this shortage so far as our country is concerned has been increased because of the difficulty of transportation, shortage of ships, etc. These latter conditions are easing up slightly during the closing months of the year making certain lines a little easier to obtain. Nevertheless, the world's situation at the moment is one of shortage, and it would appear as though it will take a very considerable time

(*Continued on page* 284)

Conditions in the Lumbering Industry

IT is practically the unanimous experience of lumbermen that the cut of the past year was less than that of 1918 and considerably below the normal cut of pre-war days. Scarcity and inefficiency of the labor supply has been largely accountable for this result, there having been great difficulty in securing and holding men. On the other hand the demand for lumber has been strong and there has been no trouble experienced in selling all that could be produced. That the scarcity will continue for some time is obvious for there is not much likelihood of any considerable increase in production for some time to come. It is believed that mill capacity is ample and that it will rather be a case of bringing operations up to present capacity than of extending facilities. As in the case of the pulp and paper industry, it is gratifying to note that efforts are being directed towards the conservation of the country's forest wealth. A good deal of the work is being undertaken by governments, but several companies are going in for reforestation on their own account. Reports from various parts of the country follow.

Big Timber in the Forests of British Columbia

ALL KINDS OF LUMBER IN DEMAND

By Ward C. Hughson

Gilmour & Hughson Limited, Hull, P.Q.

Production for 1919 has been just about equal to 1918. Both years were 25 per cent. below pre-war days. Labor has been in short supply and inefficient. Transportation was somewhat better. Cost of operations was greatly in excess of that of 1918 on account of shorter hours and increased pay. The state of the market has been excellent, both for domestic and export. Every and all kinds of lumber have been in great demand. The outlook for 1920 looks exceedingly bright at the present time. We do not know of any enlargements in prospect and think there will not be any increase in out-turn under conditions as they have prevailed for the past year. We are not aware of any companies doing other than they have in the past to conserve timber resources.

LABOR SUPPLY A SERIOUS FACTOR

By Geo. W. Grier

G. A. Grier & Sons, Limited, Montreal

As a general rule, production has been falling steadily for the last three years or so, and it is probably anywhere from 20 to 40 per cent. less than in pre-war days. I should say that the 1919 cut on the whole would be considerably less than the 1918 production.

The industry has suffered from an insufficient supply of labor, and in many cases the labor available is inefficient as compared with previous years. It is said that many of those who went to the war and were formerly woodsmen, now prefer to remain in the cities rather than work in the bush. As to transportation, every business man knows what ocean shipping conditions were during the war, and since the signing of the armistice. Conditions of transportation by rail have varied a good deal. There have been several periods when the car supply for lumber shipments was anything but satisfactory, especially the supply of U.S. cars to carry lumber for the U.S. trade. Costs of operation have naturally greatly increased with advanced wages for labor and advanced prices of all the varied supplies required to carry on a lumbering operation.

The domestic market, the U.S. market, and the demand from the United Kingdom have all been strong, and today almost any class or grade of lumber finds ready sale in one of these three channels. There appears to be little doubt but that Canada will be able to sell at good figures all the lumber that can be produced during the coming year. With the present strong demand, manufacturers will naturally produce all they can, but the labor supply is such that it is doubtful if the output for 1920 can be very materially increased.

I cannot give much information about conservation of timber resources. In the Province of Quebec, the Provincial Government have certain regulations prohibiting the cutting of small timber under a certain specified diameter on the stump. Many of the larger timber limit holders, it is generally understood, are, of their own accord and in their own interests, leaving the smaller trees standing and taking only the larger-sized timber. I believe the Federal authorities at Ottawa have also established a bureau to investigate ways and means of preserving our timber supply.

COSTS HAVE ADVANCED ENORMOUSLY

By W. F. Beck

The C. Beck Mfg. Co., Limited, Penetanguishene

Production generally has been less during the past year than in pre-war days, and a little less than in 1918, we believe. There is a constant shrinkage of output in Ontario, owing to the depletion of the forests and so much of it getting so far back and unhandy to log. This is seen in the number of mills closing up all along the Bay.

As regards labor, there has never been, in the history of the industry, such a poor class as regards stick-to-it-iveness, and each year seems to be worse than the last. As this industry, before all others, is practically all labor, you can readily see that the costs have advanced enormously, much greater than the price of the saleable product, and there is no question that people generally were under a great misappre-

hension as to the value of the product in regard to the costs of manufacturing it. Even yet the selling price has not caught up to the increased cost. In reference to the labor, we do not think there is another industry that puts up with so much from inefficiency and from the constant change and turnover of its personnel. They call it in the north country a three-gang crew, one gang coming, one at work, and one gang going out. This is a fact this last year especially. We have had some camps brought from seventy-five men to twenty-five in one week. All these men have to be transported from Montreal, Ottawa and Toronto. They go in, turn around, and come out again. The loss in railway fares, time, etc., is something enormous.

The market this year for lumber, both domestic and export, has been good. All kinds have been saleable, and there looks like a distinct shortage, especially in Ontario, and we look for considerable scarcity next spring.

As to expansion in this industry, there certainly cannot be any in Ontario. Instead of this, there is a depreciation and shrinkage each year, and expansion will have to come from other sources. There is enough capacity, we believe, to nominally take care of twice as much business as there is.

In regard to the conservation of timber resources, this is such a large subject and there has been so much said on it, that an individual has not much to say on such a subject, but there are a few items that the Government are at fault on. They are allowing settlers going into wooded territories instead of keeping them in sections where the land is good and there is no possibility of fires, and another is the granting of mining rights in good timber areas. They say it is a fact that prospectors have burned up wooded areas, just to get at the minerals beneath. The Canadian Forestry Association has been doing good work in regard to this.

Statistics of the Canadian Lumber Industry for 1918

Compiled by
Dominion Bureau of Statistics

Number of operating plants	3,086
Capital invested	$180,017,178
Logging and timber plants	36,516,701
Mill equipment	53,791,373
Materials on hand, etc.	54,147,889
Cash and accounts	35,561,215
Employees on salaries	3,550
Salaries paid	$4,911,735
Employees on wages	56,816
Wages paid	$44,490,917
Material, fuel and miscellaneous expenses	68,498,520
Value of production	144,908,864
Sawn lumber	102,335,772
Shingles	8,124,968
Lath	1,560,136
Pulpwood	18,416,438
Miscellaneous products	14,481,550

MARKET CONDITIONS HAVE BEEN STRONG

By Ottawa Valley Lumberman

The situation is naturally more or less erratic at the present time in the lumber trade, similar to what it is in practically all other trades, and therefore it is difficult, if not more or less impossible, to forecast the future.

The product in the Ottawa Valley in 1919 will not run over 75 per cent. of what it was in 1918.

Labor has been fairly plentiful at the manufacturing points during the season, and while this has had somewhat of a better effect on its efficiency, the high wages, shorter hours, etc., has resulted in increased costs, with curtailed production, necessitating higher selling values. Transportation and weather conditions have been normal and no adverse results to the trade can fairly be attributed thereto.

Market conditions have been strong and must continue so with the short supply and continued increased cost of production. All lines of lumber have shared equally in the demand.

As to the future—Is there anyone who can with any degree of accuracy foretell what it will be with the many new conditions cropping up from day to day? Clearly not definitely. On the other hand, if prices and demand do not keep up, it is questionable if the manufacturers can afford to continue operating.

THE INDUSTRY IN NOVA SCOTIA

By Davison Lumber & Mfg. Co., Ltd., Bridgewater

Production for the year 1919 has not been maintained even to the 1918 level and is only about 25 per cent. to 30 per cent. of pre-war production. Supply of labor has been poor and the efficiency of what was available only about 50 per cent. Both supply and efficiency would appear to be on the mend now.

Weather last logging season was the worst we have experienced in Nova Scotia for a good many years, there being practically no snow and very little frost. The winter was a very open one and this entailed our leaving quite a quantity of felled timber in the woods.

Costs of operation still continue to mount upwards, due to increased wages, supplies costing as much or in some cases more than during war times, and the lesser efficiency per man per day.

The market has been good, both domestic and export. Our output of lumber is sold mainly to United States, South America, Cuba and Madeira, and the demand from all these points has been good at fair prices. Our flooring and box mill department has been working time and a half for several months and its entire production is sold locally.

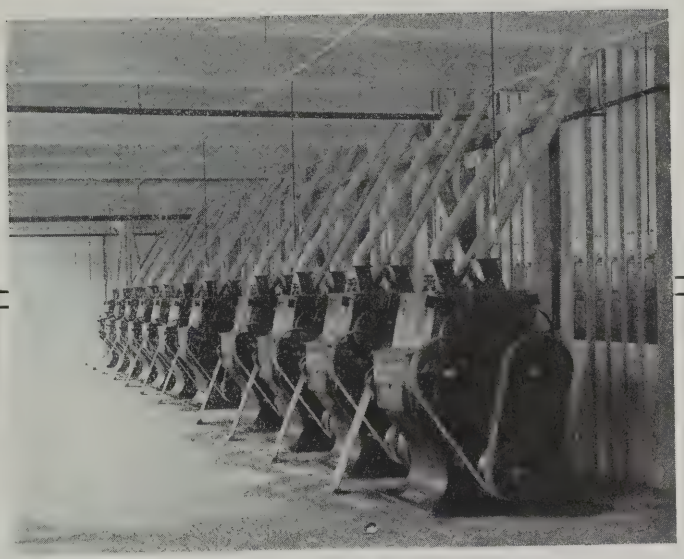
The outlook to us is encouraging and we anticipate a quick return to pre-war basis of production. We believe for several years to come the market of the world will demand a large supply of lumber.

We fully anticipate to operate our plants to their full capacity next summer. We have an ample supply of labor in the woods for the present logging season, which we believe will give us an almost pre-war cut, and our organization has been held together ready to take advantage of the expected demand.

Being the largest operators in Nova Scotia, working together with the Canadian Forestry Association and our local legislators, we are using every endeavor and means at our command to conserve the forests here, particularly in regard to fire. Of reforestration nothing is being done in Nova Scotia at the present time.

LARGER LUMBER CUT FOR 1920

By W. Gerard Power
Manager, River Ouelle Pulp & Paper Co., St. Pacome, P.Q.



I do not consider that there will be very much difference between production in 1918 and in 1919. Production of 1919 is, as a general thing, as far as Eastern Canada is concerned, considerably less than in pre-war days. This is owing to the difficulty of securing necessary labor for the woods operations.

During the summer of 1919 men have been a little more plentiful for mill operations, and efficiency has been possibly somewhat better than in 1917 and 1918. The car supply for

(*Continued on page* 290)

Milling and Food Products Industries

WITH flour mills under governmental control and regulation, both as regards the price at which wheat is bought and flour is sold, the Canadian milling industry has been in rather a colorless position during the past year. So far as actual operations are concerned mills ran pretty steadily throughout the year except for a period of two months, when they were shut down owing to lack of wheat. Both domestic and export business was good, with export demand particularly strong. Production was about on a par with that of the previous year and, if anything, was a little larger, due to the increased capacity of some mills. The outlook for the industry is rather difficult to estimate on account of the continuance of government control, but it is believed to be favorable. With its abundant supply of the best grades of milling wheat there is sound reason for believing in the permanence and prosperity of the industry.

OUTLOOK FOR MILLING BUSINESS GOOD

By A. E. Labelle

Vice-president and Managing Director, St. Lawrence Flour Mills Co., Limited

Our industry is rather in a peculiar position at the present time owing to practically the whole of it being controlled by the Canadian Wheat Board. The price and delivery of wheat is regulated by them. The price of flour and feeds is fixed by them, and they practically handle the whole of the output that goes to European countries. In consequence, things are not normal, but on the whole I think it was the best that could be done under present circumstances, and has resulted in fixing prices on a fair basis, allowing a reasonable profit to millers, and by controlling the price of wheat, preventing any increase in the cost of bread.

The milling business is one that is particularly adapted to Canada. In fact, it is one of the really fundamental—if I may use such a word—industries in Canada, as we have a large supply of wheat of the very highest quality. There is no question that Canadian wheat has the reputation, the world over, of being the finest wheat grown, and like every other natural production of Canada, it is in the interest of the country that everything possible should be manufactured here; in the first place, to supply work for our labor, and in the second place, one which is very important in milling, the greater production of mill feed for the feeding of our cattle. If Canada could export all that she can sell outside in flour instead of wheat, it would mean a larger quantity of mill feed, which would be available for the supply of another great Canadian industry—dairy and cattle raising.

There has been very little trouble in the milling business with the supply and efficiency of labor. I do not think any mill has been much troubled that way, and the labor has been, as usual, fairly satisfactory. As I have stated above, the quality of grain is very good and the supply fairly satisfactory, although mills have been closed down for nearly two months last year, due to the exportation of a large quantity of wheat. They have been very busy for the rest of the season. Both domestic and export business has been very good. The export demand was, of course, enormous, and is likely to remain very large for some time to come.

This industry has really not been affected by Government regulations or restrictions. Mills might have made a good deal more profit if they had not been controlled, but this I do not think would have been in the interest of the whole country. The flour being all bought for export to Europe by the Canadian Wheat Board, the transportation problem has been a very easy one, this article being one of the first that was given preference in order to supply the immediate wants of the European countries. As far as local transportation between different points in Canada is concerned, it has been practically the same as usual. During winter months, the usual blockade of freight has taken place from time to time, but I think on the whole that the railways, during the last winter, have done pretty well under adverse circumstances.

I think that the production of 1919 is about the same as 1918, with the exception that a few mills have added somewhat to their milling capacity; but on the whole, since the beginning of the war, mills in Canada have been running more than they have at any other time before.

FEATURE OF FLOUR MARKET HAS BEEN CONTROL

By D. A. Campbell

Maple Leaf Milling Co., Limited, Toronto

We have had no difficulty in securing all the labor we require, but the efficiency of the average workman is certainly much below pre-war standard. Grain this year is of a fair quality. There is considerable wheat that contains an excess amount of moisture due to wet harvesting conditions in the West. General operations of the company's plant have been satisfactory.

The outstanding feature of the market for flour this year has been the control of the Canadian Wheat Board, whose

(Continued on page 246)

The Mining Industry in Canada

Milling Operations at Britannia Beach, B.C.

By WYATT MALCOLM
Geological Survey, Ottawa

IMMEDIATELY after the signing of the armistice a year ago, there was a great feeling of uncertainty as to the future of Canadian industries, and as to the time that would be required for the restoration of normal conditions and the vicissitudes through which the war-disturbed countries must pass in the interval.

Mining men felt the uncertainty and realized that the success of the mineral industry depended in a large measure on the success of other basic industries. They were interested in knowing whether capital would be available for mining enterprise and for those numerous industries dependent for their raw material on the products of the mine, whether labor of adequate quantity and quality would be obtainable, and whether the cost of supplies and the wages demanded would permit of profitable mining.

Labor Conditions More Satisfactory

The year 1919 has removed some of the uncertainties, but has not effected such progress towards normal and stable industrial conditions as had been anticipated. The feeling of anxiety about the labor situation and about social upheavals and revolutionary tendencies has been considerably relieved. An attempt to establish in Canada a communist order with a dictatorship by mass action was happily frustrated, although conditions in the western provinces were much disturbed and considerable uneasiness was manifest in the cities of the east. During the spring and early summer there were strikes in many industries and much time was lost. The mining industry itself was affected by strikes, and work ceased for a time in many of the coal mines of western Canada, in one of the big copper mines of British Columbia, in the gold mines of Kirkland Lake district, and the silver mines of Cobalt. In nearly all cases, however, an understanding has been reached between employers and employees, and the labor conditions of Canada have now for some time been more satisfactory than those of almost any other country directly affected by the recent war.

The mining industries as well as other industries have, however, suffered from the inefficiency of labor. Too frequently an increase in wages has been accompanied by a decrease in the efficiency of the workmen. High wages have also tended to render labor unstable and to produce more or less idleness. The personnel of the mining staff changes too frequently. The workmen feel their strength as they never felt it before, and as a result their service is not so satisfactory.

Unfortunately, mining conditions tend in some cases to render labor troublesome and unsatisfactory. For instance, so many coal mines have been opened in the Province of Alberta, that to work them to capacity the year round, would result in a production much greater than the market demands. The prevention of over-production, therefore, necessitates the working of the mines for only a part of the year. Under such conditions there must be more or less discontent. It was expected that the close of the war would be followed by a period of reconstruction in the devastated countries, by construction of all kinds that had been postponed by the Allied nations for the duration of the war, by the replacement of obsolete machinery and manufacturing plants and by the repair of the long wear and tear. Had these expectations been realized there would have been an insistent demand for the base metals and common minerals, and the mines and quarries of Canada would have made a generous contribution towards the filling of this demand. Reconstruction has, however, not been as rapid as had been expected. The European countries were exhausted; the fall in the value of European monies has militated against the purchase of materials from America; there have been numberless strikes and social upheavals amounting in some cases almost to revolutions; and lavish expenditure on luxuries has diverted attention and capital from the more desirable construction work.

The hoped-for lowering of the cost of living has not come about and in general the prices of commodities are higher now than at the close of the war. Money has been spent lavishly but it has been spent in luxuries. A great deal of money had accumulated in the hands of men who had not been accustomed to its use and whose best idea of the use of wealth was the satisfaction of the desires for personal pleasure. They had not learnt the wisdom or art of careful and judicious investment in enterprises that result in the establishment and growth of constructive industries that are productive of national wealth, industries that are permanent and contribute to the necessities and comfort of mankind. There has, therefore, not been as great a demand for the base metals and common minerals as might have been expected.

Strong Market for Precious Metals

A survey of the mining industry for the year 1919 shows that the mining and quarrying of many of the minerals were adversely affected by unstable labor conditions and by an uncertain market. On the other hand there was a strong market for the precious metals, gold and silver, and, except when certain mining districts were troubled with strikes and labor shortage, the mining of these metals was prosecuted with vigor. The war created conditions that led to the active mining of certain minerals that had been previously recovered on only a small scale. It is gratifying that there are prospects that at least one of these will continue to command a good market.

Copper is one of the base metals that enter into constructive work of a fairly permanent character. The interests of

copper mining are, therefore, intimately related to the restoration of stable, normal conditions.

The close of the war found the Allied Governments with large stocks of copper on hand. The uncertainty about a future market led Canadian producers to curtail their output. The reduction in the demand for nickel resulted in a great decrease in the production of copper associated with the nickel in the Sudbury ores. Mines and mills in British Columbia were run for a time at only a fraction of their capacity. With the increase in the price of copper later in the year there came a resumption of more intense operations; for instance, the Britannia mine, one of the largest producers of British Columbia, is said to be working at capacity. Labor trouble was encountered for a time at Anyox where one of the very large bodies of ore is being mined, and although work was resumed there is difficulty in obtaining satisfactory labor. The large, low grade copper deposit that has been developed at Copper Mountain is ready for mining, and the mill, having a capacity of 2,000 tons of ore per day, is complete, but neither the necessary railway line nor the power transmission line is finished, owing it is said to the impossibility of procuring laborers.

The copper market is not satisfactory. Copper mining, however, continues and a large surplus of the metal is accumulating. The expected demand has not materialized, the price has dropped, and the future is uncertain.

Production of Coal Decreased

There was a very considerable decrease in the production of coal throughout the country during the first nine months of the year. This was due in part to a contraction in the market, and in part to the greater import of American coal into Manitoba. This importation affected the mining in Alberta adversely, although production in this province was also greatly hampered by strikes. The results of the carbonizing and briquetting of lignite by the Government plant to be established in Saskatchewan will be watched with interest. It is said that briquettes will be produced in 1920. It is to be hoped that the shipments of coal from the Sydney field up the St. Lawrence this year is the beginning of the recapturing of the Canadian market and that this branch of the Canadian coal trade will undergo great expansion.

With the close of the war and the consequent break in the requirements for immense quantities of nickel for war purposes came a stringent reduction in the operations of the nickel mines at Sudbury. There was not the demand for nickel for the manufacture of high grades of steel that there would have been had normal industrial conditions been established throughout the world and more permanent constructive work been undertaken. Production was, therefore, greatly curtailed in the beginning of the year, but is recovering its pre-war status. The rise in the price of silver, and the possibility of silver coinage being driven out of circulation on account of the silver content of the coins exceeding their face value has revived the suggestion of the use of nickel in coinage. Nickel is used to a certain extent for this purpose now, and it seems probable that financial considerations may make an extension of this use in the near future advisable. Sudbury is the main nickel-producing district of the world; there are large reserves of ore and the producers would no doubt welcome the opening of any new outlet for the metal.

It was stated in the January, 1919, number of INDUSTRIAL CANADA that an increase in gold production might be expected. This prediction has been fulfilled, at least, in so far as it applies to mines that are worked for their gold alone in contradistinction to those in which gold is associated with copper ores. In Ontario, where the gold mines are of the former class, the production for the first nine months of 1919, was 366,288 ounces as compared with 336,394 ounces for the corresponding period of the preceding year. And this in spite of the strikes in the Kirkland Lake district, which, unfortunately, led to the closing of the mines of that district in the spring and permitted only recently of resuming operations.

The main production was from the Porcupine district where large reserves of ore for future production have been blocked out. The Hollinger mine alone will have paid by the end of the year a dividend for 1919 of $1,722,000. Work in this district is hampered at present by a scarcity of miners.

Abandoned Mines Re-opened

The high prices of silver, which is worth nearly three times what it was a few years ago, led to a careful investigation of the ore-producing possibilities of various silver properties and prospects. Mines abandoned years ago were re-examined, and claims that in normal times received scant attention became objects of great interest. Valuable deposits were developed in north-western British Columbia and shipments of high-grade ore were made. Among the properties that attracted attention are the Premier and the Dolly Varden. The Silver Standard of the Hazelton district was operated, and discoveries were made of deposits of high-grade silver lead ores in the Mayo district, Yukon Territory.

The increase in the value of silver is of vital interest to the Cobalt mining camp. A great deal of low-grade ore was handled and dumps that had at one time been regarded as of little or no value grew into importance. The production of Cobalt is on the decline, but the high prices of the product has had the effect of lengthening the life of the camp by admitting of the economic handling of ore of much lower grade than had heretofore been possible. The production of silver in Ontario for the first nine months of 1919, which included a strike period of over six weeks, was 7,475,396 ounces, as compared with 13,145,596 ounces for the corresponding part of 1918.

The year witnessed a decrease in the sales of metallic cobalt. This was due probably to a decrease in the demand for the alloy stellite, which has been used mainly for making high-speed cutting tools. It is expected that a market will be developed for the use of this alloy in the manufacture of surgical and dental instruments and cutlery of a high grade.

The mining of a number of minerals was given an impetus by certain conditions created by the war, and the effects of the restoration of peace were watched with much interest. Mention may be made of such minerals as molybdenite, chromite, pyrite and magnesite.

Molybdenum Mining Ceases

The mining and milling of molybdenum ores in Canada became established during the war on account of the acute demand for molybdenum required for the manufacture of a special kind of steel. When the demand was satisfied prices dropped below a figure at which the material could be profitably produced and the industry fell into abeyance. Hopes are entertained that uses will be found for molybdenum steel that will lead to a revival of the industry.

As a result of special efforts a great increase was made in the production of chromite in 1918. The latter part of 1918 and the year 1919 saw a slackening in the demand and some of the mines closed down. Production on a reduced scale was, however, continued and the yield for 1919 will be about 8,400 tons valued at $350,000. The chronic oxide content will be approximately half of that of the output for 1918. This may be considered fairly satisfactory.

Owing to the great expansion of the explosives and other chemical industries in North America during the war, a great

(*Continued on page* 270)

Conditions in the Packing House Industry

NINETEEN-NINETEEN was a year of marked readjustment in the packing house industry. The change from war to peace conditions was accompanied by variations both in markets and in prices. Foreign demand for beef fell off and export demand is now largely restricted to pork products. At home, however, demand for meat of all kinds has increased greatly. From the production standpoint output was about the same as the previous year. The packers look for a continuance of good business both at home and abroad owing to the reduced herds of cattle in Europe, which it will take several years to replace.

THE INDUSTRY DURING THE FIRST YEAR OF PEACE

By E. C. Fox
President and General Manager, The William Davies Co., Limited.

At the time of the armistice, Canadian packers were selling for export both beef and bacon products through the British Ministry of Food. The cessation of hostilities, which rendered safe ocean transportation, diminished the necessity of having ample reserve supplies of meat products in Great Britain. The result was a permanent termination in the purchase of Canadian frozen beef and a temporary cessation with respect to bacon. The exports of frozen Canadian carcass beef in 1919, other than those that had accumulated in storage at the time of the armistice, have been insignificant, and indicate that the export of carcass beef carried on during the war was only of a temporary character. The lack of pressure, of course, for export has lowered the price of beef in Canada very materially, and relative to other commodities beef has been selling at a low price to consumers—consequently there has been a very excellent domestic demand for fresh beef.

The export bacon situation recovered itself by March, and de-control took place in England on 1st April, and lasted until July. During that time the market, already at a high level, advanced beyond all expectation. This was owing chiefly to so many new packing houses in the United States getting into the export bacon market through the British Ministry of Food, and finding it profitable. They seemed to think they could export anything to England and sell it. Instantly on de-control, a tremendous competition set up all over America to buy hogs, and the cost kept advancing just as dramatically as the selling price in England.

The advance of price in England had an abrupt termination in August, when it was discovered that there were stocks on hand to last for several months, and at the same time the British Ministry of Food took over control again. It was at this point that the Canadian packer demonstrated his standing on the English market, and gave evidence of the type of service that he had rendered in maintaining the standard quality of his bacon during the previous four years.

At the time de-control took place, Canadian bacon was in the greatest demand in England that it had ever been, owing to the fact that under control Canadian bacon was distributed throughout Great Britain to many buyers who had never before handled it, and it was the only bacon landing in Great Britain during the war that maintained its old standard. The advantage taken by the American packers of the urgent requirements of Great Britain is notorious. Consequently, when the break came in August, with the discovery of enormous supplies of bacon, it was found that there was no accumulation of Canadian bacon, and that this product has gone steadily into consumption; and the result was that Canadian bacon was disposed of at a loss greatly less than that sustained by American packers.

The Canadan live hog situation is not bright. The supplies for 1920 will not be adequate to the demand. I recently heard that a Vancouver packer had bought live hogs in Winnipeg for shipment to Vancouver. This is probably the first time that a shipment such as this has been made in the last ten years, and indicates a serious shortage of hogs in Western Canada. Indeed I would think that for 1920 Western Canada will have to import bacon from the United States or Ontario.

The hog situation in Ontario this year about held its own with last year, but I look for a decreased run of hogs for 1920 owing to the shortage in this province of grains fit for live-stock.

The price of grains has ruled high relatively to the price of hogs. Most farmers in Canada breed hogs from the point of view of immediate profit, rather than an average profit over a period of years. The discrepancy between the price of grains and live hogs has also discouraged production this fall. A year ago the Dominion Department of Agriculture set out on a big campaign of urging the production of live-stock. At a very critical time like this, when such a campaign is needed more than ever, the Department remains inactive, and any advantage that came from the campaign of a year ago is likely to be lost.

PRODUCTION NOT ADEQUATE TO THE DEMAND

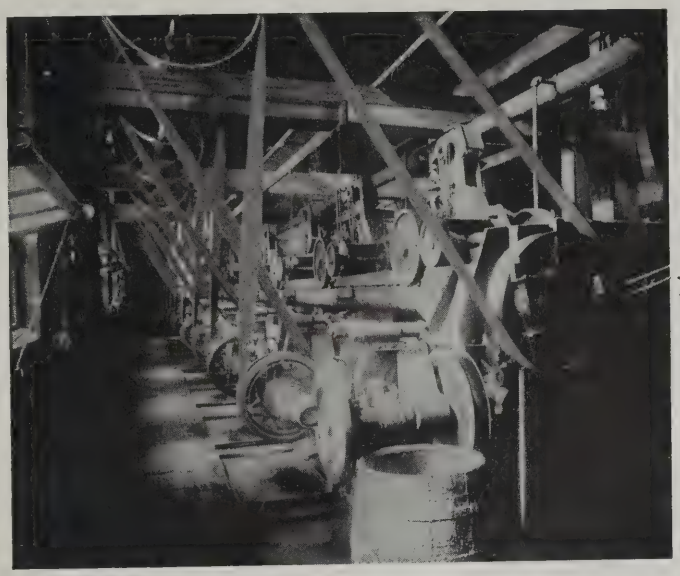
By Swift Canadian Co., Limited

The supply of labor during the year generally has been ample for our requirements and, with the return of quite a number of former experienced employees, efficiency has been improved as compared with last year.

As our supplies consist of live-stock and produce grown on the farms, we depend on live-stock production for our raw materials. The supply has been somewhat greater than last year, but in the case of cattle the quality has not been as good, there having been marketed quite a number of unfinished cattle, possibly due to high cost of feed.

Operating costs continue on a very high level, all supplies being at a very high figure.

Production has been somewhat increased in proportion with the increase in live-stock and produce. Present output is about the same as last year.



Board of Commerce rulings affecting our business have had a tendency to restrict the free movement of certain products and have forced us to discontinue the sale of other products.

Domestic demand for all products has been greater than the previous year. Export demand has been restricted to chiefly pork products and produce, as when the armistice was signed other markets such as Argentine and Australia were opened to the United Kingdom on beef, which has naturally

Review of Paint and Varnish Industry

PAINT and varnish manufacturers have experienced a very busy year. Capacity has been largely increased and output enlarged. At the same time costs of operation have advanced in such a way that it is probable that net profits have not been as great as with the smaller turnover. The demand for paint, and particularly for paint of the better grades, has been very large. As a material employed largely by manufacturers of other goods, its use has grown with the increased activities of general industry, and at the same time the demand for paint for domestic purposes has been very active. Export business has been brisk, and the fact that expansion in this direction offers such good opportunities has been the basis for a good deal of the enlargement of capacity that has been taking place. A continuance of favorable conditions in 1920 is anticipated.

BEST QUALITY GOODS IN DEMAND

By F. Moore

General Manager, Benjamin Moore & Co., Ltd., Toronto.

Our experience in the matter of labor supply, raw materials, and general operations, in the past year, has been, generally speaking, normal. That is we have not experienced any serious trouble in getting raw material, or getting labor. Consequently, we are not hampered in our operations.

Production increased considerably over a year ago, but it cost us considerably more to produce the same quantity as the year before, owing to the increase in wages. Our output, as compared with a year ago, has a very handsome increase.

The kind of goods in demand are mostly of the best quality. Profits were fairly good, but we are below the average, owing to the enormous increase in selling expenses, as well as manufacturing expenses.

The outlook is extremely good, as far as we can see. Apparently, the public have got accustomed to high prices, and the trade is buying in larger quantities, and a more optimistic spirit prevails. It is our opinion that we will have difficulty to take care of the business we will be able to get. To this end, we are putting up a new addition to our plant.

OBLIGED TO INCREASE CAPACITY

By J. H. Waterbury

President Manager, Pratt & Lambert, Inc., Bridgeburg, Ont.

The year 1919 has been the largest year in our experience in point of sales. We have had no labor trouble, though we have had more or less difficulty in securing competent help from time to time. Also, materials in our line were exceedingly high in cost, and some of them, notably varnish gums, exceedingly scarce.

Our production has increased in proportion to our sales during the year, but having reached its maximum point, we have been obliged to increase our plant and equipment, which considerably more than doubles our former maximum capacity and puts us in position the first of next year to produce from two to three times the quantity as in the past.

The tendency seems to tend to the sale of the higher quality of goods of our manufacture, and while our customers are apparently not stocking up to any great extent, they are buying liberally for their current needs. Prices in our line have increased during the past year about 15 per cent., and judging from the conditions of the future, market prices on most of the materials entering into the manufacture of varnish, there is but little possibility of any decrease in price for at least the next six months or a year.

Our export business is developing rapidly, we having but recently started soliciting this class of business, and the results so far have greatly encouraged us in making the extensive additions to our plant mentioned above.

We anticipate the next year of having a large increase in our business, and our manufacturing facilities are such as to be adequate to keep pace with even a very much larger increase than we anticipate.

DEMAND TO TAX MANUFACTURING FACILITIES

By Arthur D. Brown

Manager, A. Ramsay & Son Co., Montreal

In our experience, we have found experienced labor extremely hard to secure, and wages have been much higher. Raw materials in most cases have been very scarce and difficult to get, and there have been many complications in connection with general operation.

Under the trying conditions which we have just experienced during the war and since the armistice, we are very pleased to report that there has been a steady increase in business since 1912, each year being in excess of the previous one.

Even at the higher prices goods have had to be sold at, the demand has been for the better quality of goods, and it has been a question of getting the materials to produce goods of the right quality to satisfy the trade in general.

Re export business, we might state that ever since the armistice, export had practically ceased, owing to the fact

(Continued on page 276)

Pianos, Organs and Musical Instruments

INCREASED production is reported by most manufacturers and still larger production in 1920 is predicted. Some shortage of labor is noted but the greatest difficulty appears to have been in connection with materials, which have been hard to obtain. The market for all kinds of musical instruments has been strong and higher quality goods have been in request. Noteworthy has been the volume of export business offering, particularly in pianos. Manufacturers have done the best they could to meet this demand but are behind on orders. The outlook generally is satisfactory with good business, both at home and abroad, in prospect.

NOW SHIPPING TO MANY COUNTRIES

By Owain Martin

President, The Martin-Orme Piano Co., Limited, Ottawa

Manufacturing conditions were more difficult at the beginning of the year probably than ever before, mainly through the demands of labor. Raw materials have been at times almost impossible to secure, especially in semi-manufactured lines. These conditions have gradually improved; labor seems more settled, and easier to get, and our men not shy in regard to production. At the present moment we are again finding it hard to get stock, particularly in metal goods at all promptly.

Our production will average 50 per cent. increase over last year.

Export business has recently been taken up by us, and we are shipping now to Great Britain, France, Belgium, New Zealand and West Indies.

We have recently made considerable enlargement of our factory to accommodate the manufacture of Grand pianos. We see nothing on which to base forecasts of future trade conditions. Much will depend upon the extent of the disturbance of existing conditions following the notable accession of the farmers to power.

OUTPUT LIMITED BY LABOR SUPPLY

By W. N. Manning

The Sherlock-Manning Piano & Organ Co., London

To go back as far as 1914, we were able to keep our full staff employed through 1914 and 1915, never laid a man off, but some went to the war. Then in 1916 one-third of the remaining men joined up, and from that date to this we have been short on labor. In 1917 we introduced girls into the factory, and we still have several of the first girls who started. They have made good and are now considered a fixture in our factory. About one-half the men who went to the war have returned to us. Two were killed; others, who returned, do not appear to want to come back into factory work. Output is now limited to the labor we can get and, as it takes fully two years to educate a man in the particular piano branches, we cannot take advantage of the ordinary help that is offered.

We have had no labor troubles. We have advanced wages in line with increased cost of living and have kept our help well satisfied. They are, we believe, doing their best to give us an output. As a Christmas present we are taking out a group insurance policy and giving each man a policy of from $500 to $1,000, according to time in our employ.

We have had more trouble in the past six months getting raw material than at any time since the war started, and in order to be assured of having our requirements, we have to carry heavy stocks.

Output has increased 25 per cent. over a year ago, and this year's output, we believe, will be between 20 per cent. and 25 per cent. more than last years, in fact we are now about normal.

The tendency of the customer is to buy the high-grade piano. The Canadian public is becoming more artistic in its taste, and is demandng qualty in both tone and design. Marketing conditions were never better. Terms have been shortened, and many dealers who previously asked for long terms are taking the discount and paying cash.

We have always done a little export business, and it has gradually increased. We now have orders for a considerable number of instruments which we are unable to ship owing to the home demand. We have taken care of our export orders fairly well and expect to have the present ones all cleaned up in January. Previous to the war, organs only were exported, but during the war they had to buy pianos. Before, our foreign customers would not pay the price for Canadian pianos, but they now realize the quality warrants the price and we believe they will continue buying even though a lower-price piano may be offered from Europe. The outlook never seemed better. We see no sign of any let-up in the demand, and were we assured of labor we would immediately enlarge our plant.

SITUATION BETTER THAN YEAR AGO

By Henry H. Mason

Mason & Risch Limited, Toronto

There has been considerable difficulty through the year in getting adequate supplies of the raw materials that are required, but the chief problem has been and still is, to get a sufficient number of first-class mechanics to permit of a really satisfactory output. The situation is considerably better than a year ago, as a number of the men who left piano factories to work in industries engaged in the production of munitions and aeroplanes, have returned to their old positions. It has, however, not been possible yet to get the factory output up to a number of the pre-war years.

The demand to-day is for the higher priced styles. In fact it is really most encouraging that this should be the case, in view of prices necessarily being considerably higher than those that formerly prevailed. As to export business—the demand for Canadian instruments from abroad is very active, and is evinced not only by letters that are constantly received from many countries, but by personal calls from those representing companies in Australia, New Zealand and other distant sections. It is unfortunate that industrial conditions are such that only a small part of this demand can be given attention.

As to the future outlook this certainly can be regarded as good. In addition to the active demand both from the home and outside market, collections were never better. If the improvement in manufacturing conditions that has taken place during the present year continues, it should be possible next year through increased output to do a considerably in-

creased volume of business. As to factory enlargements this is not a problem that concerns us for the immediate future, as our first care is to build up a staff that will give us the benefit of the capacity of the present plant.

LOSING EXPORT BUSINESS

By C. A. Bender

Heintzman & Company, Limited, Toronto

Conditions of manufacturing have been very difficult. It has been hard to get men and keep them, on account of labor conditions and constant increase in prices. Raw materials show very high increase in cost, but there has been an increase in production over 1918 of 25 per cent. Market conditions are good. For the last year export business has been good, but we have been having orders cancelled on us lately owing to constant increasing cost of manufacturing plus traffic conditions.

GENERAL REVIEW OF PIANO INDUSTRY

By H. P. Bull

Vice-President, Williams Piano Co., Limited, Oshawa

We have had no trouble of any kind through discontent in our labor. We started operating a forty-nine hour week about the beginning of April of the past year on the old standard of sixty-hour a week pay for those who are not working on piece work, but retained the same scale on piece work labor. We had a general understanding with the foremen of our different departments in conference, that in granting the forty-nine hour week they were to hold the output up and, if possible, increase the output with such facilities as we would give them in new machinery.

We necessarily have to employ at least 85 per cent. skilled labor, and would have difficulty in getting more skilled labor if we had required it in any excess.

It may be of interest right here to state that before the year 1914 we were employing 225 men for the manufacture of about eight pianos a day, which seemed to be all that we could produce. The war took away a number of men from us and we have been operating with 200 men and have succeeded in practically doubling our output by the men becoming much more efficient—the result of which has increased the earning power of the men to almost double what it was before 1914.

The production during the past year has increased about 10 per cent. over the previous year, the increase being controlled to a great extent by our inability to get a greater quantity of supplies.

The requirement for instruments has a tendency toward player pianos and, in addition, our higher-priced pianos. The demand throughout the entire year has been perhaps 25 per cent. greater than we have taken care of. The demand could have been increased much beyond 25 per cent. had we put forth efforts to obtain a larger amount of business, but we have curtailed actual solicitation of business to almost a minimum. Our wholesale prices have increased about 30 per cent. in the last twelve months.

In the export business we have been making a most careful effort to build up a very permanent trade connection, and in doing this we have enlisted the services of three export companies, giving them different territorial rights throughout the British Empire, Europe, South America, China, Japan and Asia.

We have been doing some development work in regard to sending sample orders to quite a number of foreign dealers in addition to which we have some substantial connections to whom we are making regular shipments.

We had some difficulty in previous years in the export business by endeavoring to build a piano in size, design and method of construction at low prices, but the results of that effort did not prove satisfactory as we could not make pianos cheaply in this country and have any merit to the quality that would be a credit to the Canadian manufacturer and would have any tendency to build up a permanent demand and respect for the product. Therefore, we discontinued special designs of cheap pianos and decided to advise the export trade that they would have to take our standard quality of goods and pay the standard Canadian prices. We are pleased to state that this method has proven most satisfactory, and we anticipate a splendid foreign trade connection and are already considering ways and means of taking care of the demand, which at the present time is all that we are able to supply and at the same time give service to our Canadian dealers.

The outlook for increased piano business we figure on a ratio of percentage per population, and we have found that this percentage has increased by the enforcement of prohibition, which has created more possible purchasers.

We have every reason to believe that the demand for musical instruments will continue, and although there may be some occasional reversals in the demand, the requirements of music in the home—particularly a piano—is becoming a more established necessity every day for the education and welfare of the family rather than as a luxury, which our Government usually considers a piano to be every time there is a little flurry in the market as regards the national supplies. We are making plans for factory extensions and may erect 25,000 feet more of factory this year.

FIFTY PER CENT. LARGER OUTPUT

By J. W. Alexander

The Dominion Organ & Piano Co., Limited, Bowmanville.

Our experience is that manufacturing conditions have been very unsatisfactory as regards labor and raw materials. There is no scarcity of unskilled labor. What we have suffered from, and we presume the other manufacturers as well, is the scarcity of skilled labor, such as cabinet makers, etc. Raw material, such as lumber, steel wire, etc., has been very hard to obtain, and at greatly increased prices. Lumber has more than doubled in price within the twelve months. Notwithstanding the above drawbacks, production has been well maintained, and increased in some cases. Take ourselves for instance, our output will be at least 50 per cent. ahead of what it was a year before, when we complete the twelve months at the end of December.

The demand has been for high quality instruments. The price seems to be no obstacle. All standard pianos and organs have been in great demand throughout the year.

Export business has been offering very freely, and we have now large orders on hand for England, South Africa and Australia, but the great drawback is the excessive ocean freight rates, which are ten times what they were in pre-war days. In our opinion, there is no limit to the export business that could be done if a reasonable rate of freight was demanded.

The outlook is encouraging and we see no reason why the demand should not keep up. The difficulty will be to supply the demand, in our opinion, on account of the peculiar conditions of labor. We have no plans for factory enlargement, as it would not be wise when skilled labor cannot be got to adequately man our present factory.

BIG INCREASE IN GRAMOPHONE OUTPUT

By C. H. Weicker

Brunswick-Balke-Collender Co. of Canada, Limited, Toronto

During the year just closed we have had a lot of difficulty getting the experienced labor we required, and it was necessary for us to educate a large number of men. Raw materials have been at times difficult to secure and this has

(*Continued on page* 276)

The Canadian Pulp and Paper Industry

Two of the Big Newsprint Machines of the Laurentide Co.

REPORTING on conditions in the Canadian pulp and paper industry, manufacturers are practically unanimous in their belief that this great industry has now become established on a stable and profitable basis. Expansion is general with capacity almost everywhere on the increase. The demand for pulp, paper and paper products has been growing steadily throughout the year and has now reached proportions that are beyond the capabilities of present capacity to supply. Particularly is this true of newsprint, which is in extraordinary demand at advancing prices in both the United States and Canada.

Manufacturing conditions during 1919 have been fairly satisfactory. The labor situation has apparently become better stabilized, though here and there some manufacturer reports a state of uneasiness and uncertainty. Raw materials have been scarce and high in price, with some complaints as to inferior quality, due to the rush of production. Transportation problems have not been a serious factor except in one or two localities. As for climatic conditions these have been on the whole quite favorable.

Capacity is Being Enlarged

Production has been on the increase with promise of considerably larger production in 1920 and 1921. There is scarcely a mill which does not report increased capacity either in effect during the past year or in prospect for this year, the increase extending all the way from improvements to and extensions of present plants to the construction of new mills. The enlargement is in keeping with the demand which on all hands is reported to be enormous. Mills are sold months ahead, while in the newsprint field famine conditions are freely predicted unless consumption is curtailed.

The export field, apart from the heavy shipments of newsprint to the United States, has not been a very conspicuous factor on account of the difficulty experienced in meeting domestic demands. There would be no difficulty whatever in securing export orders, were manufacturers in a position to make shipments, but this has not been the case and the business has been confined to a few mills. It is rather unfortunate that more paper is not available for overseas shipment as now is the time to gain a foothold in these markets.

Gratifying progress is reported in the matter of reforestation and conservation of the timber resources of the country. This is a most important matter, for on the continued supply of wood must depend the future of this great and growing industry. Quite a number of the larger companies have now established forestry departments and are going in for a vigorous policy of protection, selection and planting.

In the following reports received from several Canadian manufacturers, first-hand information on conditions in the industry will be found. These, taken collectively, will give a very good idea of the present situation and outlook in this important field.

OUTLOOK REGARDED AS GOOD

By G. Chahoon, Jr.
President, Laurentide Company, Limited

Labor conditions in this section of the country have differed but little from those of other portions of the Dominion. We have had a shortage of labor, but no apparent unrest. The supply of raw materials for manufacturing purposes has been about normal; some manufacturers, ourselves included, have been rather short of wood this year, owing to scarcity of men for drives last spring. We have had no difficulty with inland transportation. We have, however, experienced the same difficulty as all other export shippers in obtaining space for the overseas market.

Our production is about normal. Owing to the scarcity of paper and the demand for same, the mills have been pushed to their utmost capacity and show an increased production for the year of a few per cent. We have made no enlargement in the plant, but have plans under way to put in two additional paper machines, which should be ready for operation by January the 1st, 1921.

There has been a very strong demand for pulps and papers of all kinds, due very largely to the enormous amount of advertising being carried on by the metropolitan papers. The prices of newsprint paper are controlled by the Government as they also are in the United States. Many publishers in the United States have deemed it advisable to waive their rights under Government regulations and pay fair market prices. There has been a strong demand for newsprint paper from all of the foreign markets. The amount that our company has been able to ship has been governed very largely on our ability to get steamship space.

The outlook for the coming year is good both as regards production and distribution. There is a substantial shortage at the present time, due to the numerous demands made by the larger publishers, but there are machines in the process of construction which should make up this shortage within

the next twelve months, that is if there would be no business depression that would curtail the consumption. I consider the industry in rather a precarious position, due to unprecedented prosperity. I fear that this prosperity may lead to more speculative plants, which in normal times will not be able to operate successfully.

The Laurentide Company has been developing nurseries and planting trees for the past six or seven years. Our nursery capacity this past year was about two million young trees. These were planted on lands near the mill. I sincerely hope that the Quebec Government will continue its very wise plans of conservation and in the near future develop some co-operative plan of reforestation whereby it will be just and fair for the Government to require that a new tree shall be planted for every tree cut down or destroyed.

PRODUCTION HAS BEEN INCREASED

By Geo. H. Millen
President, The E. B. Eddy Company, Limited

We have had to reduce our hours of labor to eight hours but notwithstanding this, labor seems to be just as restless as ever. We have had no difficulty in getting all the raw materials that we require. We have had some little trouble in getting all the cars that we wanted, but on the whole, conditions have been very satisfactory. The climate during the present year has been very favorable for the pulp and paper industry.

Our production has increased from 2 to 5 per cent. during the year just past. We have enlarged the capacity of our toilet and tissue department, but no other enlargement is in contemplation at the present time. We sell almost our entire output to our home Canadian trade, that is, with the exception of an occasional car which we export.

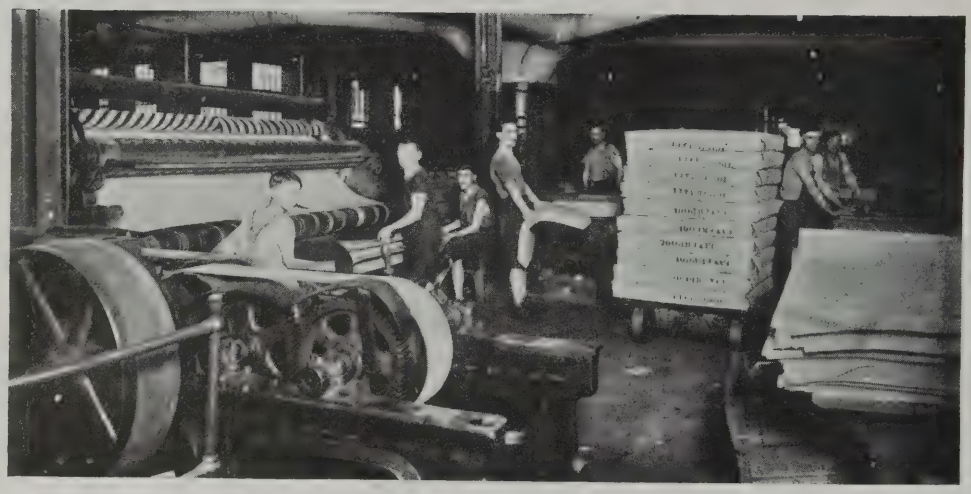
It is pretty hard to say what the conditions are going to be for the next few months. In our opinion one man's guess is about as good as another's.

We have been considering the conservation of our wood resources for some little time, but nothing definite has yet been done.

LABOR INTRODUCES UNCERTAIN ELEMENT

By E. W. Backus
President, Fort Frances Pulp & Paper Company, Limited

Manufacturing conditions, with reference to help, are very unsatisfactory. Wages are high and labor inefficient. Raw materials are scarce and high, although we have been able to secure our requirements up to this date, at some price. Transportation is very unsatisfactory; cars for loading are scarce. Climatic conditions are unsatisfactory for forest products operations.



We have not been able to increase our production; on the contrary, the opposite is true. Our output to-day is approximately five to seven per cent. lower than it was a year ago. We have not enlarged the capacity of our plants and do not feel that conditions justify that step at this time.

The price of ground wood pulp is very high and strong; sulphite and kraft pulp is easy with supplies ample. Both newsprint and kraft paper are high and strong and will remain so for sometime to come. The business outlook is good, but production will be reduced on account of labor conditions, unless there is a marked improvement in that

A Comprehensive View of a Canadian Paper Mill

This is the Espanola Mill of the Spanish River Pulp & Paper Mills, which has recently been considerably enlarged to admit of the installation of two new machines

Scene in the packing room of the Laurentide Co. at Grand Mere, P.Q. Here paper is being cut and packaged up for shipment to Liverpool and elsewhere

element. However, we look for good business for several months to come.

We do not feel that industry is on a sound basis, as there is too much uncertainty ahead of us in the direction I have mentioned, viz., labor. However, in both paper and lumber, prospects are favorable for some time to come. In my opinion the business future largely depends upon the action of Congress, in the United States and Parliament in the Dominion of Canada. If they take hold of matters in the proper way it will go a long way towards stabilizing the situation.

COMPANY HAS DOUBLED PRODUCTION

By C. Howard Smith

President, Howard Smith Paper Mills, Limited

Production has been considerably increased; so far as we are concerned our production is over double what it was a year ago. At the present time we have almost completed the doubling of our Beauharnois plant and figure on increasing the production of our Crabtree plant by 80 per cent. The work on the Beauharnois plant will be finished about the first of January and that on the Crabtree the first of May. We have also taken over the Toronto Paper Company and propose to increase the production of this plant 25 per cent.

The market is strong with trend of prices bound to be upwards. Export trade has been very satisfactory. We have exported to a great many countries, and our goods have been well received. We have had repeat orders, and a portion of the increased production is to take care of this trade. We expect a continued strong demand for paper. With the organization and re-establishment of industries generally, the demand for paper is very heavy and will continue so for some time. We certainly regard the industry as stable, and on a profitable basis. The plants in Canada are in good shape, have been well managed and this should be one of Canada's best businesses.

CONDITIONS IN EXPORT FIELD

By A. E. Cadman

Statistician, Canadian Export Paper Company, Limited

While the exports of newsprint paper, in which we are chiefly interested, have increased very greatly in the last few years, these exports have been principally to the United States. At the present time there is a "famine" condition in the United States in the newsprint market and unless drastic measures are taken it is almost certain that many of the smaller publishers will be forced to close down. This means that the bulk of Canadian newsprint will be sold to the U. S. A. in 1920, and comparatively little will be available for overseas markets. At the same time many manufacturers are endeavoring to maintain their overseas connections, even although they cannot supply all the needs.

The outstanding fact in connection with the newsprint industry at the present time is that production has not kept pace with the demand. Both in Canada and the United States, especially the latter, restrictive legislation during the war period has had the effect of keeping capital out of the industry and, consequently, production lags a long way behind the demand. An advance of at least 35 per cent. in the consumption of paper in the States has led to the present shortage.

By the end of 1921 it is expected that the production of newsprint in Canada will have increased to about 2,000,000 tons per annum and for the next two years, at any rate, it is probable that a shortage of paper will persist.

INCREASED TONNAGE ON THE WAY

By L. R. Wilson

Secretary, Abitibi Power & Paper Company, Limited

Labor conditions with us since May, 1919, at which time we entered into an agreement with the Unions for the following year, have been more stabilized than formerly, as regards the men regularly in our employ. The supply of floating labor, however, while more plentiful than during the war, has not been sufficient at all times for our needs. We have had no trouble getting all the raw material we required and transportation facilities, with the exception of isolated cases of a few days, have been normal.

Our production has not increased during the past year and is to-day practically the same as a year ago. We have under consideration an increase in capacity in our newsprint production of approximately 85 tons per day, to come on the market in the latter part of 1920, and an additional capacity of a like amount to be ready in the early part of 1921.

The tendency of the market price for paper has been a gradually increasing one during the entire year of 1919, which has been caused by the extremely heavy demand and lack of sufficient tonnage to meet that demand. In sulphite news pulp there has been little variation in prices during the year 1919, but this is not true of groundwood pulp as same has increased in value during the past month about 100 per cent. with the demand very heavy. Owing to the

demand for paper for next year's consumption, it appears to us that all the production in Canada can be readily taken care of during the entire year.

The business at the present time is on a stable basis and will probably continue so for some time to come. The chief factor contributing to the extreme shortage of newsprint effective at this time is probably on account of the control assumed by both the Canadian and U. S. Governments immediately after the outbreak of the war, with the result that there has been no increase of production in newsprint during the past four years, and with the increased consumption on account of the war and other causes has resulted in there being an insufficient amount of paper to meet the requirements of the trade.

We have during the past year organized a re-forestry department through which we propose to replant yearly an amount of wood equal to that cut, with the idea of eventually reproducing a sufficient amount for our continual use. It is too early as yet to give results from our actual experience but we are satisfied that spruce wood can be reproduced to advantage in our vicinity.

ANTICIPATE FURTHER IMPROVEMENTS

By R. H. Ecclestone

The Rolland Paper Company, Limited

With respect to labor we have had very little difficulty. Raw materials have not only increased in price but have been very hard to secure and have been unreliable. This refers to both rags and sulphite pulp as well as chemicals and dyes. We have not had any great difficulties in connection with transportation.

The last six months has seen quite an increase in production, which is a result of splendid demand and the fact that many additions and improvements in machinery and equipment at our mills have been made. We anticipate further improvements to our present mills to increase our output.

With regard to export trade there has been practically none of it during 1919, whereas there was quite a lively business done in 1918. This is due mostly, we think, to the fact that those countries buying during 1918 bought very largely and have practically been out of the market during the present year. We believe that as shipping facilities and the exchange situation improve, export demand will also improve. It appears to us that the future of Canada's export paper trade should be bright.

Although the mills at present are more than taxed to their capacity to fill orders and there seems to be no likelihood of the demand falling off in the near future we consider the present demand abnormal and we feel that the capacity of the mills at present is sufficient to take care of a normal demand.

Money invested in the manufacture of high grade paper in Canada is only a small percentage of the total investment in the industry in Canada. Nevertheless, the production of high grade papers has increased to such an extent that there is practically nothing but Canadian made bond, ledger and writing papers used in Canada, and a certain amount of export has been done. The reverse was true a very few years ago when the market was flooded with English and American papers and the consumption of Canadian made papers was small.

MACHINES RUN TO CAPACITY

By F. J. Campbell

General Manager, Canada Paper Company, Limited

We have found labor, raw materials, and transportation during the past year all uncertain and expensive, though climate in this district has been all that could be desired, there being an excellent flow of water throughout the year. There has not been any material increase of production. Machines have been run to the limit of their capacity. The market has been steady and firm, the general trend of prices upwards, with a very active demand for all products. Our company has been in the export business for many years. Export business is still hampered by the uncertain conditions of shipping.

As underlying conditions are still abnormal, we don't believe it is possible to predict what will happen within the next few months. The pulp and paper industry in Canada has long been on a stable and, for the past few years, on a profitable basis owing to our possession of raw materials and good water power.

SCARCITY OF PAPER TO CONTINUE

By H. F. E. Kent

President, Kinleith Paper Mills, Limited

The labor element has been very uncertain. At the present time, however, we are able to get all the help we require, our advance in wages being about 110 per cent. over prewar days. Raw materials at the present time are scarce. While sulphite, the main raw material used in paper making, has been greatly increased in production, the quality has not been as good as it should have been. We hope, however, that once the mills get down to more normal conditions and

A huge paper machine under installation at the Espanola Mill of the Spanish River Pulp & Paper Mills. This machine, which started running on October 20, has a speed of 700 feet per minute.

are not rushed, that they will produce a better article. In fact, it has improved greatly in the last six months. The transportation situation from our own mill has been very reasonable, and we have no complaint to make on that score.

Our production has increased about 15 per cent. since 1914. This has increased through improved facilities and methods of handling the stock. Our output, however, is on about the same basis as it was this time last year. We have not enlarged our output but we have put in considerable additional machinery to enable us to improve the quality of our papers and the finish.

With regard to the demand for pulp and paper, in the early part of the year some of the mills were idle for part of the week. Our own mill, however, was kept running full, in view of the fact that we had sufficient export orders on hand to permit us to do this. In view of the fact that the demand for pulp and paper was easy, prices of the raw materials were down, but they started increasing about the middle of the year and have been going up ever since. The demand for paper is at the present time abnormal and we ourselves are refusing to accept any more orders at fixed prices, as we are sold up from three to four months ahead.

Our export business has been very satisfactory as far as we have gone with it. Not being a large mill, we have not, of course, gone into it to such an extent as we would have otherwise. At the present time there is such a demand for paper that there is no difficulty in getting export orders if one should want them, and you can almost get them at your own price.

We believe, for the next few months, that there is going to be as great a scarcity of paper as there was in the year 1916, when it was almost impossible to get one's requirements. The paper mills in this country, as far as I have been able to judge, and I try to keep in close touch with them, are on a stable and profitable basis and are all well managed, and we are looking forward for the paper industry to have a great future.

INCREASED PRODUCTION BY TWO-THIRDS

By Large Manufacturer

The labor situation has been satisfactory except for shortage of men for logging. Conditions surrounding the supply of raw materials and transportation conditions have been satisfactory. We have increased production by two-thirds. In the first half of the year we experienced a dull market but the market has since been keen and there has been a rise in prices. All papers are scarce, especially printing paper, both book and news. Canada has lower cost pulp than Europe and the pulp and paper industry should develop and the grade of its products should improve. The industry is now coming into a stable and profitable basis and has as advantages ample cheap power and wood. New plants embodying the best manufacturing practice will help and the technical side of the industry is important.

PULP AND PAPER EXPORTS EXPAND

By EDWARD BECK

Canadian Pulp and Paper Association, Montreal

A REVIEW of the exports of Canadian pulp and paper for the first nine months of the calendar year 1919 shows a net gain in value of $10,420,441, as compared with the corresponding period of the preceding year. The gain is wholly attributable to paper and paper products, the value of the exports of both chemically prepared and mechanically ground pulp having fallen off from last year. A summary of the returns issued by the Statistical Bureau at Ottawa discloses the following for the period under review:

	1918.	1919.	Gain or Loss.
Paper and mfgs. of	$32,022,265	$42,884,409	$10,862,144
Pulp, Chem. prep.	20,402,118	20,160,294	241,824
Pulp, Mech. ground.	3,624,514	3,424,635	199,879
Totals	$56,048,897	$66,469,338	$10,420,441

Exports of unmanufactured pulpwood for the period amounted to $8,881,810 or a decrease for the latter year of $2,050,750. The falling off in exports of wood is regarded as a favorable factor in the progress of the industry indicating a determination to utilize a greater proportion of its raw materials in home manufacture.

The United States continues to be Canada's best pulp and paper customer, with the United Kingdom, Australia, Japan and New Zealand following in the order named. The following statements give the principal importing countries and the value of their imports of Canadian paper for the first nine months of 1918 and 1919 respectively:

	1918.	1919.
United Kingdom	$796,405	$2,333,953
United States	27,061,043	33,843,474
New Zealand	672,379	429,243
Argentine Republic	201,729	441,150
Australia	2,049,867	2,158,544
British South Africa	190,876	351,678
Chile	16,301	17,138
Newfoundland	126,581	97,517
Peru	3,280	66,553
Brazil	69,601	33,196
China	29,503	42,909
Cuba	10,952	43,174
France	100,676	
India	37,897	26,950
Japan	189,661	172,858

The prospects of the industry for the coming year are regarded as exceptionally good, particularly for the production of printing paper, the demand for which continues greatly to exceed the supply. Many of the existing companies are enlarging their plants to take care of the extra demand and a number of new mills are either projected or are under actual construction. Of newsprint paper alone, Canada is now producing approximately 800,000 tons a year. If all the expansions now under way or projected are carried through to completion the next two years should see this output increased to 1,000,000 tons, with a production of pulp and other grades of paper to correspond.

CANADIAN MILLS TO GET BIG BUSINESS

By Newsprint Manufacturer

A very substantial increase in wages was granted to our employees in May, 1919. No further demands are expected until spring of next year. Raw materials have been somewhat more easily obtainable than during the last two or three years, but, on the whole, the prices have been advancing steadily. There has been some trouble from car shortage, but it has not been acute. The weather has, during the whole year, been favorable to operating conditions in this industry. As far as this particular firm is concerned, production has increased by about 10 per cent. in 1919 over 1918. The market price for newsprint paper has been controlled, both in Canada and in the United States, so that it is difficult to say what the tendency of the market would have been had this control not existed. It is expected that this control will shortly be relinquished and, as there is a great shortage of newsprint paper, both in Canada and in the United States, the market price of this commodity will tend markedly upwards and will bring the selling price more in line with the manufacturing costs than has been the case lately.

The outlook for the next year is, that, whilst production in the industry, as a whole, will be increased, due to some new machines coming into operation, it is wholly improbable that this increase in production will take care of the great demand, unless some measures are taken looking to a curtailment of the consumption of newsprint paper. I regard the pulp and paper industry as now thoroughly established in Canada and, as far as groundwood pulp, sulphite pulp, sulphate pulp, pulp boards and newsprint paper are concerned, I expect to see the Canadian mills in possession of the bulk of this business for this continent within a few years, this being due to the probability of the further development of our natural resources in standing pulpwood.

The Rubber Manufacturing Industry

EXPANSION in the manufacture of automobile tires has probably been the outstanding feature of the rubber industry during the past year. Factory enlargements have been taking place on a large scale which will give a very greatly increased capacity in the near future. So far as staple lines of rubber are concerned, production has been about normal, with increases in some lines and decreases in others. Manufacturing conditions have been fairly good, though there is a certain shortage of help, and cotton, which is an important raw material in tire factories, has been in short supply. Both in the domestic and export fields demand has been strong and manufacturers look for continued activity during the current year.

Washing Crude Rubber

CONSIDERABLE EXPORT BUSINESS OFFERED

By Kaufman Rubber Co., Limited

Labor and material have been expensive and scarce, and general operations consequently difficult. Our production has increased according to our ability to secure labor and raw material. We find that there has been no change in the demand for the kind and quality of our lines except for slightly better quality. Market conditions have been good.

Our home trade has been good, and on this account, we have been unable to consider much export business. Considerable export business has been offered. We believe most Canadian manufacturers can take care of home trade and some export business, which may last until Europe is able to manufacture sufficiently for home consumption. We are rather anxious to know if the lowered rates of exchange will cut off this export business earlier, as our plans for factory enlargement depend somewhat on the possibility of export business continuing for several years.

ANTICIPATES 100 PER CENT. INCREASE IN SALES

By F. E. Partridge

President, The F. E. Partridge Rubber Co., Limited, Guelph

We have no difficulty in securing all the male help we require. We are, however, not so fortunate with female help. We are running continuous advertisements in the local papers, as well as outside points, but at no time are we able to secure more than 50 per cent. of our requirements.

We have been able, up to this writing, to obtain all the raw materials needed to keep our mill operating. There is, however, at the present time a general shortage of long staple cotton, such as used for tire manufacture, with no immediate relief in sight.

We are increasing our production continually and anticipate our sales for 1920 will be 100 per cent. over the year just closed. We have just taken on considerable export business and our prospects are very bright in this direction. We anticipate all the business from overseas that we shall be able to handle and still at the same time do justice to our domestic jobbers. I can see no reason for a falling-off in business in our particular lines for some time to come, and I have no doubt that the rubber manufacturers of this country will take all necessary steps to increase their plants to keep up with the ever-growing demands. We have just completed an extension to our tire plant, which is now in operation and which will increase our production 100 per cent.

I have recently organized "The Northern Rubber Company, Limited," for the purpose of manufacturing a complete line of rubber footwear, which will bear the "Partridge" brand. This building is now completed and the machinery is being installed. Production will begin about February 1, 1920.

CONDITIONS IN THE AUTO TIRE INDUSTRY

By H. C. Lower

General Sales Manager, The Goodyear Tire & Rubber Co. of Canada, Limited, Toronto

Due to the fact that automobile manufacturers could not get sufficient materials for automobile production, there was practically no increase in automobile tires produced during 1919 over 1918 for the original equipment of new automobiles. The volume of automobiles in use took just about one-third more tires than during 1918. The lack of increase in original equipment business was more than offset by the materially increased export business.

I should say that the total automobile tire production of Canada increased at least 40 per cent. in 1919 as compared with 1918. Larger production on exports was prevented only by the necessary delays in getting machinery and equipment from the factories, who for several years before were working largely on war materials. The delays to some extent were also produced by strikes in the steel industry. Aside from this, automobile tire production was very slightly interfered with by labor conditions.

The working conditions for labor on automobile tire production are good. The social service work done by automobile tire manufacturers for employees is apparently more

extensive and practical than that done by most any other industry.

The supply of coal and cotton are the most difficult problems of the day. The coal situation may be only temporary, but the cotton situation will last at least for a year and likely for several years due to the shortage of production.

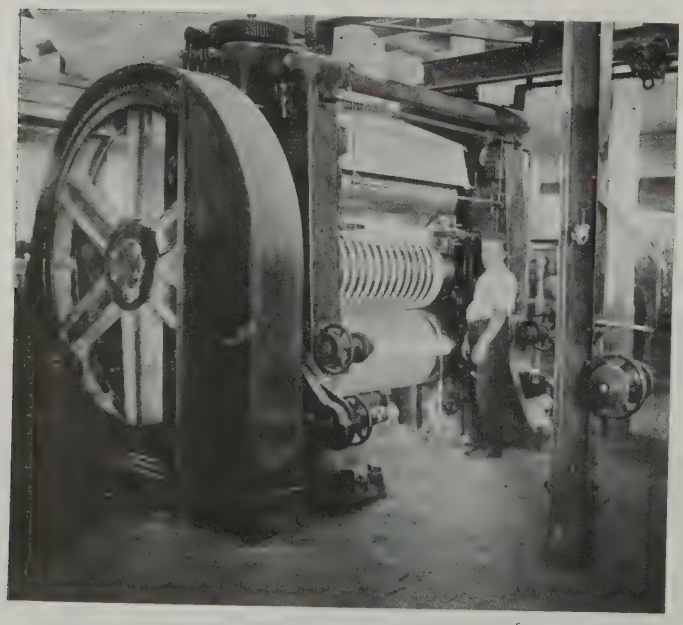
The Sea Island cotton crop of the Southern States was very small on account of the boll weevil. With the exception of the recent growths of cotton in Arizona, this Sea Island cotton produced the best duck for automobile tires. The Egyptian cotton makes a good quality of automobile tires, but there is not nearly enough of it to relieve on the shortage of Sea Island, and on account of strikes by coal miners and longshoremen, the movement of Egyptian cotton which was available, has been delayed.

Many of the newer and smaller automobile tire manufacturers will likely find it impossible to get enough good cotton to produce the quality of automobile tires necessary to their success and growth. There is every indication that for 1920 the demand for well-established brands of automobile tires will equal, if not exceed the supply. This is especially true of the companies who have developed a good demand in the foreign fields. The increased demand for tires in Canada has been quite uniform over all of the provinces.

The Canadian automobile tire production for 1920 should give employment to at least seven or eight thousand people at wages that would comfortably support the average size of family. It is interesting to note in this connection the way the Canadian automobile tire manufacturers have conducted themselves under the protective tariff. There is a tariff of 42½ per cent. on automobile tires. We are paying duties on our factory equipment, coal, cotton, in fact practically everything we use, and still are selling popular sizes of tires to the Canadian public at prices from seven to fifteen per cent. higher than the price of like tires in the United States.

It is this policy that makes it possible for the automobile tire industry of Canada to employ so many people. With these fair prices established by Canadian tire manufacturers and the high tariff on importation, only a very small percentage of the tires used in Canada are imported. Without this combination of conditions, there would be about two or three hundred brands of automobile tires manufactured in the United States receiving a share of the Canadian business, which would make it impossible for any Canadian manufacturer to build a production which would be worth mentioning

COST OF PRODUCTION MUCH INCREASED



By Ontario Manufacturer

We have found that manufacturing conditions in the rubber industry during the past year have been very much disturbed as regards labor. Very persistent attempts to unionize the industry have been made but thus far these attempts have not been very successful. Wages have been increased two or three times during the year without corresponding advance in selling prices of the products. Shorter working hours with increased pay have diminished the per capita output and materially increased cost of production. Raw materials, especially cotton textiles, have been very difficult to obtain and high in price.

In certain lines production during the year has increased over preceding year and in other lines has decreased. Among the latter are included those goods regularly supplied to industries which were affected by the cessation of hostilities and re-adjustment of business conditions.

The general demand has been for goods of high grade rather than simply lowness of price. The buying public are growing to realize that the best goods obtainable in the rubber line are cheapest in the long run. Selling prices have not kept pace with increased cost of manufacture and expense of marketing products.

Opportunities for doing export business have materially increased both because of foreign demand for the goods and easier shipping conditions. The outlook is quite uncertain. Rubber goods such as this Company manufactures are not articles of luxury and the demand for them depends entirely upon general business conditions, modified so far as rubber footwear is concerned by seasonable or unseasonable weather conditions.

Progress of the Shipbuilding Industry

SHIPBUILDING in Canada has been actively prosecuted during the past year, principally in connection with the building of ships for the Canadian Government Merchant Marine. There are still quite a number of these Government ships to be completed and work on them will keep the various shipyards busy for the greater part of the present year. Shipbuilding companies are somewhat doubtful as to what will happen after the Government orders are filled and in some quarters the granting of a subsidy is suggested so that the industry may be stimulated. Most builders agree that some form of Government aid will be necessary if the industry is to continue to prosper.

Operating conditions have been more favorable on the whole than in the previous year. The efficiency of the workmen is increasing and materials have been in better supply. Costs have advanced but still compare quite favorably with costs in Britain and the United States. It is believed that, were it not for the dislocation of exchange, a good many orders for ships would be coming to Canada.

A recent statement from Ottawa shows that Canada has 20,000 shipbuilders and $47,000,000 capital invested in the industry. The expenditure in wages is estimated at $42,000,000 a year.

GOVERNMENT ASSISTANCE IS NECESSARY

By L. McMillan

Supt. Shipbuilding, N. S. Steel & Coal Co., Ltd., New Glasgow

Our experience is that the supply of labor is ample, principally on account of the eastern car plant being closed and the steel company working only about 50 per cent. capacity, although there always seems to be a shortage of skilled labor in certain trades, such as boiler-makers, platers, coppersmiths, and men familiar in general with the equipment on board ship.

We have no difficulty in supply of raw material, except that delivery is sometimes slow. It seems to be harder to get delivery when plants are working half-time than when they are working full capacity. With plate mill at Sydney in operation, we should have no difficulty in getting prompt delivery of plates. We have always had more or less trouble in getting fittings, such as boiler mountings, engine-room auxiliaries, etc., in Canada. This difficulty, of course, is being overcome as the various manufacturers are becoming more familiar with owners and classification society's requirements.

Costs with us have decreased although average wages have increased, and in many cases cost of material and equipment. The reason for this is the more up-to-date methods of construction, such as joggling frames, more yard equipment, better organization and the men becoming more familiar with the work. There is, of course, still room for improvement.

Orders for ships are not as numerous as during the war. We have no enquiries from private ship owners in Canada, but we have sufficient Government work on hand to keep us working until July, 1920.

The future of Canadian shipbuilding in my own opinion, is not bright without assistance in some form from the Government, or unless costs in the Old Country are increased considerably. We cannot expect to obtain Government contracts much longer. Any assistance, therefore, we presume would be in the form of a bonus or subsidy. Government assistance might possibly take the form of financing boats built on speculation in order to keep a shipbuilding organization intact during dull periods, as this is most essential for Canadian shipbuilding; otherwise skilled men drift away when there is little or no work, and it is hard to get them together again. This difficulty is not serious, say, on the Clyde, where there are so many shipyards with skilled labor of every kind available.

We have finished the steamer *Watuka*, 2,400 ton deadweight, for ourselves, and expect to deliver *Canadian Sealer*, 2,800-ton deadweight, for the Canadian Government, this month (December). We have another steamer of the same size for the department nearly ready to launch. She will be delivered early next spring. We expect to lay the keel for another of the same kind this month. This ship is being built on speculation.

CONTRACTS FOR MOST OF YEAR

By P. R. Miller

General Manager, Canadian Vickers Limited, Montreal

The supply of labor is quite ample at the present time for work in hand. Efficiency of labor is as good as it has been in the past, and is gradually improving the longer the shipbuilding industry is kept going in these works. The supply of raw material is, on the whole, good, although the forecasted deliveries in steel and coal are not so good as they used to be. The only other important factor, so far as manufacturing conditions go, is the adverse action of exchange on the procuring of orders from Europe which decidedly mitigates against business. The cost of production has not increased during the year.

We have sufficient contracts in hand for new ships to keep us occupied until November, 1920. So far as our own works are concerned, we anticipate being busy on shipbuilding

for several years to come, provided labor keeps its head and does not boost wages, and also provided labor is prepared to recognize that as the cost of living comes down the cost of wages, which are at present abnormally high, should also come down.

The other factor mentioned above, viz., exchange, is undoubtedly having an adverse effect on the shipbuilding industry in Canada, and it would seem that the only way to overcome this in the meantime would be for the Government to assist the industry by some form of bounty or subsidy.

By the end of this year we will have delivered, during the season of 1919, six 8,350 ton cargo boats to the Canadian Government, one 8,350 ton cargo boat to French owners, and two 4,350 ton cargo boats to the Canadian Government. Of these, seven were launched during the open season of 1919.

We are now laying the keels, and construction has commenced on two 8,350 ton cargo boats for Norwegian owners, and two 8,350 ton cargo boats for the Canadian Government for delivery 1920. These will be followed by two other 8,350 tonners for the Canadian Government and two more cargo steamers for Norway. We have a promising enquiry for a small passenger vessel for foreign interests.

The above work is, of course, distinct from any ship repair work which we do during the open season of navigation on our dry dock, and other contracts which we take from time to time for the construction of boilers and ships' auxiliary machinery for outside parties.

FUTURE DEPENDS ON LABOR COSTS

By E. W. Izard

Yarrows, Limited, Victoria, B.C.

In the early part of 1919 the supply of labor was less than the demand, but now the supply is becoming greater and the consequence is, the efficiency is becoming higher. The increase in the supply of labor has been chiefly brought about by the return of mechanics and others from overseas, and the demand for labor becoming less on account of the decrease in shipbuilding on this coast. The supply of raw materials is improving owing to the removal of war restrictions and better shipping facilities.

The cost of production during the last year has increased slightly, chiefly on account of the increase in wages per the Robertson award, and also on account of the increased cost of lumber and other materials.

Contracts for ships have been less in number and are more difficult to obtain on account of the present keen competition which prevails.

The future of the Canadian shipbuilding industry depends chiefly on the cost of labor, which is at present too high for competition with Europe. On the west coast of Canada the cost of labor is higher than in the east, and the working hours shorter, and that, together with the cost hauling the material from the east or U.S.A., puts the west at a decided disadvantage when competing with Eastern Canada.

During the early part of the year we completed one steel stern-wheel steamer, 165 ft. x 35 ft. x 7 ft., and shipped same to India for re-erection, and we have just lately completed a steel ferry 90 ft. x 27 ft. x 5 ft. for service on the River Fraser.

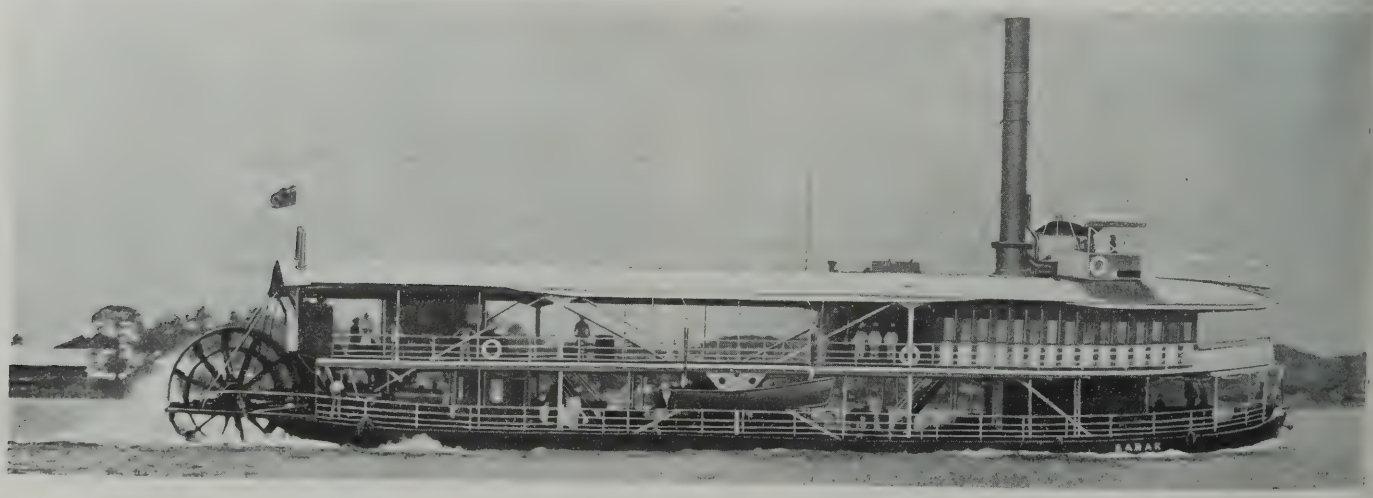
COSTS COMPARE QUITE FAVORABLY

By L. Dahlgren

General Manager, Dominion Shipbuilding Co., Ltd., Toronto

The outlook for shipbuilding in Canada is fairly bright for the next two or three years, providing labor and material will get into a settled condition, labor especially. In comparing costs between the United States and Canada, I find that we compare very favorably; also in comparison between Great Britain and Canada, that we are nearly at a par as to costs. In view of the fact that British shipbuilders are filled up with contracts for some time to come, I think the foreign buyer will look to Canada before going to the United States. However, I do not anticipate many foreign orders being placed until the present rate of exchange gets better, which will probably not be for some little time.

I think in order to encourage shipbuilding in Canada, that the Government should give a bounty of say from $5 to $15 per ton deadweight, and this to continue until we get our labor as efficient as in Great Britain, which will probably take three or four years. Also the carrying out of the proposed deep waterways would be a great boon, especially for the lake shipbuilders. Everything considered, I look for the time to come when Canada, through her natural resources, etc., will be in a better position to build ships than any other country.



FUTURE NOT BRIGHT AT MOMENT

By John S. Leith

General Manager, Collingwood Shipbuilding Co., Limited

We have no trouble at the present time regarding the supply of labor as we are not working nearly up to capacity. Regarding efficiency it will take years of steady employment to bring this up to the standard obtained in shipyards in Great Britain which are our worst competitors at the present time. At the moment we are not having any trouble regard-

River Steamer for India: Built at Victoria, B.C., by Yarrows, Limited

Conditions Among Stove Manufacturers

IN the stove manufacturing industry, the first half of 1919 was rather quiet, with demand slack. In the latter half of the year, demand developed rapidly and manufactures were fully occupied in meeting it. Some difficulty was experienced in getting help and there was also trouble over raw materials with the result that output was not increased to any great extent. As with other lines of goods, so with stoves the demand has been for the more expensive makes. Export trade has not been a factor though there have been enquiries which may lead to the establishment of connections with foreign markets.

SPRING BUSINESS TO BE BETTER THAN USUAL

By E. H. Gurney

The Gurney Foundry Co., Limited, Toronto

All types of labor have been scarce, in view of demand. There have been ample supplies of raw materials until this fall. The stove industry has, of course, felt both the steel and the coal strike. I would think that the general scale of operations has been lower than demand called for, due to the labor situation. In my opinion, production this year has been slightly better than the production of the previous year, but not adequate to meet the demand.

I do not consider that there has been any important change in tendency this last year with respect to kind and quality of goods in demand. The trend of prices, due to rising costs, has been up. As far as marketing conditions are concerned, the stove manufacturers, like all other manufacturers, are not anxious to make commitments far in advance; consequently conditions under which orders may be booked have been under some limitation.

Export business is not an important factor at all with any of the Canadian stove manufacturers. The principal reason is because the type of stove made in the United States and Canada is different entirely from that sold in most foreign countries. Due to the fact that export orders have not been in sufficient quantity to justify the expense, and due to the fact that the home market has pretty much taken the capacity of the manufacturers, it has not been feasible to accept such business as has offered.

In the stove business the important demand comes in the fall. I would think that spring business will be better than usual, and I can have no opinion with respect to conditions as far ahead as next fall.

STOVE PRICES ARE CONSERVATIVE

By W. S. Fisher

The Enterprise Foundry Company, Sackville, N.B.

Manufacturing conditions as regards labor have been unsatisfactory, especially during the past two or three years. As to raw materials, they have been pretty scarce and prices anywhere from one to four hundred per cent. above the former. The result is that our general operations have been greatly hampered, and, while the selling prices have advanced a good deal, they have not increased in proportion to the increased cost brought about as above.

Production for the year in tonnage is very little more than a year ago. The first six months' trade languished, as everyone expected lower prices. After that it came with a rush, and during the latter period we were at times unable to fill our orders. For a time during the war the tendency seemed to be towards the purchase of cheaper goods, but during the past season the demand for the very best goods has been much more marked and at present the demand continues along this line.

Export business in stoves has never been a factor of consequence in Canada, as up to the time of the war it was impossible for us to compete with the manufacturers in the United Kingdom and U.S.A. For the past year or two inquiries have been coming to Canada from other parts of the empire, and some business (though yet small), has developed. What the final result will be we are unable to judge at present, and will not until conditions become normal once more. Meantime, as in all other lines of manufacture, we feel that every effort should be made to capture any foreign business that it is possible to secure, as by and by, when the next depression comes, we will need it.

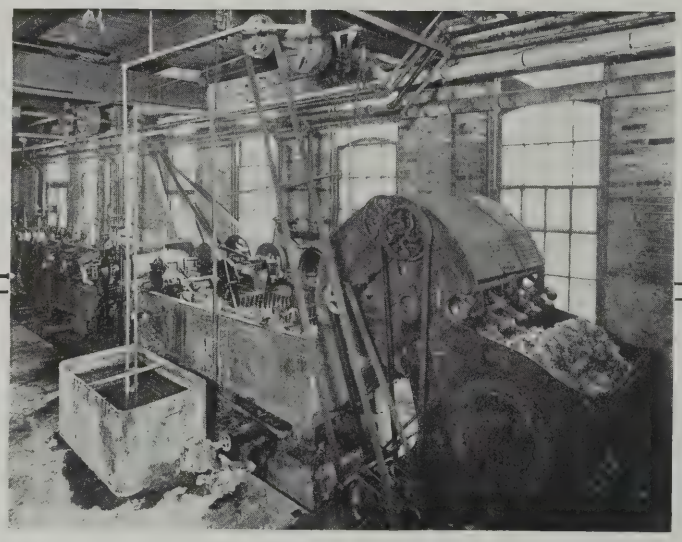
As to the general outlook, we are under the impression that the manufacturing facilities in Canada in the stove line are fully adequate to meet the normal demand. Later, if immigration flows into this country freely, there may then be opportunity for the enlargement of the present facilities.

In our opinion, the stove manufacturers have been ultra conservative in advancing prices, having delayed making advances that should have been put into effect long before they were, and to-day the new total advance made by the stove manufacturers in Canada is not in proportion to the increased cost, and it is a curious thing that there are many instances of stoves made from American patterns being sold for less money in Canada than goods from identically the same patterns made in the United States, where prices in these lines have been advanced to a much greater extent.

PUBLIC WANT LOT OF NICKEL TRIMMING

By Ontario Manufacturer

We found that at the beginning of the year there seemed to be a plentiful supply of labor and there was no difficulty in getting any material that we wanted. The general public, however, was very backward about buying, feeling sure that a reduction in prices was not far off. This condition continued until the early summer, by which time higher labor costs and advancing costs in raw materials made higher instead of lower prices necessary. The public became convinced that higher prices would prevail and began to buy freely, with the result that our output increased over what it had been a year ago, but so far as we are concerned does not reach in units the number we made in pre-war years. Higher costs have more or less forced the sale of medium-priced lines, but even on these the general public wants a lot of nickel trimming and will not be satisfied with the planer type of ranges which are just as efficient and could be sold for much lower prices.



Another development has been the increased use of porcelain enamel on ranges, both cast-iron and steel, and there seems to be a distinct tendency towards use of more enamel on ranges during the next year.

We are looking forward to good stove business during 1920. We are confident that manufacturing facilities in

(*Continued on page* 244)

The Textile and Associated Industries

EMBRACED under the general head of textile industries are so many different undertakings that it is difficult to summarize conditions in them all within the limits of a single paragraph. A review of the reports published on this and the following pages would indicate that activity has been general; that labor scarcity and a lack of raw materials have been in evidence, and that capacity has been considerably extended. The market has been strong, with popular demand tending towards goods of quality and high price. Export trade has been done to a certain extent, though domestic demand, particularly in the last half of the year, has become so pressing that manufacturers in many instances have given up export opportunities. Through most of the reports there runs a note of optimism, and the opinion is generally expressed that the textile industry in Canada is now firmly established. The various divisions of the industry will be found classified under such heads as knit goods, carpets, clothing, shirts and collars, etc.

GENERAL REVIEW OF COTTON INDUSTRY

By F. G. Daniel

General Manager, Dominion Textile Company, Limited

The year now closing has been for the cotton industry in Canada one of great activity and varied difficulties. Owing to the constantly rising costs of materials and commodities of every description, living costs, until recently, tended to increase monthly, causing a very large amount of labor unrest, accompanied by demands for increase in wages, reduction of working hours, and numerous other requests, both reasonable and otherwise. It seemed impossible for a manufacturer, notwithstanding his desire to have his wage-roll keep pace with his employees' needs, to be entirely free from labor troubles, which was the cause throughout the year, largely, for reduced efficiency and production. I feel, however, that, in this respect, we are gradually reaching a more sane basis, as is evidenced by the tendency of the operatives to settle down more steadily to work.

During the four and a half years of war, consumption of raw cotton and cotton goods for army purposes was enormous, and civilian requirements received secondary consideration, with the result that there is a world-wide shortage of cotton goods. Raw cotton, especially, has been very seriously affected, partially for the reason mentioned, and largely by five crop failures in succession. From an average pre-war price of, approximately, 12c. lb., cotton has risen to, approximately, 48c. lb., delivered at the mills, exclusive of war tax and exchange. Put in another form, the cost of the cleaned cotton in a pound of finished cotton goods which, in 1914, was 14c., is to-day 65c.

Until recently, the output in the cotton mills in Canada was slightly lower than a year ago, but I am hopefully looking forward to an improvement in the output during the next few months.

Owing to the inability of manufacturers to secure machinery, there has been very little increase in cotton mill capacity in Canada during the past year—I think probably 3 per cent. would be the maximum. This country had in operation in 1914, approximately one million spindles, with accompanying looms, etc., employing 22,000 operatives, with an output valued at, approximately, $27,000,000. This year there were in operation about 1,138,000 spindles, giving direct employment to 24,000 operatives, and a production valued at about $70,000,000. A fair estimate of machinery on order for the various companies in Canada would represent an increase of, approximately, 20 per cent. in spindleage and looms, and practically all this machinery should be producing before the end of 1920.

The experience of the past few years has given the cotton manufacturers of Canada an opportunity to demonstrate *the value of the industry to the country*, and that their cloths and yarns have not been surpassed, either in quality or finish, by those of any other country. Owing to the fact that this country is to-day, I believe, the lowest-priced drygoods market in the world, the demand for cotton goods of every description for home consumption has been without parallel. The export business is practically *nil*, as the needs of the home market are greater than the productive capacity.

I have every confidence that the trade situation in Canada for the next few years will be, at least, as good as that of any other country in the world, provided the wave of extravagance, now one of the world's most serious problems, can be checked, and a strong curb placed on the importation of non-essential articles. There is great need for the manufacture, within the country, of many lines of materials, supplies, etc., at present imported, as we cannot much longer continue the extension of credits to Europe whilst paying a heavy toll in the form of depreciated exchange upon such commodities as we have to import from the United States.

SCARCITY OF COTTON AFFECTS INDUSTRY

By R. G. Tolmie

Canadian Cottons Limited, Montreal

Our mills have suffered more or less during the past year from a shortage of labor, although conditions in this respect have shown a little improvement during the past month or so, as is usual with the approach of winter. As regards raw

aterials, our interests naturally are chiefly in raw cotton. nfortunately there is a great scarcity of this material this eason owing to the short crop, and also the increased de- ands from Great Britain and Europe since the war is over. he price has, in consequence, advanced steadily.

Our production at the present time is very slightly in xcess of what it was a year ago. The constant advance in rices during the past two or three years has brought about somewhat greater demand for the lower lines of goods hich we make, but generally speaking, there has not been very material change in the range of cloths which we have een making for some years.

We do not interest ourselves in normal times in export usiness. The only exporting which we are doing at the resent time is in some grey cottons for Roumania. The emands of the home trade are such that we are not looking or further developments in the export line.

Owing to the general world shortage in all cotton goods, s in commodities of nearly every description, there is very kelihood in our opinion that the demand will be in excess f the supply for the next few years.

NEVER SO FAVORABLE A TIME

By W. Tinker

Secretary, Canadian Woollens Limited, Peterborough

Our experience as regards labor supply during the past ear has been very satisfactory. We have increased wages o same extent, and have had no labor troubles of any kind. Ve believe the same may be said of the whole woollen in- ustry in Canada. Raw materials have been at times very ifficult to obtain. Quite a large proportion of this comes rom Great Britain, and the coal strikes in Yorkshire, dock trike at Liverpool, and the railway strike in Great Britain, ad a great effect on supplies of raw material, but shipments ave been coming forward with regularity from U.S.A., South merica and Australia, which have enabled us to keep up our roduction. The prices of raw material have been very high. n fact, at this time almost any price may be obtained for ool tops for immediate delivery. General operations on the hole have been satisfactory. We have had many troubles, f course, but all have been overcome.

Production has increased to a slight extent owing to the fficiency on the part of the executive, who have given very areful attention to this matter. The present output is about 0 per cent. higher than last year.

Goods in demand have shown a marked tendency towards better quality, at of course, higher prices. The latter were ever so high as they are at present, and the prospects for spring and fall for 1920 all tend towards still higher prices for all manufactured articles. Marketing conditions have been greatly in favor of the seller. In fact, no effort is needed to dispose of anything in the woollen trade, the fundamental feature being delivery.

The export trade is again showing up a little, but prices for this are not as large as the home market, with the result that many mills are not taking any export business at present. Our own opinion is that for the next few years it will not develop to a great extent, owing to the fact that the home market is starving for goods and must be supplied.

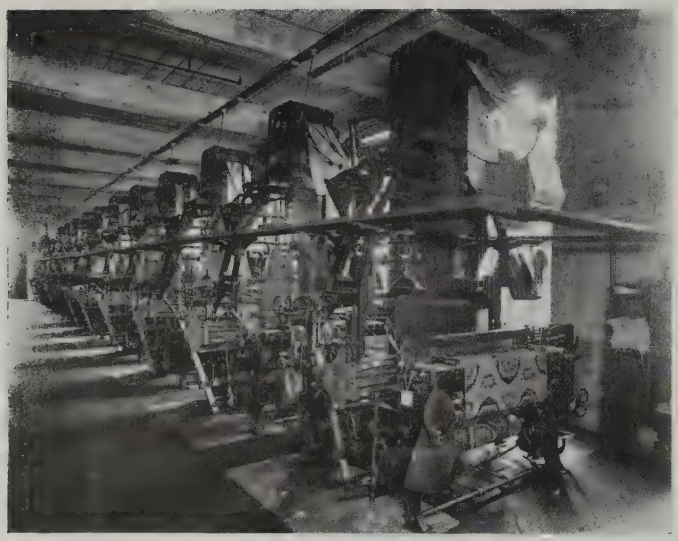
The outlook for the future, in our opinion, is extremely bright. We do not think there ever was such a favorable time for manufacturers in the history of the Dominion. Wages and other manufacturing costs in Great Britain are extremely high and this, we believe, will have the effect of keeping the British manufacturers out of this market to a very great extent. The demand for woollen goods in Canada is likely to keep up, and the manufacturing facilities at present are not sufficient to keep pace with the demand. We, ourselves, are planning, in fact we have the machinery in course of erection, which will increase our output 50 per cent.

O. Butler, *Vice-President and General Manager, Canadian Connecticut Cotton Mills Co., Sherbrooke.*—"We find that production per machine per hour per operative has decreased. Our entire product goes to tire makers in Canada. We believe that the demand is likely to increase for our particular fabric, and we have plans for the enlargement of our factory. This will take place in 1920, when our plant in Sherbrooke will be doubled in size."

OUTLOOK FOR SOME MONTHS IS GOOD

By C. T. Grantham

General Manager, Empire Cotton Mills, Limited, Welland



We have had no serious difficulty during the year with labor. We have been able to secure an ample supply of raw material, and our general operations have been successful. It is impossible to increase our production, as we are now running ten hours per day, and over 40 per cent. of the capacity running nights. This is about the same condition as existed a year ago.

There have been no important changes as regards the kind and quality of goods in demand or in marketing conditions, but prices are higher than they have ever been since the Civil War. We know nothing about the exporting business, as we have not yet had any goods to spare for this purpose, except one case where we sold a large quantity

through the Canadian Trade Commission to the Roumanian Government.

The outlook for at least some months ahead is very good, and we believe the demand will keep up until midsummer at least. We are of the opinion that manufacturing facilities will not be adequate to keep pace with the demand during that period. Plans for factory enlargement have been considered, but nothing definite decided upon.

A Quebec Manufacturer.—"Our experience of manufacturing conditions as regards labor, raw material and general operations has been the most difficult we have ever experienced, and at the present moment shows no signs of improvement. Raw cotton conditions have never been so bad. Our production this year and last is the same, with the exception of loss last year due to influenza. The demand for our goods has continued excellently. We are not posted in lines other than those manufactured by us. We have never exported, with exception of a small lot of goods to Roumania. We believe the demand will continue."

UNABLE TO INCREASE PRODUCTION

By Ontario Manufacturer

During the year just closed our output has been somewhat restricted, owing to scarcity of skilled labor, but we are gradually getting back to normal. The hours of labor were reduced from 55 hours per week to fifty hours. This had an immediate effect upon production, which dropped almost in proportion, ten per cent. This to some extent may be overcome by additional machinery, but at the present time we have the decreased output. We have not been able to increase our production and have been running at the utmost capacity for several years.

We have continued to make our regular lines and have found a steady demand for all we could produce. Having had a steady demand for all goods we could manufacture, in the home market, we have not offered any goods for sale for export. A number of mills, however, are doing an export business.

The business outlook for the year 1920 is very good. There is every prospect of there being a ready market for the products of Canadian woollen mills. Fine wools (merinos) have reached an extraordinary figure and have steadily risen for the last six months. A recent circular received from London, England, describes them as having gone to dizzy heights. It is generally recognized that there must be a drop in prices for these fine qualities, but the difficulty is to know when it will occur. During the past week competition has been very keen for them at top figures.

CONDITIONS IN THE LINEN INDUSTRY

By Wm. Berry

General Superintendent, Dominion Linens, Limited, Guelph

We have been unable to secure enough skilled help to keep our plant running up to full capacity. However, we have no complaint to make as to supply of raw material or transportation. General conditions in our works have been satisfactory, and in spite of handicap previously mentioned, we have been able to increase our output during the past year.

Referring to market conditions, the demand for our goods has been far in excess of our possible output. On account of the steadily advancing markets for raw material, prices of manufactured products have been advanced very materially during the past year.

From present appearances, the demand will be maintained, and until there is a decided drop in raw materials, markets and a general unsettlement in trade conditions, we think the present demand for our goods will be maintained.

It is not our intention to make any further enlargement. Additional equipment will be bought to round out the production of the different plants as this demand may develop.

CONSTANT DEMAND FOR CANADIAN WOOLLENS

By R. Thomson, Jr.

Hawthorn Mills, Limited, Carleton Place

Our experience of manufacturing conditions as regards labor has been fairly good. Our raw materials have been extremely high priced, but reasonably freely obtainable. Our labor conditions are probably more favorable in a small town than they would be in larger centres. In the smaller towns the labor is more settled.

Our production was much reduced in the early months of the year owing to the armistice and the extremely unsettled state of mind of the purchasers of goods. However, as woollen manufacturers, we were able early in the year to obtain fairly large-sized orders for woollen goods of varying classes from Roumania and Belgium, and the credits for these being guaranteed by the Canadian Government, re-

lieved the situation very much indeed, and kept our employees in employment, whereas otherwise they would have been added to the large number of unemployed and unrestful people in the country. Later in the year people regained confidence and purchased more freely, with the result that the product for 1919 over all in the woollen manufacturing in Canada must have very greatly increased. Our own business here has overcome the lessened production of the early months of the year, and will show a fair increase over all for the year.

The tendency as regards the kind and quality of goods in demand is decidedly towards better goods and higher prices. So much is this so, not only in Canada, but generally speaking the world over, that fine wools have reached the pinnacle of high prices, while the coarse, low-grade wools are comparatively cheap at the present. To illustrate, there are wools on the market to-day on a clean basis that can be bought as low as 70c. per pound, while fine merino wools on a scoured basis are worth $2.90 to $3 per pound. Marketing conditions are good, from the manufacturers' point of view, owing to the great demand—the demand far exceeding the supply.

There never was any export business in woollen manufacturing worth while being considered good business, from Canada, until the war. Since the armistice was signed, and for the reconstruction of foreign countries, Canada has sold to date ten million dollars' worth of woollens for export, and during this year from 50 to 65 per cent. of these goods have been made and delivered.

We size up the outlook for the future to be a constant demand for Canadian goods for some considerable period, inasmuch as the Canadian mills have increased their facilities and bettered their conditions generally during the war time and also during the year 1919. Moreover, the Canadian buyer has been forced, owing to the shortage of woollens from Britain, to buy largely at home, and to supplement that buying by purchases in the United States. Canadian woollens have at last come into their own, and the writer believes that for those mills who make really first-class goods both in woven fabrics as well as underwear and hosiery, that they may look forward with great confidence to be, for years to come, constantly well engaged. Having stated previously that the demand is greater than the supply, naturally leads to the increasing of facilities, and as far as the procurement of textile machinery will allow, mills have increased both in buildings and equipment and are continuing to do so, to a very great extent. Our own plans are for further increase, as far as may safely be done within the compass of our environment. We have added very considerable machinery and are making much higher classed goods now than at any previous time.

Knit Goods

STRONG LEANING TOWARDS QUALITY GOODS

By K. C. Turnbull
Managing Director, R. M. Ballantyne Limited, Stratford

While there has been a considerable shortage of labor, and while we could have employed a good many more hands than we have employed during the past year, the situation in this regard has not been nearly as serious as the raw material situation. We have had very great difficulty in getting anything like an adequate supply of yarns for our purposes, and we have had to sacrifice a good deal of business because of the lack of raw material. The fact that we could not get all the raw material we required minimized to some extent the fact that we could not add to our plant in the way of machinery, it being a very difficult matter to get delivery of knitting machines of the class we operate. In no other respect have we had very great difficulties.

Production has increased, being a very considerable amount in excess of the output of a year ago. We refer of course to the actual units produced rather than to increase in the dollars of output, which naturally should show an increase owing to advanced prices.

The tendency as regards the kind and quality of goods in demand is showing a very strong leaning towards the higher-priced goods. The demand for lower-priced articles does not seem to exist. Our trade has run almost entirely on the better class of goods at higher prices. Export business has been offered us, but we have not been in a position to undertake anything for export and can say nothing as to how this trade is developing.

From the business we have already booked for next year, it looks as though the demand will be greater than it has been during the past year, and we would say that the manufacturing facilities will have great difficulty in coping with this demand. We refer, of course, only to the lines of goods we manufacture in our own factory. We have already enlarged our plant, have added 100 per cent. to the manufacturing floor space, and we expect to be fully employed for the next twelve months at least.

DEMAND GOOD FOR ANOTHER YEAR

By J. R. Moodie
J. R. Moodie & Son, Limited, Hamilton

Manufacturing conditions at the present time are unsettled. The labor situation is improved to a small extent since the war ended but there is difficulty in getting raw material, and this of course means that our production is limited. Notwithstanding, production at the present time compares favorably with that of a year ago.

As to market conditions, we find a tendency toward the buying of a better class of ladies' and children's underwear. The demand for a cheaper line is dropping off to quite a great extent. Export business is being done on a very limited basis.

We have no plans in the way of factory extension. We believe that owing to the shortage of knitted underwear, that the demand for the same will continue to exist for one year if not two years, from the present time.

SUPPLIES ARE DIFFICULT TO OBTAIN

By J. A. Burns
General Manager, Monarch Knitting Co., Ltd., Dunnville

Our experience during the year in regard to labor and raw materials has been that female labor is particularly scarce, and it is impossible to get sufficient female employees to manufacture sufficient goods to supply the requirements of the trade. The situation on raw materials is very serious. Prices have greatly advanced, and supplies are difficult to obtain. This applies particularly to mercerized cotton yarns, and wool tops. Qualities of 50's and finer can only be shipped from England on obtaining license from the British Government, and licenses are only granted for a small percentage of quantity applied for. In some instances only 20 per cent. of quantity applied for is being allowed.

Production has not increased. In fact it has decreased as compared with a year ago. This is caused not only by scarcity of labor, but inefficiency of help. Employees are earning big wages, but a large percentage do not put in full time. We find the heaviest demand on the better lines of goods. There is a brisker demand, particularly for higher-priced lines. Export business during the present year amounted to about one-fifth of our output. We do not antici-

pate, however, being able to take on as large an export business for 1920, unless orders are received at an early date.

It appears to us that the capacity of all mills will be taxed to fill the requirements for domestic and export business. If female labor could be brought to Canada from England, Ireland or Scotland, we believe there is sufficient machinery to take care of all business that could be secured. We are increasing the output of our St. Catharines hosiery factory by 50 per cent.

LABOR SCARCITY HAS BEEN DRAWBACK

By C. Turnbull

The C. Turnbull Co. of Galt, Limited, Galt

Our experience in regard to labor is that labor is difficult to get. We are very short on female help, and cannot get production proportionate to lesser number of hours we have been working since the beginning of the year. We have had no difficulty in getting raw material. Our production has not been increased and output will be from 10 to 15 per cent. less than a year ago.

The better quality of goods have been more in demand than the cheaper, and we have had no trouble in getting fair prices. Marketing conditions have been fairly good. Export business has not become a factor to any extent and is developing very slowly.

We think that the demand will keep up at least for another year. We have manufacturing facilities to meet larger demand, if we can overcome difficulty in procuring help. We have no plans for factory enlargement, as there is no inducement to enlarge with labor scarcity such as we experience and have experienced all year.

MANY ENQUIRIES FROM FOREIGN COUNTRIES

By A. F. Zimmerman

Vice-President, Zimmerman-Reliance, Limited, Hamilton

We find that production has been seriously curtailed owing to the shortage of labor; the class of labor we are employing to-day not being as efficient or industrious as heretofore. Up to the present we have been able to secure enough raw material to keep our plants running, but we are now facing a shortage owing to complicated conditions.

All classes of knit goods are in demand at the present time. Ruling prices are naturally considerably higher and likely to go higher unless something occurs to halt the commodity markets all over the world. We are receiving a great number of enquiries from our agents in foreign countries, and this business could be very largely extended were we in a position to produce the goods in addition to taking care of our domestic market. Unfortunately we cannot do this, and have to consequently turn down the foreign trade.

We cannot help but feel that the demand is likely to continue for some considerable time owing to the world shortage of goods. When this shortage has been made up, we believe there will be a serious depression in the textile industry. We have no plans at the present time for factory enlargement, although we might say that we built a third floor over the whole of our plant last summer, which will take care of our needs for some time to come.

DEMAND TO CONTINUE THROUGH 1920

By H. G. Smith

Secretary-Treasurer, Mercury Mills Limited, Hamilton

In the matter of skilled labor supply, manufacturing conditions are somewhat better than during the war period, but the improvement is very slight. As regards raw materials, if anything these conditions are worse than during the war. Machinery is higher priced than ever before, and in some lines deliveries are from one to two years away. We do not believe production has increased to any extent, at least not worth mentioning. Possibly the output is about the same as a year ago.

As regards underwear, the tendencies as to kind and quality now in demand are hardly as pronounced as in the case of hosiery, but generally speaking, the better goods are wanted. Prices are fully as high as at any time in the past few years, and unquestionably will be higher. Cotton is to-day at a terrific price, and fine wools especially have been going upward at an alarming rate. The demand for finished goods is brisk.

There is a substantial export demand, and if Canadian manufacturers could get enough labor a very big business could be done. In our opinion some of the export business could be made more or less permanent if manufacturers will give careful attention to the requirements of their foreign customers.

So far as we can see, the demand will continue throughout 1920, and we do not believe in a general sense that production in underwear will be greatly increased. So far as we ourselves are concerned, we have just about completed a substantial enlargement to our factory, and we expect to be moving machinery into this new extension by the end of the present week.

DEMAND HAS BEEN FOR BEST GOODS

By I. Bonner

General Manager, Penmans Limited, Paris

During the year 1919, the knit goods trade has passed through most unusual conditions; labor has been scarce—particularly female—and also those skilled in the trade. Raw materials have seen some tremendous advances as, for intance, mercerized yards, advancing from $1.10 per pound for a 2/40's count to $2.80; cashmere yarns from $2.90 per pound for 2/40's count to $4., and so on through the whole list of materials such as raw cotton, wool top, noils, etc.

The great question has been to have selling prices keep pace with these advances, and know when one is covered. Furthermore, it has necessitated carrying large stocks, as one could never know whether contracts, as regards delivery, would be carried out by his suppliers, and in many cases where such supplies arrived late, they were, if from the U.S., subject to heavy exchange rates.

Production of knitted goods throughout the country has undoubtedly increased through new enterprises starting and established firms extending, but production per operative is, we believe, smaller than in pre-war days. Compared with a year ago, production, I think, would be about the same per operative.

The outlook for the trade is very difficult to foresee, as many factors enter into the result. It looks, however, as though local and foreign trade will be good just so long as foreign countries are unable to come back to normal production and costs, and, in equal proportion, to their ability to produce and sell abroad, will our business hold good. Many think, however, that the changed conditions as regards wages abroad will be a factor in favor of Canada.

CLOTHING VALUES TREMENDOUSLY INFLATED

By George C. Coppley

Copley, Noyes & Randall, Limited, Hamilton

I would not care to essay a forecast of the clothing business at the present time. Values are so tremendously inflated in Great Britain, the United States and our own market that it seems that a reduction in prices is necessary to put the industry upon a sound and stable basis. In my opinion the governing condition is the law of demand and supply. Consumers are able and willing to pay the higher prices, and while this condition prevails, manufacturers yield reluctantly to the exorbitant demands of labor to keep their machinery going, booked months ahead. A reduced demand seems to me the only road to a deflation in values.

Canada's Industrial Expansion

A Record of Progress

Have Erected Warehouse

McArthur, Irwin, Limited, Montreal, have recently Completed the Erection of a Large Warehouse

Owing to the heavy demand for their products which consist of paints, colors, varnishes, dyestuffs, chemicals, etc., and to the fact that they are compelled to operate their plant at full capacity all the time, McArthur, Irwin, Limited, Montreal, have found it necessary to add an extensive warehouse to their factory at Outremont. The company report that their white lead scored an immediate success after it was placed upon the market and they anticipate that it will not be long before they will be compelled to enlarge the capacity of their plant.

Rails for Roumania

Dominion Steel Corporation Have Received Large Order for Rails from the Roumanian Government

An interesting export order recently received in Canada, is one that has been obtained by the Dominion Steel Corporation from the Government of Roumania. It is for 7,500 tons of rails of a "T" pattern of special section, weighing approximately 67 pounds to the yard. The rail differs very little from the usual A.S.C.E., or other American standard patterns. It is expected that the rolling of these rails will be started in January. As soon as the rolls are ready the rail mill will be started on single shift, and this means that from three to four weeks' work is now in sight for this department.

Branch Factory at Vancouver

Canadian Carbonate Co., Limited, are Adding to Their String of Plants Across Canada

The Canadian Carbonate Co., Limited, who recently started the erection of a branch plant in Hamilton, Ontario, are now about to erect a plant in Vancouver. They have secured property 100 x 120 feet at the corner of 11th Avenue and Yew Street, and will spend about $100,000 in the erection of this plant. The establishment of this branch in British Columbia has been rendered necessary through the increasing demand for the company's product in British Columbia, and also on account of export opportunities. The plant will probably be ready for operation by July 1st. For the present, Alberta business will be taken care of by this branch.

Enlarging Their Factory

Firth Brothers, Limited, Hamilton, will Add Two Storeys to Their Present Factory Building

Announcement is made by Firth Brothers, Limited, Hamilton, manufacturers of clothing, that owing to the immediate need for more space they have decided to put an additional two storeys on to their present factory building. The building was originally built so that these two storeys could be added at any time.

The company have also purchased property immediately in the rear of their present premises with a frontage on Hughson Street of about 150 feet. On this property they propose eventually to erect a modern clothing factory possibly four storeys in height. However, they have not yet decided definitely when they will proceed with this latter development.

Building New Foundry

Dominion Steel Products Company, Limited, of Brantford, Installing 16-Ton Air Furnace

Construction work has been started by the Dominion Steel Products Co., Limited, of Brantford, on the erection of a new foundry building, 100 x 160 feet. This foundry will be equipped with two cupolas; also with a 16-ton capacity air furnace. The latter is being installed for the casting of heavy steel mill rolls, also rolls for rubber-working machinery. It is expected by the management that this foundry, which will have a capacity of about 15,000 tons of castings per annum, will be in operation in about eight weeks.

The company have also purchased, and will shortly install an electric furnace for the smelting of all types of non-ferrous alloys, with a capacity of about 300 tons of castings per annum.

Erected Five New Buildings

Jackson Machines, Limited, Saskatoon, have recently Completed Large Factory Extension

During the past season the plant of Jackson Machines, Limited, manufacturers of sheaf loaders and carriers and threshers, Saskatoon, was enlarged by the addition of five new buildings. These comprised a machine shop, 32 x 108 feet; a wood shop, 56 x 64 feet; a stock room, 56 x 56 feet; and two erecting rooms, 40 x 80 and 72 x 90 feet, respectively. The company are engaged in the manufacture of the Jackson Combination Sheaf Loader and Carrier, and the Jackson Low-down Thresher, two machines which are meeting with much favor among the farmers in Western Canada. In addition to handling their own product, they are also distributors for the Eagle Tractor and the Happy Farmer Tractor, machines manufactured in the United States. Last season the company shipped 75 carloads of its own product and this year they have every prospect for a very largely increased business.

Company Contemplates Addition

Walter Blue & Co., Limited, of Sherbrooke, may Erect Four-Storey Addition to Present Plant

The report that Walter Blue & Co., Limited, manufacturers of clothing, Sherbrooke, Que., were about to extend their plant, is characterized by the management as just a little premature. As yet the directors have not arrived at any definite decision. The matter has, however, been up for discussion and there is the possibility of their putting up a four-storey addition, 60 x 120 feet, to their present plant.

About six months ago, Walter Blue & Co., Limited, purchased the Coaticook Woollen Mills at Coaticook, Quebec, and have during the last six months enlarged and improved them. At the present time, they are manufacturing at these mills a

Shoe Machinery Plant Being Enlarged

View Showing Progress of Construction on Addition, 60x120 feet, which is under Construction by the United Shoe Machinery Co., of Canada, Limited, Montreal

high-grade of pure wool homespun which is being used in their clothing factory, the entire output being utilized. They claim that they are the only clothing manufacturers in Canada operating a woollen mill in conjunction with their clothing business.

Making Important Addition

United Shoe Machinery Co., of Canada, Limited, are Adding to Their Present Buildings at Montreal

The United Shoe Machinery Co., of Canada, Limited, Montreal, are at present erecting a large addition to their present plant. The building is 120 x 60 feet in size, four storeys high, of steel frame and brick construction. It will be heated with forced hot water system, and will be used for the manufacture of shoe machinery. They expect to be ready to occupy the building about the 1st of April.

Welland Plant Acquired

Mead-Morrison Manufacturing Co., of East Boston, Buy Out M. Beatty & Son, Limited

The M. Beatty & Sons, Limited, Welland, manufacturers of dredges, hoisting engines and other contractors' machinery, have been bought out by the Mead-Morrison Manufacturing Co. of East Boston, Mass. It is hardly likely that the plant will be operated by the Boston company direct. A separate Canadian company will be formed for the purpose, details of which will be announced later.

An Expanding Industry

Magnet Metal and Foundry Co., Limited, Winnipeg, Adopt Sound Development Policy

An increase in their capital of $50,000 will enable the Magnet Metal & Foundry Co., Limited, who were organized in Winnipeg in 1918, to make improvements to their plant and extend the field of their operations. The company own a 2½ acre site in Elmwood, with a 600 foot spur track. Their plant consists of foundry, blacksmith shop, machine and assembly and pattern shop in solid brick, and office and storage buildings in metal clad, laid out to produce economically their lines of farmers' hardware and light implements. They have secured exclusive Canadian rights on several implements and tools, which ensures them against foreign competition. They also make a complete line of farmers' hardware, and by adopting a policy of selecting those lines which have their principal material component cast iron, they can translate the waste material of the western farm into finished goods with a shorter round haul than their eastern or southern competitors. They manufacture a limited number of lines and sell to the wholesale trade only.

The president of the company is Hugh R. Eade, and associated with him on the directorate are A. E. Donovan, manager Creshman Motor Works of Canada, Limited; W. R. Ingram, Swift Canadian Co., Limited; E. G. Powell, Kelly-Powell, Limited; Albert Hoiland, president Hoiland Mfg. Co., Fargo, N.D.; Hamilton Echlin, Echlin Mfg. Co., etc.

New Industry for Waterloo

Forsyth Productions, Limited, Start Manufacture of Men's Wearing Apparel

Operations recently commenced in the new plant erected at Waterloo, Ont., by Forsyth Productions, Limited, a new company, with an authorized capital of $200,000, formed in Kitchener for the purpose of manufacturing varieties of men's wearing apparel. The company purchased a lot, 135 x 135 feet, located on the city square in Waterloo, and erected a building 125 x 30 feet, two storeys high. About fifty hands are employed. The company are an off-shoot of John Forsyth, Limited, Kitchener.

Establishing Canadian Plant

Bovril, Limited, the British Food Specialists, will Manufacture in Canada

One of the most interesting announcements of the present month, is that Bovril, Limited, the famous British food specialists, will erect a manufacturing plant in Montreal. They have secured from the city a plot of land containing 25,000 square feet and located in a remarkably fine high position at the north end of the city. Plans are completed for the erection on this property of a unit on the lines of the company's factory in England. The area of the ground will admit of the erection of other units as extra accommodation may be required.

The building will be fireproof and of excellent appearance, while every possible arrangement will be made to ensure its hygienic character. It will consist of five floors, each containing 5,000 square feet of space and will be built of steel and concrete, faced with Don Valley buff bricks and Indiana limestone. The walls and columns will be faced t

height of five feet with white enamelled bricks above which the walls will be painted with white enamel. It is estimated that, excluding the manufacturing plant itself, the factory will cost $275,000. It will be completed either late in May or early in June of the present year.

Adding Another Storey

The National Acme Co., Montreal, Are Extending Their Plant and Increasing Output

An increase of approximately 50 per cent. in output will be secured by the National Acme Co., Montreal, manufacturers of milled screws, nuts, bolts and special parts, through the addition of another storey to their main building. This will give approximately 23,650 square feet of additional space. The enlargement has been necessitated by the increased volume of business being booked, particularly from automobile manufacturers. The work will be completed early in the year, and from 75 to 100 additional hands will be employed.

Plant Nearly Ready

Factory at Windsor of Champion Spark Plug Co. of Canada, Limited, Will Soon be Producing

The new plant of the Champion Spark Plug Co. of Canada, Ltd., located at Windsor, Ontario, is rapidly nearing completion, according to advices received from Arthur J. Hayes, Canadian sales manager of the Spark Plug concern. He states that by the first of the year the factory will be in production and that henceforth all Champion spark plugs used in Canada and the British possessions will be manufactured at and shipped from Windsor.

The building, when finished, will be the largest and most completely equipped spark plug factory in the Dominion. It will contain 15,840 square feet of floor space, and will have a production capacity of approximately 35,000 spark plugs per day. Up to the present time twelve automatic machines have been installed and it is planned to increase this number to thirty-five or forty as quickly as possible.

Taking Over Stratford Factory

New Company Formed for the Purpose of Manufacturing Electric Heating and Cooking Devices

At the first of the year the maufacturing department of heating devices of the Canadian General Electric Co., Limited, and the organizations of the Canadian Hotpoint Electric Heating Co., Limited, and the Hughes Electric Heating Co., all of Toronto, were consolidated to form a new company known as the Canadian Edison Appliance Co., Limited. This new organization will continue to manufacture the complete line of heating and cooking devices that were manufactured in the past by the above-named companies. Mr. J. R. Richardson is the managing director, Mr. F. M. Dusenberry sales manager, Mr. F. R. Goldsmith works manager, Mr. R. S. Morgan secretary and treasurer, and Mr. W. P. Young purchasing agent, all of Toronto.

The company have taken over the old Mooney Biscuit Factory at Stratford, which was recently purchased by the Canadian General Electric Co., and they will shortly commence operations in this plant. At the outset the company will employ approximately 200 hands, and the number of hands to be employed subsequently will depend entirely on the way in which business develops.

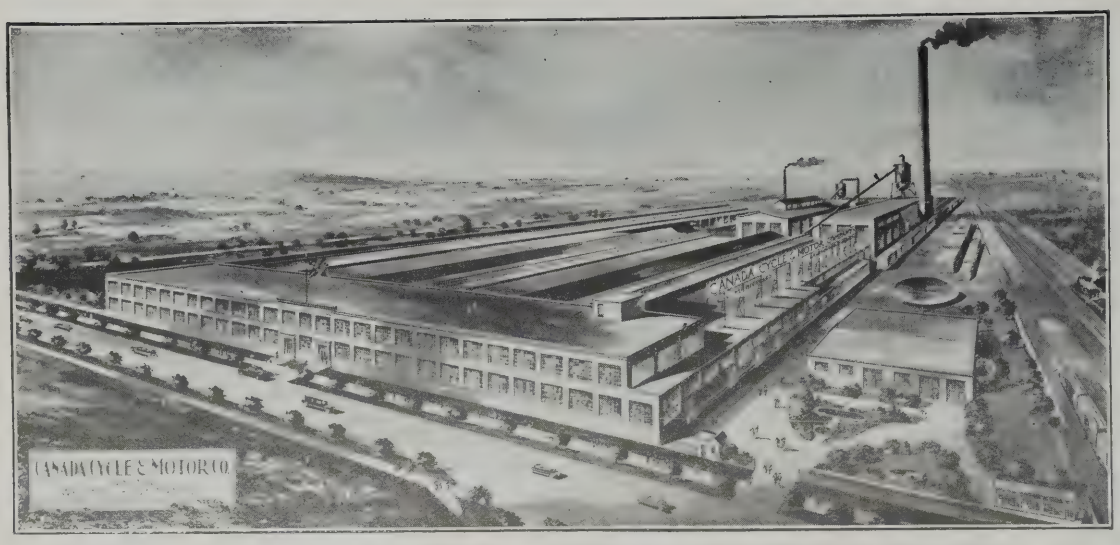
Will Make Tire Fabric

Large Factory Being Built by Manhasset Manufacturing Co., of Providence, at St. Hyacinthe

Among the latest United States companies to locate a branch plant in Canada are the Manhasset Manufacturing Co., Providence, R.I., who have formed the Canadian Manhasset Cotton Co., Limited, and are building a mill for manufacturing tire fabric at St. Hyacinthe, P.Q. The mill is of brick, 200 x 110 feet, four storeys, in which 20,000 spindles and necessary twisters and looms will be installed. In the spring a weave shed, 200 x 150 feet, two storeys high, will be erected. The company expect to start operating the first half of the mill on June 1, and the second half about October 1. The number of hands to be employed in the complete unit will be about 450. The investment amounts to $1,450,000.

New Furniture Company

Wiarton Furniture Company, Limited, Take Over the Canada Casket Factory at Wiarton, Ontario



A company known as the Wiarton Furniture Co., Limited, in which several local business men are interested, has been formed to take over the Canada Casket Factory in Wiarton, which has been lying idle for the past two years. The plant will be converted into a furniture factory, and the company will manufacture a medium line of bedroom and dining-room sets. They are adding $12,000 worth of new machinery and doubling the capacity of the dry kiln. Under agreement with the town of Wiarton, they will have to employ twenty-five skilled workmen in the first year, thirty-five the second year, and fifty or more after that for eight years.

The plant was first started in a small way in 1882 by Folk, Marlock, & Wegenast, manufacturers of furniture; in 1888 it was taken over by Siemon & Hill; in 1895 Mr. Hill retired, and sold out his interest to Siemon Brothers; in 1901 Siemon Brothers sold out to the Canada Furniture Manufac-

Putting a Second Storey on Montreal Plant

Recent view of the plant of the National Acme Co., Montreal, showing progress on construction of upper storey, giving 23,650 square feet of additional space

Bicycle Factory Enlargement

turers Limited; and in 1906 Siemon Brothers came into possession of the plant again and operated it as a flooring factory for a short time, later turning it into a casket factory under the name of the Canada Casket Factory. Last year the town of Wiarton came into possession of the plant, and it was from the town that the present company secured it.

The factory has been enlarged several times by its different proprietors, and now has a floor space of 38,000 square feet. It is a four-storey building, and has a 125 horse power boiler and engine, and a large installation of woodworking machinery.

Will Erect Ice Cream Plant

Willard's Chocolates, Limited, Branching Out in a New Line of Industry

A new development is being undertaken by Willard's Chocolates, Limited, Toronto, in the erection of a large plant for the manufacture of ice cream. Property, 120 x 192 feet, has been secured at the corner of Manning Avenue and Dupont Street, and work has started on a building, 80 x 166 feet, of mill construction, four storeys and basement. The entire building will be occupied by the Ice Cream Division, and it is expected that the plant will be fully equipped for the production of 100,000 ice cream bricks per day by the month of March. It will be, it is claimed, the most modern and up-to-date plant of its kind in America. About 200 hands will be employed in production and distribution, and the product will be marketed in Toronto, Ontario and part of Quebec. The plant has its own railway siding, and shipments will be made direct. About a quarter of a million dollars will be expended on the building and equipment. The company have acquired a modern creamery in Picton, from which the milk used in the process will be secured.

New British Columbia Industries

Three Recently Incorporated Companies Propose to Establish Plants in Province

The Clayburn Company, brick and tile manufacturers, of Clayburn, B.C., with head office in Vancouver, have recently acquired the Kilgard Brick Works near Clayburn, and it is expected that the Clayburn Co. will have the new plant in operation very shortly. The brick produced by the Clayburn Co. has a wide market, being shipped south as far as Oregon, and east as far as Winnipeg, and the existing plant is now kept busy turning out face brick and fire brick as well as retorts

It is reported that Messrs. Gillan and Edgett, of Vancouver, are contemplating the erection of a fruit cannery and box factory in the Port Haney District in the Lower Fraser Valley. It is understood that this plant will be in operation in time to handle part of the 1920 fruit crop.

One of the directors of the firm of Thomas Summerson & Co., Ltd., of Darlington, England, was recently in British Columbia making investigations with a view to establishing a series of electric furnaces to smelt iron ore. This gentleman stated that his company had unlimited capital to back their undertaking, and providing suitable offers were made, they were prepared to start operations at once.

Mr. W. S. Burley, manager of the British Columbia Fir and Cedar Lumber Co., Vancouver, whose plant was recently destroyed by fire, has announced the intention of his company to immediately rebuild. It is expected that the new plant when completed will have a capacity of about 75,000 feet per day.

The Coast Box Company of Vancouver have in hand, with the adjoining municipality of Point Grey, negotiations for a site for the erection of a $12,000 box shook factory, it being the intention of that company to shortly branch out extensively in the export business.

Plans are completed and machinery now en route from Great Britain for the erection of a wire rope factory on Granville Island, Vancouver, for the Britannia Wire Rope Company. The new factory is to be built by British capital assisted by Mr. Robert Gibson, of Vancouver. The intention of the company is to care for the needs of the local British Columbia and Alberta markets as well as to enter the export field. Raw materials for this factory will be brought from Great Britain.

Recent British Columbia Developments

Various Industries are Branching Out at Present Time in Coast Province

Among important industries recently incorporated in British Columbia are the following:

Lumber and Pulp Wood of British Columbia, Ltd., with headquarters at 120 Bay Street, Toronto, incorporated for the purpose of manufacturing lumber and cutting pulp wood from valuable timber limits situated in the vicinity of Ahbau Lake and Willow River in the Cariboo District of British Columbia

The New Westminster Furniture Manufacturing Co., with head office and factory in New Westminster. This company intends to use native hardwoods, notably maple and birch, for the making of cheaper grades of furniture. It is estimated that at present only 5 per cent. of the furniture sold in British Columbia is manufactured here, and this company should find a ready market for its product.

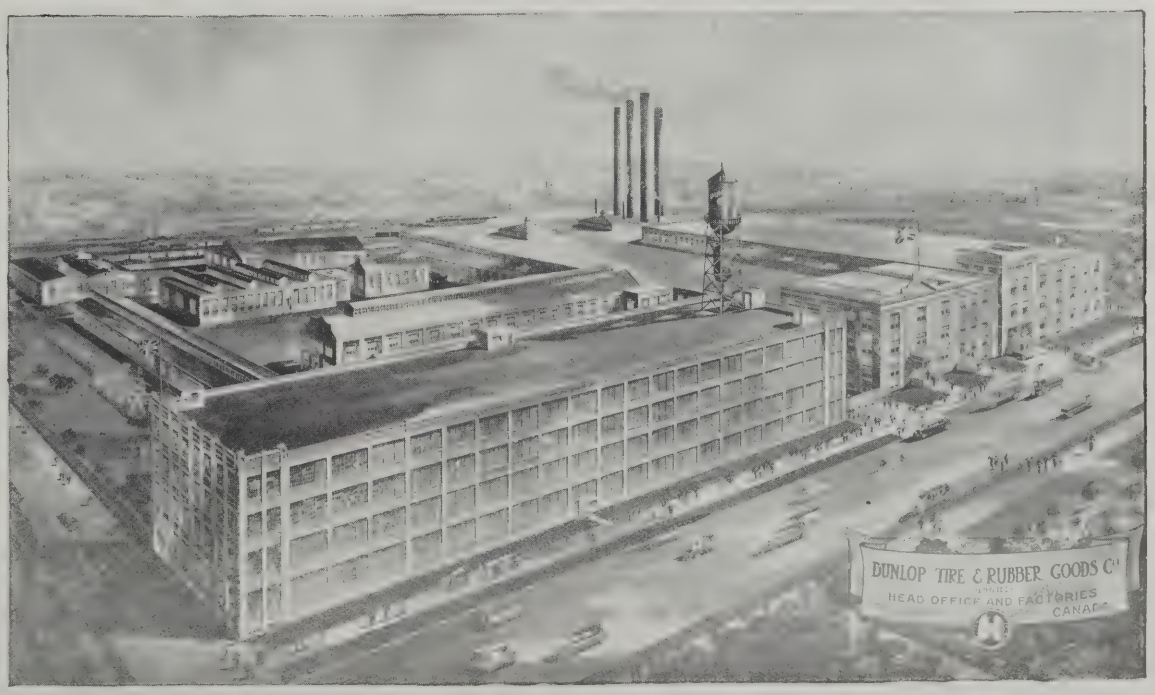
Western Toy and Manufacturing Co., Ltd., with headquarters at Vancouver. The company is composed of returned soldiers, and it is proposed to run same on a co-operative basis.

Started at First of Year

New Company for Manufacturing Gimps, Bindings and Weltings, etc. Operates at Walkerville

The Hills-Jansen Co., Limited, who recently took over the plant and property of the Dale Iron Works on Walker Road, Walkerville, started operations on January 1st with a working force of 25 employees. They are engaging in the manufacture of gimps, bindings, weltings and trimming of artificial leather for the automobile and furniture trades; also door liner boards and other flat artificial leather-covered pieces. A power sewing machine department has been installed which can take on contract work of any nature. The plant has a floor area of 6,000 square feet at present, but the company expect this summer to enlarge the premises.

The industry is an offshoot of the Jansen Mfg. Co. of Detroit, but is strictly a Canadian corporation, operated entirely distinctly from the parent concern. Mr. W. B. Jansen, president of the Jansen Mfg. Co., is president; Mr. S. W. Jansen, secretary-treasurer of the Detroit company, is secretary-treasurer, and Mr. C. A. Hills, who is factory manager of the Jansen Mfg. Co., is vice-president and general manager.



Dunlop Rubber's Expansion

Million and a half Appropriated for Erection of Another Factory in Toronto

As indicating the growth of the automobile tire industry in Canada and the extent to which the Dunlop Tire & Rubber Goods Co., Limited, are participating in this business, the announcement that this company have set aside an appropriation of $1,500,000 for building and equipping another factory in Toronto is significant. The new building, which is now well under way and being rushed to completion, is 400 feet long, 80 feet wide, with four storeys and basement. It faces on three streets — Queen, Booth and Natalie. This latest factory will be devoted especially to the manufacture of Dunlop Cord Tires — "Traction" and "Ribbed" — the success of the present Dunlop Cord Tire having been so instantaneous.

The Dunlop rubber interests are not confining their programme of expansion to Canada. A new company, Dunlop America, Limited, to operate in the United States, has been launched. This new company will operate on a huge scale.

The Dunlop Tire & Rubber Goods Co., Limited, with headquarters in Toronto and branches in the fourteen leading cities of Canada, have working arrangements, not only with Dunlop in England, but Dunlop in France, Japan, etc. These arrangements constitute interchange of formulæ, scientific research, processes and methods. Such arrangements will now likewise be made betwen Dunlop in Canada and Dunlop in the United States.

As the New Canadian Dunlop Factories are Going to Look when the $1,500,000 Addition is Completed in the Spring of 1920

Another for Peterborough

Third Branch Plant of United States Industry to Locat Last Year in this City

Announcement is made that the Canadian Aladdin Company, the Canadian branch of the Aladdin Company, Bay City, Mich., have arranged with the city of Peterborough for a site of about six acres on which to erect a factory and for a fixed assessment of $5,000 for ten years. The company will erect a building 100 x 200 feet and invest $70,000 in building and plant. The factory is to be erected, equipped and in operation before September 1. At the outset the company expect to employ from 30 to 40 men, but fully expect expansion and have an option on an adjoining five or six acres. They manufacture ready-cut houses, and at the parent plant employ 500 men. This was the third company to decide to locate in Peterborough in 1919, the others being the Western Clock Co. of La Salle, Ind., and the Nashua Gummed & Coated Paper Co. of Nashua, N.H.

New Glove Industry

Two Waterloo Men Form Company to Manufacture Workingmen's Gloves and Mitts

Under the name of the Quality Glove Co., Messrs. G. S. Raymond and H. H. Becker have established a new industry in Waterloo, Ont. They have leased the Hohmeier Block on King Street and commenced on December 15, the manufacture of workingmen's gloves and mittens. Starting with five or six hands, they hope to be in a position to increase this number by fall. The building occupied is large enough to admit of considerable expansion.

Freight Claims and Their Collection

Recording the Evidence of Damage or Loss of Goods in Transit—Why All Case or Package Goods Should be Opened Promptly—Time Limit in Which to File Claims, etc.

By F. R. ALLWARD

Transportation Department, Canadian Manufacturers Association

Second Article

AT stations where it is customary for the railways to send a notice of arrival to the consignee, through the mails, great care should be exercised to ensure that none go astray after delivery by the post office. Controversies sometimes arise as to whether or not the carrier has complied with the regulations in sending out this notice, and the receiver of freight should be in a position to prove from his records the exact date same was received; or if not received, then proof that it was not delivered by the post office. This precaution is important for the following reasons:

(1) Heavy storage or demurrage charges assessed if goods not removed within 48 hours after notice of arrival; or 72 hours in the case of bonded freight.
(2) Carrier only liable as warehousemen for goods not removed within the free time limit.
(3) Bonded goods will be sold by the Customs Department at public auction, if entry not made and duty paid within one month from arrival.

The importance of the arrival notice applies principally to L.C.L. shipments and carload lots delivered from public team tracks. Consignees served by private sidings or industrial interchange tracks must keep a close check of cars arriving, as delivery of such shipments in the usual manner is deemed due and sufficient notice of arrival thereof.

Receiving Freight

Less than Carload.—At many of the principal stations throughout Canada the railways have appointed cartage companies to act as their agents in picking up and delivering L.C.L. shipments, and the employees of the said cartage companies are empowered to sign bills of lading and to accept receipts for goods delivered. Where such an arrangement is in operation it is incumbent on the consignee's receiving clerk to examine carefully every shipment, for the purpose of detecting any shortage or damage before giving the teamster a receipt. Should a shortage be found, or if any of the packages bear indications of damage, such as a broken case, a rattling sound indicating broken parts, leakage from a liquid container, etc., a careful notation of the same should be made on the face of the No. 2 freight receipt (in ink) before signing. He should also make the same notation on the No. 3 freight bill, and request the teamster to sign it. This the cartage company's representative may refuse to do, as explicit instructions have been issued in some instances prohibiting this practice.

Railway officials take the view that notation of damage or shortage on the No. 2 freight receipt fully protects the consignee, and that the local freight agent fully complies with the regulations by filling out an "Over, Short and Damage" report, a copy of which is mailed to the freight claim agent.

If the consignee is required to arrange for his own cartage service, the teamster should be instructed to take the same precautions outlined above, when accepting shipments from the railway freight sheds, and make a careful report of the exact facts to the receiving clerk on returning with the goods.

Carload.—The railways will furnish a checker for carload freight delivered from public team tracks, but not for private siding delivery. Extra precautions, therefore, have to be taken by the consignee in unloading freight direct from car to warehouse. A record of the numbers on the car seals must be taken and the seal fastenings examined to determine whether or not they have been tampered with in transit. It is also advisable to take note of the condition of the doors, hinges, etc., as it has been proved in some instances that goods can be extracted from the car without tampering with the seals.

If the contents check short, or if some of the goods are found in bad order, it is quite necessary to immediately notify the local freight office by telephone, in order that the inspector may have an opportunity of verifying the damage or shortage, as the case may be.

In every instance a telephone message should be confirmed by letter, as it may become necessary to finish unpacking or to use some of the goods if the inspector does not call within a reasonable period.

It every case it is very important that the receiving clerk should make a careful record in writing of all the facts relating to the particular shipment involved, in order that he may be prepared (if necessary) to make a sworn statement at some later date in support of claim.

Receiving Record.—Most progressive houses now have a printed form for recording the receipt of all material, and in so far as freight and express shipments are concerned, too great care cannot be exercised by the receiving clerk in reporting all particulars to the office. The essential facts should include:

Name of shipper; point of origin.
Name of railway; inward pro number.
Car number and seal numbers (in the case of a carload shipment).
Description of goods; number of packages.
Particulars of shortage (if any).
Nature of damage (if any),

and any other information that may be deemed relevant or necessary. If the form furnished does not provide sufficient space to include all the information, a separate report can be made. Whatever method is followed, the records should be sufficiently broad in scope to enable the receiving clerk to make a sworn statement at some later date without depending on his memory for the essential facts.

Concealed Loss or Damage

The terms "concealed loss" and "concealed damage" indicate that the loss or damage is of such a nature that it is not evident when the shipment is delivered by the railway to the consignee. For example, a shipment of glassware is received in apparent good order, so far as the ex-

ernal appearance of the packages is concerned, but on opening the cases or barrels the entire contents may be found roken.

In another case, a consignment of rubber footwear packed n cases may bear every indication of good order when elivery is accepted by the consignee and yet, when unacked, several pairs of rubbers may be found short in every ase.

In view of the opportunity for fraud in claims for concealed damage or loss, it is easy to understand the reluctance shown by claim agents in allowing such claims, unless substantiated beyond reasonable doubt, and it is of the utmost importance that they be supported by the most complete and convincing evidence.

In the very nature of the case it is exceedingly difficult for a railway to verify such alleged damage or losses. Therefore claims must be supported by clear and detailed affidavits of the shipper as to the condition of the goods and packages shipped, and of the contents of the various packages if the shipment consists of a number of separate articles, also by affidavits of any parties who handled the shipment after it left the shipper and before delivery to the railway. If from the nature of the shipment there could have been any opportunity for pilfering, tampering or damage while in the custody of private draymen at either end, affidavits should be secured from them and included in the claim, to the effect that the packages were not tampered with while in their possession.

Affidavit Should Be Clear

The affidavit of the parties receiving the goods should be clear and explicit as to the contents of the packages when opened, and also as to the fact that there was no opportunity for tampering, pilfering or damage during the period between the delivery by the carrier and the time when the packages were opened and when the loss or damage was discovered.

Necessity for prompt unpacking.—It will be readily perceived from the above remarks that a consignee can in no instance be certain that goods have not been tampered with or damaged in transit, and if he desires to avoid any controversy with the railway in regard to the possibility of damage or pilferage after delivery, all case or package goods should be unpacked as promptly as possible after receipt. If the contents are then found not to be in order he should notify the local freight office immediately, requesting that an inspector be sent to his place of business for the purpose of verifying his report. In no case should the receiver of freight neglect to confirm a telephone message of this nature by letter, as the inspector may be engaged elsewhere at the time and the party receiving the message is quite likely to forget about it. This precaution is important, and if the inspector does not call at the consignee's place of business within 48 hours he should again telephone the local freight office and ask permission to speak personally to the local freight agent. If this procedure is followed prompt action will in all probability be obtained, as the agent will usually prove to be a man who is anxious to co-operate with the patrons of his company.

The precautions outlined above apply with double force to imported goods, for the following reasons:

Bonded goods.—Section 73 of the Canada Customs Act specifically provides that claim for refund of duties paid on damaged goods must be made within fourteen days from the date of arrival, or three days in the case of glass. This claim must be made by the consignee or the party paying the duty, and it should be distinctly understood that railway claim agents will not entertain a claim in which duty is included. The Department of Customs, on the other hand, will also refuse to entertain the claim for refund unless a customs inspector has an opportunity to examine the goods within the time limit outlined above.

Damage to Machinery, etc.

Appraising damage.—Machinery while in transit is frequently damaged in such a way that it is impossible to repair it by the substitution of new parts. While it may be possible for a machine to be put in shape for operation by welding, etc., yet its usefulness may be permanently impaired. The loss involved is usually considerable, and if the consignee and the railway inspector are unable to agree on a figure, a third party should be called in to make an appraisal. The appraiser must of necessity be a man thoroughly conversant with machinery, or whatever class of goods may be involved, and when he has made an estimate he should be requested to sign a sworn statement setting forth the nature of the damage, extent of depreciation in value, and other relevant facts.

The services of an appraiser can also be used to advantage where it has not been possible to arrange for the visit of an inspector, especially if the amount involved is considerable.

Salvage.—It is, generally speaking, the duty of the consignee to take delivery of a shipment even though damaged, and afterwards present a claim against the railway. Unless the damage is of such a nature as to completely destroy the value of the entire consignment, he should receive the goods and dispose of them to the best advantage. The measure of damage he is entitled to recover will be the difference between the amount he would have realized had the goods not been damaged and the amount actually realized.

Preparing and Filing Claim

If the procedure outlined above has been carried out, the claimant has now all the documents and information together and is ready to prepare his claim.

Standard form for presentation of claims.—In the first article published in INDUSTRIAL CANADA for December, a list of the documents required in support of a claim was outlined briefly. Many shippers and receivers of freight will be interested to learn that the principal railways in Canada have adopted a standard form for the presentation of loss and damage claims, also one for overcharge, and copies may be obtained from any local freight agent. The use of these forms is not compulsory, but undoubtedly they simplify the work of the claim agent and thus enable him to arrange settlement more promptly. However, the use of any form designed to meet the needs of any particular filing system will prove equally acceptable to the claim agents, provided provision is made for furnishing all the essential facts.

Amount of claim.—The amount which can be recovered by claim for loss, damage or shortage depends partly on the circumstances governing the loss, and partly on the conditions of the bill of lading under which the shipment was made.

Where claim is filed to recover the total value of a consignment lost in transit, or where the goods are so badly damaged as to destroy the value of the entire consignment, the amount of the claim should be limited to the market value at time and place of shipment, plus the freight charges if prepaid. A claim should not be filed for more than this amount because it will be declined and cannot be enforced.

The above provision does not apply where, irrespective of the actual value of the shipment, the shipper has agreed with the railway that, for the purpose of obtaining a lower rate of transportation, the value of the shipment shall be

limited to a certain amount—usually less than the invoice price. This is termed "*Released Valuation*," and in the event of loss the claimant cannot properly ask for anything more than the amount agreed upon.

The considerations outlined above governing the amount which the claimant is entitled to recover apply also to partial loss or partial damage, except where it is necessary to dispose of the goods for what they will bring in the open market or where the damage is of such a nature as to permanently impair the value or the use of the goods. These exceptions are treated separately under the headings "*Salvage*" and "*Appraising Damage*."

It is of great importance where settlement is requested on the basis of the invoice value that the items covering the particular portions of the shipment which are short or damaged should be specifically set forth in the itemized bill rendered. The item for return of freight charges should be based on the proportion of the freight charges covering the portion of the shipment lost or damaged and for which claim if filed.

Duty.—Unless specifically provided for in the conditions of carriage on the back of the bill of lading, the amount of duty should not be included. As indicated under the heading "*Receiving Freight*," a claim for refund of duty may be filed with the Customs Department, provided same is presented within fourteen days of the arrival of the shipment; or in the case of glass, three days. This privilege should always be taken advantage of as, under the terms of carriage governing shipments from the United States, duty is not recoverable from the railways.

The Filing of Claims

Filing.—As previously outlined, claim may be served on the local freight agent or forwarded direct by mail to the freight claim agent. Whatever method is followed, copies of all documents should be retained by the claimant, and when presenting a claim to the railway same should be accompanied by a letter. This precaution is very necessary, as original papers often go astray and it is then necessary for the claimant to prepare duplicates.

Time limit for filing.—Under the terms of the standard bill of lading, notice of loss or damage must be made in writing to the carrier at the point of delivery, or to the carrier at the point of origin, within four months after delivery of the goods (six months on shipments from the United States). Should the claimant find it impossible to get all the necessary documents together within that period, it would be well to notify the railway by letter of his intention to enter claim at some later date.

Shipments lost or delayed.—In the case of non-delivery the consignor or consignee is required to notify the carrier at point of origin or destination within four months (six months on shipments from the United States), after reasonable time for delivery has elapsed. In some instances the owner of a consignment of goods may have engaged with the carrier in an active investigation to determine the whereabouts of the shipment, and in the belief that same will eventually turn up, he neglects to enter claim until it is too late. It is therefore considered expedient by some experienced shippers (when requesting the railways to trace a shipment) to add a clause to either letter or printed form, reading substantially as follows:

> "*This request is notification to you that claim will be instituted if goods are not delivered.*"

The use of the above, or a similar clause, fully complies with the bill of lading terms and enables the owner of the goods to file a claim within a reasonable period thereafter.

Use of telephone not reliable.—Where a claimant follows the practice of submitting claim to the local freight agent, he should discourage the use of the telephone by his staff in negotiating with the local freight office in regard to settlement, unless information is desired in a hurry, in which event conversation should be immediately confirmed by letter.

If the local freight agent is unable to advise definitely prospects of settlement within a reasonable period, he should be requested to furnish particulars of correspondence, claim reference number, etc., in order that the matter may be taken up direct with the claim agent by correspondence.

Follow-up System Needed

A follow-up system should be adopted for negotiating settlement, and a letter addressed to the claim agent should be despatched at regular intervals. If a separate file is kept for each claim and copies of all correspondence attached thereto, it will simplify the investigation and thus avoid the matter being overlooked.

Reasonable time for settlement.—There is a great diversity of opinion in regard to what constitutes a reasonable period in which a claim can be investigated and an adjustment made with the claimant. This is due principally to the fact that the same method cannot be followed in investigating any two claims, and it will be readily understood that a claim covering damage to a shipment handled by two or more lines will take a greater length of time to investigate than one covering damage to a shipment handled by only one line.

There are many other conditions which govern the length of time involved in investigating a claim, but it is not possible within the scope of this series to cover the entire field. It is therefore a matter for the claimant to determine from the known conditions affecting any particular claim what constitutes a reasonable period within which settlement should be obtained; but in every instance the investigation and negotiation with the claim agent should be kept alive.

Interest on over-charge claims.—The conditions governing the investigation of claims for loss or damage do not apply to claims for overcharge, and if the claimant furnishes the railway with all particulars and tariff authority for the rate claimed, settlement should be obtained within a period of thirty days. It is, unfortunately, true that even claims of this nature are not settled promptly, and if the amount involved is large it is expedient for the claimant to have inserted in his claim the following clause, or one similar:

> "*Interest is demanded on this claim at time of settlement for elapsed time in excess of thirty* (30) *days from date of claim, at the rate of six* (6) *per cent.*"

If this suggestion is complied with, the claimant can compel the carrier to pay interest on all overdue claims covering freight charges collected in error.

Suing the Carrier

Suing the carrier. It is the opinion of authorities on railway law that a freight claim should not be taken to the courts for collection until all other methods of negotiating settlement have been exhausted, and with this view the majority of claimants are in accord. The expenses incurred for legal fees, etc., are usually considerable; but if the claimant is unable to obtain reimbursement within a reasonable period and is of the opinion that he has a *bona fide* claim, he has, of course, the option of suing the carrier. However, before taking this action, members are urged to take the

uestion up with the Transportation Department of the anadian Manufacturers' Association, as there are many gal questions involved which determine whether or not ie amount claimed can be recovered through the courts.

The main purpose of discussing this phase of freight aim collection is to bring to the attention of the members ie law governing shipments originating in the United tates. Under the conditions governing standard bill of ding in use in that country, suits for loss, damage or elay shall be instituted *only* within two years and one ay after delivery of the property; or in case of failure to ake delivery, then within two years and one day after easonable time for delivery has elapsed.

The legality of this provision has for some time been ie subject of discussion in the United States and a test ase has been submitted to the Interstate Commerce Commission for a ruling. Until such time, however, as a definite uling or decision is announced, receivers of freight in this ountry should be governed accordingly in negotiating set- ement of claims. Needless to say, great care must be xercised in preventing all claims of this nature from laps- ng, and if there is any indication that the investigation is eing unduly delayed by the carriers, steps should be taken o enter suit within the time limit allowed.

A Shipper's Problems

In the February issue of INDUSTRIAL CANADA the problems f the shipper will be discussed. This should prove of par- icular interest to the manufacturer who has adopted the olicy of entering claims on behalf of his client.

Heated Car Service

Case Has Not Yet Come Up in the East but Manufacturers Will Be Advised of Change

The Canadian Freight Association has filed with the Board of Railway Commissioners an application for an in- rease in the charge for use of heated refrigerator cars from he present 1c. per car per mile—minimum $2.00—to 1½c. per ar per mile—minimum $2.00.

At the hearing before the Board of Railway Commission- rs in Winnipeg the carriers were able to show that there as an increase in their costs, and in view of the evidence ubmitted by the railways, representatives of the shippers ntimated to the Board that under the circumstances they ould offer no objections. The case has not yet come up in he East, but in any event the last order of the Board deal- ng with this matter will have to be rescinded before the ailways can make an increased charge.

Manufacturers who are interested in this service will be dvised of the increase proposed.

Track Scale Weight Allowances

No Order Yet Issued by the Board of Railway Commissioners Following Judgment of September 9

The Board of Railway Commissioners issued a judgment n September 9th, 1919, dealing with the question of track cale weight allowances, evidence in connection with which as heard in 1911. No order has as yet been issued by the Board, but as a matter of information it might be stated hat the maximum allowance for dunnage is set at 650 lbs. er car. This maximum is to apply on agricultural imple- ments, machinery, stoves, street cars, and vehicles; also such ther articles as may be shown from time to time to require unnage protection. The tolerance allowed for variation in tare, due to accumulation of snow, ice, etc., is to be 1 per cent. of the weight shown on the bill of lading, with a minimum of 500 lbs. and will apply on all carload freight including coal and coke, except that when ashes, clay, gravel, sand, etc., are loaded in open cars, the minimum allowance for tolerance will be 1,000 lbs.

Cancel Tariffs

Stop-off Arrangements on Hay, Potatoes and Grain, to be Cancelled on February 1

The Canadian Freight Association have announced that—ffective February 1, 1920,—tariffs providing stop-off arrangements on hay, potatoes and grain products at Montreal and Toronto will be cancelled.

It is pointed out, however, that this will not affect the milling-in-transit of grain, or the dressing, sawing, kiln-drying or sorting-in-transit of lumber.

Marking Express Shipments

When Returning Goods to Department Stores and Factories they Should be Properly Marked

Departmental stores and manufacturing concerns have been experiencing great difficutly in determining the name of the shipper of certain parcels returned to them for exchange or repairs. The Express Traffic Association of Canada have accordingly issued a circular, which will be given wide distribution, calling upon both their agents and shippers to see that any such parcels bear the name and address of the shipper. These marks should appear on the outside of the package, and the same information, if possible, should be placed inside the package in case the outside mark is lost or destroyed.

Members of the C.M.A. are requested to endeavour to carry out these instructions..

Cartage Rates

More Articles Added to the List of Exceptions in the Carriers' Cartage Tariff

The carriers in Eastern Canada have added to their list of exceptions in the cartage tariff the following articles: Electric cooking appliances and electric heaters. This change will take effect on January 15, 1920. At the present time such articles will move at the regular cartage charges, whereas after the change becomes effective they will be charged in accordance with the regulations of the cartage companies at different points. The change will, of course, mean an increase in the rates, as all articles in the list of exceptions are carried at higher rates than the regular cartage charges.

Correction.

On page 74 of the September issue of INDUSTRIAL CANADA cartage rates were shown applying at the different cartage points in Eastern Canada. Through a typographical error the new less-than-carload rate shown opposite Windsor and Walkerville appeared as 5c., whereas the correct rate is 5½c.

Canadian Court Rules on F.O.B.

Defines Meaning of this Term in Decision Handed Down in Kingston, Ontario

A decision of interest to manufacturers and exporters was recently rendered by a Canadian court. It related to the commercial expression "f.o.b." and made a ruling as to the significance of the term. The court held that the term "free

on board" means that the seller, at his expense, places the goods on the car or vessel which is to carry them from the point specified, and that the buyer takes the risk onwards; at the same time the goods must, at destination, be in conformity with the conditions of sale or they may be legally rejected. Further, it is necessary to distinguish delivery from acceptance; for, said the court:

"The carrier is the agent of the purchaser, but his mandate is limited to the transportation of the goods. The question to decide is whether it was the thing sold that was carried from the point of shipment. If the vendor has correctly delivered the thing sold, the buyer becomes the proprietor immediately. If he delivers something else—for instance, if he has sold goods of first quality and delivers goods of second quality—there is no delivery of the thing sold. The buyer can refuse them only when they arrive at their destination.

New European Service

Monthly Service Inaugurated between St. John and Norway, Sweden and Denmark

The Canadian Pacific Ocean Services, Limited, who are acting as agents for the Norwegian American Line, announce that a monthly service has been inaugurated from West St. John to parts in Denmark, Norway and Sweden. The first sailing will be the S.S. *Drammensfjord* about January 5th, to be followed by the S.S. *Ranenfjord* early in February. This service has been established in order to encourage development of trade between Canada and these ports.

From information which the Transportation Department has recently received from Mr. C. J. Sontum, Canadian Commercial Agent at Christiania, it would appear that there is an opportunity of securing business in the following lines: Boots and shoes, clothing, chocolates, apples, plums and dried and canned fruit, cheese, bacon, wheat, canned and chilled meats. It is hoped that any members who are in a position to do any business in these commodities will endeavor to support this service.

The Department is also advised by Mr. E. N. Todd, General Foreign Freight Agent of the Canadian Pacific Railway, that he has been advised by the president and chairman of the Norwegian American Line, that the Import and Export Agents' Association of Christiania, Norway, are a very reliable and desirable firm for Canadian houses to use.

European Traffic

Canadian Express Company Issues Circular Pointing Out Services it Can Render

The Canadian Express Company have issued a circular signed by the president, John Pullen, directing attention to the assistance they are prepared to render in the development of foreign business. The company are equipped to take charge, as agents of the shippers, of the forwarding of goods to their final destinations in the interior from the landing ports of the ocean steamers, including the clearance through customs and the distribution of goods. The company's European organization, with headquarters in London, maintains suitably equipped branches at the large centres, with agencies throughout the continent of Europe, who will extend every convenience and facility to Canadian shippers.

The Royal Bank of Canada recently announced the opening of a branch at Montevideo, Uruguay, with correspondents throughout the country. They will transact a general banking business and special attention will be given to collections.

New Tariff Regulations

Automobile Parts

Rates of Duty to Apply on Parts, Finished and Unfinished, and Auto Accessories

The following articles, when shipped and billed separately for manufacturing purpose or for repair, are dutiable at the rates set out opposite each item:

Description.	Tariff item.
Acetylene tanks (brass)	352
Aluminum castings	354
Ammeters	453
Anti-skid rivets (steel)	454
Automobile covers (tops)	438
Axles	392
Ball bearings	453
Battery box brass, parts	352
Bearings	453
Bells	352
Belts, fan, leather	609
Bent wood work, unfinished	506
Bodies, complete	438
Bodies, steel, unfinished and upholstered	454
Boilers	453
Boiler parts of iron or steel	454
Bonnets	454
Brakes	454
Brake drums	454
Brake band lining, asbestos only	312
Brake band lining, asbestos with brass wires embedded therein	352
Brake band lining, cotton, with brass wires embedded therein	352
Brass castings	352
Brass pipe fittings	352
Carbide	711
Carburetors	352
Castings, rough, according to material	352, 354, 453
Chain repairers, according to material.	
Chain adjusters	454
Chain guards, according to material.	
Chains, non-skid	454
Charging apparatus, electric	453
Chassis	438
Clips and clamps, iron or steel	454
Clocks	368
Clutches, iron or steel	454
Cocks, brass	352
Commutators	453
Cushions, according to material.	
Cyclometers	657
Dashes and fenders, according to material.	
Differential gears	453
Dust shields, according to material.	
Electric auto motors	453
Engine packing, rubber	619
Engine parts, integral, if iron or steel	453
Felt washers and dust rings	567
Foot bellows for horn, leather	613
Forgings	393
Frames, or with engines attached but without axles or springs	454
Fuel level indicator, brass	352
Gasoline auto engines	453
Gasoline engine fittings, brass	352
Gasoline syphon, brass	352
Gasoline tank gauges, brass	352
Gear cases, according to material.	
Gears, differential	453
Gears and pinions, iron or steel, steering	454
Generators, acetylene, brass	352
Grademeters	657
Grease cups, brass	352
Hampers	622
Horns, brass, if not plated	352
Horns, brass, if plated	362
Hose clamps and menders, according to material.	
Housing, axle, according to material.	
Hubs, with sprockets attached	454
Igniters	453
Ignition apparatus	453
Ignition batteries	453
Iron castings, rough	453
Iron castings, finished, if engine parts	453
Iron castings, otherwise	454
Insulators	453
Jacks, according to material.	
Lamps	435
Lamp brackets, according to material.	
Lamp parts, metal	435
Lamp storage batteries	453
Lock nuts, iron or steel	454
Lubricators, according to material.	
Luggage carriers, racks of iron or steel	454
Mats, rubber	619
Moto-meters	657
Mud guards, according to material.	
Mud guard attachments, according to material.	
Mufflers, according to material.	
Odometers	657
Oil cans, brass	352
Oil cups, brass	352
Oil guns, brass	352
Oil hole covers, brass	352
Piston rings	453
Portable electric lights	435
Pressed steel body frames	454
Pressed steel channels and angles	454
Pumps, tire, according to material.	
Pumps, oil, according to material.	
Pumps, water, according to material.	
Pumps, brass, circulation, according to material.	
Pump connections, according to material.	
Pumps, iron or steel, operated by engine	453
Radiators, iron or steel	454
Rims, steel	454
Roller bearings	453
Spark coils	453
Spark gaps	453
Spark plugs	453
Speed indicators	657
Springs, vehicle	392
Sprockets	454
Steel balls	491
Steering apparatus, according to material	
Steering knuckles, according to material.	
Steering wheels, according to material.	
Steering levers, according to material.	
Steering yokes, according to material.	
Steps, according to material.	
Storage batteries	453
Switches, electric	453
Tanks, iron	454
Tanks, copper	352
Tires, rubber	592
Tire protectors and anti-skids, according to material.	
Tire repair kits	592
Tire repair tape	562
Tire repair tools, according to material.	
Tire valves and stems	592
Tool bags	622
Tops	438
Transmission gears	453
Universal joints, according to material.	
Valves, engine, if iron or steel	453
Vaporizers, brass	352
Volt ammeters	453
Volt meters	453
Vulcanizers, according to material.	
Wheels	438
Windows, curtain, according to material.	
Windshields, according to material.	

Customs Rulings

Questions that Have Come Up for Decision Recently Affecting Tariff Interpretation

Garnetted artificial silk thread waste, ruled to be dutiable under item 760.

Road graders (per illustration), ruled to be dutiable under item 453.

Bronze memorial tablets (sample), ruled to be dutiable under item 352.

Until otherwise advised, the following machines, specially adapted for use in the manufacture of woollen textile fabrics, may be entered under tariff item 468:

Shake willow or wool waste duster; duster willow machines; kicker fulling mills; rag dusters; warping machines; wool opener and mixer; soaping and wringing machine; dyeing machines of all kinds; drum spool winders and pressure drum spool winders; yarn reel, with counting motion; dead spindle spooler and bobbin stand; spooling and doubling machines; fearnaught pickers; ring twisters.

The following are considered to be of a class or kind made in Canada:

Galashiels fulling mills; cloth washing machines; card creels.

Mixtures of soda ash and bicarbonate of soda in varying strengths, per sample submitted, declared to be dutiable under tariff item 711.

Under Board of Customs' decision above on combinations of soda ash and bicarbonate of soda, the following materials would be dutiable under tariff item 711: Wyandotte's sanitary cleaner and cleanser, dairyman's cleanser and cleaner, brewer's and bottler's cleaner and cleanser, baker's and confectioner's cleaner and cleanser, butcher's cleaner and cleanser, engineer's cleaner and cleanser, yellow hoop, tanner's soda, textile soda, Rhode's E-Mul-So cleaner, Rhode's cleaner, Wil-

A Review of 1919

An Address Delivered by Sir Edmund Walker, President of the Canadian Bank of Commerce, to the Shareholders of the Bank at the Recent Annual Meeting

We have passed through a year in which the daily surprises have been as perplexing as during the war, and in which the anxieties have been as great, except that sometimes they affected rather the mere happiness of the world than human life itself. War, however, still continues in many countries, and there and elsewhere many have died from lack of food. The war has been won by the most superb co-operation in the attainment of one ideal—the winning of the war. We may lose all that victory seemed to secure by indulgence in countless theories, many of them aiming at the disintegration of society, instead of again co-operating in one ideal—the restoration of order and the improvement of social conditions, so that the happiness of the greatest number may be secured. It is not by standing idle while we discuss methods that we can get out of our present troubles. If the call is to "man the life boat" we do not wait for academic discussion before the boat is launched on its life-saving mission, and too much argument between capital and labor, just now, is madness in view of what we seek to save. The rising curve of prices cannot be made to turn downward without an increase of production, nor can we face the heavy obligations left by the war except by greatly increasing production. The man who does not do his best at his particular job is not merely helping to barricade the only pathway that will lead us out of our troubles, but he is helping to raise, or to maintain, the cost of the necessities of life for his own family. I may be called a friend of capital for saying this, but I am on record elsewhere as an advocate of many changes in the present relations of the employee and employer, all of them in favor of the employee.

INSUFFICIENT PRODUCTION

While we and the rest of the world are failing to produce on a sufficient scale to provide for human comfort and to pay our debts, the price of everything has so increased, that although all clearing-house and trade returns show higher figures in money, these generally represent transactions based on smaller quantities of merchandise, and because we think in terms of dollars and not of merchandise, we are living in a fool's paradise. The imperious demands of war rapidly raised all prices, and payment was only possible by inflating the currency; unfortunately inflated currency sustains and further increases prices. If with our own currency we bought only goods made in our own country, the minimum of harm would be done, but possessing more currency and fewer commodities than usual, we are acting like the drunken sailor newly come ashore, and buying everything that fancy suggests, whether necessary or not, without regard to whether it is made in Canada or abroad. For every purchase of goods made abroad, whether in Great Britain or China, or anywhere else, we settle through New York, and the rise or fall of the rate of exchange, about which we are so much concerned, is the expression of our failure, or the reverse, to pay cash or its equivalent. In this connection the speaker has for many years, at these annual meetings, presented the facts of our foreign trade, the peculiarities of our relations with the United States, the sales of our securities abroad to pay for the excess of our imports and the danger of mortgaging the future of our country, and has given frequent warnings as to the character of many of our imports.

OUR EXPORTS

The excess of our exports over imports for the year ending 31st March was $343,491,000, as compared with $623,647,000 for the previous year. Although so much smaller than for 1918, the excess was larger than in any previous year. The difference of $280,156,000 is more than accounted for by a falling off of $320,874,000 in our exports to Great Britain, and this again is due to a decrease of $297,893,000 in exports of agricultural products and of $87,318,000 in manufactured articles. For the six months ending in September the exports for the two half years are almost equal, while the imports were $33,571,000 less. It is gratifying to notice that, apart from the decrease in agricultural production, our figures have not been much altered by the cessation of the manufacture of munitions. Food is in greater demand than ever and our factories are behind in the production of almost every line of manufacture, while nearly every form of raw material is difficult to obtain. Our total foreign trade for the fiscal year was $2,176,378,000, as compared with $2,548,691,000 in 1918.

It is clear that, if our foreign trade were on a cash basis, we could pay the interest on our foreign debt and settle for our excess purchases from the United States without difficulty, but Europe cannot pay just now, and we must therefore limit our purchases from the United States wherever that is possible. Doubtless the markets for our securities in the United States will gradually widen, and it will become easier to adjust our accounts, but this will be a poor remedy. We cannot afford to increase our debts to foreign investors in view of the taxation we shall have to bear.

CURTAIL IMPORTS

Let us consider a few items in our imports which at least suggest great possibilities of curtailment, if we are prepared to restrict our pleasures for the common good. Under the head of apparel, we bought abroad to the extent of $8,500,000, including headgear alone for over $5,000,000; under fancy goods, $4,000,000; fruits and nuts, $25,000,000; furs, $4,500,000; gramaphones, over $2,000,000; silk in various forms, $21,000,000; tobacco, nearly $12,000,000; in all, $77,000,000, mostly luxuries. Then we are yearly face to face with enormous imports of material, part of our requirements of which we already produce, or which it would be natural for us to produce. It is obvious that our national finances would benefit if we could either produce the following items ourselves, or avoid in any way their importation: Bricks, clays and tiles, over $4,000,000; coal, coke and charcoal, $79,000,000; breadstuffs, $26,000,000; all foodstuffs, $121,000,000—much of this is doubtless absolutely necessary, but surely there is room for a large reduction; iron and steel in all forms, $161,000,000, including machinery, $45,000,000; textiles in all forms, $168,000,000; motors, railway cars and other vehicles, $18,000,000. We have repeatedly drawn attention to items of this character in past years, but we fear, without much effect. At present, however, the people of Canada are feeling rather keenly the result of their indifference to their own affairs, and it seems worth while to press these facts once more on their attention.

IMPORTS FROM UNITED STATES

There is one comforting feature about our trade with the United States. While in 1913 we bought $2.70, last year we bought only about $1.50 of goods for every dollar's worth bought by the United States from Canada. While our purchases have increased in value by 65 per cent., theirs have increased by 180 per cent. Comparing the totals, the imports for 1919 are less by $46,000,000 than in 1918, but as in the item referred to in past years, military stores, there is a decline of $80,000,000, and another decline of $17,000,000 in pork, both due to the cessation of the war, the imports for ordinary purposes are much larger than ever before. The most notable increases are in traction engines, mainly for farming, about $10,000,000, and in raw cotton, about $13,000,000.

REDUCED WHEAT EXPORT

There are many handsome increases in exports to counterbalance increased imports, but the outstanding feature is the enormous decrease of $295,000,000 in the value of exports of grain, of which $270,000,000 is due to a decrease in exports of wheat. There is a reduction in quantity of 150,000,000 bushels, from 215,000,000 bushels of all grains in 1918, to about 65,000,000 bushels in the year ending March, 1919. In the item, "cartridges—gun, rifle and pistol"—which has figured so largely in our exports during the war, there is a decline of $139,098,000. There is also a decline of $12,000,000 in exports of flax seed. Against the decline in imports of pork there is a corresponding one in exports of bacon, but there is an increase of about $28,000,000 in exports of meats and butter. There is an increase of $14,000,000 in the item of ships sold to other countries. In our imports the totals of increases and decreases are not very far apart, but in exports we have the extraordinary condition of increases amounting to $110,000,000 and decreases amounting to $443,000,000. Had we been as fortunate in the quantity of merchandise we had to export in the fiscal year ending March, 1919, as we were in the previous year, our financial position would have been very different.

FIELD CROPS

The preliminary estimate of the value of our field crops for the year 1919 is $1,452,787,000, as compared with $1,367,909,000 in 1918, the actual figures for which fell slightly short of the estimate. There was a decline in the value of grain crops, but a large increase in fodder crops and potatoes. Except in swine there is a slight increase in the numbers of all live stock on our farms. It is difficult as yet to obtain accurate figures as to the production of our mines for the year just closed. We estimated that of 1918 at $220,000,000, and the actual figures were $211,301,000. For 1919 the best estimate we can obtain is $167,000,000, showing a falling off of nearly $45,000,000, which is almost entirely in metals. Because of the ending of the war we produced only about half the quantity of nickel produced in 1918; about the same quantity of lead and zinc, at lower prices; less copper, also at lower prices; and less silver, but at higher prices.

CANADA'S DEBT

The statement of the public debt of the Dominion of Canada at the end of November shows a net total of $1,817,839,000, and we are informed that at the end of the fiscal year, March 31st, it will be $1,950,000,000. The estimated net amount due by Great Britain to the Dominion at the end of November is $181,000,000. There is also due by the governments of four other countries about $20,000,000. These assets are taken into account in stating our net debt. In addition to the debt due by Great Britain to the Government of Canada, there is a debt of $200,000,000 due by Great Britain to the Canadian banks, on which, however, since the close of the year partial payments have been made. The war expenditure of our government has fallen from a million dollars daily to half a million, but we are still far from normal in this respect. The expenditure for pensions has now reached $3,000,000 monthly.

CANADIAN SECURITIES

The sales of Canadian securities for 1919 are much larger than in 1918, and there is an important difference in their distribution.

Security	Total Sold	In Canada	In United States	In Great Britain
Government ..	$781,812,000	$629,562,000	$152,250,000	.....
Municipal	27,166,393	18,333,893	8,832,500	.....
Railway	35,355,133	5,700,000	24,550,000	$5,105,133
Public Service Corporation ..	20,950,000	11,100,000	9,850,000	.....
Miscellaneous ..	44,100,202	34,595,202	9,505,000	.....
Total 1919	$909,383,728	$699,291,095	$204,987,500	$5,105,133
	100%	76.89%	22.54%	.57%

There is an increase of about $145,000,000 in the total, but the increase in the amount sold in the United States is over $170,000,000. Had it not been for these sales the difficulties in connection with New York exchange would have been much greater.

THE PROCESS OF ADJUSTMENT

The difficulties of reconstruction after the great war are even greater than we feared. The whole world is feeling the effect of four years in which the ordinary work and economics of life were not merely neglected, but the basis thereof was almost swept away. We are short of almost every commodity, the strongest evidence of this being the fact that millions of people in Europe face actual starvation. We cannot re-establish the normal supply of commodities except by working harder than usual, and we cannot lessen the terrible strain of high prices without doing the extra work which will put an end to the lack of commodities. We cannot adjust prices without also bringing about a contraction in the volume of paper money and other instruments of credit, and so far as it is possible to enforce contraction without interfering with the production of what is really necessary, the reduction of prices will be facilitated. In a word, bankers should not aid speculation, or assist ventures which do not directly lead to production. We are still building ships with feverish haste throughout the world, and we ought to be spending large sums on railroads in order that commodities may be freely distributed. The present cost of ocean transportation, quite as much as the cost of goods at the primary markets, stands like a huge barrier across the pathway of return to normal conditions. What is worse, however, is that even present prices, in the natural order of things, will go on rising until the lack in the world's supply of commodities has been filled, and there has been a large contraction in the volume of paper money now in existence.

WAGES AND PRICES

In the case of many classes of wage earners there has been an adjustment of pay against this increased cost of living, but there are many instances in which there has been either no adjustment or one quite inadequate. There are, however, some classes of earners who are so highly paid, in comparison with the past, that they have unusual spending power, and, along with all the others who have profited unduly by the war, they are spending their money in such a manner as to increase still further the troubles of the less well-off. Apart from this, after the gigantic struggle of the war, the world has slackened its energies and is filled with argument and unrest. All these elements move along an ascending spiral which clearly ends in ruin if we cannot arrest their course.

Prices will be higher than before the war for many years to come, but a readjustment to tolerable conditions is absolutely necessary if we are to enjoy the peace bought at such a cost. Governments must cease borrowing and keep their expenditures within their powers of taxation; both individuals and governments must spend less on things not absolutely necessary, and we must all work harder to produce the normal supply of all the commodities useful in life.

CO-OPERATION ESSENTIAL

Canada, as I have already said, won its high place in the world's regard by superb co-operation in the one ideal of winning the war. Can we not compromise for the moment the differences between capital and labor, between farmer and manufacturer, between the various interests that are risking our future for the sale of their own particular grievances, and co-operate in another ideal equally great, the restoration of peace and the return of prosperity on a better foundation? With this accomplished the separate ideals of the industrial divisions of our society can be discussed with far more chance of fair adjustment than is possible in these difficult times.

MUST INCREASE EXPORTS

We know now roughly the cost of the war as represented by our public debt. This debt is held mostly at home, but partly abroad. In addition, there were issues of securities made before and during the war by governments, municipalities and private companies, and sold abroad. On the whole of this debt, so held abroad, the annual charge is about $190,000,000 per annum. Of this roughly about $65,000,000 is due to holders of our securities in the United States, and about $125,000,000 to holders in Great Britain and Europe. This debt we can pay only by an excess of exports over imports or by new borrowings. The debt at home is our own domestic affair. Certain citizens have advanced the cost of the war to the nation, and we now have to distribute this cost by taxation over all the citizens of Canada (except those who escape taxation), so as to meet the annual amortization payments. If the annual payments are obtained by reasonably fair taxation, so levied that the taxes do not become a cause of restraining our industries, we shall not fail to win through, but to accomplish this, much study of the subject is necessary.

TAXATION

Many forms of taxation not yet in use in Canada will doubtless be employed, in addition to those now in force, but the whole question should be approached without that class feeling which often causes taxes to be so apportioned, that bitterness and a sense of injustice are felt by many who do not object to being heavily taxed so long as those who really can afford to pay their share do not escape. The income tax should be paid by a much larger number of citizens. The tax on surplus profits needs much study: there is all the difference in the world, both in justice and in the interest of the community, between a large aggregate of profit made by a small margin on each transaction and a similar sum made by an unfairly large margin of profit on each transaction. The community may be deeply interested for its own advantage in securing the extension of the first kind of transaction, while no one is interested in the success of the other class except the taxpayer himself. The tax in the end must be borne by our industrial activities, and we are foolish if, in our eagerness to escape our own share, we make such burdens so heavy on others that many of these activities must cease, and commodities that under fair conditions might be produced at home are replaced by imports from abroad.

UNION BANK OF CANADA

55th Annual Statement — 29th November, 1919

Fifty-fifth Statement to the Shareholders Discloses Continued Growth of Influential Canadian Banking Institution—Total Assets Built Up to $175,000,000 and $2,000,000 Added to Reserve Fund—Significant Extension of Connections in Canada and Abroad, Aimed to Assist in the Financing of Canada's Foreign Trade—Bank in Strongest Position it Has Ever Held—1425 New Shareholders.

The Fifty-fifth Annual Meeting of the Shareholders of the Union Bank of Canada was held at the Head Office of the Bank, in the City of Winnipeg, at twelve noon, on Wednesday, January 7, 1920.

The President, Mr. JOHN GALT, in the chair.

DIRECTORS' REPORT

The Directors have pleasure in presenting their report, showing the result of the business of the Bank for the year ended November 30th, 1919.

During the year 89 branches and agencies were opened as follows:—

In the Province of Prince Edward Island, 1—Charlottetown.

In the Province of Nova Scotia, 3—Berwick, Kentville and Truro.

In the Province of New Brunswick, 2—Moncton and Sussex.

In the Province of Quebec, 1—Kenogami.

In the Province of Ontario, 13—Blenheim, Burritt's Rapids, Caledon, Campbellford, Charlton, Easton's Corners, Indian River, Ridgetown, Rodney, Toledo, Toronto (Woodbine and Gerrard, Warsaw and Woodlawn).

In the Province of Manitoba, 28—Altamont, Augusville, Clanwilliam, Clearwater, Deepdale, Dropmore, Elm Creek, Elphinstone, Graysville, Homewood, Lowe Farm, Margaret, Morris, McAuley, Oakburn, Rosebank, Roseisle, Sandy Landy, Sanford, Solsgirth, Sperling, Winkler, Winnipeg (Corydon and Lilac) Ellice Ave., Main and Lansdowne, Main and Mountain, Union Stock Yards and West Kildonan).

In the Province of Saskatchewan, 22—Alida, Carruthers, Coleville, Dewar Lake, Drake, Eaton, Govan, Guernsey, Jansen, Keystown, Kyleville, Limerick, La Porte, Major, Mantario, McNutt, Netherville, Palmer, Ruthilda, Salvador, Stewart, Strongfield.

In the Province of Alberta, 17—Acadia Valley, Alcomdale, Bentley, Black Diamond, Hillhurst, Calgary, Chauvin, Clive, Duchess, Leduc, Loyalist, Lundbreck, North Edmonton, Rimbey, Sedalia, Sexsmith, Sunnynook and Waterhole.

In the Province of British Columbia, 2—Vancouver (City Heights and Ducks).

The number of branches and agencies in operation on November 30th, 1919, was 388.

The usual inspection of all branches and agencies has been made.

During the year Advisory Committees were appointed at Vancouver, B.C., Montreal, Que., and London, Eng.

JOHN GALT,
President.

PROFIT AND LOSS ACCOUNT

Balance at credit of account, 30th November, 1918		$126,298.90

UNION BANK OF CANADA—*Continued*

Report of the Auditors to the Shareholders of the Union Bank of Canada.

In accordance with the provisions of subsections 19 and 20 of Section 56 of the Bank Act, we report to the Shareholders as follows:

We have audited the above Balance Sheet with the books and vouchers at Head Office and with certified returns from the Branches.

We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

In addition to our verification, at the 29th November, we have, during the year, checked the cash and verified the securities representing the investments of the Bank at its chief office and principal branches and found them to be in agreement with the entries in the books of the Bank relating thereto.

In our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

T. HARRY WEBB, E. S. READ,
Auditors of the firm of
GEORGE A. TOUCHE & CO.,
with which is amalgamated
WEBB, READ & CO.

Winnipeg, 20th December, 1919.

H. B. SHAW, General Manager.

JOHN GALT, President.

Customs Rulings

(*Continued from page* 231)

son-Paterson Company's prosperity soda, and similar combinations of soda ash and bicarbonate of soda.

Declared that Dexter and Cross continuous feeders, per illustrations submitted, when attached to, or together with, presses with which they operate, or when impored separately, are dutiable under tariff item 453.

Wrappers of an advertising character designed to be pasted on cans or other containers, ruled by the Board of Customs on 9th October, 1917, to be dutiable under tariff item 178.

Ship's port lights are now manufactured in Canada and therefore not entitled to entry under tariff item 470.

Pulley blocks of wood or iron, single, double, triple and quadruple, up to 18 inches in diameter are now manufactured in Canada and therefore not entitled to entry under tariff item 470.

Continuous feeders for printing presses, ruling machines or folding machine, whether imported separately or with the machine with which they operate, are dutiable under tariff item 453.

Vacuum system for stripping cards,—ruled to be dutiable under item 453.

Gramophones for educational purposes, not admitted under item 696.

Australian Import Restrictions

Proclamation Issued Prohibiting Importation of Certain Specified Commodities

The High Commissioner for Australia, London, has reveived advice from the Prime Minister to the effect that a proclamation, dated 1st November, 1919, has been issued prohibiting the importation of the undermentioned goods except by license. The conditions upon which the Minister for Trade and Customs will issue a license will be published later.

Absolute alcohol.
Amylic alcohol.
Collodion.
Sulphuric ether.
Anæsthetic ethers.
Ethyl acetate.
Cocoa and chocolate, potable.
Rennet.
Muntz or yellow metal, nickel, silver, German silver and Britannia metal sheets.
Bronze and gunmetal bars, rods and ingots.
Gilding metal sheets.
Antimony, star antimonial and lead compounds, viz., type and linotype metal, antifriction and plastic metals.
Brass, viz., angles and tees, bars and rods, pipes and tubes, plate sheet and strip.
Copper, viz., angles and tees, bars and rods, pipes and tubes, plate sheet and strip wire.
Phosphor copper—bars, rods and ingots.
Zinc and spelter—bar and ingot.
Railway and tramway materials, viz., rails, fishplates and fishbolts, tie plates and rods, switches, points, crossings and intersections.
Beams, channels, girders, and joists, rolled iron or steel.
Manganese or chrome steel parts for grinding, crushing or pulverising machinery.
Accumulators or storage batteries.
Wire, electrical cotton-covered.
Tubes, collapsible.
Iron and steel—pig iron, ingots, blooms, billets, bar, rod, angle, tee, high-speed tool steel bars, rods and ingots.
Oils, coal-tar, viz., benzol, naphtha (solvent), naphtha (heavy).
Paints and colors, viz.:
Dry white lead.
Paint ground in liquid in packages weighing over 14 lb.
Plaster of Paris.
Carbolic acids.
Cresylic acid.
Crude creosote and crude tar oils.
Naphthaline, crude.
Naphthaline, N.E.I.
Arsenate of calcium.
Arsenate of lead.
Arsenate of soda.
Arsenate of zinc.
Carbolic disinfectants.
Sodium hyposulphite.
Arsenic.
Arsenate of soda.
Arsenic sulphide.
Ethyl chloride.
Sodium sulphate (glaubers salts).
Bacteriological products and sera.
Veneers, three-ply.
Strawboard.
Frames for side cars in sets.
Wheels, steel and steel rimmed (including tyres), for use on railways and tramways.
Axles and other parts for such wheels.
Panels and mudguards for motor cars.
Hosiery yarns.

The British Board of Trade understand from a cable they have received from their Senior Trade Commissioner in Australia that goods in the course of shipment or on *bona fide* order, except those previously specially prohibited, will not be refused entry.

New Merchants Director

Western Business Man Identified with Grain Trade Elected to Board of Directors

At the Merchants' Bank directors' meeting, held on the 28th November, E. W. Kneeland, of Winnipeg, was elected to a place upon the Board. The appointment of a Western man whose interests are entirely centred in the wheat business is an indication of the growing importance of the West in the minds of the powers that be in our eastern banks. Mr. Kneeland, who is a naturalized Canadian subject, having been born in the United States of Canadian parentage some fifty years ago, has devoted his whole life to the development of the grain business in the United States and Canada. He is now general manager of the British American Elevator Company; vice-president, Port Arthur Elevator Company; vice-president, Saskatchewan Elevator Company and Liberty Grain Company. He is a director of the National Elevator Exchange, Traders Building Association, Canadian Bond & Mortgage Company, all of Winnipeg, and he is, of course, a member of the Winnipeg Grain Exchange.

Review of Industrial Conditions

Continued from page 218

CONDITIONS IN THE OIL INDUSTRY

By S. R. Parsons

President, The British American Oil Co., Limited, Toronto

We have experienced less difficulty during the past year in obtaining help than for two or three years previous. Our older employees have continued their loyal activities and the newer ones, except here and there, have not given us unusual trouble.

There has been more or less shortage of raw materials, causing some delays, but generally speaking we have been rather fortunate and do not look forward to any difficulty in our operations on account of materials.

On the whole, general operating conditions have been pretty satisfactory. So far a scheme of co-operation, which we put into effect about a year ago, with joint committee control of certain operating conditions, has proved of great service.

The demand has been very satisfactory throughout the year. Values have not changed to any great extent. On account of the fact that our raw materials are imported, we do not have as good an opportunity of exporting our products as United States refiners, except here and there for surplus lines.

If the labor situation, generally speaking, is not influenced largely by the cry for shorter hours irrespective of production, we believe we see in prospect a reasonable good year. If unfortunate labor troubles arise elsewhere or in our own country, reducing production and making it more difficult to obtain raw materials or finished products, it will interfere with the otherwise generally good outlook.

We anticipate adding to our refinery facilities, giving us a larger output for use in the home field. Before the end of 1919 we hope to have a capacity of from twenty-five to thirty-three and one-third per cent. greater than that at present. In our case this does not mean the introduction of new lines. We are also adding materially to our branches.

BIG EXPANSION BEING ARRANGED FOR

By R. H. Coombs

General Manager, Prest-o-Lite Co. of Canada, Limited

We have had very little trouble in the past year with labor, in fact, none so far as the Prest-O-Lite Company is concerned and only a small amount of trouble with the Canadian National Carbon Company. This latter trouble was due to unrest and dissatisfaction among a lot of cheap aliens whom we had on some rather dirty processes. We have now adopted a policy to employ none but English-speaking people, either British subjects or Americans and as long as we continue to employ this class of labor we expect no labor trouble.

As to raw materials, the products of both of these companies are made from raw materials which unfortunately must be imported from the United States, our principal ingredients being desilverized electrolytic pig lead and oxides thereof, carbon flour, coke, manganese, zinc, hard rubber etc. We are not experiencing any trouble in securing these materials.

Demand is satisfactory both as to amount and kind. Values are and have been stationary for over a year. We have not tried to develop the export field owing to inability with existing facilities to properly take care of domestic trade. The outlook for the near future seems perfectly satisfactory, except that the exchange differential and the necessity for importing our raw materials from the United States is rather apt to influence an advance in our manufacturing costs and consequently in our price to our distributors. However, owing to the very small advance made in the selling price of the products of our companies in the past 3 or 4 years, we do not believe that the small advance required to cover this particular feature, will in any way influence the volume of business.

As to enlargement of our capacities and the expansion of our business, we are at the present time engaged in the erection of a large new general plant in Toronto for housing both the plants of the Canadian National Carbon Co., and the Prest-O-Lite Co. The Prest-O-Lite Co. will also erect a new manufacturing plant in Toronto vicinity in the Spring, for compressed acetylene gas—one of the products of the company, used extensively in the oxy-acetylene processes. This company will also erect a new storage battery assembly plant and warehouse at Winnipeg early in the coming Spring.

CONDITIONS IN TWINE AND ROPE INDUSTRY

By R. F. Shurly

President, Shurly & Derrett, Limited, Toronto

Our experience with labor is that it has been quite scarce and very irregular. Raw materials, since the war broke, have been very difficult for us to obtain, as previous to that time practically all the soft fibre used in this country came from Europe (Russia, Italy and India), so we had to seek a new source of supply. Present conditions are that there is very little, if any, raw material on earth, of a good quality. General operating conditions have been very difficult, but we have increased our output about one-third.

Demand at the present time is great for all kinds of twine and rope, with values abnormally high. We do not consider it at all feasible or possible to export soft fibre cordage from Canada, and in our opinion it will not be possible in the future, unless conditions are absolutely different from pre-war.

The present outlook, as far as we are concerned, is good. We are booked from two to three months ahead, but by reason of the abnormal, and somewhat ridiculous figures for raw material generally, and the consequent prices that we have to obtain, we could not say exactly what six months hence will demonstrate, should there be any lessening of demand.

We have enlarged our capacity already about one-third, and have further extensions in view, but delivery of machinery is very much delayed. We have not introduced the manufacture of any new lines; in fact, we have had to cut some of the lines we previously made.

THE BRUSH AND BROOM INDUSTRY

By John C. Boeckh

Sec.-Treas., The Boeckh Company, Limited, Toronto

During the past few years we have found it exceedingly difficult at times to procure satisfactory labor, and the applications for new help which we received were not, in many instances, very satisfactory. On the other hand, wages have considerably advanced and it is quite probable that with the present increasing costs of living, they will continue to increase proportionately.

We have not suffered to any great extent as yet through the shortage of materials, though prices have advanced from 100 to 300 per cent. on different lines, with some products

The balance of trade in merchandising

WE hear a lot these days of the so-called balance of trade; and much has been made of Canada's unfavorable position in this respect.

At present the balance of trade is against us.

Therefore we, as Canadians, will have to produce more and buy more within the borders of our country, if the balance is to be restored to anything like an equilibrium.

As with nations, so with individuals.

The manufacturer who adopts an aggressive policy of production and sales, and supports that policy with vigorous and informative advertising, will divert business to himself and create a trade balance in his favor.

By the same token the manufacturer who fails to take advantage of the opportunities which advertising presents, will lose to his advertising competitor in Canada or across the line sales which might otherwise be his.

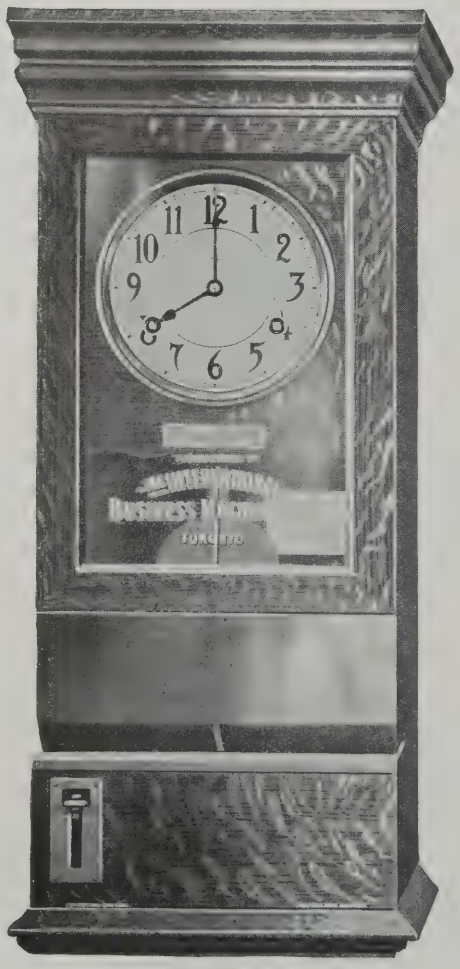
Our business is to help the manufacturer who is out after all the trade he can legitimately get.

For him we secure dealer co-operation because we do something for the dealer. We gain for him the reader's confidence because we are straightforward with the reader. We retain his goodwill and account because dealer co-operation and reader confidence sell the goods of the manufacturer whose advertising we plan, write and place.

"It's all in the Service"

Norris-Patterson, Limited

Advertising Agency



10 East Adelaide Street **Toronto, Canada**

"Pencil Records! don't go"

Make this a rule in your plant. It's a good one for any business. For the business depending on labor time records it is absolutely imperative.

International "Job" Time Recorders

International Job Time Recorder

Every job or operation calls for a "job card." The workman punches the time he starts it. He again punches the time he finishes. Both records are ***printed*** on the card by mechanism inside the machine, in absolutely accurate unchangeable figures. ***There*** you have the basis of a complete time-keeping system that will keep track of actual working time and, quite as important, give you a tracer on your "expense labor time"—the working time you are paying for but not using.

International Business Machines Company
Limited

FRANK E. MUTTON, Vice-President and General Manager

Head Office and Factory: Campbell Ave., Toronto, Ont.

Also at Montreal, Winnipeg, Vancouver

(Also makers of Hollerith Electric Tabulators and Dayton Scales)

"Here's the Time Recorder that earned our dividends for us, Gentlemen!"

"This is how it happened. Last year we put in expensive modern high-speed machines---but we also had an old-fashioned time and cost recording system. Result---our production was disappointing.

"This year my first move was to call in experts from the International Business Machines Company who investigated and showed a convincing report. In each department we now have an International Job Recorder. Each workman prints the exact starting and stopping time on every job.

"It didn't take long to pick out the producers. We've replaced the 'non-producers', those who didn't measure up, and have brought in new blood.

"Every man in the shop is a paying investment. Some are better than others. We picked 'Job Bosses' and set them on the different operations and after thorough and scientific tests we set a standard output for each machine. Now we are getting it and more because of the right spirit among the men.

"We've cut out the maddening programme of errors and disputes.

"Briefly, these are the reasons why we have earned our dividends this year."

entirely off the market, especially those coming from such countries as Russia and France. This has in turn made a greater demand for the materials available, which has had the effect of making them at times very scarce and difficult to obtain, besides the prices in all cases advancing very rapidly. However, under these very adverse conditions, we have been able to considerably increase our output, due largely to installation of labor-saving machinery and to the loyalty of our old employees who have been with us a great number of years.

The demand at present for our manufactures is very large, and even with our increased output our capacity has been taxed to the utmost and it is quite likely that we will have to disappoint some customers later on. Selling prices have of course been advanced from time to time, and it is probable that further advances will take place in the near future.

We have also begun the manufacture of kindred lines, and while it is too early to give our forecast as to future possibilities for the sale of same, we anticipate that the demand will grow and develop to a large extent.

As to future conditions of trade generally, we would not want to express an opinion as no doubt these conditions are dependent on certain factors and their influence on the situation is difficult to define. It seems, however, to us that with the great shortage of supplies of all kinds, and the increased demands for them, that trade generally should continue good for some time to come with a period of prices at present day levels or higher, unless other circumstances, of which to-day we are not aware, enter into the situation.

REVIEW OF ELECTRO-CHEMICAL INDUSTRY

By H. W. Matheson
Vice-President, Canadian Electro Products Co., Ltd., Montreal

Our factory is located at Shawinigan Falls and we have had but very little trouble in connection with labor. The French-speaking element are not in general labor agitators, consequently at the present time labor conditions are favorable. On the other hand, our policy has always been to meet labor half way, and we increase their wages at least in proportion to the increased cost of living. At Shawinigan Falls, all the local industries work together in this respect and in many cases we have increased their wages without being asked to do so. This has had a very good effect on the labor element and creates in general good feeling.

We do not purchase very much raw materials excepting manufacturing equipment. The few raw materials we do purchase for manufacturing purposes are readily obtainable at reasonable prices. The equipment for use in manufacturing we are obliged to purchase largely in the States. This is a serious handicap when one considers the high duty, war tax, etc., together with the now heavy rate of exchange we have to pay.

No difficulties are encountered in transportation as far as Canada and the United States are concerned; but the largest portion of our output is shipped to England and the Far East, and most serious difficulties have been experienced in the past months, and are still being experienced, in securing shipping space, especially to Europe. This has been due to lack of tonnage in the first place, and secondly, to the difficulty in having our Canadian transportation companies accept our materials. These materials, which at the present time consist of acetic acid and paraldehyde principally, have not been manufactured in Canada prior to the war, and the steamship companies know very little about these materials, and consequently are adverse to accepting them when they can secure cargoes so easily. This is being overcome by a process of education of the steamship companies. The overseas freight rates to Europe are also very high, and we are at the present time paying $40.00 per ton, which is quite a serious handicap; whereas, on our business to the Far East, which is considerable, we only pay $25.00 per ton.

When war closed we did not have any great prospect of any large volume of business for some time, consequently we did not prepare for operating on a very large scale. Business, however, has picked up so rapidly that at the present time it is impossible for us to fill the orders, and we are making plans to increase our output in the very near future.

Demand for our products has increased greatly both in the United States, Europe and the Far East, with a general trend of values slightly upward. At the close of the war our product dropped almost to pre-war prices, this being largely due to the enormous stocks held in both the U.S. and England. These stocks are now being greatly reduced, and it is expected they will be entirely exhausted by the first of May next. It can be readily seen that products cannot be manufactured at pre-war prices and consequently, as already mentioned, the prices are going upwards.

The outlook for the future is fairly bright, but since, as already mentioned, the major portion of our material goes to Europe, the problem of exchange is one of the most serious features militating against the volume of business. It is difficult to increase the price in England above a certain price for our products, since the material will then probably come in from Germany; in fact, we have already encountered some competition from Germany, especially in Belgium and Holland, and it will only be a question of time until this competition is felt in England. With the mark at its normal value, I believe it would be impossible for the Germans to compete, but under present conditions it is felt that the Germans can readily compete with our products in the English market.

As already mentioned, we are enlarging our capacity considerably, possibly to the extent of 20 per cent., and in addition to this are studying at the present time the problem of manufacturing new products. It is impossible for us to mention what these are at the present time, but in general they will consist of materials which can be manufactured by the utilization of water power and which have good markets in England, and due to the absence of water power in England are uneconomical to manufacture there.

THE TIME RECORDING MACHINE INDUSTRY

By Frank E. Mutton
General Manager, International Business Machines Co., Ltd., Toronto

The manufacturing situation with us is in a good healthy condition. We had very little labor trouble even during the strike, in fact it was only like a flash in the pan; it amounted to nothing as far as our plant was concerned. We employ and have been fortunate in securing a splendid class of labor. Further, our employees are what you might class in the constant category, that is, it is seldom anyone leaves our employ, except from illness.

As to raw materials, we have had about the same difficulties as all other manufacturers. Steel has been difficult to get—that is the proper kind. Castings have been very difficult to get, and only at a very enhanced price. However, we have never been handicapped for the want of material.

Our operating conditions are very satisfactory. We increased our output for the first eleven months of 1919 approximately 50 per cent. without any increased floor space. We find the demand in an extremely healthy condition for our three products, namely, time recording devices, Dayton scales, and Hollerith tabulating machines, with the demand increasing all the time. The price of our products have trended upwards owing to the increased cost of production.

We consider that the outlook for immediate and future business for at least three to five years was never as good in the history of this company. In fact, it impresses us

that it is a matter of production. We can sell more than we can produce, and there is every reason in our opinion, gathered from economic conditions, that this situation will continue for the time mentioned.

We are planning to increase our manufacturing facilities and space about 50 per cent., the plans are about now completed. As to new lines, we will be placing on the market in the next two months our new electric door lock, and after careful investigation, it would clearly indicate there will be a great demand for same, and we are making preparations to take care of it.

CONDITIONS IN JEWELRY MANUFACTURE

By Geo. H. Lees

Geo H. Lees & Co., Ltd., Hamilton

We would state that the year just closing has been the most successful one in our experience. The difficulties, too, have been more than usually numerous. It has been impossible to get a sufficient supply of skilled labor, and wages during the year were considerably advanced. Raw materials were to be had, but it took somewhat longer than usual to get them, and the prices were largely advanced. Still, taking it altogether, we did very well, and have increased our output nearly to the extent of 50 per cent.

Quite a percentage of our business this year might be traced directly to the close of the war and returned soldiers, including medals, rings, and other souvenirs presented to the returning soldiers. We do not look for much business of that kind in the coming year, and yet, as business is so good along other lines, we are looking to the New Year with anticipation of a good demand for our goods.

Owing to the high price of silver, the exchange on materials, and goods imported from the United States, and the Government jewelry tax of 10 per cent., there has necessarily been forced quite an advance in prices.

We had planned at the beginning of the year to endeavor to open a line of export business, but the home trade developed so during the year that we found it impossible to satisfactorily handle it, and the export trade had to be entirely neglected.

We have not made any definite plans for enlargement of our factory, but if business continues to increase, that must necessarily be our course.

Answering your enquiry as to whether we have manufactured new lines, would say that the reverse to this has been our tendency for the last few years. Our policy has been to make as few lines as possible, feeling that we could give better results where the market offered us the opportunity of so doing, so that we make scarcely more than half of the variety of goods we did ten years ago.

GREAT DIFFICULTY IN OBTAINING MATERIALS

By L. W. Simms

President, T. S. Simms & Company, Limited, St. John

While we have of course felt it necessary to keep abreast of the steadily rising cost of living by advances in wages and while a certain amount of agitation from outside sources is constantly reaching us in the way of rumors, comparative contentment prevails, which we are seeking to foster by close co-operation in affairs concerning our plant. The supply of labor, while not acutely scarce, has at no time for the several past years been quite up to what we could have profitably absorbed.

Possibly at no period during the war have we experienced as severe difficulties in obtaining bristles, fibres and other materials of foreign origin, entering into brushes, as at the present time. Prices have advanced to a very considerable figure beyond anything prevailing during the war and the one concern on the part of the manufacturers in our industry seems to be to obtain supplies at most any figure.

We are slowly but steadily increasing our output. In this industry increase is necessarily slow in most of our departments, owing to the lack of hand labor of a fairly skilled nature, necessary to develop.

There is a very decided demand for practically all the lines that we manufacture, the orders received during a comparatively short period this fall being in excess of anything we have experienced in our history. Costs of practically everything entering into our products have continued to advance, which coupled with the increased wages, has made it necessary to put out repeated advances with others in prospect. The tremendous demand in the home market together with an increase in the demand in export markets, mostly in our case within the British Empire, has made it so far impracticable for us to seek further fields.

As far as future business is concerned, we believe there is quite a decided scarcity in the brush line especially, and the fact that increased building is imperative, and a great many properties have reached the point where they absolutely demand painting this coming spring, will cause a very decided demand for brushes, in excess of what we have experienced for several seasons.

THE ENVELOPE MANUFACTURING INDUSTRY

By C. G. Ellis

Barber-Ellis Limited, Brantford

There has been great difficulty in getting sufficient labor, and continually increasing difficulty in getting raw materials. We have no complaints to make regarding transportation, and even under the difficulty of procuring labor and material we have succeeded in increasing somewhat our production. This we deem very satisfactory as far as we are personally concerned.

The demand for the class of goods which we manufacture, viz., envelopes, is excellent; values have increased somewhat. Helping to build up export business would be very difficult on account of the seemingly increasing trouble in getting raw material; our raw material is paper.

We are enlarging our plant in Brantford, and also greatly improving our mechanical equipment, and in doing so we have felt that the outlook for trade for 1920 in the particular lines that we manufacture, is excellent, that prices will remain firm and that as very little of our particular line is imported just at present, we should be quite busy during the coming year.

DEMAND FOR FERTILIZER EXCEEDS SUPPLY

By A. E. Bonn

General Sales Manager, American Cyanamid Co.

Labor conditions in general are good. Labor has been scarce since 1916, but with us it is now reliable and effective. Raw materials secured in Canada are of good quality, but high in price. Transportation conditions, generally, are quite satisfactory, except for occasional car shortages. Our normal operating conditions are good. Since 1916, conditions have been upset and uncertain, but they are now improving.

The fertilizer and heavy chemicals market conditions are exceptionally good. The world demand for fertilizers far exceeds available supplies, and consequently the trend of values is upward. The heavy chemicals of our manufacture are enjoying good demand in Canada and the United States.

The outlook for the next three to six months is most encouraging, and if a setback develops, we do not think it will be acute before the summer of 1920. The credit situation in Canada and the United States is likely to be an industrial deterrent by the time mentioned, unless the whole banking situation and conditions affecting international exchange are improved by governmental action in the meanwhile.

REES' RoTURBo PUMPING MACHINERY

Is used the world over in Modern Industrial Plants, Power Stations, Waterworks, Mines, Pulp and Paper Mills, Salt and Chemical Plants, where highest efficiency, reliability and high-class engineering are demanded.

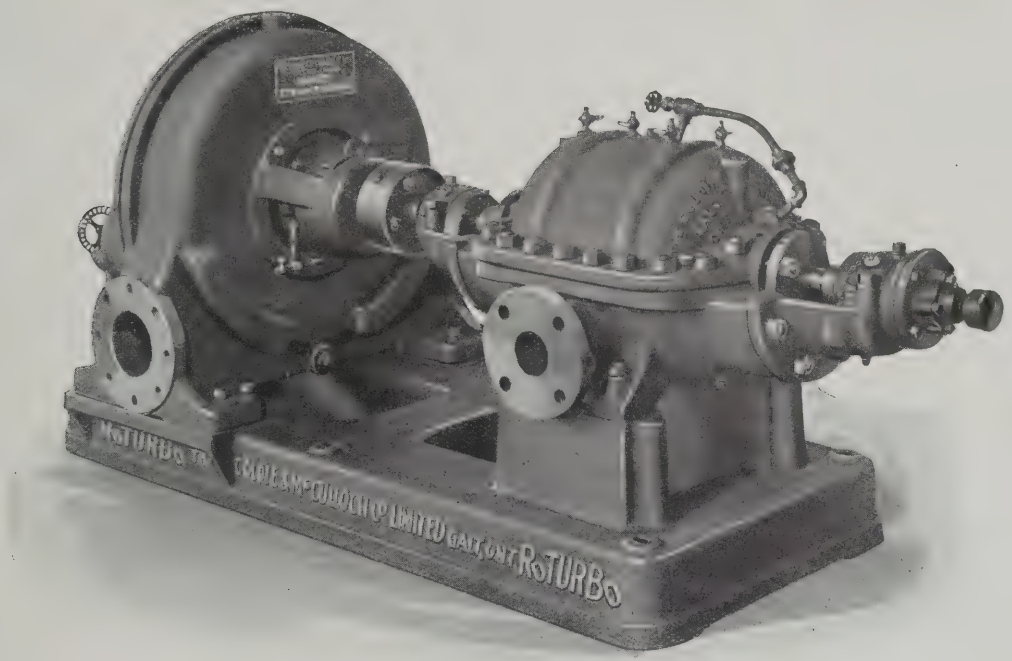

Illustration shows a REES' RoTURBo Multi-stage Pump direct connected to Goldie & McCulloch "WAIT" Steam Turbine, recently built for the Salts & Potash Co. of Canada, Limited, for pumping brine.

REES' RoTURBo Pumps provide a very high and sustained efficiency over a wide range of duties which means a saving in power costs. The self-regulating feature of RoTURBo design is responsible for this saving, and this same feature protects your prime mover from overloads on a decreased pressure head, eliminating expensive delays and costly repairs.

Steel Industry

(*Continued from page* 177)

U.S. steel strike on our market is not at all noticeable. What effect the coal strike may have it is impossible yet to determine.

We have not made any developments regarding the manufacture of new lines or extension of capacity during the war.

Our experiences in the export field have not been large, so far as steel products are concerned. During the war we sold a large number of cars, built by our subsidiary, The Eastern Car Company, for shipment to Russia and France. Had we not been able to transport these cars ourselves, the results would have been unsatisfactory. The low financial standing of European countries and the general conditions there, are so uncertain that one would be very unwise, we feel, to make any prophecies regarding the development in that direction. Even with the considerable protection which we have in Canada, we have found it somewhat difficult to compete with the American steel producers. This being the case, you can quite understand that in neutral markets this competition is that much more severe and militates against any excessive export business in steel products in normal times.

The immediate future of the Canadian steel business is dependent entirely on the immediate future of all business in Canada; our views on that point are very indefinite. After five years' war, during which very little railway equipment or steel material of any kind were brought into the country or manufactured therein except for war purposes, it would seem rational that there should be a domestic demand of very large proportions. So far, however, these expectations have not been realized, and it is only within the past few weeks that any buying movement in steel products has been evident. It will be necessary, however, that if the country is to progress, there must be a large amount of business develop to take care of the depreciation and replacements necessary during the past five or six years. In this part of the country, as you are aware, tremendous resources of raw material in the shape of iron ore and coal are available. That they will, in the not very distant future, be much more fully utilized than they are at present is, I think, something that everyone recognizes.

Stove Industry

(*Continued from page* 215)

Canada will be quite able to meet demand if the labor is available. We do not think any of the foundries are operating to their full capacity and that their operations are limited rather by number of men available than by size of buildings and equipment.

Export business has not been a factor with us. Although we know that some stoves are being exported, we do not think the quantity is of sufficient importance to affect the trade here.

PRODUCTION HAS SOMEWHAT DECREASED

By Another Manufacturer

Manufacturing conditions have been unsatisfactory as regards supply of labor and raw material. As far as we are concerned we have not been able to get sufficient output. As a consequence production has decreased in comparison with previous years, both from the fact that we are short-handed, and the output per man has been less, notwithstanding a considerable increase in wages.

Notwithstanding the increased high prices, the public seems to be buying goods of best quality. Price does not seem to limit the demand. Export business in enamelled ware is an important factor and we could have increased this business to the limit of our production. However, we felt our first duty was to the home market and have only taken such business in this direction as we could handle without prejudice to our regular trade.

The outlook as far as demand is concerned is satisfactory. The present condition as to supply of materials is so embarrassing that it is impossible to forecast what the production will be for the coming year. We have no immediate plans for factory enlargement. We first have to get up production to the capacity of our present plant before extending.

CONDITIONS HAVE BEEN SATISFACTORY

By W. J. Bathgate

Percival Plow & Stove Company, Merrickville

Conditions here as regards labor, raw material and general operations have been on the whole very satisfactory. Our production has increased about 10 per cent. The big demand has been for a medium-price range. We are not in any position to consider export trade and have had several inquiries that we could not entertain. The outlook is the most encouraging during our existence, and to meet this anticipated demand we are considering new buildings and extensions that will enlarge our plant by 20 per cent.

Agricultural Implements

(*Continued from page* 182)

facturers and producers to dispose of their output as near cost as possible for the next twelve months.

The outlook, so far as our business is concerned, depends entirely on the crops. With good crop conditions our business will be good. The tendencies of the next few months, or if not within the next few months, within a year, will be lack of work for the large number of workmen who have been induced to come to the cities from the rural districts by the large wages offered, and the only thing that will compel these men to go back to the farms will be the lack of work, and we feel that that is coming and that it is the only solution of the present situation.

If we could depend on a stable tariff policy we would expand, not only for our home trade, but to develop an export trade, but until a tariff commission is appointed or some legislation is passed that will give the manufacturers confidence in a tariff policy, we do not intend to expand in any way.

The whole matter, to our mind, is one of economics. If Canada is better off without machinery manufacturers; if the intermediate manufacturers who sell to the farm machinery manufacturers remain indifferent to the situation; if the Government does not think it needs the manufacturers in Canada to assist in paying the war debt; if the farmer considers it wise to drive the manufacturer (who has been paying the large share of the war debt, and who has financed for fifty years the Canadian north-west) into the U.S. to manufacture, and leave the burden of Canadian indebtedness to the farmer, then the Government probably is taking the right course.

PREPARING FOR PRODUCTION

By J. D. Davies

Alberta Foundry & Machine Co., Ltd., Medicine Hat

We are just starting operations in the implement business and are not yet quite familiar with conditions. In our regular business our experience of manufacturing as regards labor, raw materials and general operations has been most satisfactory. We are not pushing production now, as we are

A National Obligation

$55,000,000 went up in fire last year in the Dominion of Canada—physical loss only in the form of buildings, industrial plants, etc. The intangible loss, the value of the priceless records and documents that went up with this appalling material forfeit—records that, once gone, are gone forever—is beyond all computation.

Records are Irreplaceable

Physical property can be restored to its original condition—can even be improved upon. But the vital records—records which a business life-time has built up—records which form the foundation of your business—upon which your business is built and *grows*, cannot, in case of loss, be retrieved.

Records Worth Keeping are Worth Protecting

You put time, effort and thought into the preparation of business records—you employ a staff to keep them up—you place a high money value on them. Is it logical then, is it good business to leave them unprotected—liable to total extinction, you know not when.

A Record Safe Means Protection

What an insurance policy is to your buildings and physical property, a Record Safe is to the intangible assets of your business—your records and business documents. And it has this additional salutary feature: that though physical property may be wiped out, entirely, a Record Safe protects and guarantees the safety of those records that are always considered as constituting a "going concern."

Fire Protection an Immediate—a Vital Question

The question of protection against loss—both of your physical property and the intangible assets of your business—but the latter more importantly so—is a vital one now, when waste of any kind is a public dereliction—adequate protection is in short, nothing less than a national obligation.

Delay May Bring Serious Consequences

Consider well this question. Then take immediate steps to provide the protection that the value of your business records and documents warrants. Any "Office Specialty" representative will be glad to tell you about the new fire resisting Record Safe—explain the double wall dead-air space feature, tell you the advantages of the light but essentially solid construction—and show you how a combination of filing units to contain your various records may be stacked in "Office Specialty" Record Safes.

preparing all our new tools, preparatory to production in the summer.

The question of export has recently come up, and we have been asked to advise if we can manufacture tractors for export to Great Britain and France, but we think our proper market is Australia, leaving Great Britain and France to eastern manufacturers. We are optimistic regarding the outlook in Western Canada and are making plans to enlarge our factory next summer.

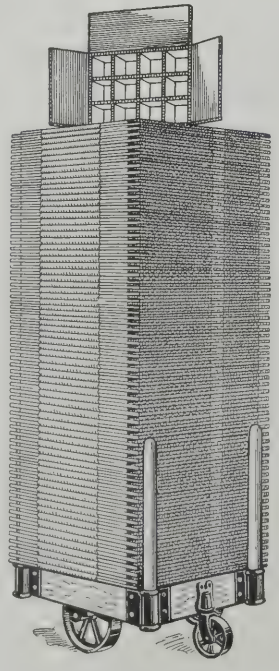
An Ontario Manufacturer.—"Since midsummer we have been quite comfortable as to labor, but the raw material situation has been getting worse and has become quite serious. Our general operations are still about normal, but this cannot continue much longer unless the raw material situation improves.

"We believe that farmers are now prepared to buy and use better grades of implements than previously. Prices are in rather a precarious position and certainly cannot go any lower. Credits and collections are good. We look for increased business. In fact, at present the only question is as to our ability to manufacture the goods for orders which could be secured. We expect the demand to exceed the supply for the coming season but after that supply would probably equal the demand."

AWAITING DEFINITE ACTION ON TARIFF

By Tractor Manufacturer

Manufacturing conditions with regard to labor have been most unsatisfactory all year on account of labor troubles. We have been more successful than some others, in as much as we have always maintained an open shop, and therefore had some employees who stuck by us and were the nucleus for a new organization. We are not really on a manufacturing programme and cannot plan on one, on account of the existing orders in council on the production of tractors, permitting them duty free under $1,400.00 in value. Our entire attention at present is devoted to jobbing work in all departments, and you will realize that this does not permit our planning for future production. In a nut-shell, our policy is that of marking time on our own lines with a fill-in policy of jobbing work, awaiting definite action as to the tariff.



Milling Industry

(*Continued from page* 199)

jurisdiction embraces the fixing of prices for export and domestic markets. The prices fixed have not been satisfactory to the mills—being too low. The Government regulations, however, have in the main been fair. We believe the Canadian Wheat Board desire to do what is right by Canadian industries.

Production for the year 1919 will compare favorably with 1918. We believe our production will be somewhat in excess of 1918.

No one can foresee the course of prices when the world's cereal markets are decontrolled. Canada is in a favorable position to compete in the world's markets from a point of proximity to the consuming centres in Europe, and with an abundance of cheap water power available for mills. Labor will no doubt be secured at lower rates in England, the Argentine, Russia, and Germany than in Canada, United States and Australia. This fact will no doubt have some effect upon the Canadian milling industry. On the other hand we produce in Canada only, what is known as "Hard Spring

Wheat," which this year is very scarce and which in the years to come will always command a market. Our only competitors for the hard varieties of wheat are the United States with only a limited area, and Russia, where conditions no doubt will remain so unsettled that for years to come they will be unable to effectively compete for export. There is an over-production of flour in Canada, Canadian mills having a total capacity to-day of approximately 25,000,000 barrels per year, 8,000,000 barrels of which only is consumed in the domestic markets.

THE WHEAT SUPPLY DIFFICULTY

By a Prominent Miller

Head of Large Canadian Milling Company

During the past year there has been no material lack of labor, except during the strike at Winnipeg. Our experience has been that common labor has not been as efficient as formerly. Mills were only partially employed because of lack of export demand during part of the time, and shortage of wheat supplies.

There were no outstanding features either in the domestic or export trade, excepting that prices and supplies were regulated through Government agencies, which, of course, was quite unusual, and which we hope may not be extended beyond the present crop year. Production for 1919 would be very much the same as that of the previous year. While there have been no new mills erected, considerable enlargement has taken place in many of the mills.

The outlook at present is, in my opinion, fair, as we look forward to a fairly steady demand for export. What is concerning eastern mills most at the present time is the possibility of getting sufficient supplies of wheat for their requirements. The Wheat Board have large commitments for wheat, and have not permitted the mills to receive shipments for some time past. A limited volume was permitted to move after Dec. 20th, but nothing like sufficient to keep the mills running full time.

The American Grain Commission have removed the embargo against the importation of Canadian wheat solely to help out their own mills, who are short of hard spring wheat; but it is hard to believe the Wheat Board will permit wheat to go to American mills when they are short for their own commitments in Europe and the Canadian mills are not fully supplied.

It is estimated now that the balance of wheat available for export would not be more than sufficient to keep mills in Canada running, providing necessary work for their employees and supplies of mill offals for our live stock and dairying interests.

BREAKFAST FOOD EXPORTS GROW

By R. K. McIntosh

The Corn Products Co., Ltd., London

We have not experienced any marked difficulty in getting sufficient help during the past two years. We do find, however, that the general efficiency of the help we are getting now is from 20 to 25 per cent. lower than that previous to the war. The supply of grain has been ample and the quality good. Of course, it must not be forgotten that we do not use any wheat, using only white corn. General operations have only been fair.

Our business has not been affected by Government regulations or restrictions during the past year. Previous to that it was very seriously restricted. Transportation and shipping conditions have been away below the average, with some exceptions. At the present time we are experiencing considerable difficulty in getting shipments cleared from the port of New York. We are badly hampered in getting G.O.C. licenses, and in getting shipments cleared; so much so, that we have almost decided to discontinue shipping to South America until such time as we can get our shipments taken from a Canadian port. We are shipping considerable to Curacao, D.W.I. At this time there is no steamship company operating between Canada and the Dutch West Indies.

We have experienced considerable increase in production, and exports to the United States and South America have increased considerably.

We anticipate a big production during the coming year. The demand from foreign markets is bound to be heavy, particularly for Canadian-made goods. Indications are that prices will not be lower on this crop. We are figuring on making some additions to increase our output on certain lines.

Automobile Industry

(*Continued from page* 184)

a great many enquiries and are hoping to be able in the very near future to establish an export business throughout the British possessions.

The outlook is very bright for the coming year, and we feel that the demand will more than likely keep up, but the tendency of prices will be considerably upward. We have considerably enlarged our capacity, and are now operating upon a basis of 1,000 motor trucks per year, which we hope will be continued during the year 1920 and, should the demand require it, we will be in a position to increase our output.

We have been striving to make or buy everything possible which goes into the manufacture of our motor trucks, in Canada, but in some instances it has been impossible to procure same in this country, as they are not being made here. I am referring principally to engines and axles.

EXPORT BUSINESS HAS BEEN RAPIDLY INCREASING

By A. Van Schlegell

Vice-President, Hupp Motor Car Corporation, Detroit

As our Canadian factory is not in operation at the present time, and probably will not be until a little later in the year, we cannot give you much information that would be of value for compiling statistics for Canada. We can, however, state that market conditions as regarding demand are unusually good. In other words, we have orders that will take our factory production for the next three months. The export business has been rapidly increasing in every part of the world. The outlook, so far as we can see, is for continued business for at least the coming year, and we hope to be able to continue the present car, although the question of price is one on which we are very much unsettled. Material and labor costs are increasing so rapidly that it is very doubtful if motor car manufacturers will be able to continue their present lines for very long.

WILL SELL ALL TRUCKS THEY CAN BUILD

By W. B. McLean

President, Mapleleaf Mfg. Co., Limited, Montreal

We have had no difficulty in regard to the supply and efficiency of labor so far, but find materials very hard to get owing to disturbed conditions at the factories and in transportation.

We are endeavoring to have all the parts possible made in Canada and have taken on an expert to develop that end of the business.

We find a demand for trucks so far greater than we can supply, and the tendency towards the lightest and heaviest models—that is, our 2 and 5-ton trucks. Price tendencies are strongly upwards owing to increased costs. We have quoted on some large orders for export, but I have not closed any of this business as yet.

The outlook to us is that we will be able to sell all the trucks we can build or obtain parts for. As we have not got

properly going yet in this business, we have not made arrangements for any large capacity. At present we make arrangements to put out about 200 trucks per year.

Packing House Industry

(*Continued from page* 202)

curtailed shipments from this country. Since the signing of the armistice the trend of prices has been generally lower.

We do not believe there would be any marked expansion in production through enlarged capacity, as during the war there was considerable expansion in the capacity of packing houses, which are now in position to take care of present production of live stock. The production of live stock is not adequate to take care of the demand, especially on hogs. The present tendencies are not favorable for increased production of hogs with the trend of prices lower and the price of feed remaining on a high level.

The export business will continue to be a factor in our industry for some years to come, as live-stock in European countries has been depleted to a large extent and these countries are naturally dependent on North and South America. In addition to the above, there is no question but that the European exchange situation is having an influence on exports of all products from North America and no doubt if it was more nearly on a parity, increased exports would result.

GENERAL REVIEW OF PACKING HOUSE INDUSTRY

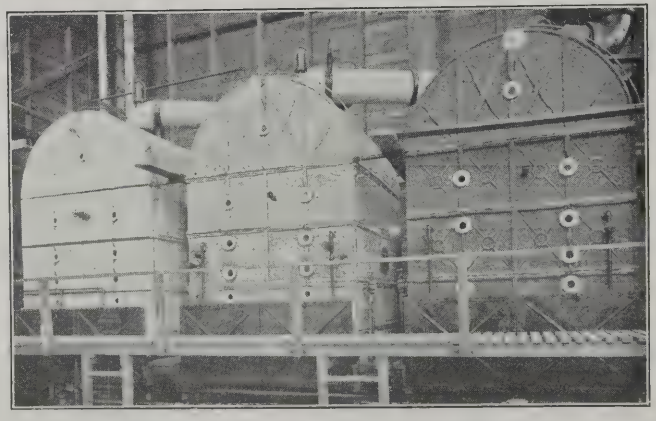
By R. D. Morrison
The Harris Abattoir Co., Limited

The packing-house industry has experienced a very high labor turn-over during the past year, but the supply of labor has been fairly plentiful throughout the year.

The report of deliveries of cattle at the five chief live stock centres in Canada, viz.—Montreal, Toronto, Winnipeg Edmonton and Calgary—shows that there has been a plentiful supply of cattle coming forward throughout the year. For eleven months ending Nov. 30, 1919, there were 1,076,48 cattle received at these markets as against 575,675 for the same period in 1918.

The hog receipts at the five principal Canadian markets for eleven months ending Nov. 30, 1919, show 1,034,177 hogs as against 1,037,555 hogs for 1918. This shows a slight decrease in receipts which would lead one to believe that there has been a correspondingly slight decrease in hog production throughout the year.

For eleven months ending Nov. 30, 1919, receipts of sheep and lambs were 612,999, as against 371,648 for the same period in 1918, or an increase of 54.9%, and readily reflects an increase in the population of sheep and lambs. This is one of the most hopeful signs in the Canadian live stock situation.



The packing house industry has been subject to greater Government regulations and restrictions than any other existing industry. In January the Canada Food Board closed its campaign for the curtailment of meat consumption in Canada. This was the immediate cause of a largely increased expansion in domestic consumption of meat. In September the Canadian Government appointed a Board of Commerce to enquire into the causes for high prices, and as a result the Board set a maximum price at which packing houses could sell Canadian pork products in Canada. This maximum price was passed on by the Board without having obtained the advice of experienced packing-house men, and in its first form was totally unfair and impossible of application.

Central European countries were, before the war, very heavy buyers of meat and meat products. During the pas

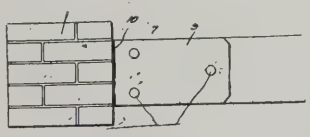
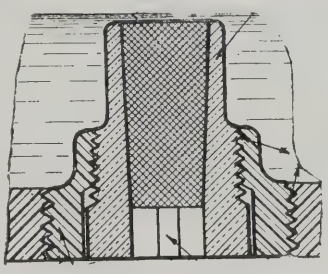
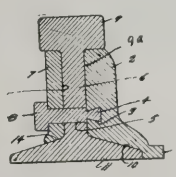
PATENTS FOR SALE



HORSE SHOE, formed of sections connected at their forward ends to provide relative movement means for fastening the shoe to the hoof, comprising of plates secured to each section in overlapping relation. Adapted to engage and conform to the sides of the hoof and having means for drawing together certain of the plates of opposite sections to bind them all to the hoof. Patent rights for sale. Christ T. Fortney, R. 1, Box 49, West Prairie, Wis., U.S.A.



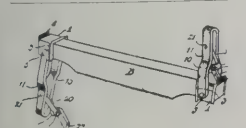
NUT LOCK, a simple and practical device, is strong, durable and absolutely reliable, one that has been thoroughly tested. It may be manufactured and placed on the market at a minimum cost with a reasonable profit. Patent rights in the Dominion for sale by T. S. Hanes, Kanauga, Ohio, U.S.A.



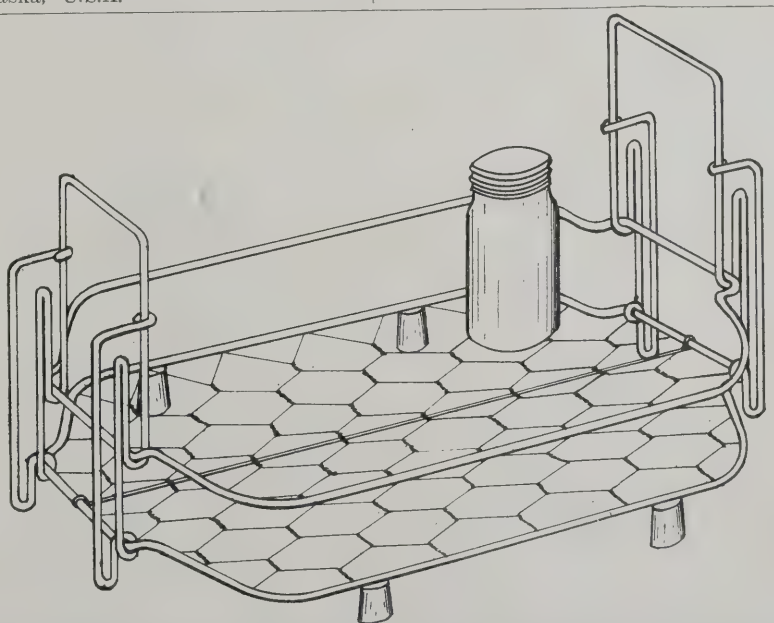
DRAFT GEAR, easily attached or detached, strong, durable and efficient in use. This simple and efficient device is one which should find a very ready market and the inventor, John Woelfle, Winterbourne, Ontario, Canada, is desirous of entering into negotiations with a reliable manufacturer with a view to arranging the manufacture, or disposal of his interests. Further particulars may be had on request.

JOIST ANCHOR.—A strong, durable and reliable anchor, easily applied, and is one which, in view of its few parts and absolute reliability, should find a ready market. The device is a time and labor saver as well as a money saver. Patent rights are for sale by C. F. Hall, Box 136, Athens, Illinois, U.S.A.

BOILER FUSIBLE PLUG, eliminates the difficulties usually found with this type of plug, can be left in the boiler for a reasonable period. The bushing once being properly fitted becomes part of the boiler and remains in the fire sheet during the life of the boiler. The thread on the plug and in the bushing are **up in the water space;** hence cannot **burn hard and tight.** Plug can be easily removed for examination and screwed back at any time with the same ease as a wash-out plug on the outside of boiler. Patent rights for sale by Wm. F. Ray, Samoa, Cal., U.S.A.



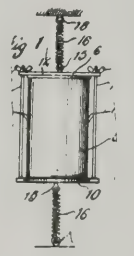
RAIL JOINT, which consists of the combination of abutting rails having a plurality of perforations in their ends, and a pair of fishplates, one of the fishplates being provided with dovetailed groove extending throughout its entire length; the other fishplate being provided with a plurality of squared perforations. Bolts each formed with a body portion square in cross section and with a wedge-shaped terminal for insertion into said perforations and said dovetailed groove. Patent rights are for sale by Ludwig Trager, 2135 South 9th Street, Lincoln, Nebraska, U.S.A.



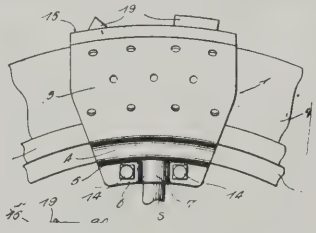
SPARK PLUG, of simple construction, and one which may be manufactured and placed on the market at a cost that will compete with any of the present devices. This device embodies all that the words Spark Plug stand for, and WILL IGNITE. No more "hit and miss." The device has been thoroughly tested and is beyond question of experiment. Patent rights are for sale by R. Champlin, 1028 Pacific Ave., Bremerton, Wash., U.S.A.

ROPE COUPLER, simple in construction, strong, durable and efficient in use, easily attached or detached. The device is one which, in view of its simplicity, convenience and cheapness to manufacture, should find a ready market. The inventor, Mr. H. A. Lowen, of Gretna, Manitoba, Canada, is desirous of arranging the manufacture of this device in the Dominion or the outright sale of his patent. Further particulars may be had upon request.

VEHICLE STANDARD, foldable and pivotally connected with the end of the bolster so that it may be folded down into the same when loading and unloading or may be stood upright and braced in upright position to carry the load. Is particularly applicable to wagons and sleds where heavy loads have to be lifted completely over the upper ends of rigid standards, for instance in loading logs, rails or the like. The device is strong and durable and well adapted to stand the strain and usage to which articles of this nature are ordinarily subjected. Patent rights for sale by L. P. Fry, Horseshoe Bend, Idaho, U.S.A.

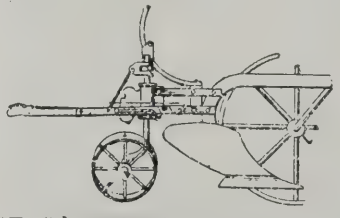


PRESERVING RACK, a very useful and simple device, so constructed that it may be folded up so as to be packed in a small compass when not in use. This simple and ingenious device is one which in view of its convenience and cheapness of manufacture would find a very ready market. This device may be manufactured at a cost so small that it could without doubt be placed in every household. Patent rights for sale by Johnson Bros., of Boissevain, Manitoba, Canada.



HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE



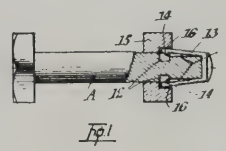
PNEUMATIC SHOCK ABSORBER AND AIR COMPRESSOR. — For use upon automobiles and other vehicles for absorbing the shocks, and also acting as an air compressor whereby air is supplied to the tank which can be used for inflating the tires; operating horn or other signal; operating a pneumatic engine and the like. This ingenious device is truly effective in use and should prove an attractive proposition to automobile manufacturers. Patent rights for sale by Mr. Wm. H. Holden, B. W. & M. Bldg., Idaho Falls, Idaho, U.S.A.

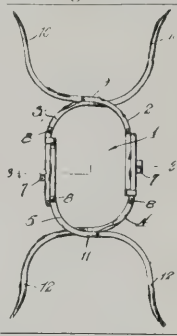
CHURN. — Resiliently supported so that it will remain in motion after it is moved manually against the tension of resilient supporting means, thus enabling the churning operation to be practised with the expenditure of minimum power and attention. The device is of special construction, is sanitary and avoids the use of absorbent material and injurious metals which may contact with the cream during the churning operation. Patent rights are for sale by Samuel H. Sandefur, 522 N. Pine St., Nomato, Oklahama, U.S.A.

TIRE ARMOUR, may be manufactured and used in connection with any tire now on the market. This device has been thoroughly tested and is beyond question superior to any of its kind. May be cheaply manufactured and placed on the market at a price well within the reach of every auto owner. The inventor is open to negotiations for the manufacture of this device or out-right disposal of his patent. Full details may be had by applying to the inventor, Mr. Gottlieb Wieland, St. Cloud, Minnesota, U.S.A.

ATTACHMENT FOR SULKY PLOWS— Does away with the necessity of lifting the plow out of the ground by hand when it encounters an obstruction and is especially convenient when moving the plow from the field to the road. The device is easily operated, remains firmly in its raised or lowered positions, the handle being foldable so as to render the plow compact for storage. Canadian patent rights for sale by Mr. John Reimers, Box 13, Millard, Nebr., U.S.A.

NUT LOCK.— An inexpensive, efficient and absolutely reliable device; may be cheaply manufactured and placed on the market at a cost which will not only compete with the present price but which will, in view of its simplicity, efficiency and durability, control the market. The inventor, Mr. George Boychuk, Box 93, P.O. Bienfait, Sask., Canada, is desirous of arranging the manufacture of this article in Canada, or is open to negotiations for an outright sale of his interest. Specifications and drawings will be supplied on request.





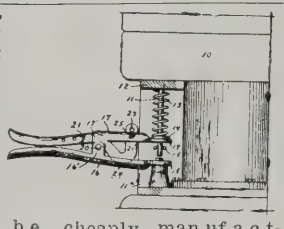


Fig 1

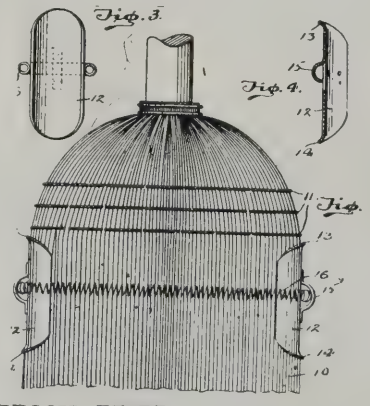
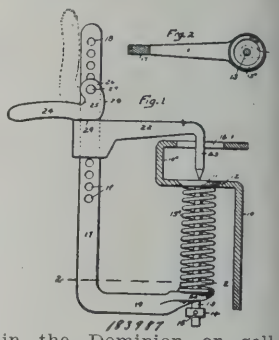
ANIMAL - POKE. — An inexpensive and ingenious device which is strictly humane, allowing the animal perfect freedom for grazing, but inflicting painful injury should the animal approach a fence with the object of pushing it down or jumping. The inventor, Mr. Manuel H. Teeter, McWillie, Okla., U.S.A., offers patent rights for sale.

TOOL FOR REMOVING VALVE. —Not one of the many, the one only real, efficient device for removing valves, strong, durable, simple and efficient in use, may be cheaply manufactured and placed on the market at a price that will not only compete but which will astonish. Patent rights are for sale by Mr. C. O. Throp, c.o. American Mfg. Co., Jefferson, Iowa, U.S.A.





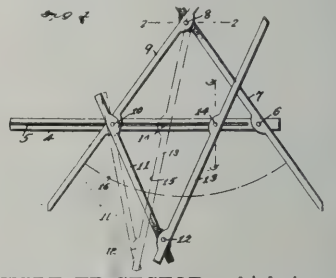


Fig. 3. Fig. 4. Fig.

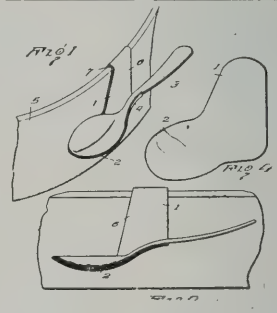
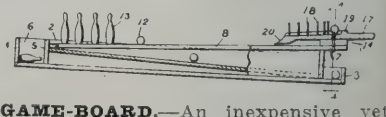


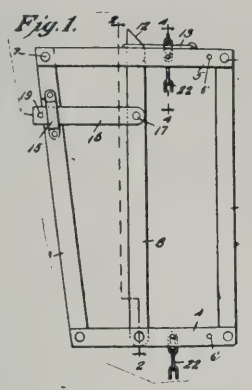
BROOM BRIDLE.—A simple, inexpensive and convenient device, which is guaranteed to double the life of any broom. The very thing for which the householder has been looking, and one which will, in view of its simplicity, efficiency and durability, find a ready market. The inventor, Mr. John E. Hewett, Wilmington, North Carolina, U.S.A., is desirous of getting in touch with a reliable manufacturer with a view to arranging the manufacture of this invention in the Dominion or negotiations for an outright sale.

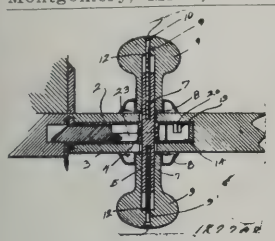
VALVE REMOVING TOOL. —To manufacturers interested in a real thing, I will gladly forward full details of the most simple and efficient valve removing tool ever invented. I desire to arrange for the manufacture of this device in the Dominion or sell my patent. Would be glad to communicate with manufacturers interested in marketing such a device. For further particulars, apply to Mr. C. O. Throp, c.o. American Mfg. Co., Jefferson, Iowa, U.S.A.



ANGLE TRISECTOR, which is, without doubt, superior to any that has yet been brought to the attention of the public, and which should control a large market. This trisector is simple, convenient, absolutely efficient and protected by broad and sound patent. Patent rights are for sale by J. Alexander Clarke, Devon, Pa., U.S.A.

KITCHEN & TABLE ARTICLES. —A simple and convenient spoon-rest, adapted to be arranged over the marginal edge of the receptacle such as a bowl, pan, etc., whereby the spoon, after being used, may be held in a convenient manner. No more 'fishing' for spoons out of scalding fluids; no more burned fingers. This device is one that will, without doubt, find a very ready and uncompeted market. Can be cheaply manufactured and placed on the market at a minimum cost with a reasonable profit. Patent rights are for sale by Mrs. Albina J. Cunningham, Bridgewater, Mass., U.S.A.

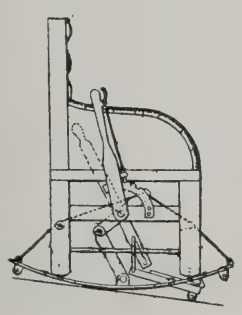




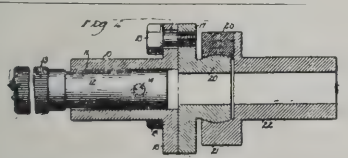
GAME-BOARD.—An inexpensive yet fascinating game. It is automatic and represents all that a game stands for; has novel feature whereby the balls used will return to the player. Patent rights are offered for sale by the inventor, Mr. Wm. Bauch, Route No. 2, Box 79, Blue Island, Ill., U.S.A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE

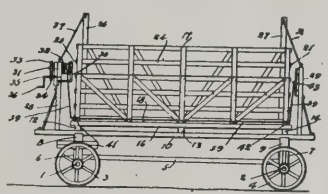


COW STANCHION. — A convenient and simple device, but one which is strong and durable, and adapted to withstand the rough usage to which articles of this kind are subject. A real comfortable stanchion which is absolutely humane, allowing the animal freedom of movement yet securely fastening and holding the head against withdrawal. The device is one which, in view of its quick, adjustment and cheapness of manufacture should find a ready market and prove an attractive proposition. Patent rights are for sale, Dan D. Schafer, Montgomery, Mich., U.S.A.



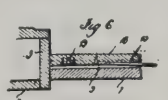
LOCK.— Having only three parts and two springs inside of the lock. Knobs fastened with counter sunk screws into the ends of the spindle. The device is one which, in view of its simplicity, cheapness of manufacture and sturdiness, should prove an attractive proposition. The patent holders, Messrs. Leusley & Eubank, Huntsville, Mo., U.S.A., offer patent rights for sale.

CONVERTIBLE ROCKING CHAIR.— Convertible into a rocking, stationary or rolling chair. Easily operated by occupant. The device offers something for which there is a ready and uncompeted market. May be cheaply manufactured and placed on the market at a reasonable profit. The inventor, Mr. Wm. Drosdowet, Box 85, Sifton, Man., offers patent rights for sale.

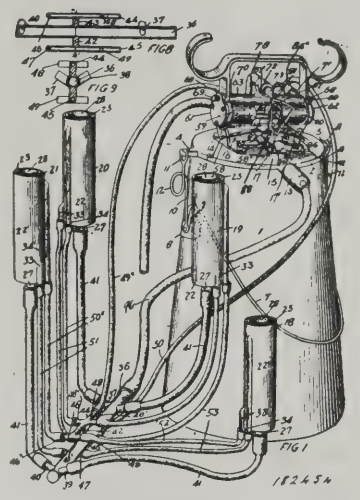


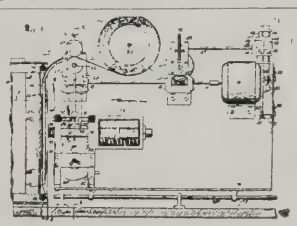
ADJUSTABLE FLOATING REAMER HOLDER.—The very thing for which the mechanical world has been looking. Having means to provide adjustments of the reamer holder which, together with the floating of the reamer, will enable accurate reaming to be obtained. Canadian patent rights are for sale by Robt. Railton, 391 High St., Valley Falls, R.I., U.S.A.

ANIMAL TRAP.—An ingenious device; may be cheaply manufactured and placed on the market at a minimum cost with a reasonable profit. The device is equipped with a storage or bait compartment having trapping devices whereby several animals can be caught at the same time. The inventor, Mr. J. F. Armand Cauvier, Grande Riviere, Gaspe County, Que., is desirous of getting in touch with a manufacturer with a view of disposing of his interests or arranging manufacture.



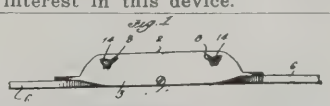
SCREW DRIVER having a special screw-holding attachment which is simple and absolutely efficient in use. The device may be manufactured separately for attachment to any type of screw driver and is something which should prove a real seller when properly introduced. The inventor, Mr. Otter A. Haufe, 240 Maple St., Secaucus, N.J., offers patent rights in the Dominion for sale.





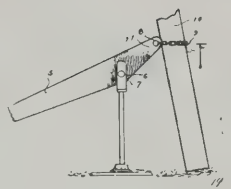
STRAW SPREADER which will increase the crop returns from $5 to $7 per acre. Really worth while machine which, in view of its simplicity, durability, and cheapness of manufacture, can be placed on every farm in Canada. The invention has been thoroughly tested and is beyond question of experiment, is especially useful in the prevention of winter killing of wheat, soil blow or washing, conserves moisture and makes tough, sticky soil much more friable. Patent rights in the Dominion are for sale by Mr. Gustav O. Sollom, Reynolds, North Dakota, U.S.A.

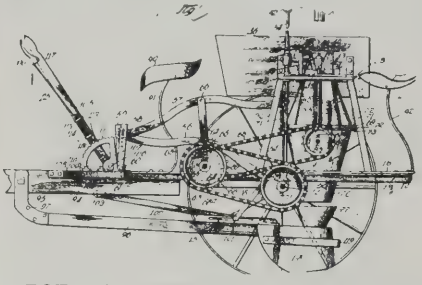
WEATHER STRIP. —Providing an air-tight connection between the door and the door frame, and at the same time cushioning the door frame so as to prevent the breaking of glass when the door slams. No matter how badly the door may warp or be warped, the strip will automatically adjust itself to the shape taken. May be cheaply manufactured; is easily installed, and may be sold at a tempting profit. Patent rights are for sale by Messrs. Decker & Smith, Fremont, Ohio, U.S.A.



MILKING MACHINE.—An efficient and reliable machine which has no injurious effects on the animal. Is easily operated and absolutely satisfactory in use. Easily cleaned and assembled. The most satisfactory and durable device on the market. The inventor, Mr. W. J. Armes, 315 Bold St., Hamilton, Ont., is desirous of getting in touch with a reliable manufacturer with a view of disposing of his interests, or arranging manufacture of his invention.

TIMING DEVICE, having for its object the timing of intermittent operations of different kinds and means for insuring definite intervals between operations, also means for varying the duration of such intervals and for continuing the intermittent operations indefinitely, also for limiting the number of operations and for rendering the operation of the apparatus with which the invention is connected inoperative after the desired number of operations has been accomplished This device is one which is worthy of careful investigation and the inventor, Mr. W. H. Fribley, Raymond, Wash., U.S.A., is desirous of co-operating with a reliable manufacturer with a view to negotiations for manufacture or the disposal of his interest in this device.





BELT FASTENING FOR MACHINERY AND THE LIKE.—A real, reliable belt fastener. The very thing for which the manufacturing world have been looking, easily attached or detached, simple and efficient. With this fastener the slack of the belt may be taken up at any time. No slipping or tearing of belts, so constructed as to be absolutely reliable, will securely hold the ends of the belt in relation to each other without reference to the strain placed thereon incident to the use upon pulley wheels. Patent rights are for sale by Mr. C. E. Queen, Rock Cave, West Virginia, U.S.A.

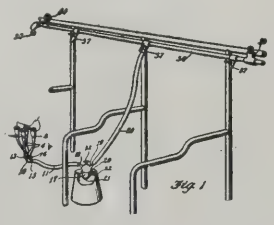
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

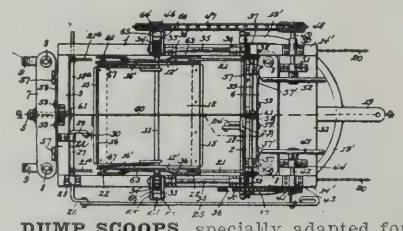
PATENTS FOR SALE

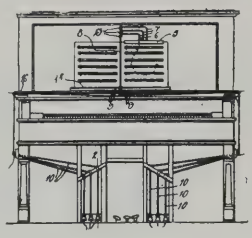
FENCE POST PULLER; easily operated and will pull posts of different diameters. May be taken apart and easily packed in a small compass when not required for use. The device is one which in view of its simplicity and cheapness with which same may be manufactured, should prove a good seller. Patent rights for sale by Ole Olson, R. R. No. 3, Canby, Minn., U.S.A.

POTATO PLANTER, just what every potato grower needs. TWO MACHINES IN ONE, cuts and plants at the same time. Is the biggest time and labor saver ever put into a potato field, plants potatoes of all sizes, and furrows, cuts, covers and makes out the next row all at the same time. Potatoes can be planted just as they come from the cellar, no more sorting. This machine is, without doubt, the most efficient device that has yet been brought to the attention of the public. Patent rights for sale by J. P. Davenport, Wheaton, Ill.

MILKING MACHINE, easily operated, simple, few parts, and consequently easy to clean. Durable and efficient in use, noiseless, economical, positively sanitary, which means better milk. Has unlimited capacity and gets all the milk. Is gentle, harmless and economical. Patent rights for sale by S. B. Harner, R. R. No. 3, Box 21, Xenia, Ohio, U.S.A.







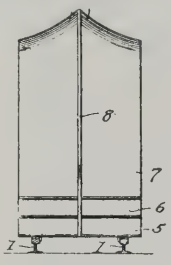


Fig. 1

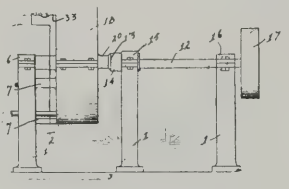
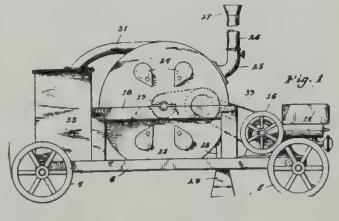
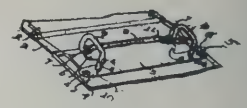


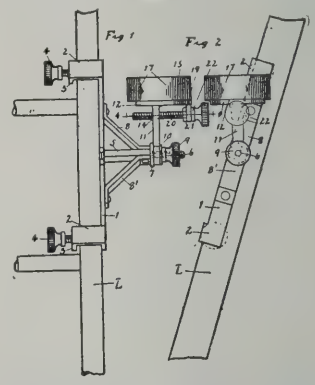
DUMP SCOOPS, specially adapted for road repairing and building, easily operated, strong and durable. One of the most efficient devices of this nature on the market. Easily operated by the ordinary farm tractor, both forward and backward, and has automatic dumping means, being operatable from the engine when the latter occupies a stationary position. Patent rights for sale by George W. Harkins, R. D. No. 1, Harveys, Pa., U.S.A.

MUSIC LEAF TURNER, easily attached to the foot pedal of any piano, so that it may be readily worked by the performer without any loss of time. May also be used by orchestras on their ordinary music stand. Simple in construction, highly ornamental, and may be cheaply manufactured and should prove an attractive proposition in view of the enormous market for such a device. Patent rights for sale by E. M. Barnes, 517 No. Water St., Wichita, Kansas, U.S.A.



SNOW PLOW, mounted on wheels, and having parallel spaced blades carried in an inclined position, the front extremities of the blades being shorter to allow the uppermost thereof to remove a layer of snow in advance of the intermediate and lowermost blades. The rear extremities of the blades, being curved upwardly towards their relative centres into engagement with a portion of the partition which is arranged intermediate to the blades, so as to form an abutment for the snow, causing the same to be deflected outwardly. Patent rights for sale by John D. Morris, R. F. D. No. 1, Waynesboro, Va., U.S.A.

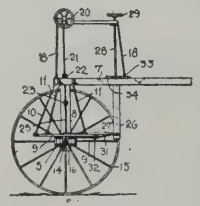




ROTARY ENGINE.—Absolutely no more waste of power, having overcome dead centre. No loss of energy, which means not only a vast increase of power but a corresponding saving of fuel over the old-style steam engine. Is simple in construction, powerful and durable. Patent rights for sale by James C. Thompson, Golconda, Ill., U.S.A.

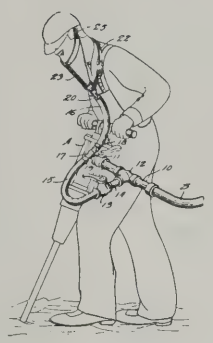
MACHINE FOR DESTROYING INSECTS, which might also be used as a vacuum cleaner for taking up dust or the like. It is simple and efficient in use, strong, durable and so constructed that it may be easily moved from one room to another and to and from a porch or the like. The device is driven by a suitable motor. Canadian patent rights are for sale by James W. Lemon, Hardy, Ark., U.S.A.

LOOSE SHEET HOLDER.—A very simple device, easily operated and is especially adapted to school work and stenography, as it can be opened and closed quickly and stands up like an easel. The holder is also particularly useful in other office work as well as for travelling salesmen and others. Patent rights for sale by George E. Gates, Comstock, Michigan, U.S.A.

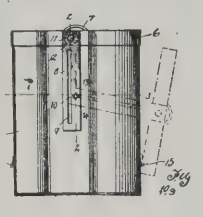


BUCKET SUPPORTING BRACKET. Holds the painter's bucket upright and close to hand on rope or ladder. Quickly adjustable to any angle. All steel, indestructible, saves time, paint and patience. The device is one which, without doubt, will find a ready market in view of its cheapness of manufacture, simplicity of construction and convenience in use. Patent rights for sale. F. D. Bouchard, Rocky Ford, Colorado, U.S.A.

SNOW PLOUGH, simple in construction, easily operated, and provided with special means for manipulations and is so constructed that the plough may move along in front of the horses or may be drawn in the ordinary manner. The inventor, A. H. Tallyn, of Benson, Illinois, U.S.A., is desirous of arranging the manufacture of his invention in Canada or sell his patent. Further particulars on request.



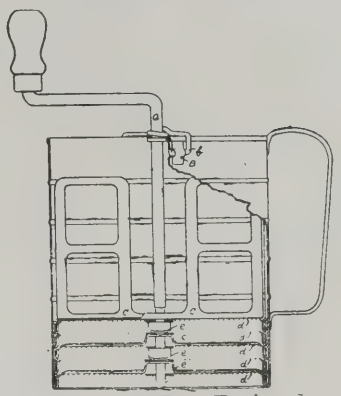
ROAD GRADER having improved steering means. The object being to provide an improved mounting of the supporting wheels and means for moving the same to various vertically inclined positions or angularly disposing the axis of rotation with respect to the line of movement of the machine, also to provide a wheel and adjusting mechanism to be employed in connection with a four or eight horse road grader whereby the draft on the animals may be greatly lessened by the proper adjustment of the wheels. Patent rights for sale by John W. Brannan, Imperial, Nebraska, U.S.A.



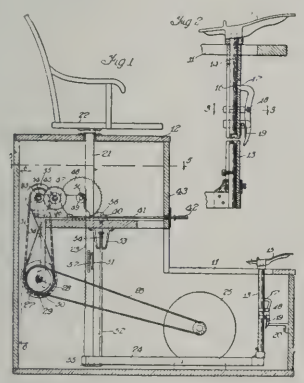
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

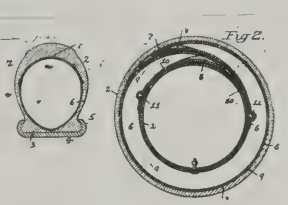
PATENTS FOR SALE

ROCK DRILL ATTACHMENT, specially adapted for face protection during the operation of rock drilling. Device consists of conical-shaped hood of flexible material combined with an air hose for conveying air under pressure to the worker. The flexibility of the hood permitting it to conform to the configuration of and fit snugly against the face of the wearer. The inventor, Mr. Aime Blanc, Aspen, Colo., offers patent rights in the Dominion for sale.



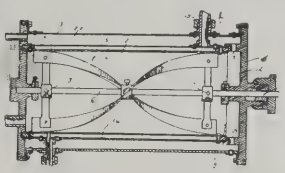
LOCK FOR RECEPTACLE LIDS, a simple and ingenious device which will securely fasten the lid of a receptacle so as to prevent the displacement of same. This device is strong, durable and efficient in use and may be manufactured for use at a very slight cost. The inventor, Mr. Albert J., Noel, Gary, Ind., U.S.A., offers patent rights in the Dominion for sale.

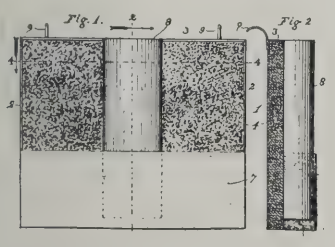




AUTOMOBILE SAFETY SIGNAL, easily adapted to any make of auto. Efficient, inexpensive and highly ornamental, avoids confusion and collisions. No diversion of the driver's attention from the machine is necessary with this signal, and consequently it eliminates the possibility of accidents. During the past year accidents due to traffic confusion were so great that it will without doubt become necessary for auto owners to adopt some signal device. Here is an opportunity for a live manufacturer, and the device is without doubt a sure thing. The inventor, Mr. D. R. Lashbrook, 119 E. Main St., Owensboro, Ky., U.S.A., is open to negotiations for the disposal of his interests or the manufacture of same on a royalty basis.

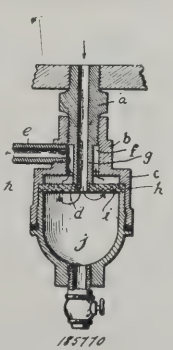
FLOUR SIFTER.—Equipped with multiple sieve, accomplishing five siftings of flour as quickly and easily as one sifting by the old method, thereby saving time as well as achieving better results. It is a well known fact that the more frequently flour is sifted the lighter and more fluffy it becomes and allows the air to become mixed, giving lightness in the process of baking, the result so much desired. The device is strong and durable; may be cheaply manufactured and placed on the market at a price which will compete with any of the present sifting devices. Patent rights are for sale by Mrs. J. E. Trice, 206 Wabash Ave., Wichita, Kansas, U.S.A.



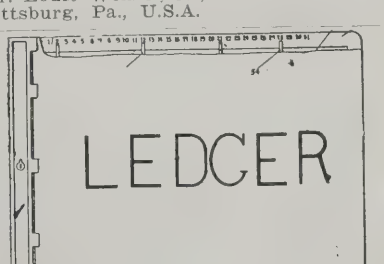


SHOE-SHINING CHAIR AND STAND which eliminates the trouble of climbing to the chair, no foot rests in the way, nothing to catch coats or dresses on when getting in and out of the chair, no danger of stepping on brushes, bottles or boxes when leaving the chair. Foot rests are comfortable and adjustable to suit the different lengths of legs. No pressure necessary to hold the foot on the rest. Canadian patent rights for sale by H. & H. Manufacturing Co., Elgin, Ill., U.S.A.

PNEUMATIC TIRE.—A real, honest to goodness puncture proof pneumatic tire. The tire that will stand up always under all conditions, roads and loads. The tire which will revolutionize tire construction. The greatest improvement since pneumatic tires were invented. Patent rights are for sale by Mr. Louis Wenzel, Jr., 404 Chestnut St., Pittsburg, Pa., U.S.A.

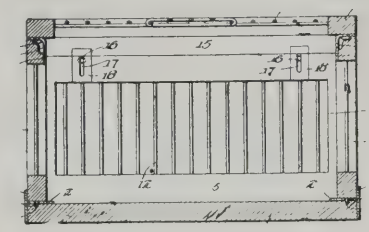


REFRIGERATING MACHINE. Having a double jacket, brine cylinder, with a self-contained expansion tank whereby a relatively greater cooling area is provided with a very small displacement in the cylinder, and having means for insuring the circulation of brine through said cylinder. Patent rights are for sale by Samuel R. Bell, Beaumont, Texas, U.S.A.

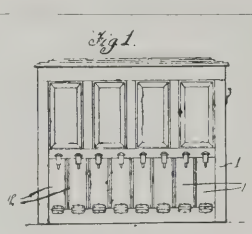


HUMIDIFIER.—This device has already an established market throughout Canada. The demand for this device has become so great that the inventor has found it impossible to handle both the United States and Canadian markets, and is therefore desirous of getting in touch with a real live manufacturer who is willing to develop and push this article in the Dominion. For further particulars and information, apply to Mr. E. G. Fairbanks, 6217-19-21 Wentworth Ave., Chicago, Ill., U.S.A. This device is without doubt the most efficient, economical and substantial of its kind, has been well liked wherever introduced. Correspondence from manufacturers interested is solicited.

GASOLINE STRAINER.—Simple and absolutely reliable device. The strainer is of special felt material, and is superior to any of the present wire strainers. It does not clog, and there is absolutely nothing but pure gasoline or oils that can pass through the felt, which must, of course, be of proper material and adapted for the fluid to be strained. Never gets out of order, and can be easily and quickly attached to any machine already built. May be cheaply manufactured, and placed on the market at a price that will compete with any present devices. Patent rights are for sale by G. S. Hale, Tekoa, Wash., U.S.A.

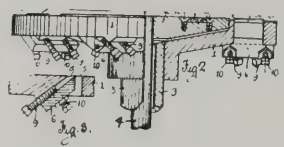


ATTENTION Loose-Leaf Ledger Manufacturers.—This accounting book facilitates the management of many accounts, where attention to the same is required at various dates according to the terms and conditions of the several accounts, to eliminate the losses and inconveniences incident to the lapses of memory in regard to obligations to customers, to devise a new system of accounting operable by comparatively inexperienced clerks and always accessible to the superior, which form of book is simple to operate and cheap to produce. Canadian and United States patents for sale, John Duchow, 319 St. James St., Montreal.



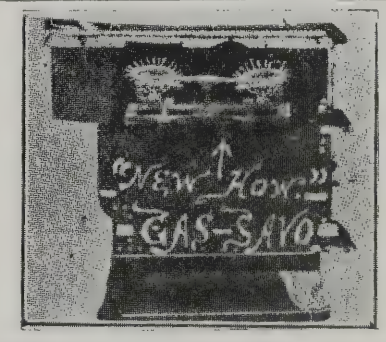
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE

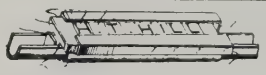


FOLDING CRATE, comprising a bottom having sides and ends hinged and slidably connected together, said hinges and sliding connection consisting of slotted plates having pivot pins slidable therein. The device is strong and durable, absolutely efficient in use and may be placed on the market at a minimum cost with a reasonable profit. Patent rights in the Dominion are for sale by A. Kroner, 300 No. Highland Ave., E.E. Pittsburgh, Pen., U.S.A.

BOTTLE DISPENSER, which consists of a refrigerator and means for serving bottled drinks quickly. If a customer desires any popular drink, simply open the small door on the front of the dispenser and the instant the door closes another bottle slips into place. The dispenser will handle eight different varieties of bottled drinks and have them all ready for prompt serving to trade. No opening of the ice-box and allowing the heat of the room to melt the ice, no more hunting around for any desired or particular variety. Always ready, always on hand. With the recent legislative action, the use of soft drinks is bound to increase and one of these machines can be placed in every reliable soft drink dispensary throughout Canada. Here is a proposition worthy of investigation. Patent rights are for sale by Mr. J. W. Berry, Greenville, South Carolina, U.S.A.

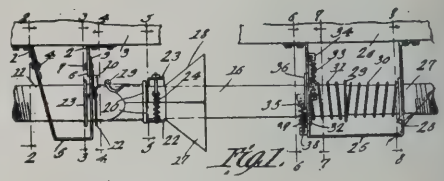


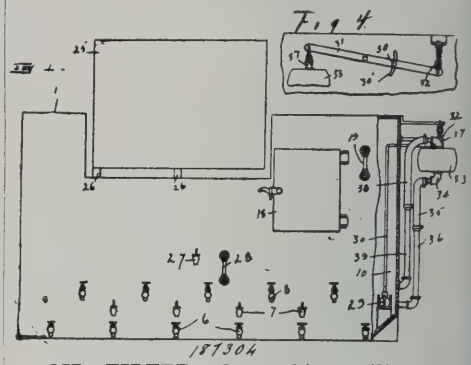
SOAP COOLER AND COMPRESSOR.—A strong, durable and efficient machine for the purpose of cooling and compressing soap in one operation and turning it out of the machine in bars of the proper cross-sectional area to be cut or stamped into hand cakes of soap. The device is without doubt one of the most efficient of its kind that has yet been brought to the attention of manufacturers. The inventor, Mr. Joseph Bock, 615 Epworth Ave., Winton Place, Cincinnati, Ohio, U.S.A., is desirous of arranging the manufacture of this invention in the Dominion with a reliable manufacturer or the outright disposal of his interests.



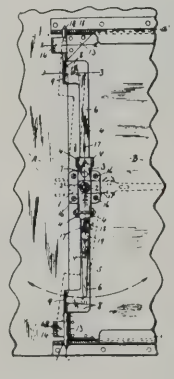
WOOD-WORKING MACHINE for finishing the flat surfaces of woods for all kinds of finished products and having means whereby the rotating disks with the cutters and smoothers fixed therein may be perfectly adjusted to each other and to the surface being finished. The device is simple in construction, strong, durable and absolutely efficient in use. Patent rights for sale by James W. Gray, Tacoma, Washington, U.S.A.

BOTTLE & STOPPER. This simple and ingenious device is very efficient in use, may be cheaply manufactured and placed on the market at a minimum cost with a reasonable profit. Is absolutely sanitary and may be adapted to many different uses. Patent rights for sale by Mrs. Corrie Miller, Schumacher, Ont., Canada.





METHOD OF HEATING.—This device is known as the "New How" Gas-Savo Oil-Burner. It is so constructed that it may be installed in any stove or furnace. The device is equipped with special features whereby a gas is produced from coal oil, which gas throws an intensely hot, blue flame. The device is especially adaptable to Quebec heaters and provides one of the cheapest fuels; has no wicks, no fumes, is perfectly safe; easily installed. The inventor, Mr. A. L. Howard, Avonmore, Ont., offers patent rights in the Dominion for sale.



NAME PLATE FOR UMBRELLAS, so constructed that it may be applied in an economical and expeditious manner, at the same time being highly ornamental. Any name or address may be quickly assembled and applied to the ordinary umbrella so as to protect the owner. The name itself may be formed by quickly assembling and applying the proper letter carrying elements, which can be cheaply produced and kept in stock in large numbers in department and other stores where umbrellas are for sale. Patent rights for sale by F. G. Farnham, 515 Park Street, Honesdale, Pa., U.S.A.

TRAIN PIPE CONNECTOR.—A simple, inexpensive and durable connector which may be readily applied to railway cars, having air brake systems and which will properly connect the train line pipes thereof so that there will be no leakage at the joints. Patent rights are for sale by Jacob Obednour, R. D. No. 2, Box 86, Martinsburg, Pa., U.S.A.

OIL FILTER.—One which will reduce the overhead expenses of any large manufacturing firm. This device will reclaim over 85 per cent. of apparently useless oil. Do you realize what this means? The reclaimed oil may be reused and is as good and as clean as before being used. The device has been thoroughly tested, and hundreds of testimonials from manufacturers, engineers and mechanics have been received. The inventor is desirous of getting in touch with a reliable manufacturer with a view to negotiations for the disposal of his interests in the invention, or the manufacturing of same. For further particulars, address Mr. J. H. Packer, Liberty, Missouri.

CAR DOOR LOCK.—A strong, durable and most reliable car door lock; is simple in construction and absolutely efficient in use; may be cheaply manufactured, and will hold the door when closed so that same cannot move out of position while the car is in transit, does away with nailing block or boards to side of car. Makes the door weather-proof and is adapted to be easily attached to the car door. Patent rights in Canada are for sale by the inventor, Mr. C. B. Fink, East Syracuse, N.Y., U.S.A.

Manufacturing Corporations,
Canada and United States

Gentlemen,-

To-day in business, "Service" is one of the most important selling assets. A motor car, without a service station system throughout the country, would never sell.

We are not the oldest Patent Attorney firm in Canada, but to-day we are filing more Canadian patent applications than any other attorneys. During the past, we have tried to give our clients prompt, personal service in carefully looking after their interests before the Patent Office. We now have a larger service to offer corporations interested in protecting their Canadian rights.

Every corporation employs a certain amount of brain-power. You give them the best tools for experimental purposes, supply them with technical reference books and magazines and then ask them to perfect your lines of product on which perfection you intend obtaining a patent.

Are you giving him a fair chance to make good ?

Good tools and technical reference-guides, coupled properly with guided brain-power, may perfect your line of product but are they working to perfect something on which you can claim patentability ? Our service system can supply you with the missing link, a complete card-index of the Canadian and United States patents pertaining to your line of product. Your brain-power can see an illustration and the claims of patents already allowed, properly classified. This not only gives your brain-power a guide in keeping their experiments along patentable lines but it acts as a reference to show the construction others have worked out, from which your brain-power will often be able to get valuable suggestions.

The brain-power of your corporation can give you better results if properly equipped. A sample of this card-index and full information sent on request.

Yours respectfully,

Harold C. Shipman & Co

Packing House Industry

(*Continued from page* 250.)

year, however, this trade has not opened up. There is no doubt that the demand for meat is there, but until such time as the exchange situation is stabilized or else large credits are granted, the European export trade will be more or less limited. The Central European countries, however, have had their live stock population decreased to a very large extent, and it will be at least five or ten years before they can hope to get back to normal conditions. Even when a normal condition is reached there will always be a heavy demand for meat and meat products owing to the tremendous population of these countries.

A year ago everyone was pessimistic as to what the future might hold in store for the packing-house industry. The war was finished and armies were being demobolized with great rapidity. During the war, plants had been enlarged to take care of the insistent demand of the allied armies for meat. At the signing of the armistice this demand entirely ceased. England was carrying tremendous stocks of meats in cold storage as a protection against a shortage which might be caused by cargoes being held up or sunk by submarines. The packing houses had been keyed up to the fullest extent to keep the supply of meat going forward; therefore, when this demand suddenly ceased it was a cause of great concern as to the future. During the Fall of 1919 Canadian packers had put away large quantities of frozen beef in cold storage to take care of orders which they expected, and were informed they would receive from the British Government. Therefore, with this large stock of beef on hand and demand cut off, the Canadian packers had every reason to be pessimistic as to the future. The British Government were holding great stocks of frozen beef in Australia and the Argentine, which they had bought during the war but were unable to transport on account of shortage of ships. This beef was bought at 10 pence, c.i.f. England, whereas the Canadian beef had cost 23 cents per pound, seaboard. However, later on in the year, Canadian packers were able to sell their entire stock of frozen beef to the Italian Government.

The outlook to-day is entirely different. The domestic consumption has largely increased. Every indication points to the immediate signing of the Peace Treaty, and immediately the necessary credits are arranged, there is no doubt there will be a great European demand for all the meat and meat products which Canadian packers may have to offer. At the present time the exchange on the European currency is at a very large discount, but it is hoped that upon the signing of the Peace Treaty necessary steps will be taken to stabilize the exchange between the European countries and America.

The future success, therefore, of the Canadian packing house industry depends to a large extent on—

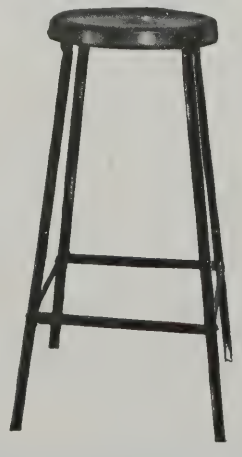
1. The farmers increasing production of live stock.

2. The securing of export orders from Europe in competition with the American packers.

Therefore, if the American Government or American financial institutions make loans to European countries with which meats can be purchased, the Canadian Government, or Canadian financial institutions will also have to do the same. This will have to be done if the Canadian farmer is to receive the same returns for his live stock as the American farmer.

FOR SALE

For sale in Western Ontario quantity of Lackawanna Steel Side and Corner Piling. Address, J. E. McKimmie, 838 Marine Trust Co. Building, Buffalo, N.Y.



DENNISTEEL
Made in Canada

CHAIRS AND STOOLS

THE best kind for use in factories, stores, locker rooms and wherever hard service is demanded. These durable all-steel chairs and stools end the wood-mending nuisance so costly in time and labor in many plants.

DENNISTEEL Chairs and Stools are fire-proof, warp-proof and wear-proof. Cannot come unglued or become rickety. Seats are all one piece, stamped out of a single sheet, and have rounded edges. Legs are angle steel, reinforced lower down with straps to ensure rigidity. Back rest of chair is adjustable. Finished in baked-on enamel---olive green, black or any other color desired.

CANADIAN INDUSTRIES EXHIBITION MAKING SPLENDID PROGRESS

Early indications point to a pronounced success in connection with the Canadian Industries Exhibition, to be held in London, England, next June.

To date the actual allotments and reservations written in Canada alone offer sufficient assurance in this respect—and cabled advices received from Mr. H. G. Montgomery, the Organizing Manager in England, indicate further big purchases of space.

Canadian manufacturers, therefore, who have not already signed up for space, and who intend to participate in the Exhibition, would be wise to give the question immediate consideration. Those who have already made their allotments have done so on a large scale, with the evident intention of making their exhibits comprehensive and complete. Such action will unquestionably have a two-fold effect. It will impress British and Continental buyers with the aggressiveness of the individual manufacturers who participate, and at the same time definitely establish abroad the knowledge that Canada is one of the foremost industrial manufacturing countries in the world.

The "Trade Within the Empire" movement is gaining momentum with remarkable rapidity, and Canadian initiative, as indicated by this Exhibition, will place Canadian manufacturers, individually and collectively, well to the front in the race for Empire trade.

Write TO-DAY for full information to O. C. Pease, Sole Canadian Representative, 41 Victoria Street, Toronto.

CANADIAN INDUSTRIES EXHIBITION

ROYAL AGRICULTURAL HALL, LONDON, ENGLAND

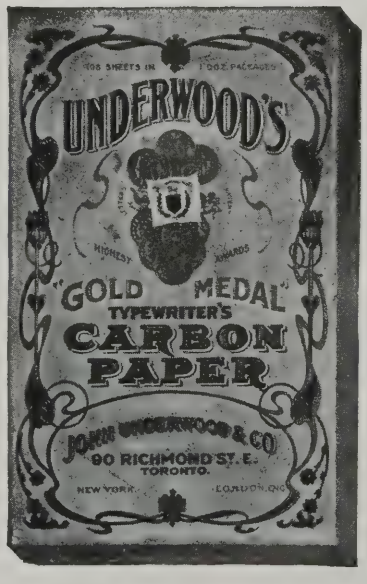
June 3rd to 17th, 1920

Canning Industry

(*Continued from page* 191.)

is to be pitied, and, unless he can make good profits, he is an absolute fool to continue in the business.

His business is one of constant worry from the beginning to the end of the season. For the reasons stated above, he is obliged to have inefficient help; then on top of this he deals in perishable goods which require unusual skill and attention to prevent loss.



As to the supply and quality of materials for canning, the canner is absolutely at the mercy of the elements. He contracts with the farmers to sow or plant an acreage which, under a normal yield, would give him an amount of goods sufficient to fill his average orders, but there are no normal seasons. Almost every season is abnormal at one time or another; therefore, it seldom happens that the canners have a normal pack of staple lines. He may have a normal pack of peas but a total failure in corn or tomatoes, and *vice versa*.

During the past year, owing to the excessive rains in the spring, followed by excessive drought, the pea crop was only on an average over the province about one-third of a crop. As usual, however, this poor crop was not universal. In one neighborhood, upon soil that could be planted early and which does not suffer from excessive wet, a normal crop of peas might have been harvested. In another section where the land was somewhat flat or somewhat of a clayey nature, the excessive rains followed by the excessive heat would destroy the crops so that the packer only got 10 per cent. or 20 per cent. of a normal yield. Corn suffered equally with peas in the spring and early summer, but the autumn was very favorable for corn and tomatoes, so very favorable that in some localities extraordinary crops of both corn and tomatoes were produced, so that the average corn crop of the whole province was not much below normal, one man having 150 per cent. and another man only having 25 per cent., but after it was all averaged up, it reached nearly a normal. Tomatoes were above the normal crop. The tomato crop was really an extraordinary crop. I believe there never has been a heavier crop, but the acreage was not quite as great as in some previous years.

Then the demand from Great Britain, a demand which I believe is only temporary, took care of any little surplus that there might have been, had we been confined entirely to the Canadian market. Previous to the war it was next to impossible for us to market tomatoes in Great Britain, the imports of tomatoes into Great Britain being almost exclusively drawn from Italy, but conditions had not yet become normal in Italy during the past season. As soon as they do become normal I anticipate that they will again supplant us entirely in the British market. Labor is infinitely cheaper in Italy than in Canada and the climate of Italy is more regular and dependable for the growth of tomatoes, and these two things are mighty factors in the economical production of goods of this nature. As for corn, it is not consumed to any great extent in Great Britain, and we cannot expect to successfully compete with the States to the south of us in the production of corn.

In regard to increased production in the future. There is sufficient canning factory capacity already constructed and in operation to pack very much more than is required by the Canadian public. Not many new factories have been erected since the great cataclysm of 1913 and 1914, when the production was so much greater than the consumption, that a very large number of canning companies went into bankruptcy and when the strongest were shaken to their foundations.

In some sections the supply of raw material, especially

Five Plants Busy Making Powdered Milk

Sixteen years ago, one small plant was sufficient to supply the Canadian demand for powdered milk; to-day we have five modern plants, our own bacteriological laboratories; machine shops for making our own plant equipment, and three busy branch offices and warehouses.

Instead of bringing milk long dusty distances to the city, we build our plants out in the sweet, clean country so that the fresh milk comes to us from the nearby farms.

At our clean plants, the milk is tested for purity, pasteurized and dried by our spray process. We then have powdered milk which is incomparable in quality and a product which is absolutely soluble and natural in flavor.

We hope in the near future to have this product for the world's markets. In the meantime, we are doing our best to supply the Canadian demand.

CANADIAN MILK PRODUCTS, Limited

of peas and of corn, is difficult to obtain owing to the great profits that have been made during the past two years in the growing of sugar beets and tobacco, the sugar beet factory paying $12.00 per ton and upwards for beets which were purchased before the war at $4.50 to $5.00 per ton. So long as this condition prevails, it will be difficult for canning factory owners to purchase peas and corn in those sections, at a price that will enable them to compete with other sections of this country or with the United States, in the production of these two articles, but I think it is fair to assume that the production of sugar will so greatly increase in the European countries from which large exports were made before the war, that our sugar manufacturers will not be able to keep up these very high prices permanently.

Biscuits and Confectionery

(*Continued from page* 186.)

on lines that could be produced in larger volume, and omitting those that require more labor to produce.

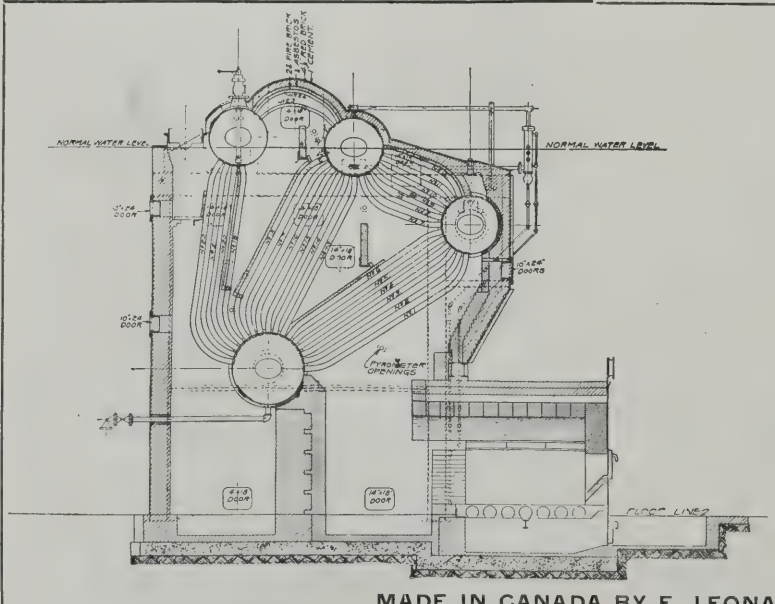
There has been a steady demand for some time for the better quality of goods, which has been increased this year. Prices have necessarily had to keep pace with cost. Marketing conditions have been handicapped in many parts of Canada, owing to unsatisfactory railway service. This particularly applies east of Ontario, and north of the Province of Ontario, also the lower provinces. Export business has not been a factor with us, as our domestic requirements have been demanding more than our output.

The demand for our products has been good, and we look for a continuation of this demand for some time to come. No doubt, in the course of a year, or a year and a half, there will be danger of over-production, particularly if export of our class of products ceases, which it is likely to do, when the British and other countries get steadied down to business and commence exporting, which they are making arrangements for.

Nearly every factory in our line of business, has also increased its capacity. There are also a number of new factories started and in process of starting. Some of these manufacturers have exported largely or entirely. With these possibilities facing us, the outlook would seem to be a strong prospect of over-production, which may or may not be overcome by increased consumption through steady employment and immigration.

OUTPUT ONLY LIMITED BY LABOR

By W. D. Ganong



President, Ganong Bros. Limited, St. Stephen, N.B.

Our output of goods has been curtailed by the amount of labor we can obtain. We are in a small town and we cannot get the necessary female help. We built a boarding-house last year, which will hold sixty girls, and which is now full, almost all New Brunswick girls from the smaller places. We have, however, about double the help we had last year.

Re raw materials, we are having a good deal of difficulty in obtaining these. We carry a very heavy stock and plan on never running out. Our chief difficulty has been in obtaining woodenware.

We have increased our production and sales materially. We find people willing to pay almost any price for candy and, while the increase has been on all lines, the greatest demand is for the highest grade of chocolates that we make.

There has been a big export demand for confectionery. During the last month we have not had so many enquiries, but before that we had a great many letters, particularly from the United Kingdom. The manufacturers in the United

CONNELLY WATER TUBE BOILERS (Patented U.S. & Canada)

are of the 4 drum type, have 100% tube area in the path of circulation, and deliver steam superheated to from 5 to 10 degrees Fahrenheit.

Simple in design, no flat surfaces, no stay bolts, no crown bars, no braces, no handholes, free from joints.

All parts easily accessible for cleaning, both internally and externally.

Can be built in units from 200 H.P. up to 4,000 H.P. and for working pressures up to 300 lbs.

100,000 H.P. in successful operation.

Price $1.00

Kingdom have been curtailed on sugar, and for next year they are to have only 75 per cent. of the sugar they had in 1915. Unless there is some embargo placed on confectionery, there should be a big demand for export, if business continues as good in the United Kingdom as it is at present.

Regarding the outlook, there is undoubtedly a big demand for confectionery, chiefly for two reasons: first, the increase in wages and the fact that the younger men are getting far better wages than ever before; also the young women, and these are large purchasers of confectionery. Second, the prohibition law has undoubtedly affected the candy business.

WITHDRAWS FROM FOREIGN MARKETS

By C. E. Edmonds

President, Christie, Brown & Co., Ltd., Toronto

Until the latter part of the past year labor was exceedingly scarce. Raw materials were higher in price, but deliveries were easier. Production has to some extent been decreased by our having reduced hours of labor from 50 to 44 hours per week, and our inability to secure a sufficient number of satisfactory workers to make up for the loss in time.

We have noticed an increased demand for high-grade goods, and prices are higher due to increase in cost of production. The demand of the home market being in excess of supply, we were compelled to withdraw from foreign markets.

Our opinion is that the demand for our product will not diminish as long as money is as free as at present, but the outlook *re* cost of raw material and labor does not encourage one to make a material enlargement of plant. As a matter of fact, our equipment is of a capacity to enable us to vastly increase our output if the class of labor that we employ could be secured to meet our requirements.

FINDS GOOD INCREASE IN BUSINESS

By J. A. Marven

J. A. Marven Limited, Moncton, N.B.

We have not had the trouble with labor that we experienced last year. Our employees are working much more steadily, and we have been able to secure all the help we require. We have nothing to complain of with respect to raw materials and have been able to get everything with the exception of a few lines, very satisfactorily.

We have had a very good increase in business during the past year, our output being from ten to fifteen per cent. better than last year. We find that the trade is calling for a much more expensive line this year; in other words, the lower grades of biscuit are only selling in limited quantities, and our most expensive lines are in great demand. Our export business is developing very slowly.

We are looking for good business during 1920, and hope that it may continue. We have increased our plant by some 36,000 feet of floor space, which we hope to have completed in the early spring.

CONDITIONS IN EXPORT FIELD FAVORABLE

By G. M. Morgan

Export Manager, Canadian Biscuit and Confectionery Export Co.

In exports the past year has been a banner one for Canadian manufacturers of confectionery and biscuits. The exact value of goods going to outside markets, cannot at the moment be ascertained. From our observations and information received, we would place same at approximately $4,000,000. This is very gratifying, when we take into consideration that in the pre-war year of 1914, the customs blue book shows in confectionery less than $5,000 as being exported.

The present position is abnormal, in so far as the English market is concerned, due to the fact of war restrictions and sugar shortages. This condition has made it possible to place Canadian products, irrespective of quality and price. However, we feel in order to make our present positions permanent, it will be necessary to watch very carefully the manufacture, as quality will determine to a very great extent our future. The export business cannot be taken lightly, nor as a temporary antidote for unsatisfactory local conditions. To engage in it necessitates being always prepared to supply at short notice what foreign clients want, whether domestic business is low or booming.

There is no doubt in our minds as to the future of Canadian biscuits and confectionery in the export field, provided that the goods are of the right quality and that our prices are not in excess of those of our competitors. The Canadian Biscuit and Confectionery Export Co. is doing all possible to further the interests of the trade in general, and have representatives now in the West Indies and South America, and have under consideration the exploitation of Oriental, Australasian and African markets, as we feel that Canadian-made products in the lines mentioned can compete favorably with goods manufactured in other countries.

Boots and Shoes

(*Continued from page* 190.)

per cent. to 100 per cent. higher than it was a year ago. We have not found it necessary to enlarge our capacity, as there is considerable competition between manufacturers for the help available, and it will be a serious question when additions now being built are ready for operation, and the supply of help which is already shorter than the demand has to be found.

We have found that the tendency this year as regards demand has been considerably increased, especially on men's shoes, and the demand has been for shoes of a good quality, the cheaper lines being hard to move. Prices have advanced materially, but instead of preventing buying it has tended rather to stimulate it.

We have not been engaged in export business on account of the large home demand, but we believe this has been a factor and had we been in position to handle any of it we could have had sufficient to keep us running at capacity for many months. We believe it has been a factor, though a small one, in general conditions as regards prices and supplies of raw materials, but so few manufacturers have been engaged in it compared with the total number of manufacturers in the trade, that we do not think it has made any serious difference to Canadian conditions.

Our opinion is that the present conditions are not healthy and the demand for shoes is in excess of actual requirements. It is impossible to predict how long present conditions will last, and we would not venture a prophecy in this connection. We have no plans for factory enlargement at present on account of our belief, already mentioned, that present conditions will not be permanent, and in addition to this the uncertainty as regards tariff, and the irrational workings of the Board of Commerce would be sufficient to deter us from entering on any such plan at present even though we were otherwise disposed and in position to enlarge.

INFLUENCE OF BOARD OF COMMERCE FELT

By Clayton E. Hurlbut

The Hurlbut Co., Limited, Preston

The labor situation with us has been satisfactory except for a lack of female workers. Other manufacturing conditions have been favorable. Our production has been increased and during 1919 was somewhat larger than in 1918. We have en-

—FIVE FACTS—

vital to every business man

I.

In case of fire your insurance policy will cover only a fraction of your loss. This is proved by the fact that you would not sell your steady-going business for the face value of that policy.

II.

You are afraid of fire. This is proved by the fact that you carry fire insurance and pay a substantial premium for it.

III.

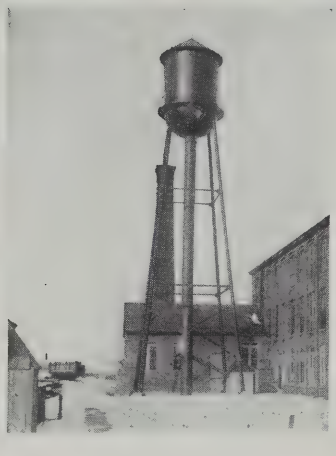
Fire danger in your building can be practically eliminated by an installation of Grinnell Automatic Sprinklers. In over 20,000 reported fires the average loss under Grinnells' has been only $270, a reduction of 96-2/5 per cent. over the lowest average business losses prior to their invention.

IV.

Your insurance rates can be reduced 40 to 90 per cent. The insurance companies are glad to make this reduction because Grinnells' reduce to a minimum the loss they have to pay.

V.

Grinnell Automatic Sprinklers pay for themselves and then pay you. The insurance rate reductions are usually sufficient to wipe out the initial cost in a few years. After that their savings are clear profit.



Two thousand men will see the business efforts of a lifetime destroyed by fire this year. The insurance companies will return them a large part of their actual property loss, but cannot repay them for the equally large losses due to lost profits, interrupted operations, and general business demoralization. Preparation now is better than reparation then—especially when the reparation is only half-measure. Our estimates and proposals are free. Ask for them now. Address:

larged our capacity by the addition of a fitting-room at St. Mary's. The market demand for shoes has been fair, but there seems to be a tendency, which did not prevail last year, to question prices. The Board of Commerce ruling on retail profits may result in lessening demand in lines other than staples and even on staples. The retailer will hesitate to order far ahead as he will not have the incentive of higher prices. How this will affect manufacturing is hard to determine at this time. Export business has not been a factor. We regard the outlook as uncertain.

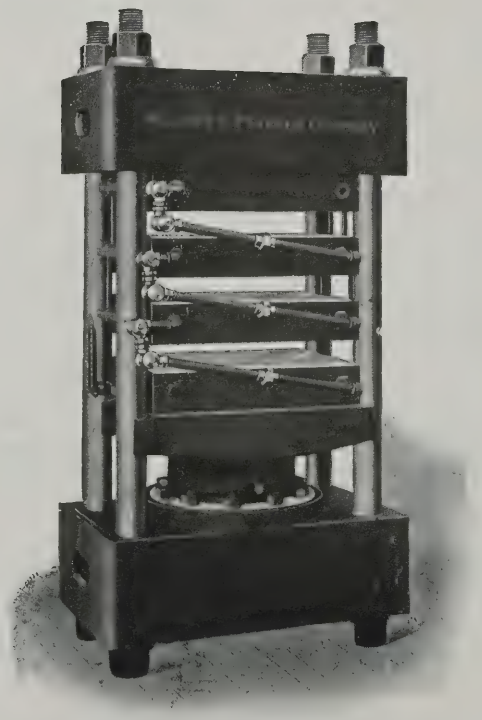
DOES NOT LOOK FOR ANY FALLING OFF

By C. Dufresne
Dufresne & Locke, Limited, Montreal

We must admit that we experienced considerable trouble some time ago regarding labor. However, we thought it advisable to go into the matter thoroughly with our employees, and although we found it necessary to increase the wages from 30 to 40 per cent., and even 50 per cent. in some instances, the matter was adjusted to the entire satisfaction of all concerned.

Leather of all descriptions is extremely scarce and prices are exorbitant, but the demand being so great it is not at all surprising. Machinery, findings, etc., have also followed suit, and even at advanced prices it is not always possible to procure the article wanted.

Business to date has been very satisfactory. Our output so far has considerably surpassed the amount of business accomplished during the same period of 1918. In fact, we have found it necessary to increase our capacity about 25 per cent. to meet the ever-increasing demands. The boot and shoe trade in general seems to be very good. This is no doubt due to the return of so many troops and their dependents. Previous to the signing of the armistice, merchants only ordered in sufficient quantities for their immediate requirements, and had nothing stocked ahead. The hope of lower prices was evidently the cause. Hence there is quite a shortage now, and although prices are higher than ever, the goods must be had regardless of cost.



There is great demand from abroad for all staple lines, and the large export business now in force also tends to the scarcity of merchandise in general for the home market. We have undertaken quite an item of French business, particularly in men's lines. However, we find shipping very slow. All foreign ports seem to be greatly congested with freight, and the length of time it takes shipments to reach their respective destinations is beyond the ordinary. This is a great hindrance to the shipper as regards payment of goods, etc.

Regarding future business, we certainly think there will be no falling-off. Owing to the extremely high prices we had to quote when sending out spring samples, we did not anticipate many returns, and must admit that we are surprised at the number of orders that have already been booked for spring delivery. An extraordinary fact is that the jobbers are now placing orders at higher figures than what they are actually charging their customers for goods. We are indeed well pleased with the results of 1919, and from present appearances business will no doubt be exceedingly flourishing during the coming year.

CONDITIONS STABLE FOR NEXT FEW MONTHS

male help is concerned. There has been during the year, and there still exists, a scarcity of experienced shoe operators. We have been, speaking for our own factory, taking on green help and training them in the different departments. There has been, however, a serious shortage of both experienced and inexperienced female help, and this still exists.

We have experienced no difficulty in securing all the supplies of raw material that we require. Prices, of course, have been extremely high, especially during the last six months, in so far as leather is concerned. Findings have also been advancing, but, as already stated, these materials have been procurable in practically any quantity required.

There has been a gradual increase in production during the year, our output for the last three months of this year being 50 per cent. over last year. There has been a slight increase in capacity, as, owing to the shortage of female help, we were compelled to open a branch fitting-room in another town, which has enabled us to keep the other departments of our factory up to something near capacity.

There has been a very keen demand for shoes during the past year. The demand has been greater than our capacity, and we have been compelled for this reason to decline considerable business. The demand has been for good quality of footwear. Prices have ruled high, and prices for spring booking are higher than at any time during the past four years. Owing to the heavy booking and the comparatively low production, the deliveries have not been as satisfactory to the retail trade as could be wished for, but, on the whole, the merchants have shown a fine spirit and have been exceptionally patient, realizing as they did the adverse conditions under which the factories were working.

Owing to the very heavy domestic demands, we have not manufactured during the past year any shoes for exporting, although we had the opportunity of placing a large volume of business in the English, French and Belgian markets.

One can only make a rough guess of what the future holds for the shoe industry as regards production and distribution. We believe there will be a gradual improvement in production, providing labor conditions will remain normal and there is no further reduction in the working hours. We are not at the present anticipating enlarging our plant. We are, however, installing additional machines in several departments, which we expect mill be a means of increasing our output from about 25 to 40 per cent., which additional production we require in order to take care of our domestic orders. We do not, however, anticipate any marked change in conditions for the next four or five months. Beyond that time it would be hard to predict.

Mining Industry

(*Continued from page* 201.)

impetus was given to the production of pyrite in Canada. The supply of Spanish pyrite, which had been used in the manufacture of sulphuric acid, was no longer available on account of lack of shipping. Pyrite deposits were mined extensively in Ontario, Quebec and British Columbia. With the close of the war the explosives industry fell off and less pyrite was mined. A large quantity of sulphuric acid is consumed in the phosphate industry; it seems likely that the return to normal conditions may be accompanied by greater efforts to replenish the fertility of the soil by the application of artificial fertilizers. As potash and nitrates become more readily available it is probable that the whole fertilizer in-

dustry will greatly develop and a greater demand be made for sulphuric acid for treating the natural phosphate.

The great proportion of magnesite used for refractory purposes in America prior to the war was obtained from Austria. Soon after the outbreak of hostilities deposits of magnesite in Quebec that had received only moderate development were quickly put in a position to furnish supplies for the American market. A thriving industry was established. Large deposits of a very fine quality of magnesite were opened later in the State of Washington, but the Canadian product was favored by much greater proximity to the markets, the metallurgical industries using magnesite being situated mainly in the eastern part of the continent. Canadian producers are apparently confident of being able to hold their own against all competitors at least for some time to come, as the two most important companies have been spending considerable money in erecting calcining plants.

Discovery of Potash Minerals

The war forced Canada to a keen realization of her dependence on Europe for potash. A discovery made in 1919, however, raises hopes that at no distant date a measure of independence in this report may be attained. Potash minerals have been discovered associated with the salt deposits at Malagash, Cumberland County, Nova Scotia. Further investigation is necessary to ascertain the extent of the salt beds and the proportion of potash they contain. The discovery of potash is leading to further prospecting by boring. There are a number of places in Nova Scotia and New Brunswick where salt springs indicate the possibility of the occurrence of salt beds. Abraham Gesner, writing in 1836, about the salt springs along the coast of Northumberland Strait, said: "The infancy of the colony is a trite apology for not entering into useful speculations, but it seems impossible that any country can arrive at manhood when little pains are taken to develop its growth."

Even if potash should not be found in commercial quantities, the occurrence of beds of common salt in a province so well supplied with coal and with so extensive a fishing industry should appeal to the business instincts of enterprising Canadians.

Money Being Invested in Mines

There has been no lack of money for investing in mines, particularly silver and gold mines. Money has also been available for sending out prospecting parties and for the development of prospects. The division of the Geological Survey, whose duty it is to supply information to the public, was early aware that the year would see a great revival of prospecting. There was a demand for information about the geology, the known mineral deposits and the prospects for the discovery of minerals in parts of Ontario, Quebec and Manitoba, in Alberta, Northern British Columbia and other parts of Canada.

Information was desired regarding the Pre-Cambrian areas in which prospecting was most likely to be rewarded with the discovery of valuable minerals, especially the precious metals. Gold never falls below a fixed value, is never mistaken by the experienced prospector for less valuable minerals, is pleasing to the eye, and carries with it the glamor of romance. Silver had become doubly attractive on account of the great increase in price. The summer of 1919, therefore, saw greater prospecting activity than had been since the few years immediately succeeding the discovery of the rich native silver veins of Cobalt.

There seems to have been little difficulty in procuring money for carrying on prospecting for petroleum. The war taught the public the value of petroleum as a fuel and as the

ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.

Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

CANADIAN INDUSTRIAL ALCOHOL COMPANY LIMITED

MONTREAL, QUE.

source of gasoline on which motor transport is so dependent. The consumption of petroleum has been proceeding at an alarming rate and petroleum geologists estimate that the approximate exhaustion of the present known sources of supply will take place at no very remote period. The feeling that the future of the petroleum market is assured, whether the nation be given over to wasteful expenditure in luxuries or to thrift and intense economic production, has aroused much interest in the possibilities of discovering new natural reservoirs of this convenient fuel.

Oil Possibilities in Alberta

Interest has been centred in the Province of Alberta. Some drilling was done in this province during 1919, and drilling rigs were taken down the Mackenzie for testing the possibilities of the Devonian formations. Geologists were engaged in working out the structure of the rocks in Alberta and ascertaining what areas presented conditions most favorable for the accumulation of oil. Much attention was directed to anticlinal structures in the foothills and it is expected that extensive drilling operations will be conducted during the year 1920.

Of the investigations carried on in Ontario those of Dover township were perhaps watched with greatest interest. In this township deep wells were sunk to test the Trenton formation and flows of gas and oil were struck. The Palaeozoic formations of the James Bay region are also beginning to attract attention.

Considerable interest was manifested in the oil shales of New Brunswick, but no plant for treating them has yet been erected. The shales are not of uniform composition. If, as is claimed by interested parties, the average composition of large bodies is such as to admit of retorting the whole mass with profit, then the industry when established should have a long tenure of life. The time is ripe for a thorough testing of the possibilities of the oil chales of New Brunswick and Nova Scotia.

In the early part of the year there was quite a little talk of making use of the aeroplane for purposes of exploring and prospecting the more remote areas of Canada, but apparently nothing effective was accomplished.

The adverse rate of exchange between Canada and the United States has been leading some manufacturers to make inquiries as to the possibility of procuring in Canada certain mineral products that have heretofore been to a large extent imported. In some cases the minerals are mined in Canada and production is capable of expansion; in other cases the minerals are available, but are not being mined. To get production of such minerals started, often all that is needed is the knowledge that there is a steady market for the product, and a little consideration on the part of the purchaser until the industry has got well on its feet.

To predict the future of the mineral industry is impossible. One satisfactory feature is that the labor situation in Canada at present is probably better than it is in any other country that was engaged in hostilities. The unrest in other countries, the unsettled financial situation and the high rate of exchange produce a feeling of insecurity. The world was war-weary; it entered upon a long holiday which it is spending in orgy of luxuries. Gradually the holidaying will cease, and gradually the people will learn that the solution of the present unsettled and unsatisfactory conditions lies in intensive work, thrift and economy, and an unselfish co-operation between employer and employee. The recovery will be gradual but there are already evidences of its approach. When it comes the mines of Canada will be so developed that they will be in a position to contribute much towards reconstruction and the re-establishment of basic industries.

Paint Industry

(*Continued from page* 203.)

that the export trade seemed to think that the markets of the world were going to drop, but since prices have held firm and they are commencing to see that there is no decline to take place, it is gradually coming back to its own again.

The outlook for the coming year is even better than that of a year ago, the demand being much greater, and it is going to tax our manufacturing facilities much more than in the past, in order to cope with the situation. Regarding enlargement of our plant, we would say that we have machinery ordered, and when in operation will quadruple our plant to that of 1912, and the possibilities in the near future, if conditions continue as at present, are that we will be forced to vacate our present premises and build a plant equal to all occasions.

INDICATIONS POINT TO BRISK DEMAND

By Ontario Manufacturer

Labor has been restless, looking for the maximum wages and giving only the minimum of production in return. Even what we consider our best men seem to produce less than in pre-war days. Raw materials, generally speaking, have been more difficult to procure than during the war years.

At present production is greater than a year ago, and apparently will continue, from present outlook, on an increasing scale well on into the spring months. The demand at present is much larger than a year ago. Industries using paints and varnishes to finish their products are all busy and buying freely. Jobbing houses and retail merchants and decorating concerns are buying more freely for spring shipments than a year ago.

Generally speaking, by reason of the higher cost of raw materials, increased labor and overhead expenses, prices are higher than a year ago, but notwithstanding this, orders were never easier to obtain.

Export has never been a large factor in the industry, but is increasing to some extent, and we believe will develop considerably during 1920.

Indications point to a very brisk demand during the first six months of 1920, and, generally speaking, we believe the industry on the whole, throughout Canada, will be able to take care of the demands that may be made upon it.

Musical Instruments

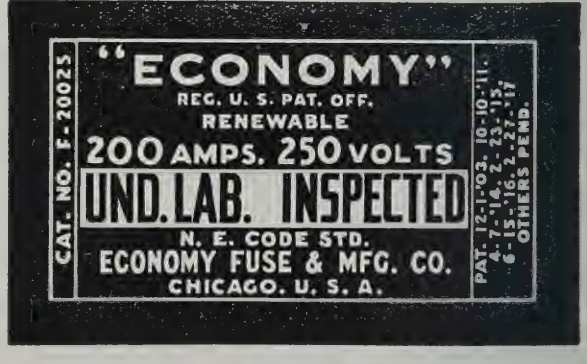
(*Continued from page* 205.)

curtailed our production to a certain extent. Our production, however, in 1919 was over two hundred per cent. greater than in 1918, and we look for at least one hundred per cent. of an increase in 1920. We are making arrangements for necessary equipment and factory space for this production, and if we secure the necessary raw material and labor, we do not expect any difficulty in selling this quantity. With reference to the quality of cases in demand, we would advise that the better grades are more in demand than the cheaper ones. We have never developed export business, as we have not as yet been able to take care of the local trade.

OUTPUT INCREASED FIFTY PER CENT.

By R. L. Chilvers

Berliner Gram-o-Phone Company, Limited, Montreal.



Production has been increased to a large extent, and present output is approximately 50 per cent. more than a year ago. The demand has been for the best quality goods. Prices on talking machines have been considerably advanced,

but this has not affected the demand, while "His Master's Voice" records, which have not been advanced, although the cost of manufacture has gone up very considerably, are in greater demand than ever before. We think the demand is likely to keep up and we are making plans for considerable factory enlargements.

LABOR SCARCE AND MATERIALS HIGH

By E. C. Scythes
Nordheimer Piano & Music Co., Ltd., Toronto

Labor is certainly a most difficult and unsatisfactory proposition with piano manufacturers to-day, and there are few factories with a full complement of men. Not only is there an acute scarcity of dependable men, but the production per man is considerably below that of pre-war periods, when wages were about half the present cost. The outlook shows no element of cheerfulness.

A large proportion of the supplies and materials used in piano manufacture must be imported, for the reason that they are not available in Canada. These importations are in U.S. funds, and it is easy to see what the rate of exchange means in piano costs.

Prices are of course abnormal, so much so, that they no longer cause comment, other than the observations resulting from cost analysis which, each succeeding month, are more distressing. The purchase of supplies is largely hand to mouth buying, and on the seller's terms, which means at whatever the prices may be on date of shipment. This may be from a week to three months from the date of ordering. In the matter of ivory alone, a very recent advance in price was sufficient to increase the cost of a piano by approximately ten dollars per instrument. The Canadian manufacturer is in competition with England, France, Germany, Italy, Australia and the United States in the purchase of supplies.

Nominally, production is about equal to that of 1913, and for 1919 will be no greater than in 1918. Occasional factories report a larger output than ever before, but against these is the underproduction of a greater number of factories and a curtailment due to incipient strikes and to a strike of a month's duration in the Quebec plants, with the subsequent

cut in production for a number of weeks following, due to some of the operatives having remained at other work secured while on strike. Machinery methods have not yet been discovered to balance the shortage of man power.

Export business in Canadian pianos is not an important factor in the business at the present time, because of the impossibility of turning out sufficient instruments for the home market. The trade is regularly in receipt of inquiries from New Zealand and Australia, South Africa and Great Britain. Some shipments have been made to these countries, and even to China and Japan, but reference to the blue book will show that the total export business is very small indeed. It is unfortunate that the possibilities of the foreign buyer cannot be taken advantage of, but under existing labor conditions, primarily, and the conditions governing in materials and supplies, export trade in piano interests only a few of our manufacturers.

There is nothing in sight to justify other than optimism, so far as the demand for pianos is converned. Costs, of course, continue to increase, and whether they will get to a point where piano prices will be forced up so high as to restrict sales, none can foresee, but the trade is fortified by the certain knowledge that the public had adopted a positive attitude concerning the necessity of the piano in the complete home, and that where there are children, the absence of an instrument is unthinkable.

Shipbuilding

(*Continued from page* 214.)

ing the supply of raw materials and other manufacturing conditions are fairly favorable.

Costs of production have increased greatly during the year, due to higher priced material and labor, particularly labor. Large increases were granted here in May of this year, and a forty-four hour week introduced.

Contracts for ships are not forthcoming, at the present moment, either from the Canadian Government or abroad. The British shipbuilder can still underbid us considerably and give reasonable deliveries, and as we have no protection of any kind we are not able to compete. We have only two ships in hand at present instead of six, for which we have room.

The future of Canadian shipbuilding is not at all bright at the moment. Lake owners are not in the market owing to the high prices ruling and, as stated above, foreign owners can buy to better advantage in Great Britain. Without some form of Government assistance, Canadian shipbuilders can not possibly compete with such countries as Great Britain, Japan and Norway.

We have delivered four ships to the Canadian Government during 1919, namely, "Canadian Warrior," "Canadian Recruit," "Canadian Signaller," and "Canadian Gunner," and will launch the "Canadian Farmer" before the end of the year, leaving the "Canadian Observer" on the stocks. At our Kingston plant we will launch the "Canadian Beaver" before the end of the year. These ships are 3,995 tons dead weight and are built specially for ocean service.

THE INDUSTRY IN BRITISH COLUMBIA

From Vancouver Province

British Columbia shipyards in 1919 exceeded the 1918 output of 14,900 deadweight tons, and have contracts for 65,600 tons, most of which are well on the way to completion.

The total of steel and wooden ships built and launched at B.C. shipyards during 1919 is ten steel and forty-six wooden, tonnage 170,500. Four of the steel vessels were for the Imperial Munitions Board, six for the Canadian

Government merchant marine. The wooden vessels were built for French, Greek, Canadian and Norwegian interests. There were forty French ships, two Greek, three Norwegian and one Canadian. The wooden shipyards have all closed down because of lack of orders. With the end of the war the call for wooden vessels fell off, and steel shipbuilding is attracting most attention as general cargo carriers.

The steel yards of the province are all working on contracts. The Coughlan yard has two 8,100-ton Government ships to finish, expects further Government orders, and has orders for two 8,100-ton vessels from private interests. The Wallace yard is building an 800-ton ship for the Union Steamship Company, and has contracts for two 8,100-ton Government vessels. The Harbor Marine Company, Victoria, is engaged on two 8,100-ton ships for the C. G. M. M., and the Prince Rupert Drydock and Shipbuilding Company is busy on a similar contract.

Following is a table of construction during 1919:

STEEL SHIPS.

Coughlan's.

	Tons.
War Column	8,800
War Cavalry	8,800
War Company	8,800
War Chariot	8,800
Canadian Importer	8,100
Canadian Exporter	8,100
	51,400

Wallace's.

	Tons.
Canadian Volunteer	4,300
Canadian Trooper	4,300
Canadian Aviator	5,100
Canadian Raider	5,100
	18,800

WOODEN SHIPS.

Lyall's—8 French, 1,500 tons each	12,000
Northern Construction—5 French, 1,500 tons each	7,500
New Westminster—5 French, 1,500 tons each	7,500
Pacific Construction—2 French, 2 Greek	5,600
B.C. Marine—1 steamer	500
Foundation Company—20 French, 3,000 each	60,000
Cholberg—3 Norwegian	4,200
	100,300

SUMMARY.

Steel	70,200
Mainland, wood	36,100
Victoria	64,200
	170,500

All the vessels were steamers except the three built at the Cholberg yards. These were sailing ships of 1,400 tons each.

NUMBER OF CONTRACTS ON MARKET

By J. Wilkinson

Manager, Midland Shipbuilding Co., Limited, Midland

We find that the supply of labor in our part of the country is very fair, but the efficiency of the labor has not been of the highest class. The supply of raw material, which consists principally of steel, at this particular time is rather hard to get, in fact most materials are in the same category. Our cost of production during the last year has slightly decreased owing to different methods which we have introduced in our plant.

As regards future contracts, at this present time there are a number on the market but we have not secured any.

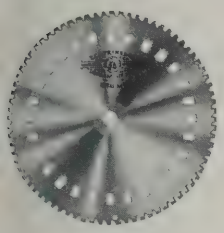
as yet, but think that we stand a good chance. The future of the Canadian shipbuilding industry looks very well to us The factors that will assist it, in our opinion, will be co-operation from the Government and much greater co-operation from the employees, with the management of the various plants, to keep the industry going.

We have completed two ships for the Imperial Munitions Board this year, the "War Leveret" and the "War Fury." These ships are of full canal size, 265 ft. x 42 ft., 6 inches. We are now building one for private owners, The Great Lakes Transportation Company, the same size, and expect to have a contract from the Canadian Government for one of the Government vessels.

Leather Industry

(*Continued from page* 196)

before this condition can be remedied, and supplies brought back to something like normal conditions.



General operating conditions have been becoming somewhat easier as the year passed. Embargoes, and restrictions of all kinds, which were in force in large numbers when the year opened, have one after another been eliminated, thereby making general business easier to carry on, and essential commodities a little easier to obtain.

As to production, it is exceedingly difficult to form any definite comparison with the preceding year; but speaking generally, I believe that production has on the whole been increased during the year under review, though not to any large extent. The year opened with a somewhat quiet demand for leather because of the uncertainty following the signing of the armistice. Early in the spring European demand began to make itself felt, and increased rapidly, thereby reducing stocks of raw and finished material, and resulting in increasing prices. Coincident with the movement toward higher prices, the domestic demand for leather of all kinds increased until it had attained very large proportions. This demand has practically been maintained throughout the entire year. The export demand continued for some months, until the decline in foreign exchange rates made it difficult, if not impossible, for European customers to operate in this market, so that during the latter part of this year practically no new European business has been effected. Unquestionably there is a need for our products of leather and leather goods in Europe at the present time, and if the exchange conditions were to become more normal large demands would at once be felt.

So far as the outlook for the year 1920 is concerned, it is difficult to predict with any real certainty. Labor conditions it would seem should become easier as the year progresses. Such supplies of raw materials as are available in different parts of the world should be more easily transported, thereby making business easier to carry on.

It would appear that the domestic demand for leather and leather products is likely to be maintained for a goodly portion of the year at least, and the question as to the ability of the manufacturing capacity to meet demands will depend very largely on the possibility of export business being available. Should this come in large quantity, because of im-

proved financial conditions, unquestionably the capacit the industry on this continent would be taxed.

There is nothing at the moment to indicate a lower w level in price of raw materials, and in all probability value of leather and leather products will be fully n tained throughout the year.

COSTS OF PRODUCTION ARE VERY HIGH

By Beardmore & Co.

Immediately upon the cessation of hostilities, the ger impression throughout the trade was that there would fall in values in the hide markets, and that prices w gradually recede until they approached something like no conditions, and some tanners even went so far as to that, in their opinion, something in the nature of a sl would take place.

Anticipations in this direction were certainly rea in a minor degree, that is, it was possible to purchase cer raw materials at less money than had been ruling du the last year of the war; and furthermore, there wa decided falling off in the market on certain classes of ished leather.

To everyone's surprise, however, an advance in the p of hides set in during the early spring, which conti steadily until values reached a point far in excess of that had ruled during the whole of the war, leather fol ing suit, but not to such an extent, and since the sprin 1919 values have been anything from 20 per cent. to 40 cent. or 50 per cent. higher than they were at any tim the history of man. Since midsummer, however, there been a gradual falling off, but even now hides are double the price they were before the war broke out, even then the market was considered high as compared values that had been ruling up to 1914.

Notwithstanding the fact that hides have slowly decl in price since the summer, it does not necessarily fo that leather will follow suit at present, as the finished ar never reached a corresponding height, and during the that the highest figures were being paid, leather was alv being sold at less than cost of production, figuring on hides which were going through the tanneries, and which been purchased at top values. This means that hides n fall below a certain point before it will affect the ma for leather, and in any case, tanners are bound to su a loss on the leather which they had made out of h purchased during the early part of last summer.

The Canadian tanning industry is very largely depen upon imported raw material, tanning extracts and mos the hides for sole, and also skins for light leathers, b purchased from abroad, and all these have to be negoti either in New York funds or foreign exchange bought thro New York, and bearing New York exchange rate. A tan is handicapped in producing cheap leather for the dome trade, as this item has to be added to cost of production.

The exchange situation has seriously interfered with exporting of Canadian leather to Europe where a large t was done both before and during the war, as owing to low value of the pound sterling, firms on the other sid the Atlantic have to look for markets where their mo possesses greater purchasing power, and it might truthf be said that the abnormal rate of exchange has tempora paralyzed the export trade between this continent and United Kingdom.

With regard to future prospects, there is not the sligh doubt but that if the pound sterling was of higher va as compared with American currency, an enormous dem would spring up very shortly from across the water, the stocks in England and the continental countries n be very low.

Harness and Saddlery

HEAVY WORK HARNESS IN DEMAND

By B. F. Ackerman

President, B. F. Ackerman Son & Co., Limited, Peterborough

Our experience with regard to labor is that we are n experiencing any particular difficulty, and this also appli to raw materials. Transportation facilities seem to be abo normal, but we have of course been very much hampered making prompt deliveries to our customers, owing to rece railway regulations of shortening up the hours for the acce ance of freight and the reduced express service. Gener operating conditions are about normal. We have increas our output from a monetary standpoint, but the volun remains about the same.

We find in the saddlery business that the demand f fine products has fallen off very considerably, but for hea work harness the demand seems to be about normal. We ha had some export business, having shipped a considerab quantity of workmen's boots to London, England, but w consider this as only a temporary business which was caus by conditions in England being such that goods of this kl were almost impossible to obtain at the moment. Ordinaril we do not think we can compete with English manufacture in the manufacture of boots.

We look for an average amount of business throughou the present spring, and as a matter of fact we find rather variation in the demand for our goods. If, however, the should be a rapid decline in the price of leather, doubtle considerable business will be cancelled, but we do not antic pate anything serious in the way of loss of business from th source.

CONDITIONS HAVE BEEN CLOSE TO NORMAL

By James D. Trees

Samuel Trees & Co., Limited, Toronto

Our business, roughly speaking, is divided into three part as far as the saddlery trade is concerned. First, saddler hardware, which covers all the trimmings that are used i the manufacture of harness. For many years quite a larg part of these trimmings were brought in from Great Britai and the United States, but since the war began, owing to th conditions in these two countries, there has been practicall very little hardware brought in from either country, and th result has been that our three Canadian factories in Whitby St. Catharines, and Gananoque, have benefited by this condi tion, and have been able to adapt themselves to handl promptly and efficiently all the business that has been of fered to them.

The second division of our business is the leather indus try, which we use in the manufacture of harness and hors collars. This is entirely manufactured in Canada now, and while prices have advanced from time to time, we have ha no difficulty in getting supplies of all the leather that w have required, although at times we have had to wait fo certain special kinds.

The third division is the manufacture of horse blankets in which we use large quantities of plain hessians, striped jute cloths, and cotton ducks. During the war period we were able to get all the jute that we required from Dundee up until the end of 1917, but conditions during 1918 were very bad for getting supplies. During 1919 things have im proved very much, and we have been able to get all our supplies that we required from Dundee.

In looking back over the year, we have every reason t be thankful that conditions have been so close to normal and also to the fact that Canadian manufacturers have been able to handle two-thirds of our supplies.

We have no complaint to make in regard to labor as we have had a steady supply of skilled labor. We could hav

used a few more skilled harness makers, but unfortunately there are very few men learning the trade at the present time.

Our output, generally speaking, has been normal, although our production of horse blankets has been somewhat less than usual. As far as we can see at the present time there is no weakening in the prices of any kind of commodities. Jute cloth is firmer, leather is higher, and saddlery hardware is also tending to go higher.

SADDLERY FIRM SUPPLEMENTS ITS BUSINESS

By E. F. Hutchings
President, Great West Saddlery Co., Ltd., Winnipeg

During the past year we found that labor has been very scarce. However, we have been able to produce such goods as our market required without any particular loss of business. Raw materials have also been very scarce, but in this regard we have kept going fairly well. As to transportation, we have been well served, except during the Winnipeg strike between May 15th and July 15th, when we suffered considerably during that period.

General operating conditions have been fairly satisfactory during the whole season, as none of our employees went out on strike during the big strike in Winnipeg, and they all remained loyal and true to the firm.

As to increasing our output, would say that this is very difficult for us to do, because the automobile, gasoline truck, and the gasoline motors which have been used largely by the western farmers, has been the means of cutting off considerable of our trade. The light carriage and single carriage harness is practically a thing of the past, also accessories for the light horse, but we have taken up other lines of business to make up for the loss in the above lines. Our team harness and horse collar business has largely increased during the last two years, and we have taken up automobile supplies, trunks and bags, mitts and gloves, which keeps up our volume of turnover, so that we have lost no ground, but increased a little.

Values are on the increase all the time. My own opinion is that leather goods will not get any higher, but will gradually decline. However, there is a very large demand for all kinds of leather in Europe, which will keep the prices up for some time, and we do not look forward to any sudden fall in the prices of leather or hides.

Lumbering Industry

(*Continued from page* 198)

American shipments was only fair throughout this past summer in most districts, and in some other districts a serious condition arose from lack of foreign cars to take care of lumber shipments. As regards ocean tonnage, while the Government-purchased lumber was pretty well shipped from ports on the St. Lawrence, very little was moved from ports in the Maritime Provinces, and the quantity of lumber shipped through usual channels was small owing to difficulty of securing tonnage.

Costs of operation during 1918 were very much higher than in 1917, and there will still be a further increase between 1918 and 1919. This increase is caused by wages of men in the woods and in the mills, and increased cost of provisions of all kinds.

Regarding markets, with the exception of a few months early last year, the market has been strong for all species of lumber, and I do not think you could possibly ear-mark any species as being in greater demand than another.

I fully expect that the cut of lumber during 1920 will be slightly larger than during 1919. I do not look for any new markets, and fully expect that United Kingdom, United

States, and our local market will take all the lumber th will be produced. I do not think that there will be any mo mills operating in 1920 than in the past year.

MUCH DEPENDS ON THE BRITISH ADMIRALTY

By W. B. Snowball
President, J. B. Snowball Co., Limited, Chatham, N.B.

Production for 1918 was slightly in advance of 1917 and considerable improvement over previous years, and judging b the Crown Lands Reports we would say equal to the winter 1913-14. This has been brought about to a large extent by th high prices available for lumber, which induced the owners private-owned lands, which they had been holding for a nun ber of years, to cut these, putting the lumber on the marke

Labor was more plentiful than in 1917 and more efficien but yet not as efficient as previous to the war and very res less, and not as desirous of being every day on the job as the were when wages were lower, which is a disadvantage in th manufacturing industry.

The larger portion of the manufactured stock in the Mar time Provinces was sold to the British Admiralty, sales havin been made from January to March of last year. This too out of the market such a large portion of the output that made the domestic market very strong and also stock require for U.S. market brought good prices. The demand was largel for 1 inch and 2 inch. The present outlook in the U.S. ma ket and also the domestic is good, but this will be somewha governed by what takes place in Great Britain. What actio the British Admiralty will take in regard to the large stock they are holding in England, and Canada will be a facto for the future, and an uncertain one. Until this policy decided upon, we do not look for any large transactions t take place, the same as they have in previous years. Th condition of British exchange is also having an effect on th British market, to which we look for 75 per cent. of th output from the Maritime Provinces.

The saw-milling capacity is fully equal, if not beyond th natural growth and production of the Province, and if an enlargement is made on what at present exists, it will mea a reduction in the timber assets of the Province.

CONDITIONS IN NORTHERN NEW BRUNSWICK

By Angus McLean
Bathurst Lumber Co., Limited, Bathurst, N.B.

The cut for this locality, I would consider, would b about 60 per cent. of pre-war production, and runs a littl bit lower than 1918 production, which, I would judge, woul run about 65 per cent. or 66 per cent. of pre-war days.

As to the supply and efficiency of labor, I would say tha we have suffered for want of labor during the entire season and what labor we had was more or less inefficient, an there was always during the entire season more or les unrest and dissatisfaction, men seemingly not knowing wha to do with themselves. Cost of operation was fully 15 pe cent. higher than 1918, and about double pre-war days.

During the early part of the year the lumber market wa quiet, both for domestic and export, but about midsumme the demand for domestic and for the United States market became very active, and from that time up until the presen we have had a very strong demand for all kinds of lumber spruce being a ready seller and pine exceptionally strong.

The outlook for next year's market is exceptionally goo and prices tend to a higher level, as there as there is reall a shortage of lumber in almost all districts to-day. W anticipate our best demands from the Uniteed States market and also a good demand from the Canadian market. We ca not say that we consider the demand from Europe wil amount to very much, owing to the fact that the rate o exchange is so much against us that we are unable to sel to Great Britain or the continent.

Machinery and Metal

(*Continued from page* 179)

several years past. These consist not only of heating a ventilating apparatus, but apply to our blacksmiths', for and blower line as well. We have a great deal of this bu ness going to the West, in fact more than for several yea past. We have also just made arrangements for handli our line in South Africa, Australia, and New York, whe we already have considerable business, and are pleased advise that we are receiving a great many export orde particularly from South African territory.

We figure that business will be good for a number months to come, with a tendency to a still further increa in price, due principally to the scarcity of raw material, a high prices which are being paid for same.

MACHINERY VALUES UP 100 PER CENT.

By F. Smith
The E. Long Manufacturing Co., Limited, Orillia

As regards the matter of labor supply we have found th common labor is easy to secure, but mechanics, such machinists and pattern makers and moulders, are very ha to secure. As regards raw materials, it has been our e perience, in the last six months, that raw materials are n made in all sizes. We have found it necessary to ta delivery of certain sizes of material, which means considera labor and cost to change into the proper material require The condition exists more in regard to sizes of steel ba plates and angles. Up to the present we have not increas our output since the armistice was signed, over and abo what our output was before the war.

With regard to marketing conditions, we find the dema at the present time to be good and we are able to sell the machinery we can manufacture at a fair price, the valu of course being nearly 100 per cent. higher than they former were before the war. In regard to export, this firm h never exported any machinery.

As to the outlook for the next six months to one yea We are manufacturing saw-mill machinery and some mini machinery. We believe that the outlook is good and that w can manufacture all the machinery we can make and wi have very little trouble in disposing of same at a reasona profit. We are expecting to increase our production co siderably within the next few months.

respect I think there is an improvement. Raw materials in most instances have been scarce and difficult to procure. The steel strike, naturally, accentuated this condition in the steel market. The coal strike has added somewhat to that. However, both these strikes appear to be pretty well settled now, and we should begin to get reasonably prompt deliveries. Transportation conditions have been unusually unsatisfactory, due to the shortage of cars, motive power, and the apparent lessened interest of those employed on the railroads —in their work. This is a very universal complaint, and from our experience it seems to be true.

We find there is a very fair demand for the machinery we manufacture, principally in the way of replacing obsolete and worn-out machines, not much replacement having been done during the period of the war. This refers particularly to sawmill machinery. Pulp mill machinery has been in good demand, owing to the very great demand for paper.

The outlook, so far as we can tell for the next few months, will practically be the same as for the past six months. We can hardly look for very much change in a shorter time than this. Things are apparently righting themselves, and it should not be very long before a more definite and distinct appreciation of the future can be made.

We have not done anything towards increasing our capacity, and it will depend on what the next few months will produce. Just now we are not contemplating anything of this kind.

WOODWORKING MACHINERY PLANT WORKS OVERTIME

By G. W. Robinson
Secretary P. B. Yates Machine Co., Limited, Hamilton

There is an extreme shortage of labor, and conditions will be worse, we believe, as we enter into the new year. In respect of raw materials, the situation is bad in all lines. We are reliably informed that companies in the United States are making inquiries in Canada for steel in certain sizes, which they are unable to obtain in their own country. As to general operating conditions, we are working overtime, paying time-and-a-half for such time, and will continue so for some period. We have increased our output, and will continue to do so.

There was never the demand that there is to-day, both as to amounts and kinds, and the trend of values is upward. There have been large developments in the export field, and this business is in volume, in spite of the exchange. Unless there is a sudden collapse, which we are unable to foresee at the present moment, business during 1920, we believe, will be of a volume heretofore unheard of.

Our present plant is capable of larger output; with us, it is a question entirely of the possibilities of obtaining a sufficient amount of labor. We are not adding new lines, but rather, to answer the questions specifically, continually bringing out new and improved types in the line of woodworking machines that we do build.

OPERATIONS DEPEND ON COAL SUPPLY

By C. A. Collins
Second Vice-President, Canadian Furnace Co., Ltd., Port Colborne.

We would report that manufacturing conditions with us are normal as regards labor and raw materials. We have been troubled by shortage of cars for shipment of our product, and while we have been able thus far to operate with the fuel we had in stock, our future operations are entirely dependent upon the disposition of the coal strike and the resumption of normal shipments of fuel.

The demand for our product is good, both domestic and foreign. The trend of values is upward. We consider the outlook favorable for active business during the next few months. The only factors which might have an adverse effect seem to be the fuel and transportation situation.

CANADIAN PACIFIC

Pacific Coast Tours

SPEND your winter at the Pacific Coast —where the climate is mild and luxurious and where zero weather is unknown. Vancouver has golf the whole year round, splendid roads for motoring, and a number of beautiful spots within easy reach, such as Victoria.

Barrett Specification Roof, guaranteed for 20 years, on the Technical School, Quebec City, Que. Architects: Tanguay & Lebon, Quebec City, Que. General Contractors: Pinchereau & Lamonde, Quebec City, Que. Roofing Contractor: Eugene Falardeau, Quebec City, Que.

UNITED STATES FIDELITY & GUARANTY COMPANY
BALTIMORE MD.

Barrett Specification Roof

20 Year Guaranty Bond

This is the bond that guarantees your roof for 20 years

A *permanent* roof for a permanent building—

THE type of roof to be used on a job like this cannot be decided on the basis of individual preference. Nor can experimenting be tolerated. For the investment is too large and the consequences of a mistake are too serious. When architects and engineers face a roofing job like this they have to get right down to *proved facts and figures.* They have to be absolutely *sure* on four points.

First. That from start to finish they will get just the kind of a roof they specify, with no chance for "skimping" or substituting inferior materials.

Second. That the manufacturer of the roofing materials is thoroughly reliable, and has had long and successful experience in the roofing business.

Third. That the roof will positively be trouble-proof and free from maintenance expense for a long period of years.

Fourth. That it shall be the most economical roof possible to obtain, not as to first cost, but what is of greater importance, as to **cost per year of service.**

Because a Barrett Specification Roof meets *all* of these requirements better than any other type of roof, it was selected to cover this splendid building.

To-day the *standard* covering for permanent buildings is a Barrett Specification Roof. It takes the base rate of insurance. It costs less per year of service than any other type of permanent roof. It is guaranteed for 20 years.

The 20-Year Guaranty

A 20-YEAR Surety Bond is now offered on all Barrett Specification Roofs of fifty squares and over in all cities of 25,000 population and more, *and in smaller places where our Inspection Service is available.*

This Surety Bond exempts the owner from all expense for repairs or upkeep on his roof for *20 years.* It is issued by a well-known Fidelity and Guaranty Company.

Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us and his work subject to our inspection.

Thus, in spite of the fact that we do not build roofs ourselves, we are put in a position where we can actually *guaranty* the delivery of the long years of service which Barrett roofs are capable of giving.

Copies of the Barrett Specification with roofing diagrams, sent free on request.

Vol. XX. TORONTO, FEBRUARY, 1920 No. 10

Editorial Comment

The Annual Meeting

AS announced some time ago, the 1920 annual meeting of the Association will be held in Vancouver on June 8 and 9. While the date is still four months distant, conditions render it desirable that members in Eastern Canada should make their arrangements to be present well in advance of the actual time of meeting. It will take several days to make the trip, and members will of necessity be absent from their offices for a much longer period than would be the case were the meeting to be held in the east. This makes it all the more important that early plans should be laid for attendance.

The value of a visit to Western Canada and the Pacific Coast at the present time need scarcely be emphasized. Many eastern manufacturers have not had an opportunity to visit the west since before the war, and in the interval important changes have taken place. Moreover it is highly desirable that through personal contact, the best of relations should be established between east and west. The more members who can take the trip to Vancouver and Victoria in June the better.

Resignation of Mr. Ellis

WIDESPREAD regret will be felt among the membership of the Association at the announcement that Mr. J. F. Ellis has found it necessary for reasons of health to resign from the office of treasurer. Only those who have been in close touch with Mr. Ellis are aware of the wide and varied extent of his activities, and it is by no means surprising that, with advancing years, he should now find it necessary to reduce his responsibilities.

The Association has had no more zealous and loyal supporter than John F. Ellis. It is now many years since he served as president, but both before and after occupying that high office he has given steadily of his time and service to the welfare of the organization. He leaves the treasurership with the esteem and admiration of those with whom he worked, while the wish is general that he may long be spared to continue his connection with the Association in some less arduous position.

Precept and Practice

A MEMBER of the Association has written to us in connection with the Made-in-Canada Campaign, enclosing six envelopes received by him from six different Canadian manufacturers. All these envelopes were made in the United States. Our correspondent says:—

"The thought that arises in my mind is—Do Canadian manufacturers practice what they preach? Of course the heads of some of the firms in question might say that these matters are too small for them to bother about, but I do not think it should be. If Canadian firms would watch these small matters it would mean the employment of several thousand more of our people making just such things as envelopes."

The Fuel Situation.

APPOINTMENT by the Association of a special committee to investigate and report on the fuel situation in Canada, with a view to developing domestic sources of supply, is a step that must receive the cordial endorsation of all who are interested in the national welfare. It is to be hoped that no time will be lost in getting down to action, and that the results of the inquiry will be such as to lead to a satisfactory solution of the whole problem.

In a sense it has been paradoxical that the Dominion, with its immense coal areas, should have become so dependent on the coal mines of Pennsylvania and Ohio for its supply of fuel. Yet after all the element of transportation has hitherto been the determining factor, and it has been more economical to deliver coal from the United States to Ontario and Quebec than to haul it from Nova Scotia or Alberta.

The need for action at the present time rests not so much on any difficulties that may arise in connection with transportation as in the ultimate exhaustion of the source of supply. Canada has already experienced a foretaste of what may occur, when the American miners went on strike last fall, and this condition will become accentuated as

reserves dwindle. Eventually, with its own needs steadily on the increase, it may become necessary for the United States, in self-defence, to take steps to conserve its supply by restricting exports. And this action could reasonably be taken against Canada because of the Dominion's own abundant fuel resources.

From whatever angle the question is viewed, it is most desirable that this country should become much more self-contained as regards its fuel supply than it has been in the past, and any effective solution of the difficulties which have hitherto prevented a wider use of Canadian coal will constitute national service of the highest order.

Water-Powers of British Columbia

THAT 3,000,000 horse-power may be furnished by the waters of British Columbia, is stated in the recently published report of the Commission of Conservation on "Water-powers of British Columbia." This estimate is in round figures and is made on the basis of 24-hour horse-power.

Water-power is becoming increasingly valuable to any province which hopes for an industrial future. This fact is emphasized by the recent coal crisis. The great volume of water-power available gives some indication of the industrial growth which should be associated with the future of British Columbia. The Commission states that its total estimate includes "about 250,000 horse-power for plants already in operation." It would appear, therefore, that British Columbia is scarcely using one-twelfth of the water-power available within the boundaries of the Province. The estimate of the Commission would seem to have been reached after very conservative allowances had been made to prevent uneconomic development of water-power. The report points out that water should not be allotted for power development without due recognition of the just demands of other interests having claims upon inland waters. Care should be taken to conserve vegetation. Nothing should be done to deplete the ground water storage. No hydro-electric development should tend to decrease the supply of water available for irrigation. Neither should hydro-electric development be undertaken at the expense of the requirements of navigation. The salmon industry must not be injured. The pollution of inland waters through the deposit of mining, factory and industrial waste must not be permitted. The report recommends that no power development should interfere unduly with the tourist traffic. After eliminating all possibility of developing latent power where it might interfere in any of the ways specified above, the Commission's estimate that 3,000,000 horse-power is available for hydro-electric developement is probably most conservative.

The report dwells upon the importance of the development of hydro-electric power to the mining industry of British Columbia, and prophesies a bright future for it through the application of hydro-electric energy. With abundance of raw materials and hydro-electric power, there should be splendid prospects for a great development in manufacturing in British Columbia.

The Dislocation of Exchange.

MORE emphatically than ever the course of foreign exchange is demonstrating the paramount importance of developing the home market. While the situation is complicated by the play of international forces, and while the movement of securities from one market to another introduces a qualifying influence, basically it is the interchange of commodities in unequal proportions that is causing the dislocation. As between Canada and the United States, the Dominion has been buying far in excess of its sales, and there has been no means of adjusting the balance through a third party as in the days before the war.

Abnormal exchange rates are bound to force the adoption of remedial measures, though it may take some time to make them effective. The connections of years are not readily severed. At the same time there is an increasing disposition to look to the home market for goods that were hitherto bought from the United States, and, failing that, a tendency to try out the British market. By degrees these influences are sure to have an effect on the course of trade.

In his address before the Hamilton branch last month, Mr. T. B. Macaulay, president of the Sun Life Assurance Co., based his appeal for closer trade relations with the British West Indies on considerations into which the question of exchange entered prominently. Canada, he argued, is a northern country, and as such must be an importer of tropical products. The United States, on the other hand, develops within its limits both the products of temperate and tropical climes, and in that respect is self-contained. If Canada persists in buying from her southern neighbor the bulk of the goods which she cannot herself produce, it stands to reason that the exchange rate must remain against her, but, if she could do her buying in the West Indies and reduce importation of tropical products from the United States, then at least one influence towards adverse exchange would be removed.

At present the soaring premium on New York funds and the break in sterling are becoming rather the effect of a psychological condition than a reasonable scientific movement, and nothing will tend to bring quotations back to a more normal basis than knowledge that the current of trade is setting strongly in the direction of improvement. Trade figures will be watched with intense interest during the next few months. And anything that can be done to show that we are importing less and exporting more will have a beneficial effect.

Fire Prevention

THE loss by fire in Canada during the year 1918, excluding forest fires, is estimated at $33,000,000.

The fisheries of Canada yield annually about $35,000,000, the gold mines about $15,000,000, the silver mines about $18,000,000, the nickel mines, $25,000,000, and the coal mines, $47,000,000.

These figures enable us to grasp the economic significance of fire waste. The loss from fire is of as much importance, economically and intrinsically, as would be the entire destruction of our fishing industry, or the closing of our gold and silver mines, and nearly as great as the disappearance of our coal industry.

Were these latter industries to cease, the public would be appalled at the magnitude of the disaster. The fire loss, on the other hand, is, or until recently has been, regarded with comparative equanimity. Why?

The reason is to be found in the fact that indemnity for the individual loss is, as a rule, provided for by insurance. The public has not always stopped to consider that no indemnity is or can be provided for the national loss. The individual is indemnified by other individuals within the nation. The nation as a whole is the loser as truly as if it were deprived of its productive industries.

It was these facts that led the Department of Insurance, with the sanction of the Minister of Finance, to call together in December 1918 representatives of various business organizations with a view to considering the best means of dealing with the problem. Many of these organizations had already seriously studied the situation and it was felt that their experience, together with that of the fire insurance companies, would be valuable as a guide to action.

The organizations represented on that Committee were The Canadian Bankers Association, The Canadian Credit Men's Trust Association, The Canadian Fire Underwriters' Association, The Canadian Manufacturers Association, The Dominion Association of Fire Chiefs, The Dominion Mortgage and Investments Association, The Trades and Labour Congress of Canada, The Non-tariff Insurance Companies, The Retail Merchants' Association of Canada, The United Farmers of Alberta, The United Farmers of Ontario, The Commission of Conservation and the Department of Insurance.

Many resolutions were adopted, of which the most important were those favouring a Dominion-wide campaign in the interests of fire prevention, the enactment of legislation imposing criminal penalties for negligence in causing fires, and the compulsory installation of automatic sprinklers in large buildings.

The first-mentioned resolution has been given effect to throughout the year by propaganda of various kinds, and more recently by co-operation with the Provincial authorities in securing the widespread observance of Fire Prevention Day.

The second resolution has been carried out by the amendment of the Criminal Code respecting the prevention of fire.

The third resolution is the one which is fraught with the greatest possibilities for immediate results in reducing fire waste. The resolution, moved by Mr. J. B. Laidlaw, of The Canadian Fire Underwriters' Association, and seconded by Mr. John Appleton, of The Dominion Mortgage and Investments Association, recognizes the efficiency of the modern automatic sprinklers, the greater security obtained by their use for owners of property and mortgagees, and the large reduction in insurance premiums resulting from their use.

In dealing with this resolution, the Department has taken the view that for the present at least compulsory measures are not necessary, but that where pecuniary advantage is joined with an opportunity for conserving the national resources, which at the present time must be regarded as one of the highest forms of patriotism, it should be necessary only to bring more prominently than heretofore to the attention of manufacturers and others the merits of this installation to attain the object of the resolution.

A survey of manufacturing plants now being made reveals a large number of plants, apparently well suited for sprinkling, which have not been so protected. In some cases the owner has probably not had his attention drawn to the advantages to be derived, in others he has doubtless been deterred by the present comparatively high cost of the equipment.

The cost of installation has undoubtedly advanced in recent years but the causes which have produced this advance have also increased the value of the buildings and stocks to be protected and consequently the amount of insurance to be carried, and as the financial advantage from sprinkling is proportional to the amount of insurance carried, the cost of the installation is relatively in many cases the same as before.

An important element of the cost of installation is the overhead expense of the sprinkler companies, each of which is called upon to make expensive surveys, plans and specifications from which no contracts are received. Frequently several companies incur this expense in respect of a single plant without result.

This suggests one means of reducing the cost of installation and one which is being tested at the present time. That is the possibility of having the installing companies co-operate through a central survey bureau in making surveys and plans, thus eliminating the duplication of work and expense which has so materially affected the cost in the past.

An arrangement of this kind was effected in the United States during the latter part of the war and was found to be advantageous. While conditions are now changed, there should be no reason why a similar arrangement should not be practicable in Canada.

A great opportunity confronts the manufacturing and mercantile interests in Canada of wiping out the stigma at present attaching to this country in the matter of waste from fire. This opportunity is presented through the automatic sprinkler.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Resignation of Treasurer

Owing to ill-health, Mr. John Ellis, Treasurer of the Association, has resigned. At the January meeting of the Executive Council, the following resolution was passed:

"WHERAS Mr. John F. Ellis, Treasurer of the Association, has been obliged to relinquish his office, owing to ill-health;

"AND WHEREAS he is one of the oldest members of the Association and has served its members faithfully as President, member of Council, and on numerous important committees;

"AND WHEREAS in the discharge of his official duties his kindness, integrity and ability have endeared him to all members of the Association;

"THEREFORE BE IT RESOLVED that the Executive Council of the Canadian Manufacturers' Association, assembled in Hamilton, January 20th, 1920, desire to express their profound regret that he has been forced to limit his activities in the Association; to hope that his health will be speedily restored; and to thank him on behalf of the entire membership for the long and faithful services that he has freely given to the promotion of the welfare of the manufacturers of this country."

The Council appointed a special sub-committee, composed of the president, vice-president, and general manager, with full power to act in selecting a treasurer who will act until the next annual meeting.

Board of Commerce

Reporting to the January meeting of the Executive Council, the Executive Committee referred as follows to the appeal of the Board of Commerce as to its jurisdiction:—

"The Board of Commerce, acting under the Combines and Fair Prices Act and the Board of Commerce Act, 1919, having made various orders with a view to prohibiting the taking of alleged unfair profits on sales of commodities within the statutory definition of the necessaries of life, and having in contemplation the making of other orders with the same object, have filed a stated case for consideration of the Supreme Court of Canada, to determine various questions of law and jurisdiction which have arisen before the Board, and which, in the opinion of the Board, should be solved before the Board proceeds in matters now before them, and to exercise the powers which are stated to be vested in it.

"The Board served copies of the stated case on the following persons and associations interested in the subjects of its reference:

The Canadian Manufacturers' Association.
The Retail Merchants' Association of Canada.
The Canadian Credit Men's Association.
The Crescent Creamery Co., Limited, Winnipeg.
The Toronto City Dairy Co., Limited.
The Toronto Milk and Cream Producers' Association.
The Industrial and Development Council of Canadian Meat Packers.

"The motion of the Board of Commerce to file a stated case came before Mr. Justice Idington, at Ottawa, on January 19th, who declined to deal with the matter, and expressed the opinion that the Court had no jurisdiction, but said that at any rate the application should not be to him as a single judge, but to the full Court. The Board of Commerce have accordingly inscribed a motion for hearing before the full Court on the 3rd February.

"Your Committee beg to report that Mr. W. N. Tilley, K.C., has been instructed to represent the Association."

Group Life Insurance

In accordance with the instructions issued at the last meeting of the Executive Council, a circular was issued to members of the Association informing them that facilities had been provided by the Dominion Government for the transaction of group life insurance in Canada, and giving all available information in regard to this type of insurance. It will be recalled that representations were first made by the Insurance Department through the Association to the Dominion Government in 1917 at the request of some of our own members, asking that the Insurance Act should be amended in order to provide for the transaction of group life insurance in Canada. The Insurance Department reports that our members are taking considerable interest in the subject, and that numerous inquiries have been received for further information.

Service of the Insurance Department

The following are the various points on which the Insurance Department was consulted during December, 1919, the figures representing the number of inquiries under each subject: Standing of companies, 3; policy wordings, 6; automobile insurance, 1; workmen's compensation, 1; marine insurance, 1; group insurance, 9; fire marshal's tax, 1; rates, 7; building construction, 3; automatic construction, 1; co-insurance clause, 3; inspection service, 6.

Judge Masten's Report

Following the approval of the Insurance Committee's recommendations in regard to Judge Masten's report at the last meeting of Council, a deputation of members of the Association interviewed the Ontario Cabinet in Toronto on January 7th, 1920. The committee pointed out to the Cabinet that this report of Mr. Justice Masten was compiled after a long and expensive investigation and that it advocated extensive changes in the method of transacting life insurance in the Province of Ontario. Attention was drawn to the fact that the special committee which had been appointed under the previous Government to frame legislation on this report had been dissolved with the defeat of the Government. It was suggested that a special committee of the present Legislature should be appointed at the approaching session to bring in necessary legislation arising out of this report. Attention was also drawn to the more important recommendations made by Mr. Justice Masten. In reply to the deputation, the Attorney-General, with the approval of the Premier, promised that the committee would be appointed during the

session, but he doubted that legislation would be brought down this year. When the committee of the Legislature is named, your committee will take the necessary steps to bring to their attention those sections of the report in which the Association is specially interested.

Graphic Exhibits of Canadian Industries

The Commercial Intelligence Committee have had the subject of graphic exhibits of Canadian industries under consideration for the past three months. It is becoming more and more evident that much more must be done in Canada to acquaint the Canadian public with the scope and character of Canadian manufacturing enterprise. It has long been recognized that visual observation is much to be preferred as a means of education to the printed word, and in this case it has the advantage of being much more permanent and, if exhibits are procured, they are placed before the public in its most receptive mood. Many of the goods are, to an ordinary spectator, somewhat uninteresting, but, when placed in bird's-eye view order, can be made both attractive and stimulating. In considering the goods that might form such exhibits no thought has been entertained of including such goods as are now exhibited in the rented booths and spaces or to interfere in any way with an individual's right to exploit his own product under his own name, except in so far as it may be necessary to include an odd line or article to complete some cycle of exhibits. As indicated above, the idea is to get exhibits of various allied products shown either actually or by photograph and descriptions or photographs of processes arranged in the order in which the process takes place. In many exhibitions, buildings have already been provided that are now suitably housing exhibits of a similar national character. The Commercial Intelligence Committee is impressed with the importance of this phase of publicity work, inasmuch as it can be efficiently handled in comparatively small space without interfering in any way with the revenues of Exhibition Associations, and recommends that the suggestion be passed on to the various sections of the Association, and, where sections do not exist, to groups or individual manufacturers for their information.

U.S. Foreign Trade Convention

Through the Department of Trade and Commerce an invitation has been forwarded by the authorities in charge of the Annual Foreign Trade Convention to be held in San Francisco on May 12-15 to suggest the names of representative delegates to attend this Conference. The Commercial Intelligence Committee proposes to put full information before the members to ascertain the amount of interest in the proposal. It will then be in a position to co-operate with the Department of Trade and Commerce in the matter.

Telegraph Rates

Reporting to the Executive Council at its January meeting, the Transportation Committee dealt with the question of increased telegraph tolls, as follows:—

"A careful analysis of the exhibits filed with the Board of Railway Commissioners by the G.N.W. Telegraph Company, has been made, from which it is quite apparent that the telegraph companies must have a considerable increase to take care of the enhanced costs of labor and material.

"There has been some doubt as to whether an increase could be granted without annuling the legislation of 1887, which fixed the maximum rate in Ontario and Quebec at 25 cents for ten words; but it would appear that the Board of Railway Commissioners have the power, under section 325 of the Railway Act, to grant an increase—despite any existing Act of Parliament to the contrary. However, this question will no doubt be dealt with by the Board at the final hearing in Ottawa on the application.

"Under the proposal submitted by the telegraph companies the Dominion will be divided into zones, showing an approximate average increase over the whole country of 32 per cent. It was the opinion of your Committee that fair and equitable rates would have to be considered between commercial centres and that this phase of the situation should be watched. However, after further discussion, it was decided to leave the matter entirely in the hands of the Association's representatives who will be present at the final hearing in Ottawa."

Hydro Electric Shortage in Ontario

At a meeting of the Ontario Division Executive, held in Hamilton on January 28th, 1920, a special report by the Transportation and Power Committee was submitted. It was stated that in pursuance to a resolution of the Executive, circulars and questionnaires had been issued to all the manufacturers in the Province of Ontario, requesting them to furnish information regarding the power service supplied to their plants. Many industries complained of numerous

January Circulars

Eight circulars were issued to members during the month of January, summaries of which are given below. The Association's bulletin service is now reaching considerable proportions and form an important part of the work of the organization. Members are urged not only to read the circulars carefully as they are received, but to arrange for their fyling in such a way that they can be referred to readily at need. By checking over the following list it will be seen whether any of the month's issues have failed to reach their destination.

No. 234, Jan. 4.—Circular re Export Trade issued by the Commercial Intelligence Department. This circular pointed out the desirability of stipulating that quotations be made in terms of Canadian dollar values and payment received in Canadian funds. It showed that the pound sterling is worth more in Canada than in the United States and that, accordingly, customers in Great Britain do not need to use as much sterling to settle for Canadian commodities if payment is made direct from Great Britain to Canada.

No. 235, Jan. 14.—Circular re proposed Supplement No. 13 to Canadian Classification No. 16, issued by the Transportation Department. This circular gave the new regulation with respect to long and bulky articles as substituted by the Canadian Freight Association for the present Rule 6. What was involved in the charge was explained and members were invited to advise whether the new regulation would cause any hardship.

No. 236, Jan. 28.—Circular re "Made-in-Canada," issued by the Executive Council. In this circular there was outlined what had been accomplished during the past year in intensifying the "Made-in-Canada" campaign, which the Association had carried on for some years. This included a summary of work done by the Canadian Reconstruction Association. The circular concluded with a number of suggestions as to what individual manufacturers could do to help on the campaign.

No. 237, Jan. 30.—Circular re Ontario Workmen's Compensation Act issued by Ontario Division. This circular invited members to express their views on the working of the act preparatory to the holding of a meeting of the Division for its consideration.

—— Jan. 21.—Circular re Statistics Act, 1918, issued by the Legal Department. This circular called attention to the necessity of making the annual returns to the Dominion Bureau of Statistics in the census of industry, explained what was required, and urged manufacturers to see that returns were made.

—— Jan. 30.—Circular re Special Canadian Products Number of "Industrial Canada," urging members to give the preference in buying to firms advertising in this number.

—— Jan. 14.—Circular issued by Ontario Division announcing meeting of Executive Council in Hamilton on Jan. 28, and luncheon address by Mr. T. B. Macaulay, president of the Sun Life Assurance Co., on "Closer Trade Relation with the West Indies."

—— Jan. 20.—Circular issued by Toronto Branch, announcing special meeting on Jan. 29th to hear Mr. Thomas Mulvey, K.C., Under-Secretary of State for Canada on "Blue Sky Laws."

shut-downs for various reasons, causing serious changes of manufacturing methods and general inconvenience as well as adding proportionately to the users' cost of power. In some instances, members suggested that if there are to be further restrictions of power, the more essential industries should be favored. The obvious deduction to be drawn from the inquiry of the committee is that the Hydro-Electric Power Commission has accepted contracts to supply electrical energy in excess of production.

The Executive Committee resolved that a delegation, representative of the Ontario industries, should be organized to wait upon the Hydro-Electric Power Commission at an early date for a general discussion of the whole question of electrical energy in Ontario.

Ontario Workmen's Compensation

At a meeting of the Executive Council, held in Hamilton on January 28th, 1920, the Legislation Committee of the Ontario Division was directed to issue a circular to the members in the province, inviting particulars as to their experience of the operation of the Ontario Workmen's Compensation Act, either generally or as it affects individual plants. When the information is compiled, a memorandum will be submitted to the Provincial Cabinet, suggesting desirable amendments of the Act.

The Embargo on Mechanics

Attention of members is drawn to Order-in-Council, No. P.C. 2499, passed on 24th December, which lays an embargo on the entrance into Canada of immigrant mechanics, artisans and laborers, skilled or unskilled, unless they possess a monetary qualification of $250, as well as transportation to destination, operating from 31st December last, and to remain in force until March 31st next, unless otherwise ordered.

At various points throughout Canada, according to the Minister of Immigration and Colonization, there are certain classes of workers without employment. This information must not, however, be taken too seriously, as when cabling the provisions of the Order-in-Council to their representatives in the British Isles, the Department stated clearly that the $250 regulation would not be enforced against immigrants being brought forward by employers, who had made known to the Department their intention to import help, and where such application had been investigated and approved of by the Department. The Order-in-Council applies to British as well as other classes of immigrants.

In case of urgent need for labor, our members should communicate with our Legal Department.

How a Canadian Manufacturer Can Help the Made-in-Canada Movement

1. Giving the necessary instructions to his own Purchasing Departments.
2. Insist on the purchase of Canadian-made goods for any contract or building in which he is interested or can exercise influence.
3. Favoring the employment of Canadian architects and engineers.
4. Advocate in Boards of Trade and other similar organizations the support of the "Made-in-Canada" policy.
5. Secure the co-operation of local organizations, including women's organizations.
6. Secure the co-operation of local newspapers.
7. Urge upon his own employees the necessity of asking for goods made in Canada when they make their purchases in local shops.
8. Bring the matter to the attention of his local member in the Dominion House of Commons, the Provincial Legislature and Representatives of his Municipal Government, dwelling upon the urgent necessity of buying Canadian-made goods in order to provide work for Canadians.

Fuel Supply

A committee appointed at the last meeting of Council to consider the possibility of developing in Canada a supply of fuel adequate to the needs of the country has held a meeting, which was attended by Mr. Arthur V. White, President of the Conservation Committee, Ottawa. Preliminary plans have been made and are being put into effect.

Membership Campaign

The special membership campaign organized throughout Canada during the first week of December and continued in various localities after that date, has added 455 new members to the Association up to the present. These are distributed among the divisions as follows:—

Divisions.	*New Members.*
Ontario	176
Quebec	140
Maritime	75
Pacific	32
Prairie	32
Total	455

Special membership work is still proceeding in a number of industrial localities which were not thoroughly canvassed during the Campaign.

Canadian Engineering Standard Association

Mr. R. E. Jamieson, Canadian Consolidated Rubber Co., Limited, Montreal, has been reappointed to represent the Association on the main committee of the Canadian Engineering Standard Association for the year beginning March 1st, 1920.

Fuel Controller

At its last meeting, the Executive Committee brought in a recommendation that the Executive Council record the appreciation of the Association for the valuable work done by Mr. C. A. MacGrath, Fuel Controller, Ottawa.

Conference With National Council of Women

As the outcome of a resolution of the National Council of Women, coupled with a communication from that body asking that a representative committee from the Association meet a special committee appointed by the Council to discuss how the National Council could intelligently assist in the carrying out of the made-in-Canada principle, meetings were held in the Association offices in Toronto, on January 30. The conference proved mutually satisfactory and served to settle certain difficulties which had arisen in the minds of consumers. The boot and shoe, blouse, whitewear, dress, costume and neckwear trades were represented.

Engineering Index

The Commercial Intelligence Department directs the attention of members to the Engineering Index. This is an index of all the technical articles publishd in trade and technical papers. Many of these are of vital interest to manufacturers engaged in any engineering or metal working trade, yet it would be impossible for manufacturers to acquire the informa-

tion contained in these articles unless they subscribed to the multitudinous array of trade papers covering these trades throughout the world. The Index gives brief outlines of the contents of the various articles and states in what publication they may be found. If sufficient interest is aroused, the Committee may possibly arrange to publish interesting extracts regularly so that accurate information may be available promptly for interested manufacturers.

Activities of the Quebec Division and Montreal Branch

By R. W. GOULD

Secretary Quebec Division

AT a meeting of the provincial executive held on the 20th of January, it was decided to ask John Lowe, of Montreal Cottons, Ltd., to represent the association of the province at the inter-provincial conference to be held in Ottawa in the near future to take up the question of the unification of provincial labor laws. Mr. Lowe has already done good service in connection with similar work, and the Division is in hopes that he will agree to act.

The Quebec Division Executive and the Montreal Branch have decided to publish a monthly bulletin, printed in both French and English, dealing exclusively with the activities of the Quebec Division and the Montreal Branch. This bulletin will be for the information of our own members, and it is believed that it will provide a vehicle whereby the individual member will be kept in closer contact with the Association, at all times, than ever before.

Early last month the Montreal Branch took the lead in a joint luncheon given to Roger W. Babson, of the Babson Statistical Organizations of the United States, when Mr. Babson spoke on the value of vision in business. The Kiwanis Club of Montreal and the Montreal Publicity Association joined hands in the effort, and over 600 business men attended the luncheon. The effort was a splendid success from every angle.

The Montreal Division will launch a new membership campaign in the old city of Quebec early in February. It is hoped to have the general manager with us to direct the early operations, and also Mr. Bristol, manager of the Tariff Department. The drive will be opened by a noon day luncheon at the Chateau Frontenac.

There have been a large number of meetings of the various sections during the month, and I am convinced that among the New Year resolutions of many of the manufacturers in Montreal and throughout the province has been one embodying a decision to be better and more active association members during the coming year.

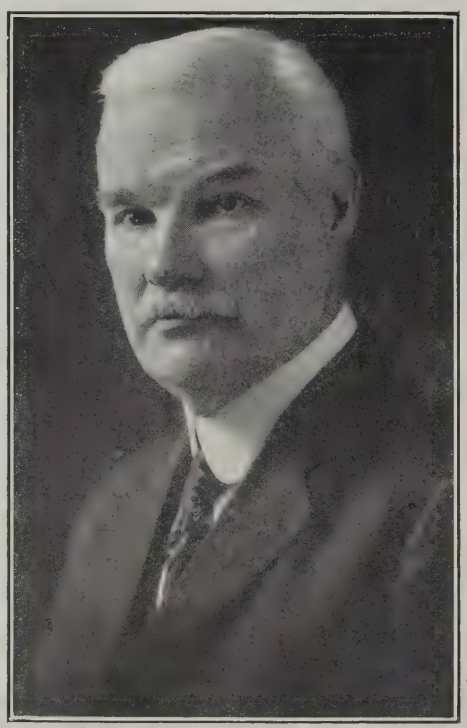
The Importance of Consequential Loss Insurance

By W. H. SLATER

Manager, Willis, Faber & Co. of Ontario, Limited

IT seems somewhat strange that manufacturers are only just beginning to appreciate the necessity for some form of insurance against fire which will do more than cover the actual damage to buildings, plant and stock. Practically every manufacturer realizes that a fire on his premises will involve him in a heavy loss, however well insured the property may be, but very few indeed take the trouble to inquire whether it is not possible to protect themselves against such loss, or even show much interest when the availability of such protection is pointed out to them. Consequential loss insurance or, in the meaningless phrase by which it is generally known, "use and occupancy insurance," is, however, beginning to be appreciated and it is only a matter of time before manufacturers will consider themselves inadequately insured unless they hold policies which will provide protection against loss by fire other than the actual damage to property.

The occurrence of a fire of any serious extent naturally results in the diminution of a factory's output and frequently, of course, even though not a total loss to property, causes an entire cessation of manufacture for a period of several months. The lack of production does not, however, do away with many of the expenses consequent upon the ownership of a manufacturing establishment, although it does do away with the profits which are depended upon to meet such expenses. Everything goes out and nothing comes in. Taxes, interest on bonds and mortgages, rent of real estate or the interest on capital invested therein, all have to be met while it is necessary to continue paying salaries of many of the permanent staff and even to pay wages to a few skilled workmen who may be too valuable to lose. There are, of course, many other maintenance charges which do not cease merely because no goods are being manufactured. There are, therefore, two classes of loss not covered under the ordinary fire policy—loss of profit on goods which should have been produced and expenses which should have been provided for by the production of such goods. Consequential loss insurance takes care of both of these.



A consequential loss policy is a contract to pay, in the event of a fire, a daily indemnity equal to the actual loss sustained through non-production, until the factory can be reinstated and brought back to its pre-fire state of efficiency. The amount of the daily indemnity for which policies should be issued is based on the average daily net profit during the preceding twelve months plus maintenance charges as described above which would not cease with the cessation of production. In the case of a plant ordinarily working seven days a week, the total amount of insurance carried is 365 times the daily indemnity; in the case of a plant which does not operate on Sundays and holidays, the amount of insurance equals 300 times the daily indemnity. It is not necessary that the daily indemnity should be equal throughout the year, as that would in many instances necessitate paying for more insurance in the slack periods of the year than could actually be collected during those periods, since the policies do not in any case pay more than the actual loss sustained. A considerable amount of skill is required in drawing up a policy of this kind, and it should be entrusted only to an expert. The rate of premium which the insurance companies demand for a consequential loss policy is usually slightly less than the ordinary fire insurance rate, but so many different factors enter into a calculation of the hazard involved that every plant must be rated separately in accordance with its own peculiar circumstances.

Closer Relations with British West Indies*

Exchange Situation a Reason Why Canada Should Secure More of Its Tropical Supplies From the Indies—Commercial Union Would Render Both Parties Independent and Would Form a Combination of Great Strength

By T. B. MACAULAY
President, Sun Life Assurance Co. of Canada

LET us first of all consider our financial condition throughout the Empire. There is a danger that, after co-operating in time of war, the Empire, unless it co-operates much more closely than it does now, may actually go down in peace. Trade relationship and trade co-operation between the different parts of the Empire have long been looked upon as desirable, but the time has arrived when they are absolutely essential to Canada and to the whole Empire. That is a strong statement, but if you want to get proof of it, just consider some of the outstanding facts. Let us look at the exchange situation. When I went down to the West Indies last spring, ten months ago, I began to talk to the people there about the exchange situation, and I pointed out that at that time New York exchange was at a premium of 5 to 6 per cent. in London, and gradually increasing, and in Canada at 3 per cent., and I pointed out the seriousness of that. But since then the premium on New York funds in London has been growing; it has increased to 10, 15, 18 per cent. I was looking over some notes before I came here; the last time I made it out it was 17 per cent., and to-day it is about a 30 per cent. premium. The pound sterling in New York is worth about $3.74, and, as its par value is $4.86 2-3, that means the premium is just about 30 per cent. In other words, it takes 130 pounds of real, intrinsic value in England to pay for 100 pounds in New York; or $100 in New York has a purchasing power of $130 in London. In the same way our Canadian exchange has risen until it is over 8 per cent.

T. B. Macaulay
President, Sun Life Assurance Co. of Canada

What does that mean? It means simply that both Canada and the Mother Country have been purchasing from the United States vastly larger values of goods than they have been selling to that country, and that there is a great adverse balance of trade, being the excess of imports over exports, which both parts of the Empire are finding great difficulty in meeting; and the rate of exchange, the premium on New York funds, is the measure of that difficulty.

Before the war, exchange was at par. But how was it kept at par? At that time England, the Mother Country, had vast amounts of American securities which were owned in Britain, and on these securities interest was accruing every year in New York. That interest was available to put against the excess purchases in New York, and, if the interest was not enough, the exchange brokers just went out on the street and sold some of these American securities owned in Britain and transferred them. If the interest was not enough, the principal was available. But since the war this large amount of American securities no longer belongs to Britain; it has been transferred to American ownership, and that great amount of interest is no longer available for the excess of purchases. Moreover, the Mother country, in order to prosecute the war, has had to borrow huge amounts in the United States, partly from the public of the United States and partly from the government of that country. The total, I have heard estimated by a financier at 2,000 million pounds. On that huge amount interest now has to be paid in the United States. The payment of interest is now made the other way. Therefore, there is great difficulty in paying for those purchases; and in order to draw out the last of the American securities owned in Britain they offer this premium, that a person can now get—about 30 per cent.—beyond the American price—if he will just let them go. And how long will it be before all the rest of those securities will have been drawn out? There is not an inexhaustible supply, and the end is near at hand, and then it will not be merely a question of converting the securities that Britain owns in the United States; then it will be a question of transferring British securities to American possession.

And the same problem is going right on in Canada. We are buying from the United States large amounts, far more than we are able to sell to them. And how are we paying for them? By a steady flow across the boundary of our securities—very largely our Government bonds. One reason why the premium in Canada does not get as high as it does in England is that we are closer to the United States, they are more familiar with our securities, and we have the same currency—we have dollars—and the Americans will buy our securities more freely than they will those sterling securities of the Mother Country; therefore ours go across more easily. But that just means that there is all the greater danger, because no country can go on indefinitely paying for its purchases by the transfer of its securities; in other words, by borrowing, for that is what it comes down to.

How long can the Empire go on like this, if it is going to be borrowing from the United States all the time? I said that it was a question of the very utmost importance; I feel it is almost a question of life and death with the

* Address delivered before Hamilton Branch, C.M.A., on Wednesday, January 28, 1920.

Empire to get these things straightened out. How is it going to be done?

First of all, why is it that the United States are in this very favorable condition? In the first place, they made a lot of money during the war. While we were expending our money, they were reaping a harvest, and the war has made them wealthy, while it has impoverished the allies of the United States, who went in earlier. But, after all, that is just an accentuating cause. If you want to know the real cause you have to look at the position of the United States itself. The people of that country have to go outside of their own boundaries for hardly anything that they require. The people of the Northern States can find all the tropical goods that they want within their own boundaries, either in their own southern states or in Porto Rico, which they now own. The people of the southern states do not need to go outside; they need only go to their own northern states to get all their flour and foodstuffs and manufactured articles. Neither party needs to go outside of its own country. Neither section of the population need go outside the boundaries of the United States to get anything that they want; and the American tariff wall makes sure that they do not go.

Canada Exclusively Northern

Now, contrast that position with that of Canada. Canada is prosperous. I am a Canadian, and I am proud of Canada, and I am delighted to see how very prosperous and how very rapidly developing Canada is. But, gentlemen, I want you just to remember this fact, that Canada is exclusively northern. We are not like the United States; we have to go outside of our own boundaries for everything tropical or semi-tropical that we require. Now, take the West Indies. The British West Indies have great possibilities, but they, on the other hand, are exactly tropical and they have to go outside of their boundaries for everything northern that they want. And if we in Canada buy largely from the United States all the tropical and all the southern things that we require, and if they in the West Indies buy from the United States all, or a large proportion, of the northern things that they require, both parts of the Empire are rolling up an indebtedness to the United States, which is one of the causes of the rate of exchange, and which will in time become ruinous.

Now the question arises, can we not find a remedy? Does it not seem that it is the natural thing that the remedy should be found by those two parts of the Empire, which are naturally complementary, which unitedly make a territory somewhat similar to that of the United States in that it combines both north and south, northern and tropical? Why cannot those two make a partnership so that they will buy from each other, instead of buying from the United States? If they would do that—if we bought all the tropical things that we require from them, it would make their population greater, develop their resources, make them more wealthy, more prosperous; and if they in turn bought from us, it would develop our northern agricultural industries, our production of flour, our manufacturing and a hundred other things. Each would make the other more populous, more prosperous, each would extend the trade of the other, and each would to that extent cancel the indebtedness of the other to the United States, and to that extent rectify the rate of exchange.

It seems to me there is no need to say anything further along those lines. I will give you some figures just to show you how very acute the situation is. I have before me some figures regarding the trade of both the Dominion and the West Indies, which are illuminating. Taking such articles as flour, meat, fish, coal, butter and cheese, condensed milk, northern vegetables, cottons and other articles, which Canada is in a very favorable position to supply, the West Indies imported in 1917 nearly $36,000,000, and of this amount, what proportion did they buy from Canada? Less than 20 per cent. The great bulk of these articles went to them from the United States. I think you will agree with me that our proportion of this business should be 90 per cent, and not 20. I will take a few articles:

What West Indies Import

Of bread stuffs, the West Indies imported $7,000,000, and of this $3,875,000, or 55 per cent. only, came from Canada. Of this article our proportion should be 100 per cent.

Of fish, they bought $2,070,000, and of this but $1,287,000, or 62 per cent. from Canada.

Of butter and cheese, they took $970,000, but only $127,000, or 13 per cent., from Canada.

Of condensed milk, $625,000, $135,000, or 22 per cent., from Canada.

Of soap, $900,000, $22,000, or 2½ per cent., from Canada.

Of paper, $500,000, $103,000, or 20 per cent., from Canada.

Coal, $2,850,000, from Canada $147,000, or 5 per cent.

Meat, $1,700,000; from Canada, $12,600, or three-quarters of 1 per cent.

Lard, $520,000; from Canada, $235, or one-twentieth of 1 per cent.

Of all these articles combined, Canada supplied, as I have said, but $7,000,000 out of nearly $36,000,000, or less than 20 per cent.

Turning now to our own imports of tropical goods, we find a very similar condition. Of sugar, molasses, cocoa, coffee, rice and other tropical products, the West Indies exported about $63,000,000, and of this Canada took but $22,500,000, although she bought in all of those same articles over $108,000,000. We imported $86,000,000 worth of these tropical goods from other countries than the West Indies. It is true that in some cases these imports originated in British colonies, and were bought by us through a New York middleman, but the greater part of that $86,000,000 was of non-British origin. Here we have two parts of the British Empire, each living under the Union Jack, but each dealing chiefly with a foreign country rather than with each other, each enriching and building up that foreign country, instead of enriching and building up each other. What can be said in defence of such a condition? Can you imagine the people of the Southern States buying most of their northern produce from Canada instead of from their own northern territories? Or can you imagine the people of the northern states buying their tropical requirements from the West Indies in preference to Florida or Louisiana? Would the Americans allow Canadians to supply Porto Rico? The people of the British Empire must come to their senses, and take a leaf out of the books of the United States. The time for Empire co-operation has arrived, and for the good of both parties, and of the Empire to which we belong, Canada and the West Indies should, and in fact must, enter into a trade partnership to buy from each other, and help each other.

Situation in British Guiana

I have a special interest in British Guiana, and how serious the situation there is, may be seen by the following figures: In 1917, Guiana bought from the United States £843,000 of goods, and sold to the United States £116,000. In the same year she bought from Canada £330,000, and sold to Canada £862,000. In other words, for every dollar's worth of goods that the United States bought from her, she bought from the United States $7.27; for each dollar's worth that Canada bought from her she bought from Canada

42c. worth. I mention those figures just to show what great possibilities there are for trade development; how much they can help us and incidentally also how much we can help them. But now the question is, how is it to be done?

The Preferential Trade Agreement

We already have a preferential trade agreement with the West Indies, or rather one section of the West Indies. We have that preferential trade agreement, with which the name of Sir George Foster is associated, and that is one of the things that will be remembered to his credit. Whenever Sir George Foster's name is mentioned fifty years from now, it will be associated with that treaty. Under that agreement Canada gives a preference of 20 per cent. of the duty on a number of things, which are mentioned in certain schedules—articles originating in those West Indian colonies of the eastern group; and on the other hand the West Indies in that group give the same preference, 20 per cent. of their duty, to Canada and to the Mother Country on all those same articles. If it were not for that preferential treaty, I think it is a fact that British trade and Canadian trade would be almost non-existent in those islands to-day. That preferential treaty has saved the trade for Canada and for the Empire. But it has not gone far enough. It is a very remarkable thing that on two of the articles in regard to which this treaty has made each party sure of the markets of the other—flour on the one side, from Canada, and sugar, on the other side, from the West Indies—on both these articles there is an exception in the treaty, whereby the rate of preference is greater than the regular 20 per cent. The 20 per cent. treaty has been very beneficial, but we want to be tied together commercially just as strongly almost as if we were provinces. We want to have control of those markets, each for the other, and the question is, how?

I took a trip down through the West Indies. I may say that I happen to be President of the Canadian-West Indian League. I was drawn into this a good many years ago, and the more I have got into it, the more deeply interested I have become; not merely because it is a West Indian question, but because I have seen its importance to the whole of Canada. And I went down to the West Indies, and in my capacity as President of the Canadian-West Indian League, I was able to reach all classes and was given a very cordial welcome everywhere. All through those islands I suggested to the people that this preference should be increased, and everywhere that idea was received with enthusiasm. The suggestion was that it should be increased from 20 per cent. to 50 per cent., and not in one place did I hear one solitary word or voice opposing that idea.

The Question of Revenue

The question was raised, however—"How about revenue?" "We need revenues." Their average tariff down there is only perhaps about 12 per cent. Their tariffs are low. They said: "If we throw off this preference we shall be short of funds." Well, that question was raised at the first place where I discussed matters, but after that I raised it every time myself, in advance, and I said this: "Gentlemen, there are two ways in which you can give us a preference of 50 per cent. You can have your tariff of 12 per cent., we will say, and you can cut it down to 6, and then get into financial trouble right off; or you can let your present 12 per cent. remain as your preferential rate and make your general rate double that amount, and then you will have no financial trouble at all, and in addition to that you will equalize the inequality which comes from our giving you a 50 per cent. preference on our Canadian tariff, which is heavy, and your giving us a preference on a lower tariff, and it makes any preference something more worth while."

Nowhere did I hear a single voice that was not in favor of that, and I believe that idea will be accepted. I came away with the idea that everywhere, at any rate in the colonies that I visited, the people are absolutely ready for that increase in the preference from 20 per cent. to 50 per cent. Furthermore, I myself urged, and I heard it urged in many cases, that instead of the Act having a schedule attached to it, it should, like our British preference, apply to everything originating in either country; that the schedules should be abolished and the preference should apply to everything originating in Canada or originating in the West Indies.

One point that you will notice is the British preference, which is given down there. The people there are very strongly British, and one of the things you have to consider is this: They say—"We cannot give Canada any preference that we do not give to the Mother Country." As far as that goes, I sympathize with that point of view, but, as you will notice, there is what may be called a little inequality, because we give them the preference in our markets with no competitors and they give us a preference in their markets just on an equality with the Mother Country. On the other hand, gentlemen, the things that they need down in the West Indies, or nine-tenths of them, are things that the Mother Country cannot supply—things that are the natural products of Canada, of northern countries—things which they simply must get from either the United States or Canada. I do not like the idea of discriminating against the Mother Country in anything; and we do not lose in any case. There are few things that the Mother Country supplies; cottons are perhaps about the only thing. But the things they need are nearly all northern products, and that is entirely satisfactory.

British Guiana's Possibilities

But we now come to another suggestion. I want to point to British Guiana. British Guiana has very special problems. Most of the Colonies are pretty well developed, highly developed. Barbados has a population of about 1,100 to the square mile. That gives you an idea of the density. But when you come down here to British Guiana, you come to a place that is undeveloped; 90,000 square miles, and but little over 300,000 people, or if you exclude Indians, say, three persons to the square mile. That country is capable of tremendous development. Along the shore here is a belt of low-lying land, rather inclined to be swampy, but alluvial land just a little above the level of the sea. In fact, there is a wall all along the sea coast to keep the sea out. That land produces enormous quantities of sugar and rice. It already produces great quantities of these, but, gentlemen, I have been down there, and from what I have seen, as well as from what I have heard and have read, I believe the capabilities of that section in the way of increased production are simply enormous. I am assured that British Guiana alone could produce enough sugar to supply the British Empire. At any rate, whether that is true or not, it is capable of enormous expansion in regard to both sugar and rice. Then when you come into the middle country, here you find a country of great forests, with timber resources, rubber, balata, diamonds, gold and this bauxite for the aluminum industry, which the Americans are getting hold of. But here is a very interesting thing. When you get down here in this south-west corner you come to a great prairie section. It is natural prairie, almost inaccessible, capable of sustaining great herds of cattle, and the people there are very anxious to develop it. One of the leading men down there told me the people of British Guiana would almost sell their souls to get a railway built to open

up all that country. They have short railways here, but what they want is one that will come down here to the western and southern part.

Now I want to draw your attention to one of the peculiarities of these boundaries; that is why I got this map. This section of prairie land here does not stop at the boundary line; in fact, by far the greater part of all that huge prairie district is on the Brazilian and Venezuelan side. I have taken the trouble to write off to different authorities and I have gradually got pretty well mapped out just where it is. It is a vast region of prairie, capable of sustaining an enormous population. On the Brazilian side the people do raise cattle. And where do those cattle get an outlet? A certain number of them come down here to Manaos, but all the rest of them have to be shipped nearly 2,000 miles by the Amazon to the sea before they get an outlet. Now, gentlemen, for political purposes that would be Brazil. For commercial purposes that section of Venezuela and this part of Brazil can be made a part of British Guiana, and the development of British Guiana would mean the development of that section there, which would be made commercially tributary.

Tired of Colonial Office

These people want development in the worst way. The question is, how? They have begun to get a little tired of thinking the Colonial Office in England will do something for them in this respect, and they wonder if Canada would.

Consider the relations between Porto Rico and the United States. Porto Rico and the United States have a union that is exceptionally good. Porto Rico has its own legislature. It has its own governor, appointed by the President of the United States, who also appoints a number of other leading officials, who have votes; but it controls its own affairs through its own legislature. There is no tariff of any kind whatever between the United States and Porto Rico, but absolute free trade. The collections from the tariff, while they are at the United States' rate, do not go to the United States Government; those collections are handed over to the local government for local purposes.

Now just think of what has resulted from that. This system has been in operation since 1901, and I have the figures for the seventeen years to 1918. In 1901 Porto Rico exported $8,000,000 worth; in 1918, seventeen years afterwards, under the operation of this plan, the exports had risen to $74,000,000. In 1901 the imports were $9,000,000, and during those seventeen years they rose to $63,000,000. Think of that development. It is like a miracle almost. It is stupendous. The exports increased nine times in seventeen years; and, gentlemen, of those imports of $63,000,000 into Porto Rico, $59,000,000 came from the United States and only $4,000,000 from all the rest of the world. That arrangement has made Porto Rico prosperous; it has made the United States more prosperous. Fifty-eight millions of exports are worth something; and besides increasing the prosperity, it has forced all that trade practically into American channels.

Now, if the people of British Guiana wanted an arrangement of that kind, I should say let them have it by all means; I should be delighted. But I do not know that they do want it, and it is not for us to urge it. The people down there want principally two things. Well, in all the islands they want our trade. In British Guiana they want to increase trade with us, and they want to get their country developed. Those are the elements that they want, and it is better to meet them on their own footing. They talk along commercial lines; let us talk along commercial lines. The question is, can we get something that on the commercial line would be practically the same? I think we can. There is the alternative of having a permanent free trade agreement, ratified by the British Parliament, which would put British Guiana permanently on the same footing as Nova Scotia, for instance, so far as trade matters are concerned, but without our having to be bothered with their government. I think that probably that would end in commercial union of the Porto Rico type; but we do not need to consider that. Let us take one step at a time and let things develop as is natural.

Result of Political Union

Let us consider for a moment what would be the result if they came in as provinces—just to get our minds clarified. If British Guiana came in as a province, they would have the right to say, "Treat us as you treated the Canadian provinces. For the Maritime Provinces you built the Intercolonial Railway, for Prince Edward Island the Prince Edward Island Railway, and for the Prairie Provinces and British Columbia you arranged for the building of the Canadian Pacific. Treat us like that." Suppose that the building of that railway, which is a little over three hundred miles, would cost $20,000,000. It is a perfectly level country, a good deal of it through savannahs, and there would be only one long bridge, and the only trouble would be the dense forests in a few places. But suppose we built that. I think that if our Government could make an arrangement to get commercial control of that country just by developing it on the same basis as one of our own provinces, it would be one of the best bargains Canada ever made. Furthermore, if we had a free trade arrangement with British Guiana, it would soon be extended to other colonies. Every one of the other sugar producing colonies, like Barbados, St. Kitts and Jamaica, would before long be in on the same basis. Then, gentlemen, Canada would be a country that would be a rival to the United States. Then we would have all that tropical country which for commercial purposes would be ours, just as much as the Southern States and Porto Rico belong to the United States, and our trade would develop in an enormous way.

The next step would be to make a commercial treaty of the same kind, with a preference of, say 20 per cent., with Brazil, and then we would have all that section politically independent, but commercially part of Canada and building up Canada. Moreover, you see the little gulf in here, and the Orinoco, which is the inlet to Venezuela; Trinidad gives a footing for Venezuela, as British Guiana gives an equal footing for Central America.

Why Countries are Backward

You may ask, why do not these countries go ahead and develop as it is? Why cannot they do that? Suppose British Guiana were to say to Brazil, "We want a preferential treaty." Brazil would say right at once, "What is the use? You produce the same kind of thing that we produce." No. But suppose that Canada and British Guiana went to Brazil and said, "We will give you a preference of 20 per cent. of the duty off everything coming and going through that section of the country." I do not know whether it would extend to the whole country or not. The United States has a 20 per cent. preferential treaty with Brazil. We would give a sufficiently large preference to obtain this trade, and in return for the same kind of thing for them. British Guiana would not mind, because she would have free trade with our markets. We could build up that and make it commercially ours. If we do not do anything the United States is going to get everything down there, but by this means we should build up Canada, build up the islands and

(*Continued on page* 83.)

Technical Education Act Becomes Operative

Director Has Been Appointed and is Now Arranging the Preliminaries—Credit Due the C. M. A. for Having Promoted the Movement—Explanation of the Legislation Under which the Work is Being Carried On

By W. A. C.

THE recent appointment of Professor L. W. Gill, M.Sc., late of Queen's University, to the newly created position of Director of Technical Education for Canada, marks the culmination of years of effort on the part of those interested in this important phase of educational activity. The agitation for an adequate system of technical education dates back to a period long before the war, and it has passed through many phases, but it was only through the lessons taught by the war that the urgency of the matter was so forcibly emphasized that action became imperative.

To the Canadian Manufacturers' Association must be accorded a good deal of the credit for having forced the subject into prominence. At a meeting of the Toronto Branch on November 7th, 1918, the following resolution was passed:

"Whereas the development of Canada's immense natural resources is an imperative and immediate duty, in view of the enormous cost of the war and the need of employing usefully the immense masses of labor and skill released when peace is proclaimed;

"Whereas the close of the war affords the supreme opportunity for launching a national scheme of technical training that will make Canada's workers in all lines thoroughly efficient; that will vitalize all the school work in the various provinces by presenting a worthy national objective; that will open out new and profitable spheres for the ambitions of Canada's young manhood and womanhood, thus challenging them, from patriotic motives, to stay here and assist in up-building of this Dominion; and that will enable Canada to hold her worthy place against world-competition during peace, as she has done through her fighting forces in war;

"Therefore, resolved, that this Association arrange without delay for a delegation from its membership, as well as from other bodies willing and ready to act immediately, to wait upon the Dominion Government and ask that a Technical Training Board be added at once to the Reconstruction Committee of the Cabinet, for the purpose of formulating a comprehensive policy of Federal aid to industrial training and technical education in all the provinces of Canada, and that legislation necessary for the operation of such Board on a permanent basis be prepared for the coming session of Parliament."

L. W. Gill, M.Sc.
Director of Technical Education, Department of Labour, Ottawa

Following up this resolution, a delegation proceeded to Ottawa and laid before the Government strong reasons for early action along the lines suggested. Doubtless influenced by this delegation, the Government introduced, at the following session of Parliament, Bill No. 131, being "An Act for the promotion of technical education in Canada," under the terms of which an appropriation of ten million dollars is set aside for this purpose. The appointment of Prof. Gill is one of the first fruits of this Act.

The following summary of the legislation under which Prof. Gill will administer his department may prov illuminating. As a matter of fact, except to name the Minister of Labor as executive administrator, the Act does not provide for any stated organization to carry out its purposes.

By the term "technical education" is meant any form of vocational, technical or industrial education or instruction approved by agreement between the Minister of Labor and the Government of any province as being necessary or desirable to aid in promoting industry and the mechanical trades, and to increase the earning capacity, efficiency, and productive power of those employed in them.

The Minister of Labor, under whose supervision the Act will be administered, is vested with sole authority to judge of all questions arising out of the Act and must submit an annual report to Parliament containing information as to the work done. Officers and employees may be appointed under the Civil Service, but no organization is outlined in the Act.

The $10,000,000 is to be expended in graduating amounts, beginning with an annual sum of $700,000 in 1920 and increasing $100,000 each year until 1924, from which time to the end of the fiscal year 1929 the sum will be $1,100,000. The allotments are paid quarterly and cannot exceed the amount spent on technical education by the province within that year. Unexpended balances may be carried forward, provided that the balance does not exceed 25 per cent. of the annual appropriation. In case it does, the approval of the Minister must be obtained. The sum of $10,000 will be paid to the Government of each province every year, and the remainder of the appropriation for the year will be allotted and paid to the Government of the province in proportion to the population of each province, respectively, as determined by the last Federal census.

The terms to which the provinces must agree in order to receive the grant are:

1. All grants must be used for technical education in the manner agreed upon by the Minister of Labor and the Government of each province and approved by the Governor in Council.

2. No part of the grant can be used to meet liabilities incurred prior to July 1st, 1919, for lands, buildings, furnishings, or equipment secured for technical educational purposes.

3. Only 25 per cent. of the annual grant can be used to secure land, or to erect, extend or improve buildings, or supply furnishings and equipment.

4. Each Province shall make an annual report to the Minister.

5. The Minister shall be the sole judge of questions arising out of the Act.

6. Every province receiving a grant shall furnish evidence required by the Minister of Labor to show that the grants made are expended for technical education as provided in the Act.

Professor Gill, the new Director of Technical Education, is a native of Prince Edward Island and an honor graduate and gold medalist (1896) of McGill University in mechanical engineering. Subsequently he took up post-graduate work in electrical engineering combined with research work in magnetism, and was awarded an 1851 Exhibition Scholarship for two years, one of which was spent at McGill and the other at Harvard. After leaving the university, Prof. Gill took up commercial work with the Westinghouse Electric and Manufacturing Co., Pittsburg, where he was given special facilities for studying manufacturing methods and shop practice.

In 1900, Prof. Gill was appointed Professor of General Engineering in the School of Mining, Kingston, Ont., at that time affiliated with Queen's University. As the latter had not yet developed a faculty of practical science, he concentrated his efforts on developing university courses in the various branches of engineering. Consequent upon this development he was appointed professor of mechanical and electrical engineering and later professor of electrical engineering.

In January, 1915, Professor Gill volunteered for overseas service and was granted a commission in the Canadian Engineers. Later in the same year he offered, through Queen's University, to recruit from the students and graduates a battery of field artillery. On February 3rd, 1916, as major in command, he proceeded overseas with this battery and, after six months' training in England, proceeded with it to France. He remained in command of this unit until March 26th, 1917, subsequently commanding the 33rd and 45th batteries successively. After the taking of Vimy Ridge, Major Gill was compelled to retire from combatant service on account of ill-health, and after several weeks in hospital, was requisitioned by the War Office for special technical duty with the Ministry of Munitions. After nine months he applied for return to combatant service and was under orders to proceed to France when the armistice was signed.

Early in December, 1918, Major Gill was appointed Assistant Director of Educational Services, and was responsible for the organization and administration of all the work of the Khaki University in England, being promoted to the rank of Lieutenant-Colonel. After demobilization, Mr. Gill accepted a temporary appointment to his pre-war post at Queen's University. His experience gives him peculiar qualifications for his new work.

Minimum Wages and Maximum Hours in Manitoba

By G. E. CARPENTER,
Secretary Prairie Division, C.M.A.

THE Minimum Wage Board, appointed by the Manitoba Government to investigate and fix, in accordance with conditions in Manitoba, standard minimum wages and hours of employment and standard conditions of labor for female workers employed in shops, factories and mail-order houses in cities in Manitoba, has been carrying on its work now for about eighteen months.

It will be recalled that, when a public demand arose for some legislation for the protection of female workers, the Trades and Labor Council endeavored to secure the passage of a bill providing for the enactment of a Statutory Minimum Wage. The Prairie Provinces Branch agreed that some legislation should be enacted, but advocated that a Minimum Wage Board should be established for the purpose of dealing with each line of business separately so that ample protection should be afforded the workers, having in view all the conditions surrounding industry. In taking this action the Branch received strong public support, with the result that an Act was passed at the session of the Manitoba Legislature, held in 1918, and a Minimum Wage Board was created for the purposes set forth above.

A summary of the Board's awards to date has recently been issued and this may prove of interest to members of the Association elsewhere in Canada. While, of course, all employers are not entirely satisfied with the findings of the Board, it is a significant feature that, with two exceptions, the awards have been agreed to at a conference of workers, employers and members of the Board.

The summary is as follows:—

Number of awards made and industries affected, 44; lowest minimum now in force, $8.50 (Dauphin laundries only); highest minimum now in force, $12.50; lowest maximum hours per week, 44 (offices only); highest maximum hours per week, 52.

The prevalent minimum wage rates for various industries in the Province are as follows:

City of Winnipeg and St. Boniface.—Laundries, groceries, pickles, macaroni and vermicelli, yeast, confectionery and biscuits, soap, paper box, cigars, drugs, abattoirs, creameries, $11; laundries (Brandon), $10.50; laundries (Dauphin), $8.50.

Note.—Previous to August 17th, 1919, minimum wage rate in the City of Winnipeg and St. Boniface for laundries, pickles and macaroni and vermicelli was $9.50, and for groceries, yeast, abattoirs, creameries, confectionery and biscuits, soap, paper box and cigars, $10. Also, minimum wage rate for laundries in Brandon previous to this date was $9.

Minimum wage rate for the following is $12.—Departmental stores five, ten and fifteen-cent stores, retail stores, bags, gloves, bedding, jewellery, auto top, caskets, leather goods, tents and awnings, paints, rags, brooms, seed packing (Winnipeg and Brandon—separate regulations), tailoring, knitting, millinery, printing, etc., mail order, ladies wear, ladies' hats, garment and regalia, fireworks factories (Brandon only), dyeing and cleaning, hair dressing, furriers, dressmaking, amusement houses.

Minimum wage rate for the following is $12.50.—Restaurants, hotels, offices.

Maximum hours of labor per week for various industries are as follows: Laundries (Winnipeg, Brandon and Dauphin), macaroni and vermicelli, seed packing (Brandon only), fireworks (Brandon only), shops and stores (Brandon only), hotels, 52 hours; groceries, pickles, departmental stores, cigars, gloves, bedding, auto top, caskets, leather goods, tents and awnings, paints, rags, brooms, seed packing (Winnipeg only), tailoring, knitting, millinery, dyeing and cleaning, 50 hours; confectionery and biscuits, retail stores, soap, paper box, bags, drugs, jewellery, 49 hours; yeast abattoirs, creameries, five, ten, and fifteen-cent stores, printing, etc., mail order, ladies' wear, ladies' hats, garment and regalia, hairdressing, restaurants, furriers, dressmaking, amusement houses, 48 hours; offices, 44 hours.

Building Increases

Permits Issued During 1919 Were Very Considerably in Excess of Those of 1918

A review of building operations in Canada during 1919, prepared by *Construction*, indicates a very substantial increase in activity. Reports of building permits received from thirty-eight important centres give a total of $73,684,453, as compared with $35,454,930 in 1918, an increase of 107.82 per cent. Figures were in a number of cases incomplete, so that final returns may be even more favorable. Only in two places were decreases recorded, and both were relatively small.

Replies to an enquiry sent by *Construction* to the building inspectors and city engineers of various municipalities are very optimistic in tone, and indicate a heavy volume of building work for the coming year. Practically every section in the Dominion is looking forward to a period of activity which, if fully realized, will witness operations approaching, if not equalling, the heavy investment of the boom days of 1910-11.

Boot and Shoe Manufacturers Get Together

Important Convention of Shoe Manufacturers' Association Held in Quebec—Meeting Does Much to Develop Spirit of Camaraderie—Members Decide on a Vigorous Advertising Campaign—Other Important Business Transacted

By ALEX. MARSHALL
Secretary-Treasurer, Shoe Manufacturers' Association

AN historic spot was selected to hold an historic Convention. Quebec, the cradle of the shoe trade in Canada, witnessed the first Annual Convention of the Shoe Manufacturers' Association after its first year of organization work and growth.

For an infant, it is surprisingly lusty and vigorous. About a hundred delegates attended the various business sessions. At the social functions, the hide, leather and allied trades swelled the total to between 300 and 400.

The same officers were re-elected for the coming year, the active officers being: President, F. S. Scott, Getty & Scott, Limited, Galt; First Vice-President, Jos. Daoust, Daoust, Lalonde & Co., Ltd., Montreal; Second Vice-President, J. D. Palmer, Hartt Boot & Shoe Co., Limited, Fredericton, and the Executive Committee, composed of one representative for every seven members or fraction thereof, in Ontario, Quebec, Maritime Provinces and British Columbia.

Progressive Programme Mapped Out

Already the Association has proved its worth to the members, and a very progressive programme has been laid out for the coming year. As a result of committee work, a scheme of standardization of cartons has been adopted, reducing the almost unlimited number of sizes previously used to 12 standard sizes. This will enable the shoe manufacturers to effect economies in placing their orders, will assist in the standardization of containers, and will enable the retailers to preserve neatness and uniformity in their shops.

Another committee has been developing plans in connection with the improvement of technical educational facilities for the shoe trade. Inasmuch as Montreal produces about 46 per cent. of the shoes made in Canada, and Quebec City about 18 per cent., with an additional small percentage made in some of the intermediate towns, it was felt that the logical place for the development of the technical education system was in the Province of Quebec. The matter has already been discussed with Sir Lomar Gouin, the Prime Minister, and it is anticipated that the Provincial Government will be ready to stimulate shoe manufacturing in Quebec by providing adequate facilities for the training of shoe workers in the technical and cultural subjects which will not only make them better shoemakers and better equipped for the battle of life, but will improve the character of the citizenship of this country.

A number of resolutions were passed at the meeting dealing with subjects of vital interest to the shoe manufacturers, and possibly the most important was that in which the Association endorsed the proposal of the Shoe Retailers' Association to hold a style show in Montreal in the week of July 12th to 17th next. The active co-operation and assistance of the Shoe Association in making the Shoe Style Show has been pledged, and undoubtedly the retailers will be ready to carry this project through in the best possible style, particularly when it will be happening in conjunction with their own annual convention.

It has also been suggested that some provision should be made for getting a selection of the shoes shown at the Style Show to be assembled into a made-in-Canada exhibit for the Canadian National Exhibition in Toronto.

Very valuable contributions to the available information regarding the shoe industry and surrounding conditions were contributed in addresses by Mr. W. P. Bennett, of "Hide and Leather," Boston. Mr. Bennett dealt particularly with the trend of leather prices and expressed the opinion that firm prices will hold for some time yet to come. Mr. R. D. Fairbairn, a member of the Canadian Trade Commission, spoke eloquently with regard to the necessity of developing a great Canadian export trade, and put before the shoe manufacturers the obligation that is laid upon them to utilize their utmost efforts to seize and hold their fair share of export business. Mr. T. H. Reider, president of the Ames, Holden, McCready Company, Montreal, but still a newcomer in the shoe business, gave a very able address which he entitled "A Freshman's Survey of the Shoe Industry," in the course of which many points were brought to the attention of the shoe manufacturers which were suggested as improvements in the conduct of the shoe business. In his closing remarks, Mr. Rieder emphasized the importance of having a fully equipped secretarial department, which would deal with all matters of public interest relating to the shoe trade and co-operate with Government departments in assembling statistics and other necessary information. This matter was also made the subject of a resolution at the meeting, and the Executive Committee is charged with the duty of considering the best ways and means of putting the question before the membership at large.

A $50,000 Advertising Campaign

For six months or more, arrangements have been under way to inaugurate an extensive "Canada Product" campaign, directing the public's attention specially to the shoe trade. Mr. J. D. Palmer, of the Hartt Boot & Shoe Co., Limited, Fredericton, second vice-president of the Association, delivered a splendid address covering the whole situation, and ably spoke, in moving the resolution supporting the spending of $50,000 on an educative campaign, directed to the general public, retailers and their clerks, with a view to placing the high standard of the Canadian shoe industry before the Canadian people and earning the place in the public mind that the importance of the industry warrants. The resolution was unanimously carried, and Mr. Palmer is the chairman of the committee charged with the proper carrying out of this campaign.

Although much important business was dealt with at the meeting, the outstanding feature of the whole convention was the spirit of camaraderie that was in evidence throughout the whole membership, composed as it is of two large elements, English-speaking and French-speaking Canadians. It was most interesting to note the approval with which was met on all sides the various proposals that came up.

There was practically no serious divergence of opinion on any subject, and a much better personal understanding was arrived at by the manufacturers from all quarters than had previously been the case. Any important comments delivered from the floor of the meeting were immediately rendered in English if the original was French, and in French if the original was English. Not only that, but it was very interesting to note the way in which the French and English members met together and discussed personal matters at the luncheons and other social features. Too high praise cannot be given to the hospitality of the shoe and leather trades of the City of Quebec. The get-together spirit was more than ever in evidence on the last night, when the Association banquet was held. On this occasion the speakers were the Hon. Arthur Meighen, a member of the Cabinet of the Dominion Government, and Sir Lomer Gouin, Premier of the Province of Quebec.

On the whole, it would be difficult to conceive a more satisfactory convention, and it is to be hoped that in many other industries similar rapprochements will come about.

Ontario Shoe Manufacturers

Annual Meeting of Provincial Association Held in Toronto Last Month—Several Interesting Addresses Delivered and Officers Elected

A well attended meeting of the Ontario Shoe Manufacturers' Association was held in Toronto on Wednesday, January 7th, 1920. In the morning, the members divided into groups according to the classes of goods made and exchanged information for their mutual advantage.

The afternoon session was devoted to subjects of general interest. The members had the privilege of hearing addresses from Mr. S. R. Parsons, the Canadian employers' delegate to the recent International Labor Conference, on how the proposals and activities might affect Canadian industry, and from Mr. H. V. F. Jones, assistant general manager, Canadian Bank of Commerce, who gave a most interesting review of financial conditions during the war and the effect of exports, imports and war loans on the exchange situation. Mr. J. R. K. Bristol also made a short address on the Canadian tariff.

At this meeting the Ontario Association endorsed the action of the Executive Committee of the Shoe Manufacturers' Association of Canada in coming to a friendly arrangement with the Retailers' Association regarding the cost of cartons and cases and special features in shoes. They also endorsed the policy of holding a great Shoe Fair in Montreal on July 12-17 next, and are advocating that the shoes assembled there be retained for further showing at the Canadian National Exhibition in Toronto.

The shoe manufacturers also expressed themselves in favor of having imported shoes marked with the country of origin, and Canadian shoes also specially distinguished. This portion of the programme will probably be best taken care of in connection with the proposed general advertising campaign on which the shoe manufacturers are about to embark.

The elections took place at this meeting resulting in Mr. A. Brandon, of Brantford, and Mr. G. W. McFarland, of Williams Shoe, Limited, Brampton, being re-elected Hon. Chairman and Chairman respectively. The rest of the Executive Committee is composed as follows: Vice-Chairman, G. H. Ansley, Perth, Ont.; F. H. Ahrens, Kitchener, Ont.; S. H. Parker, Preston, Ont.; C. S. Corson, Toronto, Ont.; W. H. Duffield, Hamilton, Ont.; N. M. Davison, Kitchener, Ont.; the latter representing the felt shoe manufacturers. Mr. F. S. Scott, M.P., of Galt, chairman of the Shoe Manufacturers' Association of Canada, was also made an ex-officio member of the Ontario Executive.

Clay Products Manufacturers

Three-Day Meeting Takes Place in Toronto—Much Valuable Information Conveyed to Members Through Addresses by Experts

Members of the Canadian National Clay Products Association convened in Toronto on January 20, 21, and 22, for their eighteenth annual meeting. The president, Wm. Burgess, Todmorden, opened the proceedings with an address urging co-operation. The report of the Executive Committee and also that of the secretary-treasurer was made by Gordon Keith.

The Tariff Committee reported that efforts had been made to secure some amendment in freight rates as applied to clay products. Just for the present the matter was in abeyance until a projected increase in freight rates had taken place. In the meantime, as many clay workers are members of the C.M.A., the committee had arranged to take advantage of the tariff and transportation services of the larger association.

The Technical Education Committee, through Mr. Millard F. Gibson, chairman, reported progress on an important scheme for the education in Canada of those desirous of taking up the study of ceramics. Heretofore there have been no opportunities for technical training in Canada or for investigational work on the development of our great natural clay resources. No particulars of the committee's report are available as yet, but the meeting was given to understand that some very outstanding developments are pending. It is expected that in February a comprehensive report will be made public.

The election of officers resulted in the reappointment of last year's executive by a unanimous vote. The members of the executive are: Thomas Kennedy, Swansea, past president; William Burgess, Todmorden, president; Ryland H. New, Hamilton, 1st vice-president; Millard F. Gibson, Toronto, 2nd vice-president; T. H. Graham, Inglewood, 3rd vice-president; Gordon Keith, Toronto, secretary-treasurer; and the following councillors: H. B. Hallatt, Tilbury; W. H. Freeborn, Brantford; N. T. Gagnon, Montreal; Andrew Dods, Mimico; John S. McCannell, Milton; F. B. McFarran, Toronto; Chas. A. Millar, Toronto; C. B. Lewis, Toronto.

During the convention a number of valuable papers were read and delegates were given an opportunity to see some of the clayworking establishments in the vicinity of Toronto. The annual banquet took place on the evening of January 21, the guests including Brig.-Gen. C. H. Mitchell; J. C. Reilly, Secretary of the Association of Canadian Building and Construction Industries, and Hon. H. C. Nixon, Provincial Secretary of Ontario.

In his address on "Pottery Possibilities in Canada." Millard F. Gibson, manager National Fireproofing Co., Toronto, discussed the possibilities of developing manufactures of fine porcelain, glassware and clay products generally to take the place of the present considerable quantity imported from Europe and the States. Mr. Gibson told of the many interesting examples of fine pottery, glassware, etc., which have been made under the direction of Professor Keele, at Ottawa. He instanced the discovery of a new bed of white clay near James Bay, which, with the large deposits of feldspar and other minerals, will make it possible for Ontario to go in for the manufacture of fine chinas, ornamental glassware, optical glass, etc., and he felt that every encouragement should be given to the development of the ceramic industry on the widest scale possible.

The Control of Profiteering in Great Britain

Canadian Manufacturers who Have Been Following the Operations of the Board of Commerce in this Country, will Find Matter of Interest in Contrasting its Activities with those of the Bodies Formed to Administer the Profiteering Act in Great Britain

By JOHN C. KIRKWOOD

ON August 19th of the past year Great Britain put on her Statute books the Profiteering Act. This Act provided for setting up local tribunals to receive consumers' complaints, for the penalizing of those found guilty of profiteering, and gave permission to local authorities to trade.

The passage of the Act was a somewhat hasty proceeding, and was put through just on the eve of the summer holidays, when members of Parliament were fatigued and eager to bring an arduous session to an end. The Bill was admitted to contain imperfections, and nobody liked it any too well, but it seemed necessary to put it through to allay public irritation.

The arguments in favor of the passage of the Bill were:

1. Profiteering has a profound deterrent effect on export trade. High prices at home induce manufacturers to concentrate on the home market, whereas the necessities of the country require the stimulation of export trade.
2. If and when domestic prices are at an unreasonably high level, with unconscionable profits, the British market would be flooded with unnecessary articles and the trade balance would be swung still farther against Great Britain.
3. Profiteering leads to social unrest.

As against these arguments it was urged by critics and opponents to the Bill that:

1. There was not enough good in the Bill to counteract the positive harm which it would cause to trade.
2. It embodied principles unfair and unjust from the point of view of English law.
3. It would create another vast and expensive department.
4. If the prices of all the articles which could be brought to the attention of the tribunals—clothing, furniture, foods, cigarettes, and the like—were to be thoroughly investigated from the beginning to the end, there would have to be a Costings Department with highly trained experts. This would take a very long time, but the Act was to last for a period of only six months.
5. The Bill contained no indication that trusts would be dealt with, and how could small local tribunals deal with trusts?
6. The Act would make small traders victims of trial and penalties by local tribunals.

On the charge that the Bill made no provision for dealing with trusts, Sir Robert Horne, Minister of Labor, said: "For the first time the Board of Trade will have powers to make those investigations without which no trust or combine can be broken up or its prices dealt with." Sir Auckland Geddes, President of the Board of Trade, speaking on behalf of the Bill, gave the following definition of profiteering:

"Profiteering is to make an unreasonably large profit, all the circumstances of the case being known, by the sale to one's fellow citizens of an article which is one, or one of a kind, in common use, by or for profit."

Methods of Enquiry.

The Profiteering Act authorizes the Board of Trade to make orders applying the Act to any article or class of article declared by the Board to be articles of a kind in common use by the public, or material, or machinery, or accessories used in the production of such articles.

The provisions of the Act are administered by means of committees or tribunals of three grades—central, local, and appeal.

The Central Committee

The Central Committee is presided over by Mr. C. A. McCurdy, K.C., M.P., Parliamentary Secretary of the Ministry of Food, and Chairman of the Committee on Trusts. He is assisted by such deputy chairmen as he may have appointed.

In general the functions of the Central Committee are to investigate cases of alleged profiteering by persons other than retail traders, and when necessary to institute prosecutions. In pursuance of this duty it will itself collect information as to prices, costs, and profits, and will study the methods and practices of the various trades or groups of trades, including trusts and trade combinations concerned in the production and distribution of goods to which the Act is applied. In order that the Central Committee may be in a position to advise the Board of Trade as to what may be considered a reasonable price for any article, it is empowered, should necessity arise, to appoint sub-committees to carry out the investigation into the cost of production throughout the various stages of manufacture.

Local Committees

The local authorities, that is to say, in England and Wales, the Common Council for the City of London, and the Councils of the Metropolitan and Municipal Boroughs, and of the urban and rural districts, and the Council of the Scilly Isles, and in Scotland, the Councils of the County, and the Councils of the Royal, Parliamentry, or Police boroughs, were invited to appoint local committees in accordance with regulations made by the Board of Trade. To these the Board of Trade has delegated power to investigate and hear complaints of alleged profiteering on the part of local retailers, and either to dismiss the complaint or to declare the price which would yield a reasonable profit, and require the seller to repay to the complainant any amount paid by the complainant in excess of such price. It is provided by the Act that the expenses of these committees will be defrayed by the local authorities out of local funds or rates.

Appeal Tribunals

Appeal Tribunals to hear appeals from the decisions of local committees, as provided by the Act, were appointed for each county or group of counties in England and Wales by the Board of Trade. Chairmen of county councils in England and Wales were invited to convene meetings of representative people to suggest to the Board of Trade names of suitable persons for membership of these tribunals. The Secretary for Scotland was asked to undertake, on behalf of the Board of Trade, the formation of Appeal Tribunals

for Scotland. The Irish Government was consulted as to the application of the Act in Ireland.

Thus it will be seen that two separate and distinct lines of action have been contemplated:

1. Central investigation by the central committee into the cost and profits of production and distribution of goods to which the Act has been applied.

2. Local investigation by local committees (subject to appeal as provided by the Act to Appeal Tribunals) into such complaints as may be made by members of the general public concerning the prices charged and the profits made in the retail distribution of goods to which the Act has been applied. In any case in which investigation discloses actual profiteering prosecution may follow.

It was an instruction of the Board of Trade to all committees and tribunals established under the Act, that no action shall be taken which will hamper or restrict legitimate commercial enterprise throughout the country. It is not the intention of Parliament, as expressed in the Act, to prevent any person or company from making a reasonable profit on their business transactions.

Setting Up the Machinery

The regulations for local committees and appeal tribunals were sent to some 2,000 local authorities, together with a circular signed by the President of the Board of Trade explaining the regulations, and a form to be returned within three days of the appointment of the local committee, with particulars of the persons appointed. These regulations were as follows:

The local committees will consist of not fewer than seven nor more than 25 persons. Two members should be women, three must be members of the local food control committee, and it is stated that it is imperative that the working classes should be adequately represented. Generally speaking it is desirable that cases should be heard by a body of not more than five persons.

In some places it may be convenient for the committee to sit in separate sections and at different centres, and sub-committees may therefore be set up, which must have one woman member and adequate representation of labor. These sub-committees will have all the powers of the local committees, other than that to take proceedings before a Court of Summary Jurisdiction. Where they think such proceedings should be taken they will report to the local committee.

All complaints to the local committee shall be heard in public, unless the local committee in any particular case, having regard to the interests of the parties and to all the circumstances, direct that the complaint or any part of the proceedings thereon shall be heard in private. The local committee may exclude the parties and the public at any time for the purpose of conferring upon any question affecting the decision of the complaint.

Questions before the local committee shall be decided by a majority of such of the members of the committee as are present and vote, but a member shall not take part in the consideration of, or vote on, any question relating to a complaint against a person with whom he is a trade competitor, or in which he is otherwise personally interested. A member shall not vote unless he has been present throughout the proceedings.

The Hearing of Complaints

The procedure laid down for the lodging and hearing of complaints requires a complaint to be made in writing to the office of the clerk to the local committee, within four days of the sale or transaction which is the subject of the complaint. Where the grounds of complaint appear insufficient, the committee may dismiss the complaint without calling on the respondent; but where a *prima facie* cause of complaint has been disclosed, the local committee shall hear the complaint, the complainant and the respondent being given at least three days' notice.

The local committee may summon any witnesses and take evidence on oath, and may call for the production of any documents relevant to the complaint. The complainant and respondent may conduct their own case, or may be represented.

If the local committee are satisfied that an unreasonable profit has been made or sought, they shall declare the price which would yield a reasonable profit, and shall require the seller to repay to the complainant any amount in excess, and they may take proceedings against the seller before a Court of Summary Jurisdiction. In declaring the price which would yield a reasonable profit, a rate of profit which does not exceed the fair average rate earned under pre-war conditions shall not be deemed unreasonable.

Seller's Right of Appeal

Any seller aggrieved by any order or decision of the local committee, other than a decision to take proceedings before a Court of Summary Jurisdiction, may appeal to the Appeal Tribunal for the area against the decision, and any order made by the local committee shall be suspended until the decision of the Appeal Tribunal.

Complaints relating to profiteering or alleged profiteering arising out of the retail sale of any article or class of articles of food or drink, to which the Act may be applied, shall be referred by the local committee to a special sub-committee to consist of five members, of whom not less than three shall be members of the local food control committee.

The regulations with regard to the Appeal Tribunals will in the main be the same as those for the local committees. A list of the Appeal Tribunals will be sent to the local committees in due course. Any appeals lodged against the decisions of the local committees before the list is circulated will be retained by the clerk to the local committee.

Wholesalers Charges

In his covering circular the President of the Board of Trade directs that if, on the investigation or determination of any complaint, it shall appear to the local committee or Appeal Tribunal, that the price charged or sought, about which the complaint was made, is in view of all the circumstances unreasonable, but that the unreasonable price so charged or sought was due to the price charged by the wholesale trader, the local committee or Appeal Tribunal should dismiss the complaint or allow the appeal as the case may be, and should refer the case to the Board of Trade.

Local committees and Appeal Tribunals should bear in mind that it is not the intention of the Board of Trade to take any action which will hamper or restrict legitimate commercial enterprise, or which will prevent any person or company from making a reasonable profit on their business transactions.

Formation of Local Tribunals

The establishment of local committees lagged in many communities, the local authorities being either luke-warm in the matter of profiteering, or else found no great clamoring on the part of the citizens for the appointment of a local committee, or for the punishment of profiteers. All told, about 1,000 committees out of a possible 2,000 have been appointed.

The selection of those to serve on local committees rests with the local authorities. The general principle governing appointment is that no member shall sit to consider a case in which the trader complained of is a competitor with him-

self. In some communities no traders are permitted to be members of the local committee. In at least one place the Town Council elected themselves *en bloc* to serve on the profiteering tribunal, but their act was protested against, it being stated that fifty per cent. of the town council are members of trades in which it is alleged profiteering takes place.

Complaints by the Public

It is generally true that the public has not complained to the extent that was expected, and in some places the local committees have had nothing to do. Various explanations are given for this apparent apathy on the part of the public. "People have become so used to high prices," said the Town Clerk of a London borough "that they do not realize yet what they can do to reduce them."

Many complaints made, while not frivolous, are useless, because they refer to things outside the articles scheduled. Typical of the complaints made are:

"A butcher's manager was summoned for making an excess charge of 4d. on a joint of veal. He was sentenced to prison for 21 days, his employer was fined £50 with costs, and a shopman was fined £5."

"A draper was ordered to refund 1½d. to a customer who had been charged 1s. 6¾d. per yard for 3 yards of sateen lining."

A complaint was made that a draper had charged 5½d. for a reel of crochet cotton of which the pre-war price was 1½d. The trader said the price was fixed by the makers, and the committee who considered the retailer's profit not unreasonable, but decided that the matter should be reported to the Board of Trade so far as the wholesaler is concerned.

Another complaint was an alleged charge of 5d. for 1 oz. of pepper, against the usual price of 2d. A charge of 8/- a lb. for chocolates as against 4/-, the price when this article was controlled.

Complaints have been made against the prices charged by restaurants, against the prices charged for the rent of gas meters, against the prices charged for coke, Epsom salts, pepper, clothing, false teeth, medal ribbons, military badges, toilet requisities, fish, cigarettes, and clocks.

Widening the Scope of the Act

It became apparent very early in the history of the operations and applications of the Profiteering Act that its scope required to be widened. As originally framed, the Act dealt with prices of articles "in common use," but excluded every variety of "services rendered." Also, the original list of designated articles or kinds of articles was found to be too narrow. Accordingly there has been a widening of the scope of the Act. The first schedule of the goods with the prices of which local committees had to deal was as follows:

Clothing and articles of personal use	Articles for sewing and knitting
Household goods	Furniture (not antique)
Building materials	Food

Subsequently, a supplementary schedule was issued, and includes among other things:

Books	Hay	Pencils
Gas meters	Toilet articles	Drugs
Stoves	Fountain pens	

Articles of food sold in restaurants and tea shops were included in the first draft of the first schedule, but these involve personal service and were, therefore, struck out. They are not likely to be reincluded in any new schedule. Nor is wine sold at restaurants at exorbitant prices. Wine is not regarded as an article "in common use," and in any case it can be bought more reasonably from a wine merchant. The difficulty of fixing a reasonable charge in a restaurant where the surroundings count for so much and involve considerable expense is felt to be insuperable.

From the "World," London

The New Invasion

Trusts in Great Britain

So far as publicity is concerned, it has concerned itself, in connection with the Profiteering Act, to the prices paid retailers by consumers. That is, it has had little to say about trusts, though the Act in its provisions includes trusts and the profiteering supposed to go with trusts.

That there are trusts and monopolies in Great Britain everybody knows, and probably they are increasing rather than diminishing in number; but the British public have not been incensed by their acts and power as have been the people of the United States in that country. Whether or not British trusts have been making the cost of living appreciably higher in their own country has not been established; yet they are under suspicion, and there is a demand and a machine for their investigation. The machine is the

Central Committee

authorized by the Profiteering Act, the chairman of which is Mr. C. A. McCurdy, as previously stated. The Committee consists of 119 members, and its composition is fairly representative of commerce, finance, co-operators, trade unionists, and the general public. It is the Parliament of the Profiteering Act.

It includes representatives of both employers and workpeople in the following industries: Food and groceries; agriculture, cotton, linen, wool, and clothing of all kinds; leather, boots and shoes; metal and hardware, including

Canada's Industrial Expansion

A Record of Progress

Canadian Plant Now Operating

Kenworthy Bros. Co., of Stoughton, Mass., start Manufacturing at St. Johns, P.Q.

During the past month the branch plant which Kenworthy Bros. Co., of Stoughton, Mass., have erected at St. Johns, P.Q., started operations under the name of Kenworthy Bros. of Canada, Limited. They are manufacturing the same line of goods as in the United States, the principal product being a treated wool felt, which they call "Kendix," and which is used very largely as an insole in rubber and leather shoes. They also cut felt heel pads and box toes and handle all classes of felt, imitation leather, etc. The Canadian office and plant is in charge of Mr. A. P. Hittl.

Beaver Board Companies Expand

Thorold Plant being Extended by Addition of New Finishing Plant

At the Thorold plant of the Beaver Board Companies there is at present under construction a finishing plant, 125 x 362 feet, of brick, steel and concrete, mill type construction. The plant will have a capacity of 500,000 feet per day and will provide employment for approximately 100 men. The companies are also building a new office, 48 x 80 feet, of brick, wood and concrete. They expect to have these buildings finished and mills in operation by March 1. They are also extending their dwelling accommodation, having just finished three single houses and nearly finished seven double houses.

Structural Steel Mill

Algoma Steel Corporation Undertakes Establishment of an Important New Industry

It is now definitely announced that the construction of the proposed structural steel mill at Sault Ste. Marie will be proceeded with at once by the Algoma Steel Corporation. It will cost from $6,000,000 to $7,000,000, and will take from 12 to 15 months in building. When it is completed it is the hope of the Corporation that they will be able to supply the larger part of Canadian consumption of structural steel, of which at present 90 per cent. is imported from the United States. The new mill will provide work for 600 operatives.

Making Super-Cement

St. Mary's Cement Co. Have Started Manufacture of New Product for Canada

A new product for Canada is now being turned out by the St Mary's Cement Co., this being super-cement, the invention of an Englishman named Goddard. It was used effectively by the British Government during the war for petrol tanks and other construction work, and is a waterproof material with greater tensile strength than ordinary cement. Rights for Canada and the United States are held by Monk, Manhard & Dawson of Montreal, who will put up a plant for the manufacture of the special compound used with cement to make super-cement. For the present, this compound is being made in the St. Mary's plant, but it will ultimately be produced on a large scale for sale to cement companies generally.

New Paper Box Plant

Company Formed in Peterborough Leases Space for Establishment of New Industry

The increasing use to which paper is being put in the manufacture of all sorts of articles is attested by the growing demand for paper boxes. A new company, which starts out with a favorable outlook, is the Peterborough Paper Box Co., Limited, incorporated with an authorized capital of $50,000. The company have leased premises in the Grand Central Block on George Street. They occupy space 51 x 24 feet, three storeys high and the building has been renovated and equipped for the purpose. About fifteen or twenty hands will be employed at first, but so much encouragement has been received in the way of orders, even before operation has commenced, that rapid development is looked for.

Will Double Production

Regent Knitting Mills, Limited, Are Adding to their Plant at St. Jerome, P.Q.

The Regent Knitting Mills, Limited, are practically doubling the capacity of their plant at St. Jerome, P.Q., by placing an additional storey on their mill. This will give 7,500 square feet more manufacturing space in the old mill and the same area in the new worsted spinning mill. The addition will be completed and ready for operation about the middle of February. About 100 additional hands will be required, for the most part operators on knitting machines, and this will give the company a total of 375 employees. Production will be increased from about 700 dozen pieces weekly to 1,400 dozen pieces.

New Developments Planned

Following Reorganization of Alaska Bedding and Their Associated Companies

On December 15th last a reorganization of the Alaska Bedding Companies and their associated companies, the Ideal Bedding Co., Limited, Toronto, and the J. H. Sherrard Manufacturing Co., Limited, Montreal, took place. A closer alliance was formed with the Simmons Company, of Kenosha, Wis., and the Canadian companies, while under the same management as before, will be operated under the name of Simmons, Limited. In announcing the change, Mr. J. H. Sherrard stated:

"Some years ago our companies secured the Canadian rights to the Simmons bed patents, which resulted in a great improvement in metal beds made in Canada. Early this year (1919), we made an arrangement with the Simmons Company to import their new 'Top Line' of 'designed' light steel beds, and these have taken so well with the public that we

A London Enlargement

View of new building being erected by McClary Mfg. Co. for storage and shipping purposes

were compelled to plan for their extensive manufacture in Canada. In endeavoring to arrange for this, it became apparent that we could only obtain the full benefits of the Simmons products and advertising for our customers and the public by our amalgamation with the Simmons Company, and I am greatly pleased to inform you that this has been accomplished.

"The company management will remain unchanged. The writer will continue to direct its destinies as president. Mr. Bradshaw will be vice-president, in general charge of production, with Mr. Johnson in executive charge of sales. Mr. Abbott will continue his able management at Montreal plant, Mr. Browne at Toronto, Mr. Bromley at Calgary, Mr. Baker at Winnipeg, and Mr. MacLaren at Vancouver."

Additions and alterations are being made at the Montreal, Toronto, and Winnipeg factories to take care of increased business, and the executive have plans in view for further expansion, details of which are not yet ready for announcement.

New Printing Plant

Murray Printing Co., Limited, of Toronto, Propose to Erect Large New Building

As an evidence of how the printing industry is expanding, it may be noted that the Murray Printing Co., Limited, one of the oldest and largest printing companies in Toronto, are preparing to erect a new building which will greatly increase their present capacity. The site selected is at 192-194 Spadina Avenue, running through to Cameron Street and giving 60 x 205 feet of ground. The building will be six storeys high, of mill construction, equipped with the latest fire protection appliances and will contain about 36,000 square feet of floor space. The very latest printing machinery will be installed and it is hoped to have the building completed by about July 1.

Manufacture Moving Pictures

New Company Formed in Winnipeg to Undertake Local Development of Films

The Western Film Manufacturing Company are a new comcern recently established in Winnipeg for the manufacture of moving pictures depicting industrial, educational and agricultural subjects. Formerly such pictures taken in Western Canada had to be sent east to be developed. Premises, consisting of a two-storey building, 30 x 80 feet, on Manitoba Avenue, have been secured and about $30,000 invested in the business. The president of the company is Mr. P. J. Hamilton, who was formerly connected with the Pathescope Co. of Canada.

More Space Required

Sam'l. Osborn (Canada), Limited, are Erecting Building for Warehouse and Office Purposes

A new building, 120 x 80 feet, and costing approximately $40,000, is being erected at the works of Sam'l. Osborn (Canada), Limited, in Montreal. It will be utilized for the warehousing of steel bars, wire rope and the various products which this company have for sale. A small portion will be used as a demonstration plant for the heat treatment of steels, and a few machines will be installed for this work. Office accommodation will also be provided in the new structure.

A Million for Extensions

The National Farming Machinery, Limited, Goes in for Extensive Additions

About a million dollars will be spent on extension and new equipment by the National Farming Machinery, Limited, of Montmagny, P.Q., who have taken over the plant and business of the General Car and Machinery Works, Limited.. They will continue the manufacture of steam engines and boilers, saw-mill machinery, wood-working machinery, and good-roads machinery, and will operate steel, iron, brass and aluminum foundry, but in addition they will make agricultural implements and gasoline engines, and for this purpose are making the extension mentioned. A small rolling mill in connection with the steel foundry is also being erected. Some departments will be producing within a few weeks, others not until May or June. It is expected that from 1,200 to 1,500 men will be employed.

Planning General Expansion

Northumberland Paper & Electric Co., Limited, Have Large Building Program

The majority of the capital stock of the Canada Boxboard Co., with mills at Montreal and Frankford, Ont., has been acquired by the Northumberland Paper & Electric Co., Limited, Campbellford, Ont. Some form of organic union will probably be worked out, but no details have yet been arranged. In the meantime the properties of the Canada Boxboard Co. are being operated by the Northumberland Paper & Electric Co. very much along former lines. It is the company's intention to build a new plant in Toronto, work on which will be commenced early in the spring. They are now enlarging the plants at Campbellford and Frankford, as all three mills at Campbellford, Frankford and Montreal are very much behind their orders, and are unable to keep up to the present demand.

Rebuilding Box Factory

Factory at Bedford, N.S., Operated by Moir's Limited, to be Restored After Fire

Moir's Limited, biscuit and confectionery manufacturers, Halifax, whose sawmill and wood box factory at Bedford, N.S., was destroyed by fire on November 14, will rebuild the plant. The building was 160 x 60 feet, two storeys, with an "L" at one end to give sufficient length for sawing logs conveniently. The company's plans do not provide for any enlargement of capacity at present, as a building the size of the burnt one will give ample room to take care of requirements for some time to come.

The mill which was destroyed was comparatively new and equipped with modern machinery, it having been built in

1911. Since that time there have been improvements both in the class of machinery and in the method of handling lumber for box-making and it is the company's intention to put in the very latest and best machines available. It is quite likely that motor drives will be installed, as there is a water-power developed at the plant.

Needle Manufacturers Expand

The Torrington Co., Limited, Upper Bedford, P.Q., Acquire Additional Property

Announcement is made by the Torrington Company Limited, Upper Bedford, P.Q., manufacturers of knitting machine needles, that they have recently purchased the property of the Bedford Stove Company, adjoining their present location. This will be used to extend their factory, though they will not use the buildings now on the adjoining property, but will demolish them in the spring and erect a modern factory building. Nothing definite regarding the latter development has been decided yet, and no plans have been drawn up. At present the company are only manufacturing knitting machine needles, but they will put in other lines which they are manufacturing in the U.S., as soon as possible, including screws and rivets, electric vacuum cleaners, and other electric appliances.

Extend Toronto Plant

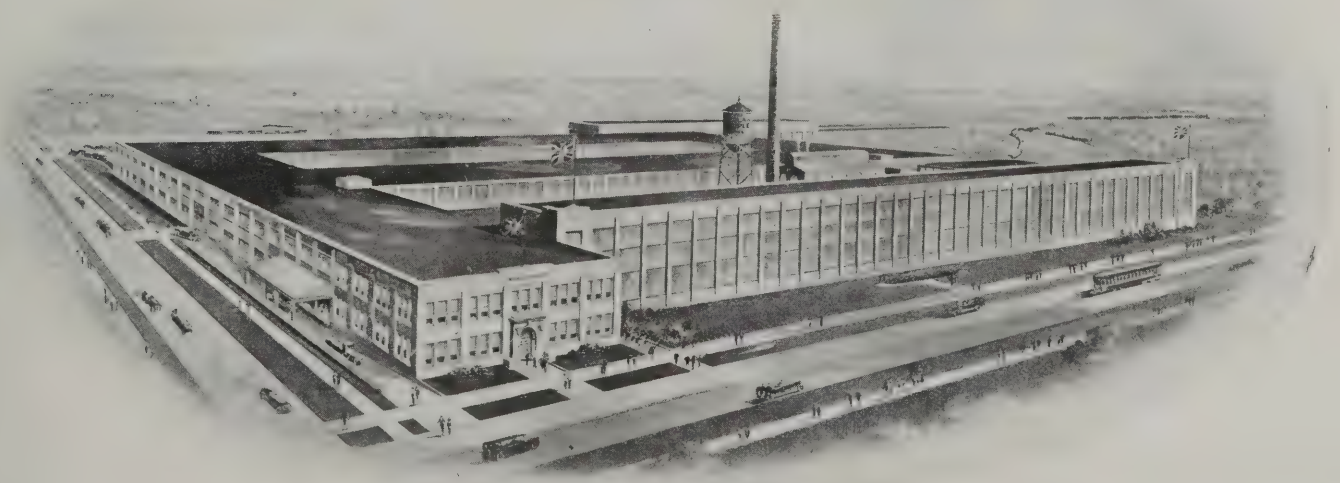
Canadian Fairbanks Morse Co., Limited, Making Additions to Their Toronto Factory

In a recent interview with Mr. H. J. Fuller, president of the Canadian Fairbanks, Morse Co., Limited, Mr. Fuller advised that the additions being made at Toronto factory are to meet new Canadian demands. Following the manufacture of munitions, the plant was quite exhausted, and it was necessary to put in almost entirely all new equipment to keep step with the anticipated growth of the Dominion.

"We have not the orders in sight, but we are anticipating that Canada will develop and its demands are going to be very large in the future," said Mr. Fuller. "We are enthusiastic over the future, and are willing to invest our money and if we cannot immediately use all of our facilities, the time is not far off when they will be required. The extensions are to take care of our large engine business. This is distributed through our branch houses in every part of the Dominion of Canada."

The New Pedlar Plant

Oshawa Industry Soon to be Housed in Complete New Factory Building



Work is now progressing on the erection of the new plant which the Pedlar People, Limited, of Oshawa, are erecting to take the place of their present inadequate premises. The site secured for the new building is on Simcoe Street between the C.P.R. and G.T.R. tracks. It will be 440 x 365 feet, of brick, steel and cement construction, 2 storeys in height, and so arranged as to facilitate the movement of the product continuously in one direction from raw material to the shipping department.

The Pedlar business was established in 1861 by the late George Henry Pedlar, assisted by his father, the late Henry Pedlar. Although new buildings were constructed from time to time until a large area was occupied, the success of the company has been so great as to completely outstrip all possibility of extension on the old site. Accordingly a complete new plant was decided upon and this will be occupied next year when completed.

Capacity Taxed to Utmost

Brantford Cordage Company, Limited, Preparing for Necessary Expansion

A new storage warehouse is at present under construction by the Brantford Cordage Company, Limited, manufacturers of Maple Leaf binder twine and cordage. It is 400 x 90 feet, of steel and brick construction, and provided with sectional fire-walls and full sprinkler equipment. The company

The Pedlar People, Limited's Big New Plant

This plant is now in course of erection at Oshawa and when completed will appear as in the above illustration. It will comprise a building 440 x 365 feet, two storeys in height, of brick, steel and cement construction

have also purchased an additional two and one-half acres of land adjoining their present mills, providing for further expansion in the near future. Present capacity is approximately 10,000 tons of binder twine per annum, and, notwithstanding the fact that they are in open competition with the world and without any tariff protection, their products have become so popular that present capacity is taxed to the utmost.

Monarch Knitting Expands

Additions Being Made to the Company's Factory at St. Catharines Now Nearly Complete

The Monarch Knitting Co., Limited, expect to have the addition to their factory at St. Catherines ready for operation by March 1st. The building itself is now complete, the sprinkler and heating systems are being installed and the machinery should be ready within the next few weeks. The extension is three storeys in height, of red brick construction, and contains about 30,000 sq. feet of floor space. The ground floor will be devoted to office purposes and recreation room for the girl employees. The first floor will contain the hosiery knitting machines and the second floor the sweater finishing department.

Knitting Mill Enlargement

Plant of Joseph Simpson Sons, Limited, Toronto, Receives Needed Extension

To relieve the pressure in their main plant on the Esplanade, Toronto, Joseph Simpson Sons, Limited, knit-goods manufacturers, are erecting a building on King Street East, which will be devoted entirely to carding and spinning. It will be 90 x 190 feet, three storeys high, of brick and mill construction. It is expected that it will be ready for operation by about July 1. When completed, from 50 to 75 new hands will be required.

Gear Company Will Move

The Hamilton Gear & Machine Co., Toronto, Plan Better Service

The Hamilton Gear and Machine Co., Toronto, now located at the corner of Concord and Van Horne Avenues, expect to remove their whole gear shop in the spring to the modern buildings at Nos. 62-84 Van Horne Avenue, formerly occupied as shell shop and tractor shop. The latter have a floor space about 2⅓ times greater than the present gear shop, and have the additional advantage of being all on one floor. The tractor shop is a fine building of concrete truss, saw-tooth roof construction, the only one of its class in Canada. The move will be greatly to the advantage of the company and their customers, who will receive improved service.

New Concentrating Mills Planned

Consolidated Mining & Smelting Co. of Canada, Limited, have Important Plans

Two exceedingly knotty problems have recently been worked out by the experts of the Consolidatd Mining & Smelting Co. of Canada, Limited, which will lead to the erection of two large concentrating mills in British Columbia. One of these problems concerned the concentrating of the low grade copper ores of the Rossland Mines. As a result of the success of experimental work the company will build a mill at Trail or Rosslands, treating 1,500 tons of ore a day and costing about $800,000. The product from this mill would be a copper concentrate which would be smelted in the existing copper blast furnaces. The second problem concerned the concentrating of the low grade silver lead zinc ores of the Sullivan Mine at Kimberley. A mill with a capacity of 2,000 tons of ore per day will be erected. The product will be lead and zinc concentrates, both of which will be shipped to the Trail smelter for treatment in the existing zinc plant and the existing lead smelting and refining plant. The market for the increased output of copper which the above developments will entail is already at hand in Canada. For the zinc and part of the lead export markets will have to be sought.

Broom Company Re-organized

St. Lawrence Broom & Brush Co., Montreal, Turning Out 700 doz. a Week

The St. Lawrence Broom & Brush Co., Montreal, have recently been re-organized. Mr. Rodrique Langlois has bought out the interest of one of the old partners. He has put enough capital into the business to allow of having all the buying done on a cash basis. Output will be about 700 dozen a week. Twenty men will be employed regularly and the company to raise output shortly to 800 dozen a week.

Locate in Brockville

Jireh Food Company Removing Their Industry From Maitland to Brockville

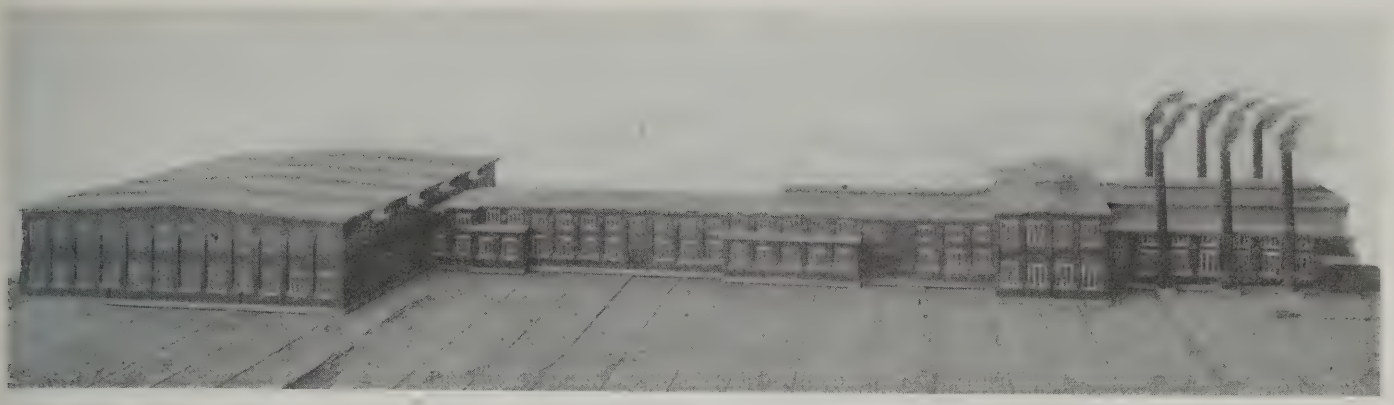
Reorganization of the business of the Jireh Food Co., whose milling plant was located in Maitland, Ont., has been effected and the company are now operating in Brockville. They have occupied a vacant building and have started the manufacture of their Jireh breakfast food, with a line of diabetic flour as a side line. The company will employ at the outset about fifteen hands, but expect to add to this number as the business expands. The principals of the company are Newell L. MacDowell and Merrill W. McDowell, both of whom have splendid overseas records to their credit.

More Warehouse Space

Dominion Road Machinery Co., Limited, will be Enabled to Increase Production

Ratepayers of Goderich voted favorably January 5 on a by-law exempting the Dominion Road Machinery Co., Limited, from taxes, other than school taxes, for ten years. The company have recently completed a warehouse, 40 x 100 feet, with travelling crane. This additional storage room will permit of their manufacturing during the winter months and having a larger stock of machines ready for shipment in the spring when municipalities demand the machines for spring work.

Will Erect Office Building



The Galt Knitting Co., Limited, Galt, have Plans for Welfare Work in New Building

The Galt Knitting Co., Limited, Galt, Ontario, manufacturers of underwear and knitted specialties, have plans ready for the erection of an office building adjoining their mill. This will be 50 x 75 feet, two storeys in height and of concrete construction. The lower floor will have commodious office room, while the upstairs will be devoted to rest room, cloak and dining rooms for female employees. The company expect to commence construction about April 1st, and hope to have everything completed by midsummer.

Several Extensions Planned

Dominion Canners, Limited, Have Quite a Programme of Building in Prospect

Several developments are either under way or being considered by the Dominion Canners, Limited. At Strathroy they are just completing a new factory and warehouse to replace a factory that was burned down. The buildings are

Dominion Iron & Steel Company's Ship Plate Mill

Model of the New Mill at Sydney which has been under erection for two years and which will probably start operations this month

three storeys high with basements, and are built of concrete and red pressed brick, costing in the neighborhood of $150,000. The company are contemplating some alterations at Dunnville, owing to the buildings there being somewhat old and dilapidated. There are some minor alterations at one or two other factories, principally in the way of extending warehouse capacity. They are also figuring on a new factory in Hamilton to replace the present jam factory, which is not large enough for requirements. The latter extension, however, has not been finally passed upon by the board.

Ship-Plate Mill Nearly Ready

Five Million Dollar Plant at Sydney Expected to Start Operating in February

It is expected that rolling operations at the new ship-plate mill of the Dominion Iron and Steel Co., at Sydney, N.S., will commence towards the end of February. The erection of the mill was started in June 1918. The rated capacity is 50,000 square feet of half-inch plate in 25 hours, equivalent to 500 tons daily or 12,000 tons per month. The mill is equipped to roll between 3-16in. to 2¼in. gauges in widths up to 98in. and lengths up to 80ft.

The mill has been the direct outcome of the Dominion Government's shipbuilding policy. The Government will guarantee a tonnage at a price sufficient to recoup the steel corporation for its outlay. The original price arranged was $4.15 per hundred pounds for standard ship-plates, plus extras for unusual shapes. Subsequently the price was revised to $3.65 per hundred pounds. The agreement, as revised, calls for 250,000 tons of plate delivered over a period of five years, with Government option to increase the tonnage to 375,000 tons, not less than 50,000 tons to be supplied annually.

Two Shawinigan Plants Join

Electric Furnace Plant and Iron Foundry to Operate at Shawinigan Factories, Limited

The electric furnace plant of Fraser Brace and Co., erected at Shawinigan Falls during the war, and the iron foundry of Normandin Bros. have been acquired by new interests, and on January 1 commenced operations as the Shawinigan Foundries, Limited. G. G. Macartney, who operated the electric furnace plant for Fraser Brace and Co., is president; W. G. Dauncey, vice-president and metallurgist; and Captain C. M. Hall, secretary-treasurer. It is intended to continue the manufacture of pig-iron in one electric furnace pending developments which may lead to the production of ferro-alloys and special steels in the near future. Extensions are contemplated so as to enable the iron foundry to cope with the demand for the ordinary run of castings in such an industrial centre. Arrangements have also been completed for carrying on brass foundry work on a large scale and to put a special grade of semi-steel casting upon the market.

Doubling Plant Capacity

Canadian Hart Accumulator Co., Limited, Are Making Addition to Their Plant at St. Johns

An addition which will considerably more than double the capacity of their factory at St. John's, P.Q., is just being completed by the Canadian Hart Accumulator Co., Limited. The original factory was of mill construction, one storey high. The addition is of the same type of construction and will nearly double the size of the plant. The company's product consists entirely of storage batteries for various classes of work including batteries for electric power stations, telephone stations, fire alarms, electric railways, farm lighting, electric train lighting and automobile starting and ignition.

Woodstock Developments

List of New Industries Which Have Started Operations During the Past Year

In reviewing the year's work at the annual meeting of the Woodstock Board of Trade at which he was unanimously re-elected to office, the president, E. A. Rea, gave the following information about industrial developments during 1919:—

The Woodstock Paper Box Company have located in the Stone property on Dundas Street, and are now employing a good number of hands. We expect to see this number largely increased during the present year. The operation of this plant has proved a decided advantage to local manufacturers using their products.

The Orange Products Company have taken over the Tobin Arms Factory and are now making marmalades. They are employing a good number of hands, and expect to increase this number.

The Woodstock Worsted Spinning Company started operation during the year and are now employing many hands.

The DeLong Hook and Eye Company have located a branch in the city on the property of Mr. A. Thompson on Finkle Street, and are now employing fifteen to twenty hands. If the labor is available they may add considerably to this plant, and decide to locate their Canadian headquarters in Woodstock.

Bean and Westlake, Limited, have built an addition to their already splendidly equipped plant.

Hosiers, Limited, have built an addition to their factory and will shortly be employing many more hands.

The Harvey Knitting Company are adding an addition to their already large plant.

Hay & Co. have added an addition to their plant and have now a larger payroll than ever before in the history of the company.

The Linderman plant, which was closed for some time, is again in operation, and we expect to see this factory employ a large force of highly skilled, well paid mechanics.

On the recommendation of the Board of Trade the City Council submitted two industrial by-laws to the ratepayers, which were carried by overwhelming majorities, and with the result that we expect to see the Warren & Son Organ Co.,

Inside the Ship Plate Mill

Showing section of the hot bed looking north towards mill or motor pinions in the distance

Limited, occupy the Woodstock Lumber Co. building after making alterations to the factory which will make it thoroughly modern in every respect. They will employ many high paid mechanics.

The Brunswick Canadian Products Co., Limited, will start their large factory just as soon as weather conditions will permit. This will be one of the largest industries in the city, and will employ 200 or more men.

The electors will be called upon in a few days to vote on a by-law to assist the Karn Piano Co., Limited. I have every confidence in the men behind this proposition and hope to see this by-law get as large a vote as was accorded the other two in December last. I am sure it will be a great satisfaction to the citizens to see the Karn-Morris plant again humming with industry and employing more men than ever before.

Branch Plant in Dundas

J. R. Moodie & Sons, Hamilton, Have Leased Factory for Expansion

To assist in knitting and finishing their goods, J. R. Moodie and Son, Limited, Hamilton, who operate the Eagle Knitting Co., Limited and the Eagle Spinning Mills, Limited, in Hamilton, have established a small branch plant in Dundas. They started with fourteen hands, but expected to increase the number before very long.

Organized New Company

Dominion Bridge Co., Limited, Have Formed Subsidiary for Manufacture of Paper Mill Machinery

In the directors' report presented to the annual meeting of the Dominion Bridge Co., Limited, the following information was given relative to the company's activities in the manufacture of paper-making machinery:—

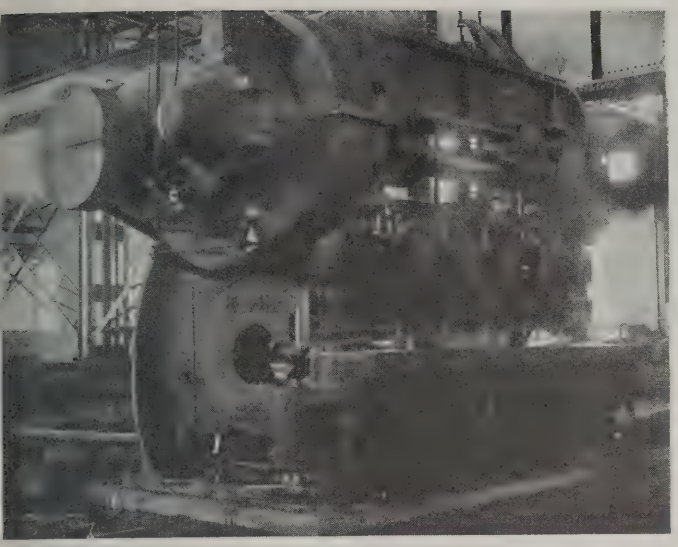
"The demand for paper-making machinery, alluded to in the last report, has outgrown the capacity of your shops at the Lachine Works, where its manufacture was being carried on, and your Company has purchased the land and shops of the St. Lawrence Bridge Company (built for the fabrication of the Quebec Bridge). A foundry equipped to turn out the special castings required for paper-making machinery and also for the heaviest class of general castings has been added. The tools and machines now used for making paper machinery are being transferred from your works to the new plant and the shops of that plant are generally being equipped for the manufacture of paper-making machinery, as well as for special foundry and machine shop products for which there is not now capacity in Canada.

"It was considered advisable to segregate the operations of the new plant from your Company and to incorporate a new Company under the name Dominion Engineering & Machinery Company, Limited, to take over the shops and equipment, the paper machinery business and other business for which these shops would be specially equipped, with an issued capital of $2,500,000.00. Your Company has acquired all the shares of the new Company.

"The purchase of the plant of the St. Lawrence Bridge Company, has resulted in the winding up of that Company and its assets are in process of distribution."

Build New Forging Department

General Forgings & Stampings, Limited, go in for Automobile Forgings and Stampings



General Forgings & Stampings, Limited, which is the new name of the Canada Pole & Shaft Co., Limited, Merritton, are at present building a complete new forging department in addition to their present plant, and this will when completed be the most up-to-date forge shop that can be devised. The change of name has been found very necessary owing to the fact that for some time past the nature of the business has been changing from that of a pole and shaft and woodworking business to that of a forging and stamping business. For a considerable time the company have been operating only on automobile forgings and stampings and from now on will devote the entire plant to this product. All officers and connections are the same as before.

Company Changes Name

Galt Robe Company of Galt, Ontario, will be Known in Future as Stauffer-Dobbie, Limited

A change in the name of the Galt Rubber Co. took place at the first of the year. It will now be known as Stauffer-Dobbie, Limited. No change in ownership or management has been involved, the former partners and officers continuing to own and control the company. Mr. Geo. A. Dobbie is president; Mr. Jos. Stauffer, vice-president and treasurer; and Mr. James H. Bennett, managing director.

The company was established originally in 1903 for the purpose of manufacturing imitation buffalo robes. By degrees other lines were added, such as lap dusters, hammocks, furs and fur products. In 1912 the original mill was completely destroyed by fire, and the present three-storey buildings were erected. Further new lines were added, such as Turkish

155-inch slitting shear

108-inch cutting off shear

Two Mammoth Machines in the Ship Plate Mill at Sydney

towels, kimona cloths, art blankets, rugs and comfortables. As robes are no longer the chief product, it was deemed advisable to change the name of the company.

The company have been adding new machinery as fast as it has been possible for them to secure it, and they have at the present time twenty-five new looms coming from the United States; twenty of these will be put on Turkish towels, which will bring their equipment in this department up to seventy-five looms; the other five will be put on special kimona cloth, which is the company's latest line. They expect that within a year's time the capacity of their mill will show an increase of fifty per cent.

Will Double Capacity

Canadian Connecticut Cotton Mills, Limited, Will Make Large Addition to Their Sherbrooke Factory

Financial arrangements are now being made through the sale of $3,000,000 of 8 per cent cumulative preferred stock which will enable the Canadian Connecticut Cotton Mills, Limited, to erect an addition to their plant at Sherbrooke, Que., increasing its capacity by about one hundred per cent. The new addition will contain 400,000 sq. feet of floor space and will be built of brick and steel with modern lighting, heating, and plumbing. The new mill will be devoted to the manufacture of automobile tire fabrics, furnishing employment for about 900 operators. The company expect that it will be completed early next fall.

New Clothing Company

Climax Clothing Company, Limited, Will Start Operations in Arnprior During March

Messrs. J. T. Griffith and N. L. McNaughton, who were in business in Arnprior, Ontario, under the name of Griffith, McNaughton, Limited, and who sold out their business a few months ago to F. C. Huyck, of Albany, New York, have formed another company under the name of Climax Clothing Company, Limited, with a capital of $100,000. They have purchased a building in the town of Arnprior, 75 x 30 feet, three storeys and basement, and are installing new machinery for the manufacture of men's and boys' ready-made clothing, ladies' and children's stockings and men's half-hose, to be manufactured in cashmere and worsted yarns on automatic machines. The plant is being equipped for a production of $250,000 per annum. Mr. F. Rutherford is to be mill manager, and they will employ about eighty hands, starting about the middle of March. Mr. J. T. Griffith is the president of the company; Mr. N. L. McNaughton, vice-president and secretary-treasurer; and Mr. A. A. McNaughton, accountant.

Have Made Improvements

Wilson Canadian Company, Limited, Are Now Operating Their Packing Plant in Chatham, Ontario

The Wilson Company, the big Chicago packers and provisioners, who took over the plant of the Chatham Packing Company last fall, have already made considerable improvements to the plant and are now in a position to handle 750 hogs per day. This capacity can be increased as the supply of live stock in the Chatham district warrants. The company, which is operating in Canada under the name of Wilson Canadian Co., Limited, state that they are going to lend their support at all times to the stimulation of the growth of live stock so that they will be enabled to increase the capacity of their plant still further.

Stationery Manufacturers Enlarge

National Paper Goods, Limited, Hamilton, are Adding Approximately 12,000 square feet to Their Factory

An addition to the factory in Hamilton of the National Paper Goods, Limited, manufacturers of envelopes, tablets, papeteries, etc., is at present under erection. The addition is 52 x 70 feet in area, three storeys high, and will contain approximately 12,000 square feet. It is being erected for the purpose of increasing capacity in the company's stationery manufacturing department. It is anticipated that the building will be completed on or about April 1st, and from 25 to 35 additional employees will be taken on.

Freight Claims and Their Collection

The Shippers' Problems—Liability After Delivery of the Goods to the Carrier—Handling Claims for Customers—Attitude of the Sales Department on Question of Claims

By F. R. ALLWARD
Transportation Department, Canadian Manufacturers Association

Third Article

THERE is a widespread opinion among the shipping public that once the bill of lading is signed the carrier is liable for any loss or damage that may be discovered on delivery of the consignment at destination, but this is not true where the goods are hidden from view. For example: in the case of an L.C.L. shipment of shoes the receiving clerk at the freight sheds may sign for two cases, but he has no opportunity of verifying the contents, and the fact that several pairs are found short on unpacking by the consignee is not conclusive evidence that they were pilfered while the consignment was in the hands of the railway.

There are other instances where a concern may be handling certain classes of goods in the capacity of broker, and for the sake of convenience they are never opened but are shipped out in the original package to their customers. Under such circumstances it would be manifestly unfair to hold a railroad company responsible for loss or damage, especially where the record of handling produced by the Claims Department does not show any evidence of damage or opportunity for pilferage. The courts, our law makers, and other regulating bodies have recognized the fairness of this view and in the present standard bill of lading the Board of Railway Commissioners for Canada has approved the following provision:

> "Received subject to the classifications and tariffs in effect on the date of issue of this original bill of lading..... the goods described below in apparent good order, except as noted (*contents and condition of contents of packages unknown*).

If we are to recognize the fact that brokers and other middlemen cannot unpack all case goods they receive for distribution (private brand goods in particular), then it devolves upon the manufacturer to establish such a system of packing goods that his employees can consistently make a sworn statement as to the contents and condition of any one consignment, should the occasion arise. However, it is not always necessary to follow this procedure where the manufacturer can convince a representative of the Claims Department that under the system adopted in his factory or shipping room the opportunity for error in packing is negligible.

As regards the number and outward condition of the packages a clean bill of lading holds good in the case of L.C.L. shipments or carload shipments loaded on public team tracks (when a checker is provided), but the railway claim departments are not prepared to recognize this view where carload shipments are loaded by the manufacturer on a private siding.

Cars Loaded on Private Sidings

Some three years ago the Canadian railways notified shippers in all the large terminals that they would no longer continue to supply checkers for shipments loaded on private sidings, on the grounds that men were scarce and that the labor costs were not warranted by the results obtained. They offered as a substitute to provide the shipper with car door seals, to give clean bills of lading, and to investigate all claims for damage or shortage in the same manner as in the past. It has been found, however, that the railways are not prepared to carry out the agreement as regards claims for shortage, especially if they are able to produce what purports to be a clear seal record. Unfortunately the carriers cannot be compelled by law to supply a checker, and for his own protection as well as in the interests of his customers the shipper should establish a most careful method of checking and should keep a record of the same in such shape as will admit of its being accepted in a court as *bona fide* proof of the correctness of his invoice and bill of lading. At least a double check of the goods going into a car should be established and a careful record made of the seals placed on the side doors as well as the small windows on the end of the car.

The practice of giving the seal numbers of carload shipments to railroad employees should not be countenanced, unless the shipper is satisfied that the information will not prejudice in any way a claim for shortage of goods. Seals are placed on car doors to protect the contents from pilferage, and in taking a record of the numbers a car checker is supposed to examine the seal for the purpose of detecting any sign of tampering. It will be readily understood, therefore, that the shipper who permits his staff to furnish railway employees with the record of seals protecting his shipments is encouraging the checker to neglect his duties.

Ownership in the Goods

As far as a railroad company is concerned, a consignment of goods covered by a straight bill of lading becomes the property of the consignee immediately that document is signed by the carrier's agent (in the absence of notice to the contrary) and the said consignee is the only party who can legally collect reimbursement on a claim for damage or non-delivery. This is not, however, the controlling factor as between the shipper and his customer. The extent of a shipper's responsibility is covered entirely by the terms of sale and as there is more or less controversy on this question it would be well for the seller to have a clear understanding with his customer based on the following terminology:

(1) When the price quoted applies only at shipping point and the seller merely undertakes to load the goods on or in cars furnished by the railroad company serving the industry or most conveniently located to the industry without other designation as to routing, the proper term is:

> "F.O.B. (name point of origin)"—F.O.B. mills, works or factory; all have the same meaning and obligations.

(2) When the seller quotes a price including transportation charges to destination without assuming responsibility for the goods after obtaining a clean bill of lading at point of origin, the proper term is:

> "F.O.B. (name point of origin)"—"Freight prepaid to (name point of destination)."

(3) Where the seller wishes to quote a price from which the buyer may deduct the cost of transportation to a given

point without the seller assuming responsibility for the goods after obtaining a clean bill of lading at point of origin, the proper term is:

"F.O.B. (name point of origin)"—"Freight allowed to (name point)."

(4) The seller may desire to quote a price covering the transportation of the goods to destination, assuming responsibility for loss and for damage up to that point. In this case the proper term is:

"F.O.B. cars (name point of destination)."

(5) It may be that the goods on which a price is quoted covering the transportation of the goods to destination constitute less than the carload lot. In this case the proper term is:

"F.O.B. cars (name point of destination) L.C.L."

(6) Should the seller be located at a point where the railways provide regular cartage service, and he wishes to quote a price on a less-than-carload lot, freight and cartage charges collect, without assuming any responsibility after obtaining a clean bill of lading from the carriers' cartage agents, the proper term is:

"F.O.B. warehouse (name point of shipment) L.C.L."
—F.O.B. mill, works or factory all have the same meaning and obligations.

It has been stated above that the consignee is the only party who can legally recover reimbursement on a claim for damage or non-delivery when a shipment of goods is covered by a straight bill of lading, but it has always been the practice for Claim Departments to entertain a claim from either the shipper or the consignee providing the original bill of lading (or bond of indemnity, in lieu of lading) is surrendered with the claim Similarly in a court action the shipper, in order to prove his right to recovery, need only produce his sale records showing that he held ownership in the goods until delivery to the consignee.

Handling Claims for Customers

The small town general merchant, brokers and the smaller wholesale distributing houses undoubtedly have little experience or knowledge of the proper procedure to follow in obtaining reimbursement for loss and damage claims from the railways, and as a matter of service many manufacturing concerns long ago adopted the practice of handling claims for their customers. Competition in trade has made it necessary for other dealers to follow suit, with the result that the majority of merchants now look to the shipper to credit their account for any loss or damage that may be found to exist on delivery of the shipment.

The most regrettable feature is the lack of co-operation shown by many dealers in failing to furnish the shipper with the evidence required to substantiate a claim on the carrier. This is apparently due to the popular belief that the shipper is legally responsible for the safe delivery of the goods at destination; but even from an ethical standpoint a dealer cannot consistently expect to obtain reimbursement for loss or damage to his goods unless he is prepared to furnish evidence in support of his claim.

Many firms hesitate to insist on the consignee furnishing the required proof for fear of offending their customers, but instead attempt to cast the onus on the railways by filing claims for every alleged case of damage or shortage reported by the dealer. This is certainly not fair to the railways and is apt to cause the claims agent to look with suspicion on every claim filed by the said shipper.

If manufacturers desire to avoid considerable losses they should get away from the practice of assuming responsibility for the safe delivery of goods at destination. Undoubtedly it is good policy as a service feature for a concern to handle claims for customers, but if this policy is followed the shipper should have it distinctly understood that negotiations with the railway claims department will be conducted *only* in behalf of the consignee and not because he (the shipper) is legally responsible; and furthermore, that credit will not be allowed until settlement is obtained from the railroad company.

Attitude of Sales Department

The shipper's sales staff may at first take strong exception to adopting such a policy on the grounds that it will antagonise the trade. This need not be so if the task of educating customers in their duties and obliagtions as receivers of freight is assigned to a good correspondent well trained in the art of business diplomacy. He should be able to find ample material for his purpose in the second article published in "INDUSTRIAL CANADA" for January; and as regards carload shipments for small stations it might be well to point out that the railways do not always make the practice of supplying a checker for shipments unloaded on a public team track. In that event the consignee should be cautioned to take extreme care in checking out the contents and also to examine the seals on the doors to determine whether or not they have been tampered with en route.

How to Prevent Claims

This article completes the series on "Freight Claims and Their Collection" and will be followed by an article on "How to Prevent Claims," dealing with them from a Shipper's Standpoint—such as Marking, Packing, etc.

Loss and Damage Express Claims

New Instructions Issued by American Railway Express Co. to its Claims Agents

In a circular recently issued by the National Industrial Traffic League, members are advised that the following new instructions have been issued by the American Railway Express Company to its claims agents regarding the settlement of loss and damage claims presented against the American Railway Express Company:—

"The following instructions will govern the settlement of loss and damage claims presented against the American Railway Express Company:

"(1) The date that written or verbal request is made by shipper, consignee, or other interested party, to trace a shipment, shall be considered as the date of claim, but verbal requests will be considered only when and as of the date substantiated by the Company's records made in writing.

"(2) Except as noted below, no claim for total or partial loss, or concealed damage, shall be paid which is not presented within four months after delivery of shipment, or, in the case of failure to deliver, then within four months after a reasonable time for delivery of shipment has elapsed.

Exceptions:

"(*a*) Where claim is made on account of loss of a C.O.D. shipment, the claimant shall be allowed forty days, in addition to the four months in which to file his claim. This based on the fact that we do not accept tracers for C.O.D. shipments within forty days of date of shipments unless shipper produces evidence that shipment has been delivered and paid for. When not presented within this extended period, decline.

"(*b*) Where C.O.D. shipment has been delivered and money collected, or where shipment is receipted for as C.O.D. and delivered without collecting C.O.D., claim should be paid regardless of whether or not presented within four months from date of delivery.

"(3) On account of difficulty in determining where or how delay or damage occurred, we will take the broader view and interpret the four months' clause as not applying to claims for delay, or claims where the damage to the shipment is apparent.

"(4) When, at the expiration of two years and one day after delivery of shipment, or in the case of non-delivery,

two years and one day after a reasonable time for delivery, claim has not been adjusted or declined in writing, and suit has not been commenced, claims shall be referred by Claim Agents to Superintendents of Claims, to be reviewed by them. Such claims will be paid only when, in the judgment of Superintendents of Claims, the Express Company was responsible for delay in settlement."

S.S. Service to Brazil

Monthly Sailings Started in January by the Canadian Government Merchant Marine

Canadian National Railways export and import department advise that they have inaugurated a service from Canadian Atlantic ports to Pernambuco, Rio de Janeiro and Santos on the East coast of Brazil which will be served by the same steamer as is now running to Buenos Ayres. The first sailing from Halifax was about January 25th; and the monthly service will be continued thereafter when cargoes offer.

There would appear to be a great desire on the part of the people of Brazil to do business with Canadians, and it is hoped that all manufacturers who can take advantage of this service will support it to the utmost.

On the January 25th sailing, there was a quantity of codfish, malt and newsprint paper. It is hoped that a larger trade may be developed in other manufactured articles.

Express Co. Liability

The Proposal to Modify the $50 Limit in Case of Loss or Damage

The provision in the express receipt limiting the liability of the company to $50 in case of loss or damage has been under consideration for some time, the proposal being to amend this clause to provide that in the case of shipments having an actual weight in excess of 100 lbs., the liability will be limited to 50 cents per lb. In other words, on a shipment of 200 lbs. the claimant would be able to recover $100, but under the present arrangement he can obtain only $50. Negotiations have been carried on with the express companies, but the Express Traffic Association are not prepared to make any concessions.

After careful investigation and consideration it was felt that if the case was taken to the Board of Railway Commissioners it might result in a higher graduated table for values over $50.00. Furthermore, the present basis for express rates authorized by the Board has been predicted on the $50.00 valuation, and any attempt to secure a modification of this provision might have a tendency to disturb the present scale. However, in view of the fact that some sections of trade, such as the Packing Industry, are urging a modification of the present rule, the Transportation Committee will deal further with the matter as soon as actual figures can be obtained to show whether or not any saving would be effected by the proposed amendment.

Ruling Issued

Interstate Commerce Commission Allows Some Latitude in Time for Fyling Freight Claims

In an article published in the January issue of "INDUSTRIAL CANADA" under the caption of "Freight Claims and Their Collection," it was stated that suits for loss, damage or delay to shipments originating in the United States could be instituted *only* within two years and one day after delivery of the property, or in case of failure to make delivery then within two years and one day after reasonable time for delivery has elapsed.

The Interstate Commerce Commission have now issued their ruling in connection with the test case referred to, in which they say that the limitation in the bill of lading should not be construed as prohibiting the payment after two years and one day of meritorious claims if seasonably filed.

It is understood that the General Counsel of the United States Railroad Administration is preparing a circular withdrawing his instructions to the carriers of July 22nd, 1919, to withhold payment of claims of this nature pending the Commission's decision in the "Decker" case and now authorizing the railroads to pay just claims for loss or damage, even though the statutory period has expired. It is anticipated that these instructions will be issued shortly.

New Live Stock Contract

Board of Railway Commissioners Will Take Up Matter at Hearing This Month

A hearing will be held in Ottawa on Tuesday, February 10th, 1920, for the purpose of taking evidence on the proposed new Live Stock Contract and all other matters affecting transportation of live stock by rail in regard to which the Board of Railway Commissioners has jurisdiction. This question has been under consideration since 1904.

At a later date the Association and interested shippers took the initiative in urging a reasonable contract and had practically come to an agreement with the railways, on some points, when someone suggested to the Board that no action be taken until the matter was decided in the United States. However, there has been so much delay in arriving at a decision in the United States that urgent representations were made to the Chief Commissioner for an immediate decision in so far as Canada is concerned, and as a result the Board has now set the matter down for a hearing.

Increased Freight Rates

Considerable Increases Likely to be Asked for by the Railway Companies

Reporting to the Executive Council at its January meeting, the Transportation Committee made the following statement on the subject of increased freight rates:

"Judging from current events there is every indication that an application will be made for an increase in freight rates, prior to the return of the railways to private ownership in the United States on March 1st, 1920.

"As the operating ratio is now 95%, it is apparent that an increase of approximately 25% must be granted. In Canada, in so far as the Canadian National Railways are concerned, the operating ratio is considerably higher and, if that line is to be put on a proper footing, it may mean an increase of 50%. However, whatever happens in the United States will in all probability be reflected in Canada.

"The attention of your Committee was directed to an editorial which recently appeared in one of the leading newspapers of Canada, contending that the C.P.R. was not entitled to any additional revenue and suggesting that if it was found expedient to allow a further increase in rates the C.P.R. should be required to pay the amount of the said increase into the Dominion Treasury. The members agreed unanimously that no attempt should be made to interfere with the C.P.R., which would have the effect of curtailing the efficient freight service now provided by that Company, and accordingly the following motion was adopted: "That this Committee go on record as being in favor of the C.P.R. receiving the same rates and the same conditions as those allowed to the Government Railways in every shape and form."

"There is a widespread feeling in Canada that any increase in rates granted to railways should not apply on export

An Endorsement of Group Life Insurance

BY THE COMMITTEE ON

Industrial Betterment, Health and Safety

OF THE

National Association of Manufacturers

Authorization for the transaction of Group Life Insurance throughout the Dominion has been recently granted to Canadian and United States Insurance Companies by the Superintendent of Insurance for Canada.

The Equitable Life Assurance Society

of the United States

the pioneer company in the development of this modern welfare measure for employees, now offers its services to Canadian firms and corporations.

How successful this form of insurance has proven to all branches of business is shown in the report of the Committee on Industrial Betterment, Health and Safety of the National Association of Manufacturers which includes many endorsements from representative patrons. A copy of this pamphlet will be sent on request by the Equitable's Group Insurance Department. Here is a particularly pertinent paragraph:

> "Taking it as a whole, your Committee believes that to those having in mind the improvement of conditions of those in their employ, so far as the same may be justified by a modest expenditure, will probably find in Group Life Insurance the medium which dollar for dollar of such expenditure will prove most beneficial to employer and employe alike, and therefore to the general improvement of industrial conditions. As it has been aptly put by someone:
>
> "Could an addition of one to one and one-half per cent. of the payroll be more economically and satisfactorily expended in promotion of the security, loyalty and content of the workers than when invested in sound life insurance protection for employes?"

THE EQUITABLE

LIFE ASSURANCE SOCIETY OF THE UNITED STATES

HALIFAX MONTREAL TORONTO WINNIPEG

business. In this connection it has been pointed out that export rates to Canadian ports are usually kept on a parity with those applying via American ports. Canada must be kept in the position to permit exporters of this country to compete with the United States."

Railway Materials for Brazil

Large Quantities Required by the State-Owned Railroad System of the Republic

Information has been received through the Department of Trade and Commerce, that the State-owned railroad of Brazil, known as "A Estrada de Ferro de Carlos Barbosa a Alfredo Chanes," requires quantities of material of various kinds. Below is a statement of materials required. This has been forwarded by the Chief Engineer of the railway, and Canadian manufacturers who are interested should get in touch with Major G. B. Johnson, Canadian Government Trade Commissioner, Cairo (P.O. Box 2164), Rio De Janeiro, Brazil.

Railway Construction Machinery, Locomotives, etc.:
- Excavating machinery (steam or electric shovels).
- Rock drills (compressed air or electric).
- Picks, shovels, bars, etc.
- Rails and dump cars for removing earth and rock.
- Cableways and buckets for removing earth and rock.
- Explosives: Cement.
- Steel rails, weighing 28 to 40 kilos per meter, with all accessories.
- Bridge-steel girders for spans from 20 to 200 meters.
- Locomotives, passenger and freight, gauge 1 meter, minimum radius on curves 150 meters, heaviest climb 18 millimeters per meter, and track of rails weighing 30 kilos per meter.
- Freight cars, boxes and flats.
- Trucks, complete for one-meter gauge.
- Passenger coaches, one-meter gauge.
- Railway automobiles, one-meter gauge, for line service.
- Tools for track-laying and maintenance of way.
- Rail saws and drills.
- Turntables, switches.
- Telegraphic and telephonic equipment, including line material.

Machinery for Electric Power, no belt transmission:
- Machine tools for railroad shops, lathes, drills, planers, machine hammers, etc., for cutting and drilling iron and steel.

Compressed air installation for painting and riveting
Grindstones, ventilators
Woodworking machinery.
Furnaces for melting iron and other materials.
Cranes and winches for handling heavy pieces in the shops.
Hand tools, for stonemasons, blacksmiths, carpenters and electricians.
Clocks, time-keeping and night-watchmen's.
Pumps, compression and centrifugal (for electric or steam power).
Steam engines—stationary.
Gas engines (gasoline and kerosene).
Electric motors, dynamos and accumulators.
Surveying instruments, transits, levels, etc.
Drafting materials, drawing instruments, paper, inks, tables, etc.
Blue-printing equipment, complete.
Stone-crushing machinery.
Railroad scales (car and locomotive).

And all material for the construction, maintenance, and operation of a railroad.

B.C. Car Shortage

Serious Situation Developed in December, but was Relieved as Result of Negotiations

During the latter part of December a serious car shortage developed in British Columbia, which completely tied up the export of lumber from Canada to the United States. Immediately on being apprised of the situation a direct appeal was made to Sir Henry Drayton, Finance Minister, and to the Board of Railway Commissioners. This business amounted to approximately ten millions per month, but on account of the large number of Canadian cars in the United States the Canadian lines showed reluctance to allowing their equipment to be used for this traffic. The American Coast lines would not allow their cars to come into Canada for this lumber; but finally, as a result of negotiations, the C.P.R. agreed to provide sufficient equipment to handle the traffic.

Howard Smith Paper Mills

Company Issues Preferred Stock to Finance Purchase of Toronto Paper Manufacturing Company

A public offering of the unsold portions of $1,500,000 eight per cent. cumulative participating preferred stock of Howard Smith Paper Mills, Limited, has recently been made. Of the total $475,000 is to be exchanged for a like amount of preferred stock now outstanding, and the balance will be used to acquire the entire capital stock of the Toronto Paper Mfg. Co., Limited. The new stock is offered at 103, yielding over 7¾ per cent.

- - - - that Time Recorder system you are thinking of buying

Is it "fully automatic"? To be so it must have the three features mentioned below. If it lacks any one of these it is NOT fully automatic

A Time Recorder System that is not "fully automatic" does not eliminate entirely the human element in its operation. Getting rid of this "human element" is a great economy and safeguard because then there is nothing for an employee to regulate or adjust. Nothing to remember---or forget. Any operation in a Time Recorder System that can be forgotten is a WEAKNESS and no system is stronger than its weakest link.

The 3 Automatic Features

found together only in Internationals are

1st.---The shifting of the Time Card (or Sheet) from day to day---is done automatically.

2nd.---The shifting of the Time Card (or Sheet) for the proper placing of the "In" and "Out" Records---is done automatically.

3rd.---The printing of all "Late" or "Early Leaving" recordings in Red or in a separate column --- is done automatically.

We make these fully automatic Recorders either self contained or electrically driven with control by a master clock.

Now the leaving out of any one of these three automatic features considerably reduces the cost and calls for a machine of a different build. We supply them of very high quality, and they will meet in price and surpass in merit, any other machine in the world.

On our Electric Recorders you can have either the "Late" records printed in a line below the regular record, or you can have it printed in Red. The latter is of course far superior and is selected by 95 per cent. of the Electric Recorder buyers.

Internationals give you COMPLETE service---or less if you want it. They are made in Canada and they stand apart for design, durability, finish and exclusive features.

Control of Profiteering in Great Britain

(*Continued from page* 64)

cutlery, brushes, and domestic utensils of all kinds; pottery, wood-working and furnishing, building materials, and chemicals.

The duties of the Central Committee are exercised through three standing committees.

The Investigation of Prices Committee, which investigates costs, prices, and profit at all stages;

The Complaints Committee, which receives, hears, and determines complaints against wholesale traders;

And the Committee on Trusts, which obtains from all available sources information about trusts and trade combinations, having for their object the control of prices, output, or transport rates.

Among the members of the Central Committee are: Sir Thomas Allen, Parliamentary Committee, Co-operative Congress, and deputy chairman, Consumers' Council; Sir William Beveridge, director, London School of Economics; G. H. Stuart Bunning, president, Trades Union Congress, 1919; Viscount Burnham, publisher of the London *Daily Telegraph;* Baillie P. Gillespie, M.P., General Federation of Trade Unions; Stanley Machin, chairman, London Chamber of Commerce; J. J. Mallon, secretary, Anti-Swearing League; T. Robinson, M.P., National Confederation of Employers' Organizations; Sir Wilfred Stokes, Federation of British Industries; J. H. Thomas, M.P., president, the National Union of Railwaymen; Ben Turner, General Union of Textile Workers; and Sidney Webb.

There are six women on the committee.

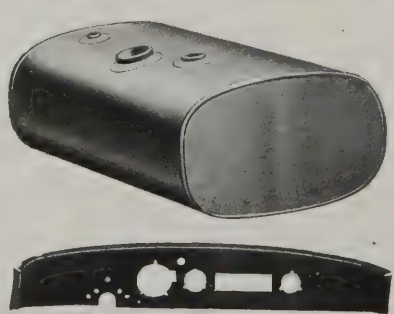
One feels that so far the Profiteering Act in Great Britain has been a good deal of a squib—a false alarm. The public, which cried out loudly and bitterly against alleged or suspected profiteering, has not been at all enthusiastic in hauling alleged profiteers to trial. Also, what is profiteering? Where does profiteering begin?

The Profiteering Act has a life of six months. In the months that remain there is not likely to be any more zeal on the part of the public to take advantage of the provisions of the Act than it has shown in the weeks that have elapsed since August 19. That there has been profiteering none is likely to deny, but in the main the present high prices for most things in common use are not high because of profiteering, but of other causes.

File Manufacturers Had Good Year

By E. M. THURBER

Manager Nicholson File Company, Port Hope



In 1917 we made large additions to our plant, but on account of labor shortage did not get any benefit from this added equipment until the end of 1918. During the year 1919 we were able to get all the men we required, many of them old hands who had returned from France. The efficiency of our force steadily improved, our output increased, and the percentage of spoilt work decreased and our output was the largest we ever had.

During the first half of last year new business was small, we were operating our plant largely on old orders and getting our stock in shape. During the last half of the year business has been much better than we anticipated and we have had no difficulty in disposing of our entire output. Prices have remained constant during the year.

We have had no trouble getting the raw material we required, and while transportation has been slow, it has not inconvenienced us. This is largely a question of anticipating requirements and keeping a surplus stock of material on hand. The outlook for the Spring appears good, but conditions are too uncertain to make any predictions.

STEEL STAMPINGS

NEARLY 60 years of specialized experience and a plant that has few equals on the continent for equipment, assure you exceptionally good service when you place your order with us for Steel Stampings and deep-drawn work. We can handle Stampings of every size and are particularly well-known for automobile body stampings and tank work of all descriptions.

Are you using castings or forgings when perhaps a stamping would not only be more economical but would serve better ?

Our engineering department is at your service to help you determine where you can replace forgings or castings with steel stampings.

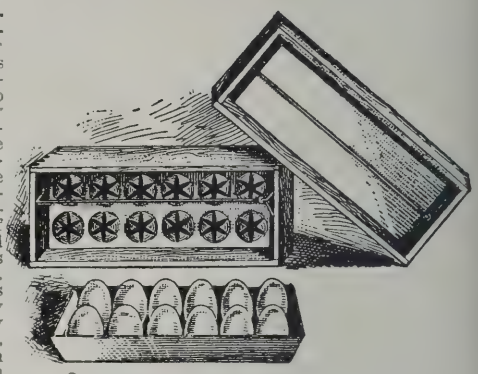
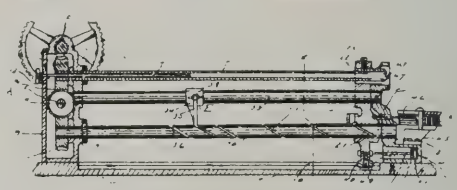
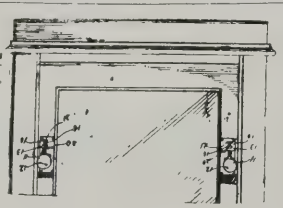
PATENTS FOR SALE



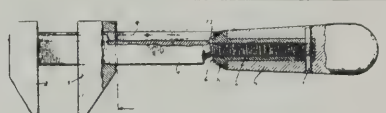
METALLIC RAILROAD TIE, the only absolutely satisfactory device of this nature, being provided with an improved means for rigidly connecting the rails to the tie, nothing to work loose, strong, durable, a real labour saver. The inventor, C. R. Ruggaber, Box 231, Augusta Road, Savannah, Ga., offers patent rights in the Dominion for sale.



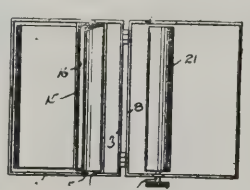
VALVE MOTION FOR FLUID PRESSURE ENGINES.—The object of this invention is to control the valve movement so as to allot a greatly increased portion of the cycle of movement to each open position of the valve and to cause a correspondingly smaller portion of the cycle of movement to be occupied by the opening and closing movement, with a corresponding gain in the time allowed in the expansion and lessening of the compression time in the exhaust end of the cylinder, and to provide means for a constant angle of advance with respect to the main crank of the driving axle. Patent rights for sale by W. S. Clarkson, 90 Foster St., New Haven, Conn.



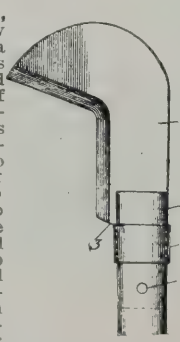
DOOR AND SASH VISE.—A very simple and inexpensive device, thoroughly efficient in use, and one which may be manufactured and placed on the market at a very small cost with reasonable profit. The device is one which has been thoroughly tested and is beyond all question of experiment. Patent rights for sale by C. F. Shilling, P.O. Box 306, Avoca, Ia.



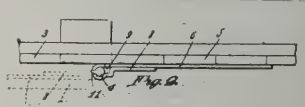
EGG SHIPPING CONTAINER for carrying eggs in such a manner as to thoroughly pack and protect same against breakage, and at the same time permit the transporting of same by parcel post, express and the like. The device is one which may be cheaply manufactured, is simple in construction and absolutely efficient in use. Patented April 11, 1916. U. S. No. 71296 Patent rights for sale by F. Koht, 1903 Cottage Grove Ave., Des Moines, Ia.



FENCE-STAY-WIRE-FORMING MACHINE whereby a fence stay may be formed from a single piece of spring or other wire in a simple and rapid manner. The finished article is of an even, neat appearance, as well as being strong and durable. For further particulars apply to the inventor, J. F. Tillman, 1419½-4th Ave., Seattle, Wash., who offers patent rights for sale.

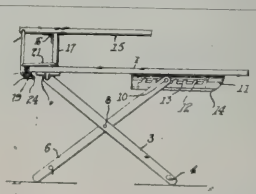


WINDOW LOCK, specially adapted for use in connection with the sash of weightless windows, greatly improving the construction of devices of this character and which can be readily thrown into or out of operation as desired. This device may be cheaply manufactured and is one which, in view of its simplicity and reliability, should find a very ready market. Patent rights for sale by P. Zielinski, Armstrong Creek, Wis.



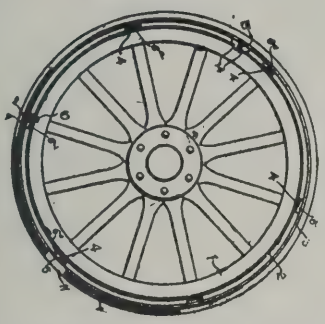
MONKEY WRENCH, an improved construction having a shank and jaw member fixed on one of the shank ends and a movable jaw slidingly disposed on the shank, and a jamming member extending over the length of the shank and being embedded therein, and a means at the handle of the wrench for lifting the rear end of the jamming member to lock the movable jaw on the shank at the desired place. The device is without doubt a great improvement over any of the present devices now on the market, and in view of its simplicity and the cheapness with which it may be manufactured, should prove an interesting proposition. Patent rights for sale by Al. L. Stebor, Jr., 914 George St., Plainfield, N.J.

CIGARETTE ROLLER, a simple and ingenious device having a paper and tobacco magazine, a hollow roller for receiving the tobacco from the magazine, a paper guide partially surrounding the hollow roller, and a cut-off for the flow of tobacco, and a pivoted platform supporting the paper for leading fresh papers to the paper guide. This device is one of the most efficient of its kind that has ever been brought to the attention of the public. Patent rights for sale by R. S. Jenkins, P. O. Box 651, Fort Myers, Fla.



BUSH KNIFE, this device is now being used by a great many farmers and others engaged in the clearing of land and wherever the knife is known, the workmen will use no other. Its cutting qualities are so much superior to any other that the inventor has found it impossible to supply the demand and is therefore desirous of getting in touch with a reliable manufacturer with a view of disposing of his interests or arranging for the manufacture of his device in the Dominion. For further particulars apply to Q. Sawyer, Creswell, N.C., who offers patent rights for sale.

GATE HINGE, a strong, durable device, simple in construction, and efficient in use, easily applied and having few parts, so that it may be cheaply manufactured and placed on the market at a price that will compete with any of the present devices of this character. Patent rights for sale by E. C. Crook, Lewistown, Mont.

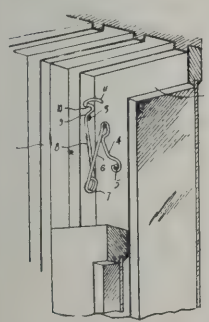


STOVE PIPE, having for its object to permit a length of stovepipe being easily cleaned without taking it down or putting out the fire in the stove. Also, by inserting one in the chimney flue, the same can be easily cleaned at any time without removing the pipe. The device is one which may be cheaply manufactured and placed on the market at a small cost with reasonable profit. Patent rights for sale by E. P. Pearson, Maple Brae Farm, Carp, Ont.

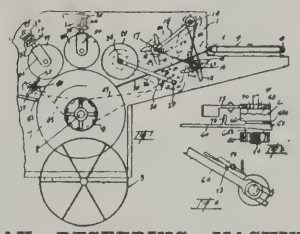
IRONING BOARD that not only fills all requirements, but actually helps make ironing easy. There are no legs to interfere with the ironing of skirts or any other articles. The device may be adapted without necessity of unfastening any thumb-screws or bolts. When folded it takes up smaller space than any other folding ironing board. Patent rights for sale by M. P. Nichols, Leetonia, Ohio.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE

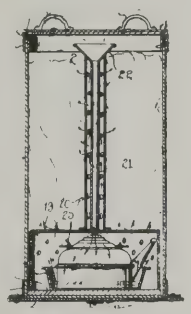


AUTOMOBILE WHEEL RIMS, comprising certain new and useful improvements in automobile wheel rims of the demountable type, and has for its object an improved construction possessing the desirable characteristics of rigidity and strength, which will require no bolts, no crosscut in the rim to admit water into the tire casing or shoe and which can be very easily manufactured and will not be liable to get out of order or become loose in service. The device aims to generally improve devices of this class so as to render them more useful and commercially desirable. Canadian and U. S. patent rights for sale by W. Martin, 12,407 St. Clair Ave., Cleveland, Ohio.

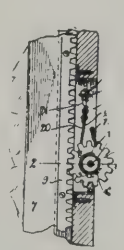


RESILIENT TIRE for use on vehicle wheels, and embodies springs in contradistinction to tires of the pneumatic type in order to give resiliency to the structure, the principal object being to provide a resilient tire which may be inexpensively manufactured and at the same time prove durable and easily maintained in good repair. For further particulars apply to R. F. Burnett, R.R. No. 3, Coffeyville, Kans., who offers patent rights for sale.

WINDSHIELD MATCH-SAFE, a newly patented device by means of which a pipe, cigar or cigarette can be easily and surely lighted by a common match in the highest wind. Neat, novel, simple and inexpensive, and needed by every smoker. Should prove to be a great seller. Patent rights for sale by E. P. Hovey, East Quogue, N.Y.

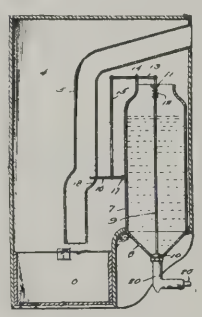


STORM WINDOW HOLDER, particularly adapted for securing a frame window in place or which may be used equally as well for supporting screen frames or the like. The fastener is attached to the inside of the frame and is protected from the elements so that the possibilities of water entering the screw holes by which the fastener is attached and rotting of the material is limited. Patent rights for sale by E. P. Ekman, Wausa, Nebraska.

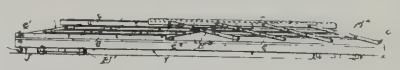


FLAX DESEEDING MACHINE, a thoroughly efficient and economical machine, specially provided with means for automatically feeding or retarding the feeding operation as desired. No wasted seed. Simple in construction, strong, durable, easily operated, and may be manufactured and placed on the market at a price that will compete with any of the present devices. Patent rights for sale by H. L. Larson, Headquarters Northern Con. Co., P.G.E.R.R., Cariboo, B.C.

DISINFECTOR AND DEODORIZER, particularly adapted to disinfect and fumigate articles such as clothes, by the use of formaldehyde or other like disinfecting materials. The device is very simple in construction, may be cheaply manufactured, and is of inestimable value to doctors for emergency operations where it is necessary that uniforms or clothes must be thoroughly disinfected on short notice. For further particulars apply to E. J. Capek, Schuyler, Nebr., who offers patent rights for sale.

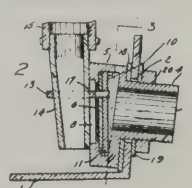


CHOCK BLOCK to be used in connection with a waggon bolster. The device consists of a channel iron disposed in the ordinary bolster, a chain means for fastening the channel iron and chain to the bolster, a block disposed in the channel, and further provided with a slot below the opening and communicating therewith, said chain being insertable in the opening and locked in the slot for holding the block in a set position. This device is one which, in view of its convenience and simplicity, should prove an interesting proposition. Patent rights for sale by G. Abrey, Osceola, Ark.

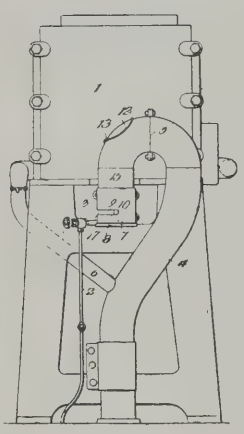


WINDOW ATTACHMENT for use in connection with windows for obviating the necessity for the now generally used window cords and weights and generally simplifying and improving the construction of devices of this nature. It may readily be applied to the window frame or removed therefrom and is of extremely simple and inexpensive construction, embodying but few separable parts, all of which may be manufactured at a low cost. Patent rights for sale by J. Stavnizky, 90 Wells St., South Manchester, Conn.

IMITATION GRASSHOPPER, is so natural that it is hard to distinguish between the real thing and this new imitation. It has been proven that they will catch bass and shy big trout when other lures fail. The device consists in forming a body portion of buoyant material, the legs being made from shafts of feather by cutting the barbs from the shafts and bending the shafts to form triangular members having overlapping ends. Then the shafts are fastened in place on the body in a manner to represent the legs of a grasshopper, and by fastening the feathers upon the back of the body member you have the grasshopper complete in detail. There is nothing in the whole makeup that will rot out of season. The whole construction is strong and durable and when carefully handled will outlast any other fly. Patent rights for sale by M. M. Palmer, 119 West Washington St., Pasadena, Cal.

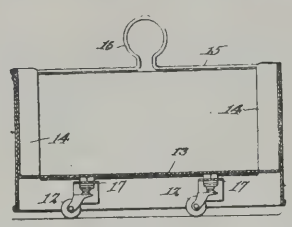


VENDING MACHINE, a simple and ingenious device for the dispensing of beverages so constructed that by placing a coin in the chute provided the device will automatically measure out a certain proportion of the beverage to be dispensed. The device is very simple in construction, attractive in design, and should prove an interesting proposition in view of the very extensive and uncompeted market. Patent rights for sale by E. P. Mitchell, Tappen, N.D.

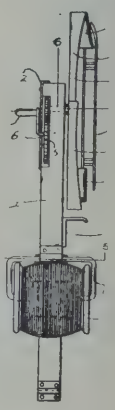


RAILWAY FREIGHT CAR for expeditious handling of freight of railroads and steamships. With this device railroads would know no such thing as freight congestion and steamships, of course, would not be delayed by stalled railroad shipments. The device will effect the complete release of freight cars from every siding and terminal and will effect enormous economies in railroad fuel and car equipment, and prevent breakage of merchandise in transit. Absolutely no delays. For further particulars apply to H. Epstein, 277 Broadway, New York, N.Y.

WASH TUB of special construction, having a perforation in the side wall of the tub and a nozzle adjustably attached so as to facilitate the emptying or filling of the tub with water as desired. The device is so constructed that it may be manufactured separately or used in connection with a tub washing machine. Patent rights for sale by Mrs. Alina Lukus, 13 Lerox St., Flagstaff, Ariz.

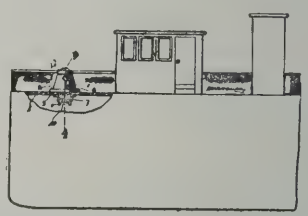


HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

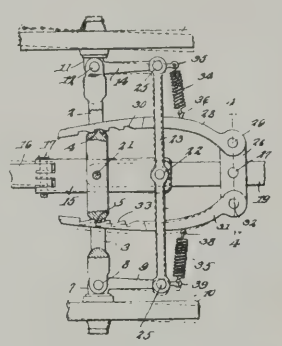


PATENTS FOR SALE

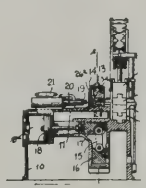
BLAST PIPE CONNECTION, to be used in connection with a furnace having an air conduit and a goose neck section immediately adjacent to the furnace and leading into the combustion chamber of the furnace and an automatic damper hinged within the apex of said goose neck section, and adapted to be automatically secured in its raised position. This device is partly adapted to be used in connection with an oil-burning furnace and has been thoroughly tested. Patent rights for sale by A. J. Borener, 1143 E. 81st St., Chicago, Ill.



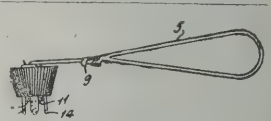
CUSPIDOR HOLDER AND LIFTER, the device is absolutely sanitary and provides a simple, inexpensive, and efficient means for holding and lifting cuspidors, for the movement of same from one place to another without lifting, and is adapted to prevent accidental overturning of the cuspidor Patent rights for sale by W. G. Devlin, Arcata, Cal.



SHUTTLE WINDER for winding thread upon tatting shutters, is compact in structure and has a shuttle holder rotatably supported by a suitable supporting structure. The shuttle holder is constructed of a pair of telescoping sections so that it may be adjusted for holding any size of tatting shuttle. The device is simple in construction and has been thoroughly tested and found to be absolutely efficient in use. Patent rights for sale by W. Hendry, 1011½ A St., Tacoma, Wash.



HASP LOCK, a strong durable and efficient device, which may be cheaply manufactured and placed on the market and that will compete with any of the present devices. The device is one which has been thoroughly tested and which has been found to be superior in construction and more efficient in use than any article of this nature that has yet been brought to the attention of the public. Patent rights for sale by H. E. Miller, Moro, Ark., U.S.A.



APPARATUS FOR RAISING SUBMERGED VESSELS which may be permanently secured to the vessel, and which, when the vessel is sunk, will indicate the location of same and form a guide for the lifting mechanism, so that the latter may be carried directly to the ship when let down into the water, and secured to same to facilitate the raising thereof. Patent rights for sale by W. A. Blakesley, 3403-30th Ave., S.W., Seattle, Wash.

WAGON TONGUE having special means for mounting same in such a way that the tongue will not swing laterally and strike the animals when one wheel of the vehicle drops into a hole or other depression in the highway. The device has been thoroughly tested and has been proven to be absolutely efficient in use. For further particulars, apply to J. Hendrickson, P.O. Box 461, Mullan, Idaho, who offers patent rights for sale.

DRILL FORMING DIE for forging and sharpening rock drills or other drill bits, and particularly adapted to be used in connection with machines which have vertical operating clamping dies and horizontally operating upsetting hammer. The device is one which has been thoroughly tested and is beyond any question of experiment. For further particulars apply to O. C. Julien, Montreal, Wis., who offers patent rights for sale.

PIE CRIMPER designed to readily press together the edges of the pie crust and simultaneously trim the edge of the pastry protruding over the edge of the pan. The device is of simple and durable construction and may be manufactured and sold at a comparatively low cost with a very reasonable profit. Patent rights for sale by J. H. Brewer, Silverton, Ore.

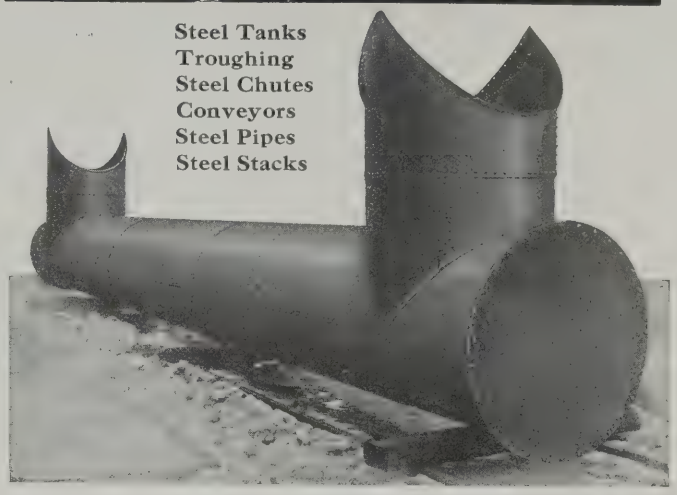
PATENT FOR SALE



Patent for sale on Lamp Chimney Holder. Simple and inexpensive to manufacture. Will sell outright for cash or sell right to manufacture in Canada. Stays on burner when chimney is pulled off, but may be removed or put on any time. Miss Amanda Halverson, Delavan, Minn.

Closer Relations With B. West Indies

(*Continued from page 57.*)

build up the Empire, until that portion of the Empire down there would be something that we should be proud of. We should have in North America a bulwark of the Empire of a size and of an importance such as at present we little dream of.

Now, I make certain suggestions; I have very definite views myself as to what is best. Another man makes other suggestions, and a third person makes other suggestions, and you do not know what to do, and no government knows what to do. And if I were in the Government, I would not know what to do, but I would know that the only way to decide a thing like this is, not to take what I say, or what any other fellow says, but to begin by getting a commission appointed, with British Guiana alone, preferably, to discuss their special problems. There will be no trouble at all in getting the 50 per cent. arrangement. British Guiana is ready to consider the appointment of a commission to discuss the question. Let us make some move. What we want is to have a commission representing British Guiana and representing Canada, and the Mother Country also would have a representative on it, and let them take everything into account and let them thresh out all these different matters and decide how far we can go in the direction of relationship, commercial or political; let them consider everything and make a definite recommendation of what is necessary to consolidate, commercially at least, Canada and the West Indies. If Canada does that, our Government will have done one of the most important things ever done by a Canadian Government, and I hope something will be done soon.

OFFICE AND FINANCE

Why Appraisals of Plant are Necessary

The Four Prime Uses of an Appraisal and Some of the Factors which Enter into the Determination of Present-Day Value

By CHARLES W. McKAIY

(Reprinted from "Factory")

THE four prime uses of the industrial appraisal of to-day are:

1. For determining annual depreciation for purposes of Federal income tax.
2. For determining insurable values.
3. For use in cost accounting.
4. For financial purposes.

A brief résumé of these four prime uses of the engineering appraisal will be presented in this article and a more detailed consideration will be accorded them in the ensuing articles in this series. It is not the purpose of these articles to attempt to train the reader as an appraisal expert, but rather to present the fundamentals of these all-important questions of value and depreciation in such a manner as to facilitate the busy executive in the future administration of his business.

Depreciation for Tax Purposes

The use of an appraisal in connection with the determination of annual depreciation for tax purposes presents many intricate and involved problems. To paraphrase the voluminous literature issued by the Inland Revenue Branch of the Treasury Department, it may be said that the basis for determining annual depreciation is "cost." Cost, as defined by the Revenue Department, consists of cost as of March 1, 1913, for all buildings, machinery, equipment, and so on installed, or acquired, prior to that date, and actual original cost as shown by the company's books and records for all property acquired subsequent to March 1, 1913.

After determining cost in the manner above outlined, it is next necessary to determine average lives applicable to the various component elements of an industrial company's buildings, machinery, and equipment. The average life of any item of plant is dependent upon the following four factors:

1. Depreciation resulting from wear and tear.
2. Depreciation resulting from age.
3. Depreciation due to inadequacy.
4. Depreciation due to obsolescence.

All of these factors must be given the most careful consideration in determining the average life of industrial equipment.

Knowing the average life and the scrap or salvage value, it is a comparatively simple task to determine an annual rate of depreciation which, when applied to the item of plant under consideration, will give the corresponding depreciation in dollars per annum.

The Federal Government has placed the burden of the proof, as to costs and as to annual depreciation, squarely upon the taxee or, more properly speaking, squarely upon the appraisal engineer whom the taxee appoints to represent him in solving his depreciation problems.

The truth of the foregoing statement will be obvious from the following quotations, each taken from a recent letter to the writer from the Inland Revenue Branch of the Treasury Department:

"A reasonable allowance for the wear and tear of property arising out of its use or employment in the business or trade is to be based on the cost of such property—or on its fair market price or value as of March 1, 1913, if acquired prior thereto. In the absence of proof to the contrary, it will be assumed that such value as of March 1, 1913 is the cost of the property less depreciation up to that date.

"Replying to your inquiry as to the proper rates to be used in computing depreciation on various classes of machinery, you are informed that no rates are prescribed by this office. The rate must be determined by the estimated number of years constituting the probable life of property with respect to which depreciation is claimed.

"You are advised that this office has established no specific method of determining the capital sum to be replaced by depreciation allowances, but considers such sum a question of fact to be established by any evidence which the tax-payer chooses to submit in support of the figure placed upon it by him."

It will be obvious that the determination of "cost," for tax purposes, is by no means a simple problem. The inventory must be so taken as to segregate all buildings, machinery, and equipment installed, or acquired, prior to March 1, 1913, from buildings, machinery, and equipment acquired subsequent to that date. The inventory of plant acquired between March 1, 1913 and the date of appraisement must again be subdivided to show the actual dates of acquisition of the component elements.

In determining average life—and therefore annual depreciation rates—the whole inventory (both the inventory of plant acquired prior to March 1, 1913 and the inventory of plant acquired subsequent to that date) must again be subdivided, or classified, according to the average lives, or depreciation rates, of the component element. In other words we cannot apply the depreciation rate applicable to property found to have an average life of 20 years to property having an average life of 10 years.

Proof Must be Conclusive

Again, in view of the fact that the Federal Government has so obviously placed the burden of the proof—in this matter of depreciation—upon the taxee, it is most important that such proof shall be conclusive—founded upon recognized principles of depreciation, modified to meet the peculiar requirements of the case in hand.

This term, "peculiar requirements," has been used advisedly. The obsolescent factor of depreciation, for instance, is a variable one. Certain conditions may exist, and can be proved to exist, in one plant for a given type of machine which do not exist in another plant for the same type of machines. The same argument applies to building and miscellaneous equipment.

The writer recalls a case where a building which, under ordinary conditions, would have had a relatively long life,

HEAD OFFICE . . TORONTO

bid fair to have an exceedingly short life—due to two of the four depreciation factors already referred to. In the first place the vibration of the peculiar type of machinery used in the case in question tended materially to shorten the life of the building. This shortening of life was obviously due to the "wear and tear" factor of depreciation.

Again, rapid changes in the manufacturing art were so modifying the machine requirements that it seemed probable that the building in question would have to be entirely rebuilt at an early date to provide for the installation of the new machinery necessary to keep pace with the change in the manufacturing requirements. Hence, the building was depreciating rapidly, not only from wear and tear, but also from obsolescence.

Unless every depreciation problem of this nature is solved upon its individual merits by technically trained appraisal specialists, the conclusions reached are likely to prove faulty, and the proof—as to depreciation—submitted by the taxee, may not withstand the searching scrutiny to which it is bound to be subjected by the Federal Tax authorities. The Federal Government, in placing the burden of the proof upon you, the taxee, expects—and has a right to expect—a complete, concise and authoritative solution of your problem.

This whole question of the relation of depreciation to industrial appraisement and to the Federal income tax will be treated in detail in subsequent articles in this series.

The Insurance Appraisal

The insurance appraisal requires entirely different treatment from one made for purposes of determining annual depreciation. Insurable values are determined upon the basis of reproduction, or replacement costs. Reproduction costs, to be complete, must include not only the cost of machinery and equipment f.o.b. point of purchase but also the freight and installation charges on the equipment purchased.

From the reproduction cost there must be deducted accrued depreciation—in other words the present sound insurable values as of the date of appraisement must be determined.

In making an insurance appraisal, proper summaries must be provided to show the insurable values according to the insurance company's subdivision of the property.

The advantage of an unbiased appraisal, made by a neutral outsider, can hardly be exaggerated. The subject of insurance appraisals, and practical suggestions as to their preparation, will be discussed in a subsequent article.

The Appraisals in Cost Accounting

Competition in modern industry—and the constantly increasing cost of material and labor—has made the subject of cost accounting a most important one.

It is frequently advisable to allocate manufacturing costs to the various operating departments. In so doing, it is necessary to know not only the actual material and labor costs but also the overhead costs or "departmental burden."

In determining the investment by departments and in allocating the overhead charges for insurance, interest, taxes and depreciation, the engineering appraisal plays a very important part.

Having determined the total investment and the investment in each department it is a comparatively simple problem to allocate properly all of the overhead costs.

There is still another, and a most important use of the modern engineering industrial appraisal. Industrial companies frequently require capital for plant extensions and business promotion. The investment bankers who make a specialty of financing industrial property require a complete appraisement of both the tangible and intangible assets of the company under consideration.

This phase of the subject of industrial appraisement is

most important to the industrial executive, and will be treated in detail in the last article in this series.

Besides the four main uses outlined here, other more specialized uses arise from time to time in a particular plant. The appraisement for these specialized uses is handled as the individual case demands.

The importance of so designing an industrial valuation as to meet all the demands that may be placed upon it, can hardly be exaggerated. It is possible to design an appraisal to meet every valuation requirement of the industrial executive. The scope and manner of preparation of such an appraisal will be discussed in subsequent articles, together with a comprehensive, but concise, treatment of the subject of depreciation.

Dominion Bank

Strong Position of This Institution Disclosed by Annual Statement for 1919

A perusal of the statement submitted to the shareholders of the Dominion Bank at the annual meeting on Wednesday, January 28th, very clearly indicates that this well-known institution had a most satisfactory year ending December 31st, 1919.

The net profits amounted to the substantial sum of $1,169,000, an increase of $83,000 compared with 1918. As a result the bank paid to its shareholders a bonus of 1 per cent., in addition to the regular dividends at the rate of 12 per cent. per annum. In all $780,000 was distributed in dividends and bonus. The net profits amounted to 9 per cent. of the bank's capital and reserve.

As to the improvement which took place during the year in the bank's financial position, the total assets on December 31st last, stood at $143,500,000, an increase for the twelve months of $10,000,000. But that which will particularly interest those who are disposed to closely analyze financial statements is the fact that the bank's immediately available assets are equal to 54 per cent. of its liabilities to the public. The item standing under this heading is $70,075,000, being an increase of $6,546,000 over 1918. Cash assets alone amount to 24.59 per cent. of the public liabilities, the total cash assets, $31,903,000, being in excess of the previous year by $3,405,000.

It is quite evident that the management of the Dominion Bank has continued during the year its conservative policy in respect to the valuation of its assets and the augmenting of the bank's general strength. Off its bank premises account it has written the sum of $300,000, or $50,000 more than it did in 1918, while its note circulation has been reduced by $332,000. The balance carried forward to profit and loss account, amounting to $495,700, is in excess of the previous year by about $50,000.

That there has been an expansion in the Bank's relationship with the business interests of the country is evident from the increase of $2,328,000 which took place in commercial loans, the total at the end of the year standing at $66,400,000.

Laurentide Company

Reorganization has been Approved by the Shareholders of the Company

At a special meeting of shareholders of the Laurentide Co. on January 27, approval was unanimously given to reorganization proposals submitted by the board. Assets and liabilities will be transferred to a new company of the same name,

EXPORT TRADE

Manufacturers contemplating the extension of trade in foreign countries are offered the assistance which this Bank's world-wide business connection makes possible.

The experience and facilities of a department of the Bank devoted wholly to foreign business are at your command.

AUDITORS' REPORT TO SHAREHOLDERS

We have compared the above Balance Sheet with the books and accounts at the Chief Office of The Dominion Bank, and the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on December 31st, 1919, we certify that, in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us at another time during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank.

G. T. CLARKSON, R. J. DILWORTH } of Clarkson, Gordon & Dilworth, C.A.

Toronto, January 20th, 1920.

hile shareholders receive three shares of stock in the new ompany for each share held in the old company.

The President of the company, George H. Chahoon, jr., ho presided at the meeting, briefly outlined the plan recomended by the Executive of the enterprise, stating that it had een arrived at with the view to providing for the further evelopment of the property and in the general interest of aurentide shareholders. The company, he said, had materilly increased its production of sulphite and groundwood pulp, nd had already contracted for the building of two new newsrint-making machines of a daily capacity of seventy tons each. elivery of these machines was expected early in 1921, and ne output has been sold at prices which should prove lucrave to the shareholders.

Brompton Pulp

Annual Dividend is Now on a 6 per cent. Basis, Payable Quarterly

Reviewing the result of the year's operations at the anual meeting of the Brompton Pulp and Paper Co. on Jan. 5, Mr. F. N. McCrea, the president, stated that the first alf of the fiscal period had been a very lean one, so far as usiness and earnings were concerned. Companies engaged argely in the production of newsprint paper had been in a nore fortunate position than those whose output consisted f other lines, such as Kraft wrapping papers and other roducts in less urgent demand at the time. Conditions, owever, Mr. McCrea said, had much improved in the last alf of the twelve months, and he anticipated that the comany was "in for a good year."

As an example of the improvement which had set in, the resident stated that one of the company's subsidiaries, the Odell Manufacturing Co., whose sales in January of last year amounted to only $52,000, had booked business in December amounting to some $381,000.

Following the meeting of shareholders, the directors, who had been re-elected, declared a quarterly dividend o 1½ per cent on the common stock, thus placing the shares on a 6 per cent. basis. Previously the stock paid 5 per cent. per annum.

Imperial Oil Limited

New Issue of Stock Being Made Which Will Raise Fifteen Millions of Capital

Imperial Oil Limited are offering shareholders 200,000 shares of the unissued capital stock of the company at $75 per share, in the proportion of one new share for every six shares held. By this plan the issued capital of the company will be increased from $30,000,000 to $35,000,000, though, as the shares are being put out at three times the par value, the sum of $15,000,000 will be put into the treasury. Payment may be made in full on March 1 or in four equal instalments of $18.75 per share on March 1, June 1, September 1, and December 1.

Gillette Safety Razor Co.

Company Enjoyed Substantial Growth in Business During Past Year

At the annual meeting of the Gillette Safety Razor Co., of Canada, Limited, held in Montreal, on Jan. 27, it was reported that net earnings for 1919 were $821,394, an increase of $306,958, or almost 60% over 1918. An interesting factor in the company's business during the year was a substantial increase

Dominion Bridge Co.

rnings for the Past Year Declared to be Most Satisfactory in View of Conditions

Earnings of the Dominion Bridge Co., Limited, during the st year of peace amounted to $1,640,531. This compares with ,477,009 in 1918. After the usual allowances, there remained ,343,305 for disposition, representing earnings at the rate of .6 per cent. on the share capital. With the addition of the evious year's balance, the amount carried forward into the rrent year's account was $3,848,613.

Reviewing the results of the year's operations, G. H. Dug-n, the President of the company, stated to the shareholders: he result is considered satisfactory in view of the conditions taining during the year. The beginning of the past financial ar was practically co-incident with the date of the cessation hostilities; the armistice caused the cancellation of muni-on orders, with whch the shops were filled, disrupting the siness of the company. The adjustment of these muntion ders and of the organization of peace conditions, together th the general public hesitation in placing business resulted very little profitable occupation for the plants and organiza-on during the early months. The costs of both labor and aterial have, contrary to expectations, increased during the ar, and were therefore in excess of estimates.

"During the latter half of the year there was a marked provement. It closed with a fair volume of business and od prospect of an active demand for the present year."

Canadian Car

American Interests Now Secure a Place on the Board of the Company

Changes of considerable importance in the board of the nadian Car and Foundry Co. were effected at the annual eeting of the company on January 25. Two of the former rectors, Messrs. Erskine Hewitt and J. Frater Taylor, tired, and four new directors were added, viz., W. H. oodin, President of the American Car and Foundry Co.; ndrew Fletcher, President of the American Locomotive; ewis L. Clarke, President of the American Exchange ational Bank of New York, and Francis H. Clergue, Mon-eal.

In his address to the shareholders, Mr. Butler dwelt at me length on the importance of the new alliance with the werful companies working in similar and kindred lines to e Canadian Car concern. He stated that Mr. Clergue was e largest individual holder of the company's stock at the esent time, after some 26,000 shares had been transferred him to Mr. Woodin.

The various plants of the company, Mr. Butler stated, re never in better condition than they are at present, and at the car concern was in a good financial position. The 19 business, he said, had approximated $33,000,000, and the mpany had $8,000,000 of orders on the books at the begin-ng of the current calendar year. Last year, on the same te, unfilled business had amounted to $17,000,000, but, vertheless, a good average business was expected in 1920.

Tokyo

Japan's increasing foreign trade is characteristic of the intelligence and energy of the nation.

Canada's trade with that picturesque country has increased rapidly and continues to expand.

Tokyo, the capital of Japan, home of the Mikado, is in touch with every corner of the Japanese Empire. Thus Canadians having trade relations with the Japanese, will find the Tokyo branch of the Park-Union Banking Corporation of far-reaching service.

SYSTEM SERVICE

WHAT DO YOUR RECORDS MEAN TO YOU?

JUST so many papers—papers which you can thoughtlessly dispose of after they have served your present purpose.

Or do they represent the aggregate of many business transactions? Do you account them the vital goodwill factor they really are—a goodwill factor whose value is dependent upon the ease, accuracy and quickness with which they can be referred to at any future time?

Upon your records the success of your business—perhaps the work of a life-time—depends. Your records must be quickly accessible and carefully preserved if you are to give your customers proper service. To be quickly found they must be properly filed and properly safe-guarded. Have one place for each and have everything in its place.

Proper standardization of records and proper filing insures your business goodwill, saves time and embarrassment for you and for all those on your staff.

"Office Specialty" Standardized Equipment meets every business need—and "Office Specialty" System Service, the result of over 30 years of study of thousands of filing and record keeping systems—is offered to you without stint or limit in the solution of your filing and record keeping problems.

Additional Reports on 1919 Conditions

OWING to delays in the receipt of some of the contributions sent in for publication in the January issue and also to the fact that a number of reports were crowded out at the last minute, it has been deemed advisable to continue this valuable feature into the present number, and on this and following pages will be found a number of additional articles dealing with 1919 conditions and the outlook for business in the year 1920.

Clothing Manufacturers and the Labor Problem

By C. B. LOWNDES
President, The Lowndes Co., Limited, Toronto

THE transition of the men's clothing business from a war to a peace footing resulted in a tremendous unsettlement throughout the entire industry. Prior to the armistice men were continuously going into khaki, and the Canadian clothing manufacturers suffered materially in reduced volume of business throughout the period following the commencement of hostilities.

At the end of 1918 there was a very great scarcity of business, and when it became mooted that there was the possibility of getting export orders for clothing and an arrangement was made effective by the Canadian Government through the creation of credits in favor of Roumania, it was naturally grasped at by the great bulk of those engaged in the business. Following the placing of this business, in which time cloths and linings had to be bought and patterns and models developed, demobilization commenced with consequent increase in the demand for domestic trade. As greater numbers of soldiers were discharged, the retail trade were cleaned out of all classes of men's garments and stocks were rapidly depleted all over the country. The demand for spring lines increased enormously and fall bookings were exceptionally heavy and far beyond the expectations of the great bulk of Canadian clothing makers.

Increasing Disturbances

When business commenced to advance, it became noticeable that there was an increasing disturbance in the labor situation, and at once the evils which had pursued the trade for some time commenced to show themselves. The shortage of workers became more pronounced month by month, and the fact that no help had been trained during the period of the war years, that the source of supply for the class of help that usually engaged in the clothing business had been cut off, that there had been a tremendous change in four years through natural decrease in the industry by way of marriages and deaths, and that large numbers had left Canada during the period of hostilities in order to avoid military service, all these factors combined to place the industry at the greatest disadvantage it has ever been in in its history.

Manufacturers realizing the difficulties of the situation and the possibility of their being unable to get their goods delivered, commenced to bid for labor, and the workers, realizing that the manufacturers were deluged with orders and were dependent entirely upon their services for delivery, encouraged the practice, until it was quite evident to many that the situation had every aspect of resulting disastrously unless it could be promptly controlled. Many manufacturers were of the opinion that labor in its attitude was unfair to the industry, while a few more moderate in their point of view recognized the principle that, when three jobs were open to one man, the individual so placed was likely to be a picker and chooser and the advantages of the laws of supply and demand were all upon his side. With conditions in this state, production gradually diminished, and despite the introduction of policies of various kinds dictated by expediency, there was no general improvement in the situation, as the objects sought by labor were the recognition of its right to organize, to have collective bargaining, and compulsory arbitration. With this situation governing, the early months of 1919 were fraught with continuous difficulties to the manufacturers.

Trade Cleaned Out of Stock

As indicated above, when the travellers went on the road for fall bookings, they found the retail trade practically cleaned out of stock, and in addition to the labor difficulties, manufacturers found increasing difficulties in getting cloths from the mills owing to lessened production created by a shortening of hours in practically all textile lines. Fall orders were booked on the basis of the wages governing during the spring months, and herein the manufacturers of the country were, generally speaking, very heavy losers, for no sooner were fall orders booked than the individual demands of the workers became greater and greater. In addition, collective demands were made which were acceded to in order to maintain production.

At this point a few manufacturers in Toronto, recognizing that if the goods were to be manufactured and the retail trade to be supplied it would be necessary that steps be taken to deal with labor, formed what is known as the Associated Clothing Manufacturers, to which 18 houses subscribed their signatures. This organization met the officials of the Amalgamated Clothing Workers of America, representing the employees, and an agreement was reached, the result of which indicates a control in the clothing industry of wonderful significance and pointing to the possibilities of mutual negotiation between employers and employees. Under this agreement the parties thereto agreed to bring a government into the market, and in the course of the early fall months, unitedly joined in appointing Dr. H. B. Sharman, a former professor of Chicago Unversity and a gentleman of

"We Will Locate There"

THIS is the decision of every manufacturer who really goes into the facts about Hull. After having investigated Hull—and having carefully considered its exceptionally advantageous conditions, there is but one verdict.

Hull's growth has been as steady as it has been sure. The prosperity of its industries has been in some cases phenomenal. It makes a definite appeal to industrial concerns.

Hull wants more industries.

If you have a growing business, and you are progressive, Hull's City Council will give you greater co-operation than you can secure anywhere else in Canada.

Here are some facts about Hull:

Hydro-Electric power as low as $12.00 per H.P. per year
Plenty of labor (population 200,000 within 2½ miles).
Low fixed assessment on land for 15 years.
Low tax rate.
Tax exemption for 15 years on improvements.
Cheap factory sites including water-front sites with private power development privileges.
Shipping facilities over 11 steam railway lines and by river and canal to the seaboard and great lakes.
Located in the most populous part of Canada, midway between Quebec City and Windsor or Detroit.

And there is much more you ought to know about Hull. Let us explain in detail. All information will be given cheerfully on request. Write to the

Industrial Commissioner
HULL - CANADA

Bring Your Industry to HULL

outstanding scholastic attainments and considerable business experience, as Impartial Chairman governing the Board of Arbitration, his decision in all cases to be final and to be accepted by both sides without demur.

With the appointment of this Board of Arbitration, under Dr. Sharman, the employers appointed as Labor Manager for the Toronto market Mr. A. A. MacIntosh, formerly of the Toronto *Globe*, but more recently Managing Editor of the *Advertiser* of London, Ont. Mr. MacIntosh occupies a new position in Canadian industrial life, being virtually in control of all arrangements made on behalf of employers with the representatives of the workers. His decisions, in so far as they affect the employers, are final, and it is his duty to interpret the policy of the organization which he represents so that it shall result to the advantage of those connected with it. The Amalgamated Clothing Workers of America have as their representative Mr. H. D. Rosenbloom, who himself prior to becoming associated in organization work was a worker in the ranks of factory employees. Among employees he is recognized as both fearless and capable in unholding the rights of those he represents, and it is generally conceded that he has a keen appreciation of what is necessary for the proper protection of the industry as a whole. The officers of the Associated Clothing Manufacturers are: President, C. B. Lowndes of the Lowndes Company, Limited; Vice-President, Wm. Johnston of Randall & Johnston, Limited; Treasurer, T. W. Learie of W. R. Johnston & Company, Limited; Secretary, R. Schutz of the North American Tailors, Limited.

Noticeable Improvement

With the signing of the agreements between the parties interested, there was a noticeable improvement not only in the stability of the market but in the output of the workers, and conditions to-day are tremendously better than was the position during the early months of the past year.

The problem of the clothing manufacturers in respect to getting goods has almost been as vital as the problem of getting the goods made after they had been secured. Following the armistice, many American woolen manufacturers for a time were panicky and swept into Canada with goods at considerably reduced prices. Canadian manufacturers, having a better grip of the situation, bought freely. Unfortunately for them, however, the American market suddenly stiffened and American mills and agents, finding a higher price for their stuff, in many cases, allowed the orders booked at the low prices to go by the board, turning their attention to selling the goods at higher prices, and no doubt with the ultimate intention of delivering should the prices subside. This experience naturally has not enhanced the reputation of many United States manufacturers, and during the last few months the tremendous depreciation of the Canadian dollar has done more than anything else to drive trade in this country into a realization that it is better to buy at home or to buy in the Old Country, particularly in view of the fact of the advantages to be gained owing to the low rate of sterling exchange.

During the past year Canadian clothing makers have had very little demand for what is commonly known as cheap goods. Most buyers having insisted upon having the better quality article despite the fact of very heavy advances on the price of such. The trends of values, however, have been continuously up, and here it may be said that with cloth prices still rising, and labor costs not decreasing, it is altogether likely that high prices will maintain for some considerable time in the future.

The outlook in the clothing industry shows many abnormal situations, but from all angles, it is unquestionably fav-

REES' RoTURBo PUMPING MACHINERY

Is used the world over in Modern Industrial Plants, Power Stations, Waterworks, Mines, Pulp and Paper Mills, Salt and Chemical Plants, where highest efficiency, reliability and high-class engineering are demanded.

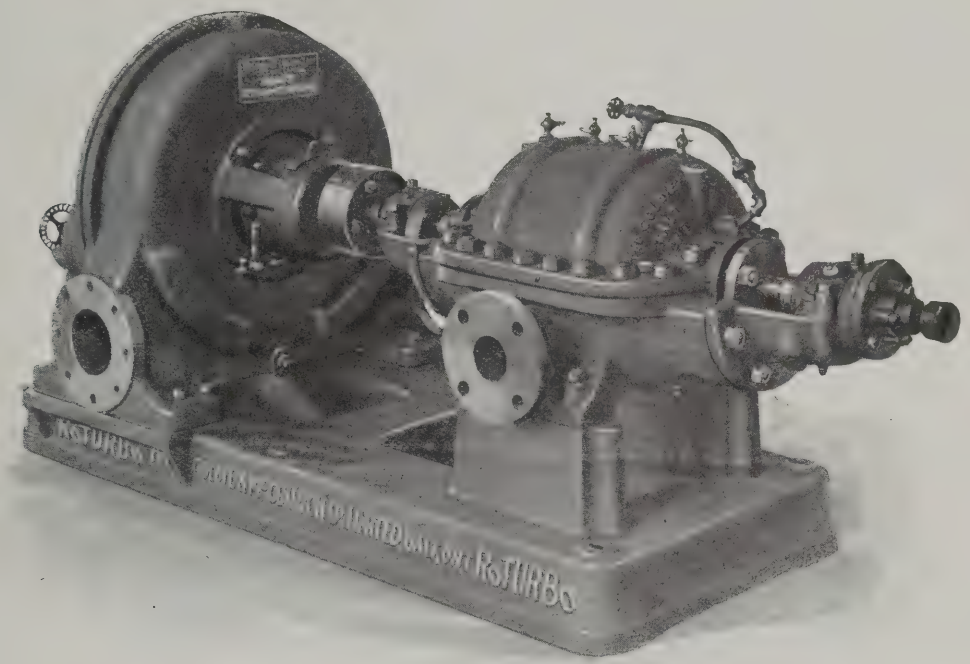

Illustration shows a REES' RoTURBo Multi-stage Pump direct connected to Goldie & McCulloch "WAIT" Steam Turbine, recently built for the Salts & Potash Co. of Canada, Limited, for pumping brine.

REES' RoTURBo Pumps provide a very high and sustained efficiency over a wide range of duties which means a saving in power costs. The self-regulating feature of RoTURBo design is responsible for this saving, and this same feature protects your prime mover from overloads on a decreased pressure head, eliminating expensive delays and costly repairs.

orable. Most houses are well booked for spring delivery, and providing the cloth makers are in a position to fill orders which have been taken, practically the entire industry should enjoy an excellent season. The prospects for fall 1920 are also good owing to the great shortage of heavy goods, particularly overcoats, during the past fall months.

While the labor market locally may be said to be sound at the moment, it cannot be said that it does not offer elements of potential disturbance owing largely to the fact that the whole trade is not associated in the movement for a better understanding between workers and those who engage them. There has been a tendency during the year to eliminate the piece-work methods, and this is regrettable, but is merely another evidence of the fact that workers will not produce under conditions of prosperity as they will produce under conditions of adversity. It has seen also a movement looking to the elimination of the contract shop and in many respects this is not an unmitigated evil. There will undoubtedly in the next few years be a tremendous impetus to inside manufacturers, which condition will be maintained once it is proven to employers that as much can be produced in the inside shop as has formerly been said to be produced in the outside contract shop.

SCARCITY OF LABOR AND MATERIALS HAMPERS

By C. F. Fell

Hamilton Carrhart Cotton Mills Limited, Toronto

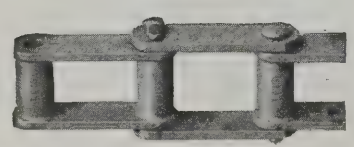
We are experiencing a great deal of trouble in endeavoring to get experienced labor, and also raw materials. While we have been endeavoring to increase our output, due to being heavily oversold, we find that both these conditions mentioned are retarding our progress far more than we are able to comprehend.

As regards marketing conditions, they are very good, and the demand exceeds the supply. We, of course, benefited on the Roumanian order placed through the Trade Commission at Ottawa, and believe that through this means there was a greater demand by the domestic trade.

Unless the mills can increase their output, the outlook for 1920 will not be very bright, and until raw materials are produced in larger quantities, it will be utterly impossible to expand. We had contemplated making several extensions to our plant in order to enlarge our business, but find that owing to the mills restricting the booking of orders, and non-deliveries of contracts placed in the past, it may not be possible for us to make these extensions as at first intended.

BETTER CLASS GARMENTS IN REQUEST

By Jno. A. Northway



John Northway & Son, Limited, Toronto.

The labor in this trade has very largely been foreign, mostly Jews, and since the stop in immigration there has naturally been a great shortage. In our own plant we have had so much trouble with this class of labor that we have discontinued employing same and are building up a staff of a better type. In raw materials, the advance has generally been as high as 300 per cent. We have not increased output much on account of the foregoing conditions.

We find quite a large demand, especially for the better class of garments, more so than before the war, the public demanding garments made of fine qualities of silk and wool, which we might say has a good deal to do with the high price of garments. As all raw materials are still advancing, garments must necessarily follow. We have done nothing to speak of in the export line.

We anticipate that business will be very good for the next few months if there is not too much disturbance in the labor markets at home, in the United States or in England, which would effect the delivery of raw materials to us.

A-1111

LABOR VERY SCARCE IN BRITISH COLUMBIA

By Jas. B. Thomson
Jas. Thomson & Sons, Limited, Vancouver, B.C.

Skilled operators are very scarce and very hard to get. The minimum wage, which was set in September last, makes it necessary to pay girls for work of this kind $14 per week as a minimum. It is thought that possibly operators will be easier to get now that the labor market is replacing certain number of girls with men, but the great difficulty is that that class of operators are not skilled, and the minimum wage award has set such a high figure on apprentice help, *i.e.*, the sum of $11.00 per week, coupled with the fact that you are only allowed one in seven of this class of help, that it makes it very hard to recruit labor in the West.

Regarding raw material, there has been a shortage of this. In many instances we were forced to buy in the United States at higher prices than we should have had to pay were the Canadian mills in a position to make delivery of cotton piece goods.

We were successful in increasing our output to a certain extent, but not as much as we would like. The demand at all times for the product of our factory has been greater than we were able to supply, even though the prices, owing to market conditions, have had to be steadily advanced. At the present time the output of our factory hardly goes beyond the confines of the province of British Columbia. We have had some very tempting offers to export, but it has been impossible, owing to lack of both labor and material.

As to the future, indications at present are that the demand will be good for the coming year for the product of our factory in our own province, but we are constantly asked by merchants in other provinces, and also from Australia and New Zealand, to see if we cannot supply them with merchandise. What we need in British Columbia most is more skilled operators. Machinery for expansion we can easily get, and I think by importation we could readily obtain additional cloth, but there is not much encouragement to put in additional plant with such a scarcity of labor as exists. There are other lines we will manufacture when labor conditions change and we can get skilled employees, such as, particularly, women's garments and possibly cheaper line in men's ready-to-wear clothing. For the present we have to content ourselves with the manufacturing of shirts, overalls and mackinaw clothing.

CONDITIONS IN THE WHITEWEAR INDUSTRY

By J. B. McCarter
President, Eclipse Whitewear Co., Limited, Toronto

Our experience in manufacturing for the last two years has been difficult owing to the scarcity of labor and raw materials, and the demand has been so great that it has been impossible for us to take care of all business offered. In 1918 our output was the largest in our history to date, and in 1919 the Eclipse sold more goods from the 1st of September until the 15th of November than our entire output the previous year, forcing us to call our travellers off the road and refuse further business. Even if we were able to obtain more labor, it is doubtful whether we could do more business or make use of the extra help on account of the scarcity of raw materials. We have practically been forced to purchase all our cotton in the one market, England being out of the question, both in deliveries and in values; and the rate of exchange much against us in the United States. We have practically given instructions here not to purchase anything in the States, on account of their high exchange.

Regarding export business, we have been doing considerable in New Zealand, but have been compelled to recall all samples from that country, as we did not think it good policy

The Canadian Appraisal Company

Limited

DURING the past fourteen years we have appraised some four thousand properties, scattered all over the Dominion of Canada.

These include the leading and most representative plants of every manufacturing industry of the Dominion.

The valuations which we make comprise land, buildings, plant, machinery and equipment, tools, water powers, etc.; in fact, all the permanent working plant of any manufacturing or other industry.

Our certificate, therefore, of values, in conjunction with the certificate of profits and liquid assets prepared by the accountant, furnishes a complete verification of a company's assets.

Quicker than Thought!

"Fifty-nine seconds after the alarm was given, the first stream was turned on the fire."

Quick work!

But the Grinnell beats it always by minutes, often by ***hours***.

With ordinary fire-fighting apparatus, a fire must be ***seen*** before it can be attacked and only too often this means that it is too late for any effective fighting to be done.

But "way back" in the darkest corners, out of sight and hearing, the silent little Grinnell sentinel is everlastingly watching for that first rise in temperature that indicates that the fire is just ***beginning***.

Often before the fire is ***seen*** by any human being—"Click!" "Splash!" and a deluge of water from the Grinnell Sprinkler overhead has placed it definitely among the "might have beens."

And the surprising part of it all is that it actually costs less to protect your building with Grinnell Automatic Sprinklers than to do without them.

Your insurance man knows and will tell you just how much a Grinnell installation will save you each year, in premiums alone.

Important

Heretofore the underwriters have often required a tank supply for automatic sprinklers in addition to the city mains. Now, however, Grinnell Sprinkler equipments can often be installed without a tank.

to try to export under the conditions. We think it time enough to take up export business when we are in a position to supply our home country's demands. As far as the future is concerned, we see no likelihood of any change or easing up. We are at present making plans to carry on in 1920 and 1921 along the same lines as 1919 and 1920.

CLOTHING DEMAND LIKELY TO CONTINUE

By J. J. Greene

Managing Director, W. E. Sanford Mfg. Co., Ltd., Hamilton

Advances in wages, with steady employment, combine to make labor conditions with us more favorable at present than heretofore. The condition with regard to our raw materials continues difficult. Deliveries from the mills are slow and repeat orders almost impossible to place, and where possible, only at an advance. One mill advises us that they will take a season off in order to catch up.

We are enlarging our capacity by the building of a new factory, not only to increase our output but also to make conditions more favorable for our workers.

The demand for our product is good, particularly in the medium and better lines. With others we expect to be put strenuously to it to satisfactorily fill our coming season's orders. We cannot say that the trend of values is downward or even stationary. In many lines the direction is upward.

We have done a little export business, but find that the home demand is so large, skilled labor and the difficulties of procuring materials so great, that we feel we have to practically restrict our efforts to our own country.

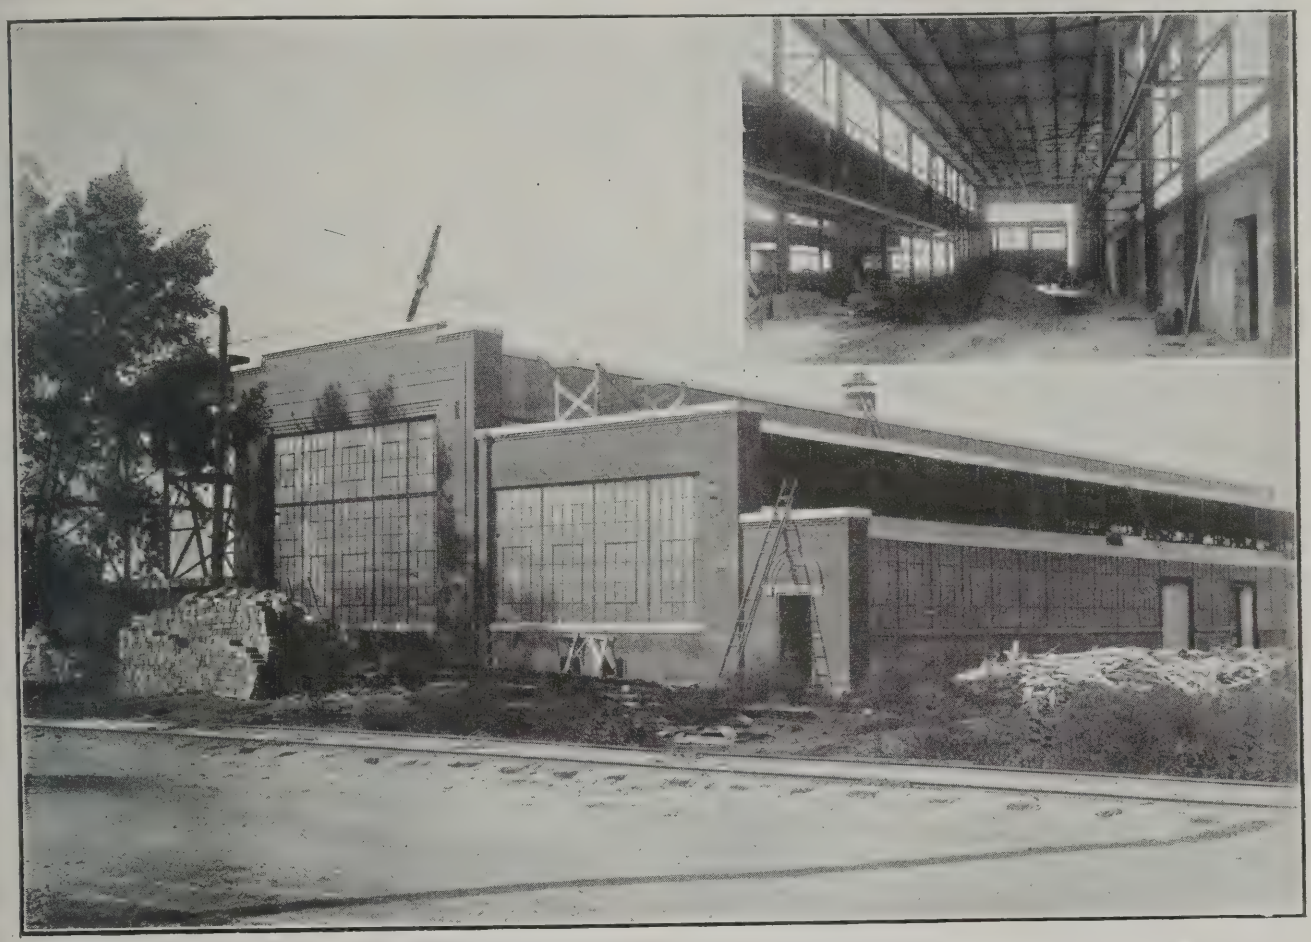
As to the outlook, we are fairly optimistic. The needs of the consumer combined with the scarcity of raw materials and the difficulty of getting them would seem to us to indicate that a demand will continue which it will be for those who are able to do so to meet and supply.

OVERALL MANUFACTURERS HAVE DIFFICULTIES

By O. A. Matthews

R. G. Long & Co., Limited, Toronto

To make a long story short, we would state that the difficulty in securing raw materials is increasing every day, and the skilled labor in the needle industry has reached an acute stage. As far as the future is concerned, we would not venture an opinion because of the various elements of uncertainty both as regarding the procuring of materials and the problem of skilled labor.



MEN'S NECKWEAR BUSINESS A RECORD

By A. T. Reid

President, A. T. Reid Co., Limited, Toronto

The demand for men's neckwear during the past year has been quite unprecedented owing mainly to two outstanding conditions: First, the great scarcity of silk materials because of lessened production; second, the increased and abnormal demand for neckwear caused by the return and demobilization of our Canadian troops. These two conditions, allied with the trade generally being particularly large in all branches and departments of commercial life, have made the year 1919 possibly the largest in volume and value in men's neckwear business of any previous year in the history of this country.

While in the retrospect these are the summarized facts, we have in prospect for the coming year the promise of a business, if not equally large, one that will prove to be among the best. Retail stocks are in no way heavy; indeed, through the inability of the manufacturer to fulfil more than 50 per cent. to 60 per cent. of the orders received, merchandise in the retailers' hands must be in greatly restricted quantities. We can at present see no reason why the demand for merchandise should not be equal to or approximately as

good during the present year. This, of course, largely depends upon the maintenance of the present high rate of remuneration paid to all kinds of labor, and possibly a continuation of the tendency to spend to the maximum—a habit we will all agree none too wise but all too general.

In the minds of many the continued advance in the cost of all materials, such as silks, lining and other items that enter into the production of a finished tie, plus the abnormally high wages paid to operators, may bring the cost to the consumer to the point where he may hesitate to expend so much for what a few years ago would have seemed so little. As applied to men's neckwear, however, this will not occur unless in respect to its relation to other commodities of a kindred kind.

TRADE LOOKS FOR HIGHER-PRICED GOODS

By W. A. Brophey

Managing Director, Tooke Bros., Limited, Montreal

Our experience regarding labor in 1919 is that experienced labor is hard to get, and the young people coming in untrained do not seem to want to settle down and learn the business, as before the war, and will stay a few weeks only. Raw materials are scarce and prices advancing daily. Our production has been increased, but our present output does not compare favorably with a year ago, as we have had to put in more machines in order to secure a greater production.

The tendency of the trade is for higher-priced merchandise; we do not find the same demand for cheap goods as existed before the war. Market conditions are very satisfactory, as the demand for our merchandise is much greater than the supply. Export business has not been a factor with us; in fact not being able to look after the home trade, we have not gone after foreign business.

We size up the outlook for the coming year as good; in fact we think the big demand for merchandise will keep up for at least two years. Our present manufacturing facilities are totally inadequate to keep pace, consequently we are adding 15,000 square feet to our main factory; we are adding a storage building to our uptown factory, and we are opening up a branch factory in Longueuil, and we hope by these enlargements to be able to handle increased business.

DIFFICULT TO SUPPLY SHIRTS AND COLLARS

By F. W. Stewart

Managing Director, Cluett, Peabody & Co. of Canada, Limited

As regards labor, conditions have been satisfactory except that we have not been able to secure all the operators which we require for our plant at St. John's. We have not suffered from supply of raw materials, and general operating conditions have been fairly satisfactory.

Our production for several months past has shown a marked increase over last year, the tendency being a demand for a better quality of goods, and it has been very difficult to satisfactorily supply the demand for goods of the highest grades. We have not accepted any export business, and we have been using our efforts to supply the demand from our own market.

From the present outlook, it appears that the demand is likely to keep up for some time to come, as it will likely be three or four years before we are in a position to catch up with the normal demand from our production, and build up our depleted stocks. It is doubtful if manufacturing facilities will be adequate to keep up with the demand during that length of time. To assist us in taking care of this situation, we have opened a small auxiliary plant in St. John's for manufacturing collars, and we are also opening up branch factories at Sherbrooke, for collars, and Montreal, for shirts.

It would appear at the present time as though the supply of cotton materials during the next year or two will be very

limited, owing to the enormous demand which is now being put upon Great Britain for these goods from all parts of the world, and it does not appear as if the U.S. and Canada will be able to assist very materially in taking care of this demand, as our home markets will likely tax our industries to the limit for some time to come. Prices of cotton materials have been advancing very rapidly, and consequently our product for the next year or two must be priced higher than at any period previous to this date.

HAT MANUFACTURERS VERY BUSY

By Gordon C. Crean
Robert Crean & Co., Limited, Toronto

We have found labor, especially female help, very scarce, and raw materials scarce and dear. Demand for our goods has been very heavy, and we find the demand running to the higher grade goods, especially made-in-Canada velours. We have done some exporting, but had to cease, as we could not take care of our own market. We hope when we can increase our output to be able to again resume export business. We expect for the next six or seven months to be running to our utmost capacity. We have already enlarged our capacity by about 25 per cent. and are contemplating a further extension.

CORSET PRODUCTION BEHIND THE DEMAND

By Crompton Corset Co., Limited, Toronto

Labor conditions with us are the principal drawback, as we are only able to manufacture about half the quantity which we could dispose of if we had a sufficiently large staff. We have been fortunate enough to obtain sufficient materials, but, of course, cannot say how long this will continue, as the mills appear to be completely filled up with orders, and are very backward in accepting new business. It is practically impossible for us to import very much of the staple lines in materials owing to the condition of affairs in the United States, where they appear to be even worse than we are here, as far as the corset business is concerned.

CARPET PRODUCTION ON THE INCREASE

By H. Quarmby
Guelph Carpet & Worsted Spinning Mills, Limited, Guelph

We find that we are unable to secure an adequate number of skilled operatives, although the soldiers who recently returned have made labor conditions rather easier. Raw materials are extremely difficult to secure in large quantities, and wages are about 25 per cent. higher than they were twelve months ago.

In our carpet department, for the two months Oct. 1st to Nov. 30th, our production was 27.50 per cent. greater than in the same period last year; in the worsted spinning department the production is stationary.

High-class goods are greatly in demand, and prices have an upward tendency.

We look for two or three years of good trade, as the world is short of all kinds of goods, but we think that with the many additions being made to factories, Canadian manufacturers will be able to supply the requirements of the country within a short time. We are making an extensive addition to our worsted spinning plant which, when completed, will double our yarn production.

The Fusion of Honourable Traditions and Modern Practice

Stagnation, born of self-complacency and an unhurried career, finds no place in McClary's organization.

On the contrary, since its inception seventy - three years ago, McClary's have brought into practical use ideas which, at first, seemed visionary and infeasible.

Men of foresight and vision, born and trained to success, have guided and continue to guide, by the application of progressive selling ideas to the needs of the moment, McClary's famous products into the homes of an astonishingly large clientele.

Hot from the furnace of mental impressions campaigns are merged into profit producers for dealers who, keenly appreciating, accept the opportunity to handle the "Famous" line of Stoves, Ranges and Furnaces, manufactured and marketed by McClary's.

Take 1920 while it is yet young and, with McClary's honourable traditions and modern selling methods, mould it into the finest, most profitable year you have ever known.

Our nearest branch waits to communicate with you.

DOUBLED OUTPUT OF BRICK IN 1919

By F. B. McFarren

General Manager, Interprovincial Brick Co. of Canada, Limited

We might explain that our company started operations in 1914, turning out our first brick just as the war commenced. Practically all construction work ceased and many brick manufacturers having large stocks to liquidate reduced prices to such a level that it was almost impossible to sell at a profit, and the demand was extremely limited. Fuel and labor, however, were plentiful and selling conditions gradually improved as many manufacturers closed their plants. During 1916, 1917, and 1918 the demand continued to improve, and as many of the plants were still closed down it became less difficult to dispose of the material produced. Fuel and labor became scarce and great difficulty was latterly experienced in procuring sufficient fuel and labor to take care of the requirements. At times the car supply was inadequate and constantly increasing freight rates made the distribution of manufactured goods increasingly difficult in various markets. We believe the rate increases have been greater in proportion on brick and clay products than on almost any other commodity.

During 1919, we found it necessary to double our output to cope with the demand, and while wages have considerably increased, we have found it easier to secure sufficient labor.

During the period outlined, wages have more than doubled and the price of fuel is also more than double, consequently necessitating increased prices. The cost of buildings and kilns has also more than doubled during the period and many manufacturers of brick have discontinued operations and in view of the greatly increased cost of new construction and increased working capital required, we believe that it will be a considerable time before production is back to the pre-war basis.

While a large amount of work has apparently been postponed due to the increased cost of construction, there has been a great shortage of houses, which has necessitated a large amount of housing construction, and there appears to be a great deal of larger work contemplated for the coming season. At present we find that the demand for our product is much greater than the supply and we are constantly adding to our capacity.

HIGH BUILDING COSTS AFFECT CEMENT INDUSTRY

By F. P. Jones

General Manager, Canada Cement Co., Limited, Montreal

Manufacturing conditions are, at present, in most localities very difficult, not so much on account of the scarcity and high price of labor, but because labor is not producing the same per hour as it did prior to the war. Raw materials are as a rule very high priced and difficult to get. General operating conditions are of necessity affected by the above, namely, not getting the same production per hour as we did, and difficulty of obtaining raw materials. Output has decreased as the demand for our production has not been good during the past four years.

Demand for our product is poor, mostly on account of the cost of building to-day, which is a consequence of the high cost of labor. A large number of buildings of all classes and kinds, besides a large amount of construction work, roads, etc., are required in the country, and undoubtedly, business would be good if people could get a reasonable return on capital expenditure, but the writer is not optimistic regarding the future, because he does not believe these capital expendi-

tures are justified until conditions are such that a man spending $100 in labor, will be able to get $100 in work done.

Values have not in our line gone up as much as in most of the others.

The export field is very attractive, but difficulties are: (1) Lack of ocean tonnage; (2) Irregularity of sailings; (3) In our business, the difficulty of obtaining suitable package.

The outlook for the next few months in our business is not encouraging. We have not enlarged any of our plants, and have not been running for the past four years at more than 33 per cent. of our capacity. We have not introduced any new lines.

DEMAND FOR CEMENT REPORTED GOOD

By John G. Lind
General Manager, St. Mary's Cement Limited, St. Mary's

Manufacturing conditions during 1919 have been fairly good with us. We have had no labor trouble; the transportation companies have furnished us with plenty of equipment, and we have increased our output by about twenty-five per cent. Regarding marketing conditions will say that the demand for cement has been exceptionally good. The price at our mill dropped 10c. per barrel last March. We are not properly situated for export business. The outlook for 1920 business, we expect, will be good. Cement is a low class commodity carrying a high freight rate, and the conditions make it more economical t operate smaller plants near strategic centres.

DEMAND FOR BABBIT METALS INCREASES

By G. F. Allen
Manager, Hoyt Metal Company, Toronto

We have had no trouble whatever with labor. We have not a great number of employees so it is an easy matter to adjust things in our plant. We have increased our output considerably. The demand for our product, Babbitt metals, etc., and kindred lines has been very great last Fall, and we have done the largest business in the history of the Company.

We believe 1920 is going to be a big year—the biggest in our history, provided of course general strikes do not occur all over to upset trade conditions. As far as exporting is concerned we do not export from this plant, except to Newfoundland. Other export business is taken care of by our London office.

DEMAND FOR ROOFING RATHER LIMITED

By J. O. Thorn
General Manager, Metallic Roofing Co. of Canada, Limited

Labor, speaking generally, has been costly and rather inefficient. Raw materials have been very high in price and difficult to obtain. Transportation has been rather slow and unsatisfactory, and has advanced 40 per cent. in cost. General operating conditions have been rather more difficult than usual. The output, however, has been increased, although the output per man shows a dcrease, owing mainly to lack of skill and want of energy.

The demand has been rather limited owing to high prices, cost of transportation, shortage and high cost of labor for constructing buildings. The export business has been seriously interfered with by war conditions.

The outlook, so far as business in Canada is concerned, appears to be fairly good, but raw material is very high in price and exceedingly difficult to obtain.

The cost of production is abnormally high, all of which has a tendency to check sales.

We have not enlarged our capacity, because during the war we have been unable to operate more than 50 per cent. of our capacity, but we have in view making extensions, providing raw material can be obtained and that labor conditions are reasonably satisfactory.

Miscellaneous Industries

PULP INDUSTRY IN PROSPEROUS CONDITION

By Quebec Manufacturer

Our experience has been that we have had sufficient labor to carry our industry along to full capacity. There has been more or less unrest, the same as other plants have experienced, but nothing serious. Raw materials of all kinds are very high, in some cases almost impossible to procure. Transportation to some points has been entirely satisfactory. To other points, where foreign cars were required, it has been rather difficult at times. Climatic conditions have been entirely satisfactory. We have increased our production very materially during the last six months.

Tendencies in the market for pulp and paper have been upward, in regard to both demand and prices. The marketing conditions have been extremely good. Our experience in the export trade has been that we could have increased it, had we had the goods. Owing to the strong home market we have been unable to increase our export trade.

The paper and pulp industry looks to be in an extremely prosperous condition for the next few months. There will be no trouble regarding distribution. The only difficulty will be in getting sufficient production to distribute. The production of newsprint will be very much increased within the next 18 months, as several hundred tons per day of new capacity will be on the market.

The paper and pulp industry, we consider, is in a very stable condition, and will be for some time to come, and, furthermore, will be on a very profitable basis, the factors contributing to same being the natural increase in the use of paper from year to year, and the fact that no mills were constructed during the war period.

ANTICIPATES BIG YEAR IN 1920

By Wm. R. Vendall

General Manager, Richards-Wilcox Canadian Co., Limited, London

If the money market holds together, we expect 1920 to be the biggest year Canada has ever seen in the output of manufactured goods. The only obstacle in sight seems to be a question of capital, whether there is sufficient money available to finance the needs of the world on the present price basis.

We are enlarging our output constantly, and have further factory extensions in view for spring. We feel that it is incumbent upon Canadian manufacturers to strain themselves to the utmost to produce in Canada as large a percentage as possible of the goods consumed in Canada, and something additional for export trade, and with that idea in view, we are constantly adding to our line items which have been coming in from the States.

In our view, the thing that requires the greatest attention at the present time is to secure the fullest possible co-operation of all our industrial forces, to remove antagonisms and get everybody pulling together for the common good.

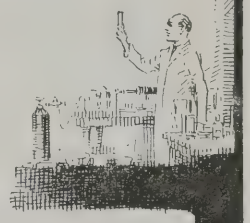
DEMAND FOR GOODS SOMEWHAT REDUCED

By F. H. Hopkins

Managing Director, Dominion Wire Rope Co., Ltd., Montreal

We have not increased our output. The demand for our class of goods since the armistice has been very materially reduced, and the demand at present is only about 50 per cent. As regards labor, we had our first trouble during the past year. So far as raw materials are concerned, conditions were a little better in obtaining deliveries.

The class and kind of goods being called for are about as formerly and the value has been materially reduced. We



Industrial Chemistry

Its Place in Manufacturing

Manufacturing, once a matter of empirical judgment and individual skill, must, more and more, become a definite plan of practical, scientific processes. Quantitative measurements must replace guess-work to eliminate waste and ensure economy of production.

Industrial Chemistry is the stepping stone to this greater efficiency. It clearly defines the best, the most economical, the quality-retaining method or process. It analyzes, investigates, discovers the efficient and points out the wasteful in manufacturing. Combining technical knowledge and practical experience with judgment, it evolves far-reaching improvements.

Be in the vanguard of manufacturers. Let us investigate and solve your problem before competition forces your hand

have not been able to get into the export field on account of both English and U.S.A. advantages over us by facilities of shipping and larger stocks on hand.

We believe that the tendency for the next few months will be more satisfactory, as the general feeling is that stocks can be replenished in place of holding off for better prices. We are not enlarging our plant, as we find we have much more capacity than the present demand warrants. We have not added any new manufacturing lines.

GRINDING WHEEL BUSINESS GROWS

By G. R. Harvey
President, Hart Wheels Limited, Hamilton

Labor conditions have been satisfactory as to the number of men obtainable, but as a whole they are not as efficient. Raw materials have been available but the price has been on the average 10 per cent. higher than a year ago. We have not increased our output owing to lack of orders.

The demand for our goods seems to be increasing, with the trend of values upward. We have a good deal of correspondence *re* export trade and are sure it will lead to some good business. As the grinding wheel manufacturers in the United States are at present as busy as they were during the war, and as a result of the present high exchange rate, we expect to receive a considerable volume of orders which formerly went to U.S. firms.

We have enlarged our plant and could take care of four times our present business. We have also introduced a new line of mower knife hand files and the sales of these are very encouraging.

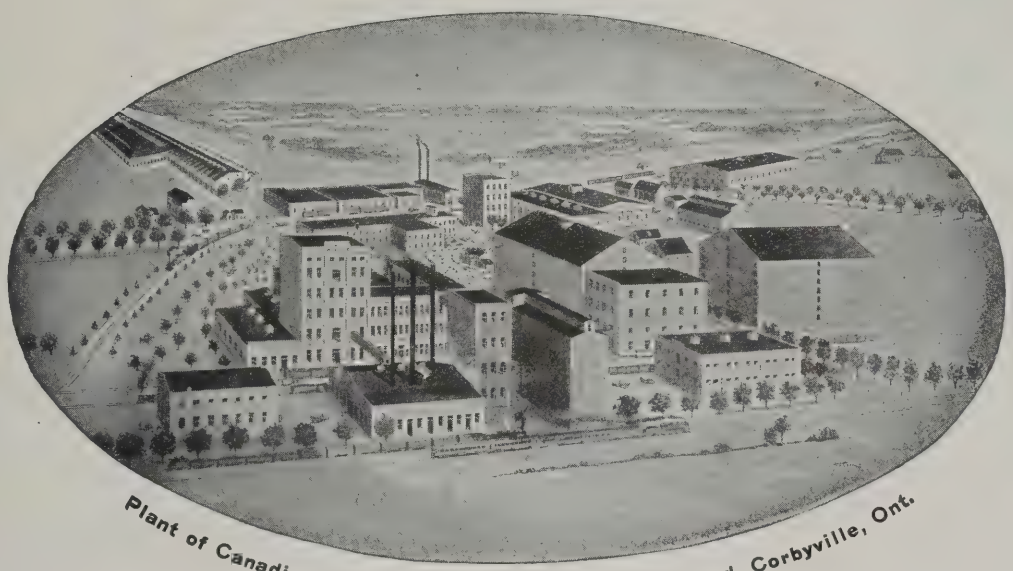
DISCONTINUE MAKING LOWER GRADES OF CARPET

By Ontario Manufacturer

We have experienced difficulty in obtaining labor, and what we have had has been far from satisfactory. Raw materials have always been procurable, of course, at greatly advanced prices; but receipt of same has often been delayed and quantities curtailed.

Our production in yardage is slightly less than that of a year ago, but the value of same has considerably increased. We are running at about 60 per cent. of our capacity. We have almost discontinued the making of lower grades, the demand for same having fallen off. We could have easily booked 50 per cent. more business than we have accepted.

We have never been exporters, though we have been offered, during the past six months, good orders from Australia, New Zealand, South America, and some even from the United States.



As to the outlook, retailers' stocks are not large. Small buyers are quite conservative in their estimate of future requirements, but the larger dealers, and those who generally size up the situation best, have placed large orders, and are anxious to place still further for delivery as far off as 1921. It looks very much as if the British manufacturers will be able to deliver a fair amount of goods next year. They are quoting prices which compete with ours. I do not think that dealers will be able to obtain their full requirements during 1920. We have considered, quite frequently, the enlargement of our plant, but in view of difficulties, chiefly relating to machinery, we have not decided on anything as yet.

DEMAND GROWS FOR EFFICIENT TRUCKS

By Four Wheel Drive Auto Company

We have just commenced the erection of our factory here and therefore cannot give you much information as to manufacturing conditions as yet. We might say, that the demand seems to be growing very quickly in Canada as it has grown in the States for a high grade and efficient truck, rather than a cheap made up article, or a small cheaply made truck

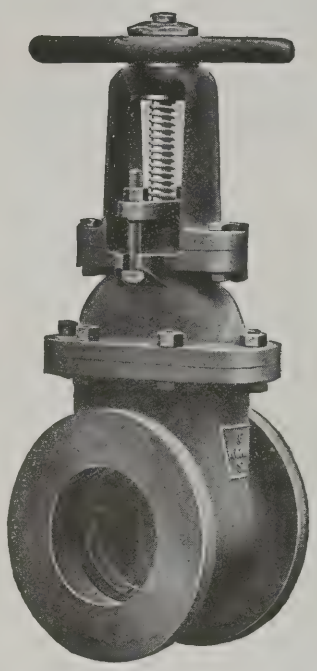
ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.



Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

which will not last very long. Our experience seems to be that even small users of trucks, who have the load to haul, are buying trucks more as an investment than as a temporary make-shift.

Our truck is a high priced article, but prospects look brighter for it than they have ever looked since we have started in Canada. The tendency seems to be for a better built truck, consequently a higher priced truck, and in our particular case on account of the four wheel drive principle the demand is much greater. We expect to need more space next year and are already figuring on an extension to our present premises which are being built.

BRITISH COLUMBIA LUMBER
From Vancouver Province

Over sixty-two million feet of lumber was shipped from mainland mills to foreign ports during 1919. In the preceding year the mills sent out by the sea route a total of over fifty-three million feet. This was thirty-five million better than the total of 1917. So the export lumber business has grown in British Columbia during the past two years.

In 1918, a fleet of fifty-one deep-sea ships took 53,403,089 feet of lumber to points in South America, South Africa, Asia, United States and Europe. Last year, fifty-four deep-sea ships left Vancouver with full or part cargoes of lumber. When it is borne in mind that 154 deep-sea ships sailed outward through the First Narrows during the year, it will be realized that the lumber business has played an important part in Canadian exports from Vancouver. Twenty-eight cargoes have gone from mainland mills to the United Kingdom, with a grand total of 40,381,235 feet. Eleven cargoes have gone to China, totalling 11,879,000 feet. Three ships for Japanese ports carried part cargoes reaching over a million feet.

The trade with South America, South Africa, Australia, Fiji and Siberia fell off, but the United States and the United Kingdom made gains, the latter showing up tremendously. This is due to the big order given last spring. The following table gives a comparative idea of the variations of the market since the end of 1918:

	1919.	1918.
South America	55,000	4,231,000
South Africa	1,000,000	7,000,000
China	11,000,000	18,000,000
Australia	4,470,000	6,000,000
Fiji	.....	500,000
Japan	1,150,000	500,000
United States	3,799,000	2,250,000
United Kingdom	40,381,000	14,000,000
Vladivostock	.....	113,000

As stated before, there were twenty-eight cargoes to the United Kingdom from Vancouver, and eleven to China. The other markets received as follows: Japan, 3; Australia, 7; United States, 3; South Africa, 1; and South America, 1.

The cargo of the s.s. *Admiral Goodrich*, with lumber for San Pedro, is included in the above figures.

The chief exporters have been the Canadian Robert Dollar Company, the Hastings Mill, and the B.C. Timber Exporters. Large quantities of lumber were also shipped from Vancouver Islands mills.

Below are the full figures by markets:

United Kingdom	40,381,235
China	11,879,000
Japan	1,150,000
Australia	4,473,000
United States	3,799,513
South Africa	1,000,000
South America	55,000

Automobile Manufacturers Overcome Difficulties

By H. S. PRITCHARD
Ford Motor Company of Canada, Limited

OUR experience of manufacturing conditions in respect of supply and efficiency of labor has been, that the supply has been adequate for our needs. We regret that efficiency has not always been commensurate with the wage. We believe in this respect, however, we are more fortunately situated than a number of other manufacturers.

Our experience in connection with the supply of raw materials has been that their supply has been extremely erratic. Throughout particularly the last three years of the war, we were practically at all times living from hand to mouth in respect of materials. This was largely due to the feeling on the part of those in control of the distribution of raw materials that the automobile was a luxury, and therefore to be supplied after the manufacture of necessities. As you know, it came down to a point just prior to the armistice, where, after Jan. 1, 1919, the automobile manufacturers of U.S. would have been definitely cut off from any supplies except those necessary to manufacture war materials. We apprehended here that we also would be cut off, as considerable of our raw materials come from the U.S. The armistice, however, intervened, and we obtained a new lease of life. We found, however, stocks of raw materials in such a depleted condition due to the war-time conditions that we were unable to accumulate any stocks throughout the year of 1919, and during that whole year also we were practically working under the same conditions as prior to the armistice. We were forced to pay great deal higher prices, and to, in numerous instances, get these supplies in by express in order to keep our men working.

This was the condition existing at the time of the steel strike, and this strike aggravated the condition. We were able to obtain little or no steel from the U.S. We bought here, there and everywhere, and had men out all over the country buying and chasing it into our factory. The steel strike in reality was not concluded but simply petered out, and we were beginning to get some material in when the coal strike intervened and the situation looked hopeless, in that the steel manufacturers were not able to recommence operations.

It came to a point where we were simply operating from day to day. Particularly was this true just before Christmas-time, when we were trying to keep our men employed over the holidays. We have, however, kept our factory going throughout all these vicissitudes—not at all times at maximum, but we feel we have surmounted the worst of these crises, and that in the future the situation must improve.

As to the quality of raw material, it has been the experience of our factory, that the quality of this material generally has been far inferior. Parts of the Ford car, which have hardly ever been known to break, have broken owing to inferior materials, although these parts have been treated as carefully as formerly. Material also has been of such varying grades, weights, sizes, etc., as to make machine work very difficult. Especially has this been true of the iron used in cylinders, which has been so hard as to cause us immense difficulty.

All parts of the Ford car, with the exception of parts to the value of about $24.66, which are not purchasable in

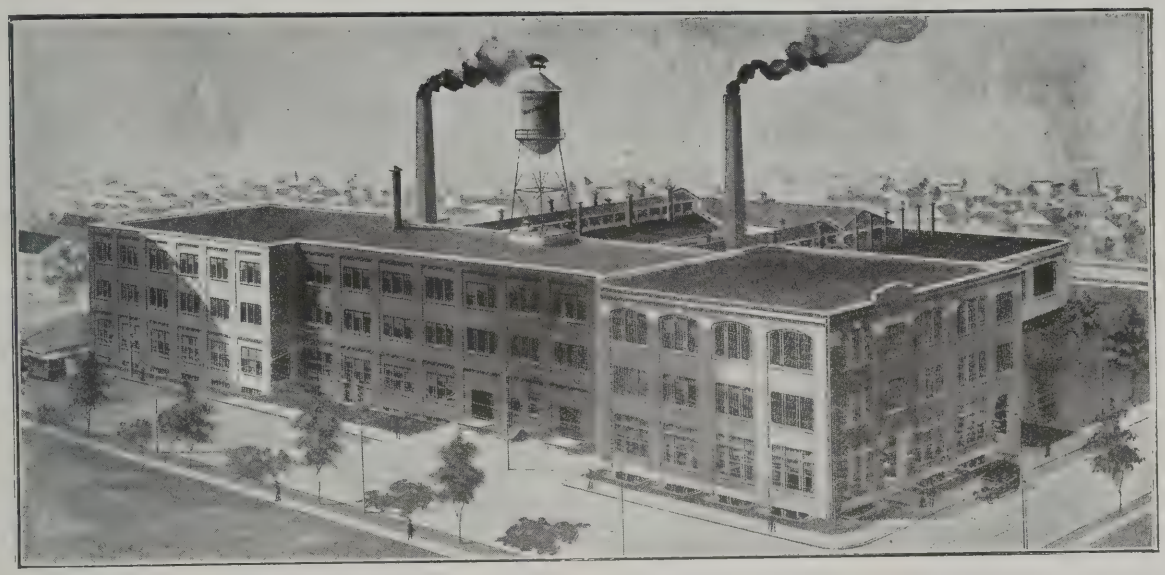
Canada, are manufactured within Canada. All of these are not manufactured within our own plant. We have developed to a greater extent, the manufacturing of parts in our plant, taking over during the year under our own control the stamping plant of the Dominion Stamping and Forging Company of Walkerville, and now make our own stampings, such as frames and fenders. We have also taken on during the year the manufacture of electric-starting and lighting equipment for the Ford car—this being manufactured within our own plant. It is our policy to develop manufacturing within our own plant progressively and as quickly as space and conditions will permit. At the present time, our activities are limited by the housing conditions in this community.

We have not been able to increase our daily production during the past year. We did, however, convert a few more of the parts that we manufacture in our factory into cars. In the calendar year, 1918 we manufactured cars and trucks to the extent of 42,838. In the calendar year of 1919, we manufactured cars and trucks to the extent of 45,246.

The demand for Ford cars has increased during the calendar year just past. At no time during the past three years have we been able to manufacture enough cars in any given year to fill the demand. Of course, there may be certain seasons of the year when our manufacture is ahead of the demand, but in the winter dealers are placing cars in storage against the demand which will exist in the spring and summer months. At the conclusion of the year, however, we could always have sold a great many more cars than we were able to manufacture. This condition was somewhat more marked last year than the year previous.

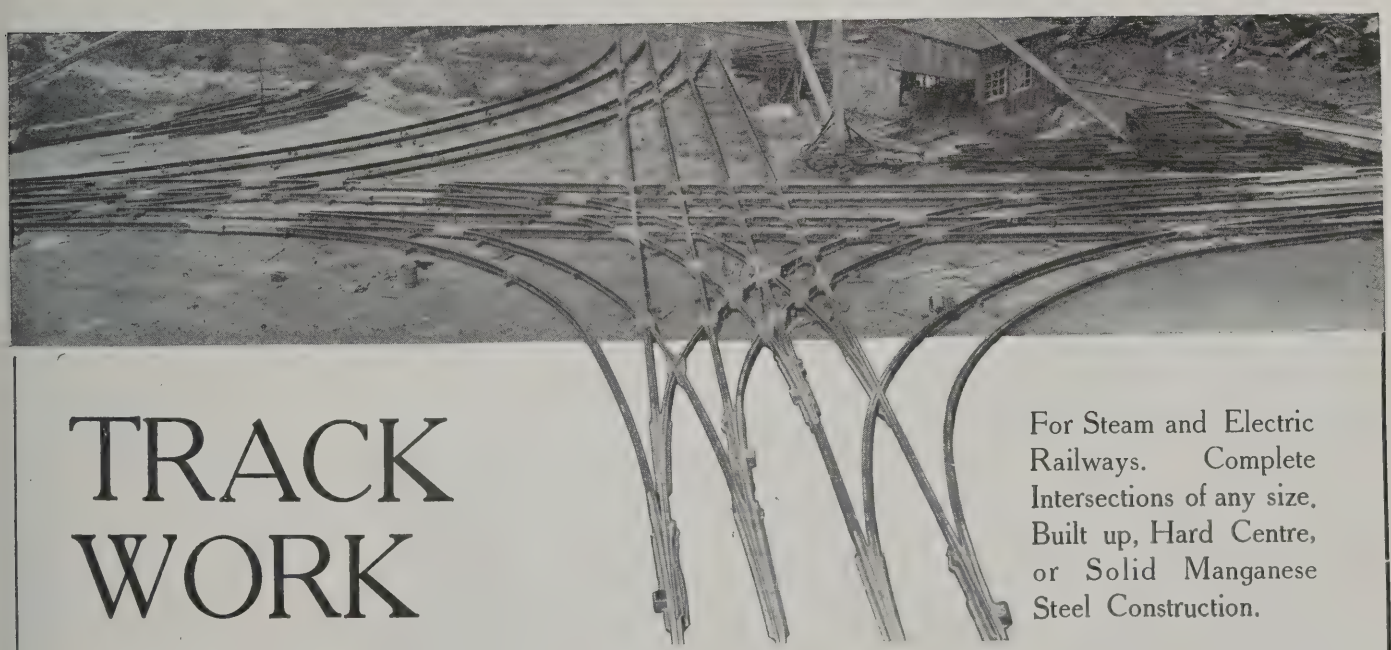


The style of car in request varies with localities. Our standard five-passenger touring car is the most popular car that we have, in that it appeals to the need of the greatest number. We notice, however, an increased tendency to buy closed cars, namely, our Sedan and Coupe model, particularly the Sedan model, which might be referred to as the closed five-passenger car.

In respect to price tendencies, the tendency on the part of the manufacturer has been for an increase in price. During the year, however, the price of all of our product did not change, although prices of raw material advanced considerably during the year, as did the exchange on Canadian funds.

On the part of the purchasing public, there is a tendency to be more liberal. Apparently the circumstances of the average buyer, particularly the farmer buyer in Ontario, Quebec, Maritime Provinces, and Manitoba, were so free, that price cut no great figure with them in the purchasing, as long as they got what they wanted.

Export business has been a considerable factor with us. Our export business is increasing. During our fiscal year from August 1st, 1918, to July 31st, 1919, we could easily have sold double the number of cars in export territory that we had allotted out of our production to our export territory. This allotment is over 22,000 cars, and we could very easily have sold over 40,000 out of a total anticipated production of 60,000 for the entire year.



Our size-up of the outlook is, that the domestic demand will not only keep up, but will increase during the coming calendar year. In Eastern Canada there is agricultural prosperity generally. In Manitoba there is also this agricultural prosperity. Certain portions of Saskatchewan and Alberta are prosperous. These two provinces, however, are populated by such optimists that they are already anticipating crops that they will get during the coming season. They have had plentiful and beneficial fall rains, and their winter season has been such as to lead them to believe that their crop will be a successful one. British Columbia, in a car sense, is extremely prosperous.

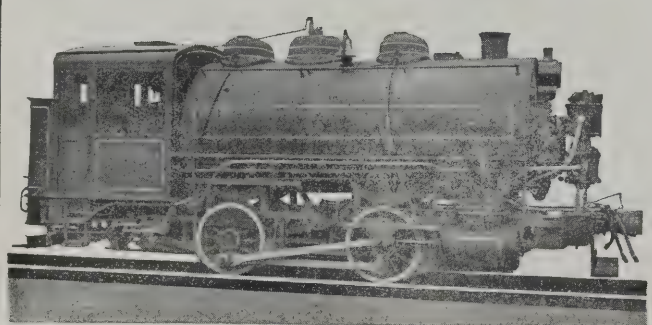
Big New Plant Proposed

Canadian National Carbon Co., Limited, and Prest-O-Lite Co. of Canada, Limited, Act Jointly

One of the most interesting developments of the day is the proposal of the Canadian National Carbon Co., Limited, and the Prest-O-Lite Co. of Canada, Limited, to proceed at once with the erection of a large new manufacturing plant in Toronto. These companies have jointly purchased the westerly ten acres of the property at the south-west corner of Bathurst St. and Davenport Road in Toronto, and will build on this site two factories—one 80 x 400 feet, two storeys high, with a section 80 x 80 feet three storeys high, and the other 80 x 400 feet, two storeys high. The former will be occupied by the Canadian National Carbon Co., Limited, and the latter by the Prest-O-Lite Co. of Canada, Limited. A heating plant will be housed in a separate structure, 50 x 60 feet, and will have room for installation of additional boilers for future units to be added.

All the buildings will be of reinforced concrete frame, flat slab floors, mushroom type columns on twenty-foot centres, steel sash and brick curtain walls. Each building will have two freight elevators and all toilet accommodations and stairways will be contained in towers erected on outside of buildings, thereby removing any obstructions which might interfere with manufacturing operations.

Arrangement is provided for special rest rooms for female employees; shower baths, a dispensary with competent medical attendant to look after any injuries to employees; restaurant with modern equipped kitchen, in charge of a competent chef, where meals will be cooked and served to employees at bare cost. In fact, both companies propose to make the new plant a model of safety, convenience and utility for not only the owners but for its employees.



It is expected that the plant will be ready for occupancy in May, 1920, and everything possible will be done to get it ready by that time.

At the present time the two companies are operating five plants at different locations in Toronto, but owing to the large demand for their goods, have been unable to fill orders for some time past and propose now to get facilities which will enable them to take proper care of their customers.

R. H. Combs, who has been general manager of the Prest-O-Lite Company for the past three years, and who was also recently appointed general manager of the Canadian National Carbon Company, states that his companies expect to employ about five hundred people as soon as the new plant is ready to operate, and that the facilities provided by these first two units will take care of upwards of 700 employees if needed. "We have secured enough ground," says Mr. Combs, "to enable us to put up six such units as the two which are now being built, but before adding new units, both the present units will have a third storey added, as the buildings are being erected to carry three full floors."

In addition to the large plant described above, Mr. Combs states that the company will erect in the spring, a new ace-

tylene gas plant in Toronto or immediate vicinity, to take care of the greatly increased demand for compressed Prest-O-Lite gas for welding and cutting, and that a large new storage battery warehouse and assembly plant will be erected at Winnipeg.

The contract for the new plants has been awarded to Wells & Gray, Limited, Toronto, and the company have specified Canadian-made cement, reinforcing rods, brick, sash, boilers, elevators, electrical equipment of all kinds, machinery materials and equipment. The company certainly deserve credit for their determination to provide work for Canadians and to practise the made-in-Canada doctrine.

Ink Company Expands

Reliance Ink Co., Limited, of Winnipeg, Extends Scope of Its Manufacturing Program

Notice is given in the *Manitoba Gazette* that the authorized capital stock of the Reliance Ink Co., Limited, Winnipeg, has been increased from $20,000 to $40,000. This has been done in order to finance certain plant extensions, etc. An addition to their factory has been built, which gives two and one-half times the former space. The company are also extending the scope of their manufacturing facilities particularly along the line of adhesives in bulk, such as envelope gum for envelope manufacturers, label paste for bottlers and padding glue for the printing and bookbinding trades.

Enlarging Four Breweries

National Breweries, Limited, Montreal, Will Spend Large Sum on Plant Extension

Four of their nine breweries are being extended by the National Breweries Limited, of Montreal, three in Montreal and one in Quebec. The capacity of each will be more than doubled at an expense of approximately $17,500,000. Owing to the unsettled conditions in the brewing industry during the last five or six years, nothing had been done in this direction, the only effort made being to keep plants in up-to-date condition without enlargement. When the present building programme is complete, the company will have four of the most modern and efficient brewery plants possible and will be in a position to handle any business offered.

Important British Connections

The Bawden Machine Co., Limited, to Manufacture Products of Several English and Scotch Firms

One of the most important developments of late in Canadian industry is the announcement that the Bawden Machine Co., Limited, Toronto, had entered into arrangements for the manufacture and sale in Canada of the products of the following English and Scotch firms: Alley & McLellan, Ltd., Glasgow, Scotland; Robey and Co., Limited, Lincoln, Eng.; John Thompson, Limited, Wolverhampton, Eng.; David Bridge & Co., Limited, Castleton, Manchester, Eng.; E. S. Hindley & Co., Limited, Bourton, Dorsetshire, Eng.; Brown Bros., Limited, Edinburgh, Scotland; and Bow, MacLachlan, Limited, Paisley, Scotland.

These companies are supplying the Bawden Machine Company with complete drawings of all their lines, together with engineering data, so that in case of breakage on any machines which have been or will be imported into Canada the Bawden Machine Company will be able to manufacture the needed repair parts without delay.

Alley & McLellan, Limited, manufacture air compressors, valves and waterworks supplies, and are already well known in many parts of Canada. Robey & Co., Limited, make a line of semi-Diesel oil engines, which should meet with good de-

mand in Canada; and also manufacture steam engines and air compressors and mining machinery.

The Thompson water-tube boiler is new to this country, but has been sold widely in Great Britain, South America, Africa and India, where the company has direct representation. John Thompson, Limited, also manufacture corrugated furnaces. Bridge's friction clutch is known in Canada, as is also this firm's rubber and textile-working machinery, which they have been manufacturing continuously for fifty years.

Brown Bros., and Bow, MacLachlan, Limited, are manufacturers of telemotors, steering gears and steamboat auxiliary machinery. E. S. Hindley are well-known makers of high-speed steam engines.

More Storage Room

Paint Manufacturers Find it Necessary to Secure More Space for Storage Purposes at Plant

A new warehouse, which will contain about 12,000 square feet of floor space, has been erected by Benjamin Moore & Co., Limited, manufacturers of muresco, paints, colors and varnishes, West Toronto. The erection of this building has been necessitated by the rapid growth of their business. Up to the present they have done practically nothing with regard to export business on account of the extraordinary demand for paints in the home market. However, with the erection of this new building and the installation of new machinery they hope to be able to go after some of the export business now offering.

Soap Manufacturers Expand

Lever Brothers, Limited, Toronto, are Marking a Large Addition to Their Plant

Feeling themselves greatly cramped in their present plant, Lever Brothers, Limited, Toronto, manufacturers of Sunlight, Lifebuoy and other well-known brands of soap, have started the erection of two large new buildings. These are three-storey structures, approximately 140 feet long by 80 feet wide, and they are being erected simply to take care of the ever-increasing demand for the company's products.

Four New Machines

Wayagamack Pulp & Paper Co., Limited, Three Rivers, are Making Preparations to Enlarge Their Capacity

Official announcement is made that the Wayagamack Pulp & Paper Co., Limited, Three Rivers, Que., are proceeding with the installation of four new paper machines. This involves the erection of new buildings to house the machines, and the necessary beating and finishing equipment to go with them. The company are also putting in an additional steam plant. They expect to have the first paper machine ready for operation by July 1st, and the others will be installed as rapidly as possible after that date.

Now Manufacturing Trucks

Eastern Canada Motor Truck Co., Limited, have Started Production at Their Factory in Hull, P.Q.

Eastern Canada Motor Truck Co, Limited, have just completed their factory building in Hull, Que., and expect to have their first trucks ready before the middle of February. The company is entirely Canadian and financed by Canadian capital. The officers are as follows: President, Mr. A. K. MacCarthy; Vice-President and General Manager, Mr. G. Gordon Bell, (D.F.C., Legion of Honor, and Croix de Guerre, late Capt. in the Royal Air Force); Secretary-Treasurer, T. W. MacDowell, (V.C., D.S.O., late Major in the C.E.F.); Sales

Manager, Mr. J. M. Taylor. The Directors of the Company are: Messrs. T. F. Ahearn (Director Ottawa Electric Railway and Ottawa Car Mfg. Co.); F. E. Bronson (Man. Director the Bronson Co., Ottawa); G. S. MacCarthy, M.D., Ottawa, and Thomas Arnold, Montreal (Pres. Taylor & Arnold, Pres. Manitoba Steel Foundries, Winnipeg, Director Chadburn Telegraph Co. of America, etc.).

The company are specializing for this season on a two-ton model called the Veteran truck, although they are equipped to handle orders for larger sizes. The company's engineers have had years of experience in U. S. truck factories, supplemented by experience in France and Gallipoli with transports where practically every make of truck was represented, and studied under the severest working conditions.

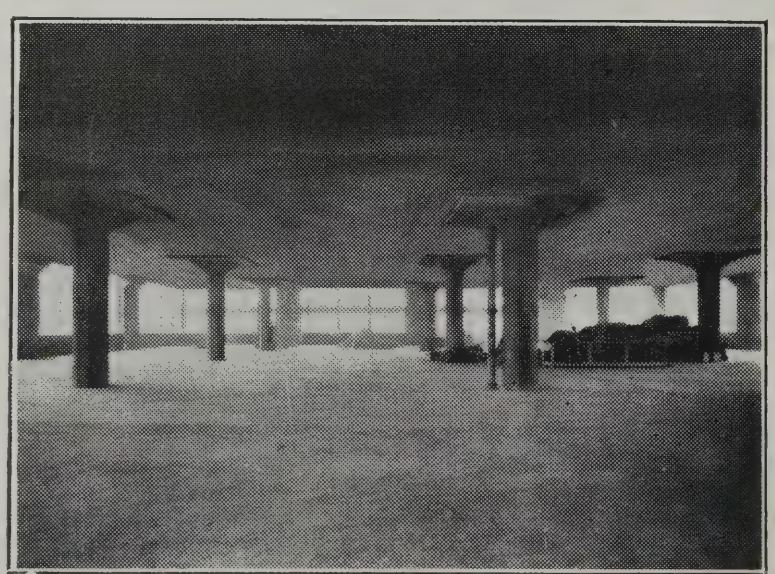
Planning Large Additions

Dominion Oil Cloth and Linoleum Co., Limited, Montreal, Have an Extensive Building Program

Alterations and additions to the plant of the Dominion Oil Cloth & Linoleum Co., Limited, Montreal, will be carried out on a large scale during the coming summer. They will include the construction of a large fireproof warehouse, the remodelling of some of their older buildings to make them fireproof, and to fit them for the most modern machinery, also the erection of new additional buildings to provide for the heavy and valuable machinery required to manufacture linoleum rugs, as well as feltol—their felt base floor covering. Owing to the present world-wide shortage of many of the raw materials used in the business, such as jute canvas, cotton fabrics and linseed oil, the present time seemed the most opportune to carry out their plans. The company's works now comprise a matter of twenty-five different factory buildings, occupying a ground area of about ten acres, and, with the new work completed, the Dominion Oil Cloth & Linoleum Co., Limited, will rank with the largest mills of the kind on the continent, both in modern methods of manufacture as well as in capacity of output.

Moving to Stratford

Gerlach-Barklow Co. of Canada, Limited, to Move Their Plant from Toronto to Building at Stratford



Gerlach-Barklow Co., of Canada, Limited, have recently acquired a factory building in Stratford, Ontario, to which they will move their Canadian plant about the first of April. At the present time the company is housed in the Darling Building, corner Spadina and Adelaide Streets, Toronto, but owing to the congestion in the city they prefer to move to a smaller place. The building which they have acquired is aproximately 40 by 80 feet, three storeys with basement, and is located in an attractive section of Stratford. The company manufacture art calendars and other direct-by mail advertising material, and are employing in their Toronto plant about fifty people.

Enlarging Forge Shop

McKinnon Industries, Limited, St. Catharines, are Making an Extension which will give Increased Capacity

McKinnon Industries, Limited, St. Catharines, have plans made for the erection of an extension to their forge shop. This will be 70 feet long by 50 feet wide, of special construction, consisting of steel frame, continuous steel sash in monitor and along both side walls, steel roll-up curtain doors and two-inch plank roof with tar and gravel. The production from this department will be principally automobile drop forgings, gear forgings and rolled gears.

Hand Your Building Problems to "Sparling Service"

Interior of New Factory of Grahams Limited, Belleville, Ont.

"Sparling Service" shoulders the entire responsibility and by unity of command and concentrated effort your building is completed on schedule time.

Increasing Their Capacity

Soren Bros., Toronto, Manufacturers of Domestic Tinware, Move to Larger Premises

After spending five years in the building which they erected on King Street West, Toronto, Soren Bros., manufacturers of all sorts of domestic tin and galvanized ware, have been forced to seek larger premises. They have secured property on Van Horne Street, west of Dovercourt Road, and have removed their plant to this site about February 1. One metal building was already on the property and this has been adapted for manufacturing purposes. A second building of brick is being erected by the firm to accommodate office, warehouse and shipping departments, and there is room for a third building which can be erected when required. The new plant contains about 50,000 square feet of space or just double the old plant, and it is hoped to increase the output by 150 to 200 per cent. A galvanizing plant is being installed, which is a new departure for the firm, and they will also have railway siding, which will greatly facilitate the movement of materials and finished products. With their improved facilities, the firm hope to be able to take advantage of export business now offering.

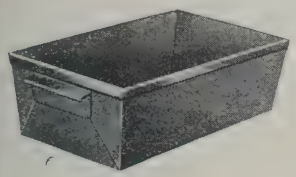
Sawmills Being Improved

Extensive Improvements and Alterations Being Made by Shevlin-Clarke Lumber Co.

Mills of the Shavlin-Clarke Lumber Co., Fort Frances, Ont., are being improved to take care of growing demand for the company's product. The planing mill is being equipped with a number of additional machines; the present engine-room is being removed and additional equipment being installed. No. 1 sawmill is also being improved in its horse-power capacity. The improvements now under way will entail an expenditure of over $100,000.

New Clay Products Company

Manitoba Clays and Building Supplies, Limited, Formed in Winnipeg to Manufacture Clay Products



Manitoba Clays and Building Supplies, Limited, is the name of a new $300,000 Dominion incorporation with head office in Winnipeg. The company will operate three departments: (1) manufacture and sale of clay products; (2) sale of building supplies, and (3) construction of roads, culverts, and bridges. The company have in view the operation of at least two plants, the negotiations for which are now pending, and every endeavor is being made to secure them and have them running in time for the heavy demand for brick that will be made this spring. They also hold western agencies for some of the largest firms manufacturing building supplies in the West. The president and managing director is Mr. J. L. Thomas, civil engineer; Joseph Dixon is vice-president, and H. Lewis White, secretary-treasurer. The directors include Messrs. J. L. Thomas, J. Dixon, R. H. Hayward, T. S. Cooke and H. P. Hartley.

Sell Canadian Plant

Norwood Engineering Co. of Canada Dispose of Their Factory at Cowansville, P.Q.

The Norwood Engineering Co., of Canada, Limited, the Canadian branch of the Norwood Engineering Co., of Florence, Mass., have recently disposed of their manufacturing plant at Cowansville, P.Q., to the Colonial Machinery Co., Limited, and have transferred their office to 71A St. James Street, Montreal. The Norwood Co. purchased the Cowansville factory in 1914, with the intention of manufacturing mechanical filtration plants and paper-mill machinery, but owing to the

When writing advertisers, please mention INDUSTRIAL CANADA

war, this business was very limited and there was practically no business whatever along these lines being done in Canada. The company accordingly equipped the factory for shell-making, and manufactured shells for the Imperial Munition Board for about three years. At the close of the war, they sold off the shell-making machinery and, as business in their particular line did not seem to develop, they finally decided to sell the factory. In the meantime, they have arranged with the Colonial Machinery Co. to manufacture part of their product for them. They will maintain a selling force in Canada, and if business warrants, will probably resume manufacturing at a later date.

Will Build New Foundry

P. B. Yates Machine Co. Plan Construction of Half-Million Dollar Plant

The P. B. Yates Machine Co. will this spring commence the construction of a half-million dollar iron foundry at Beloit, Wis. The building, which will contain 54,384 square feet of floor space, will be constructed of brick, steel and reinforced concrete, and will contain the latest and most efficient foundry equipment. This addition will double the output of the Beloit plant.

Establish Branch Plant

The Grosch Felt Shoe Co., Limited, Milverton, Takes Over Plant at Stratford

The Grosch Felt Shoe Co., Limited, Milverton, Ont., have acquired the property in Stratford, previously owned by the Stratford Desk Co., and are remodelling and equipping it for the manufacture of their lines of felt shoes and slippers, the plant at Milverton having for some time proved too small for the business offering.

The property consists of main building of solid brick construction, 212 x 40 feet, two storeys high. Adjoining this is a warehouse and boiler and engine-room, and adjacent thereto a brick building two storeys high, 40 x 50 feet, which will be utilized for the manufacture of felt specialties. The property includes 4½ acres of land, giving ample space for expansion.

Operations have not yet commenced, owing to delays in the delivery of machinery, but it is expected that everything will be in running order before March 1. From 75 to 100 hands will be employed at the outset, and 1,000 pairs of shoes turned out daily.

New Industry for Brantford

Canadian Corporation Formed to Manufacture Blue Bird Electrical Appliances in Canada

Under the name of the Blue Bird Manufacturing Co. of Canada, Limited, a company has been formed in Brantford to manufacture in Canada all the electrical household devices now being made by the Blue Bird Manufacturing Co. of St. Louis. The new company has taken over No. 1 plant of Motor Trucks, Limited, and will start manufacturing in the near future. J. B. Detweiler, manager of the Brantford plant of the Steel Co. of Canada, has resigned that position to become president, and also interested in the company are R. E. Secord, W. J. Verity, W. C. Boddy and T. Hendry, all of whom were previously directors of Motor Trucks, Limited.

The principals of the St. Louis company will be financially interested in the Canadian company, but the latter will be controlled and the greater part of the stock be owned by Canadians. The Canadian company obtains the rights for the Blue Bird design and trade mark, also all patents and licenses now in possession of the American company and any that

General Efficiency Demands the Use of

BERNARD
Wood Split Pulleys

The war is ended so far as a continuation of the bloody combats of the battlefields is connected. But in the war after the war there will be waged lively battles for industrial supremacy wherein the advantage will lie with the plant equipped with the most economical and durable machinery.

Competition will be more intense, and in this connection, keep your eye on the overhead. It has been looming large these past few years and must certainly come down.

BERNARD Wood Split Pulleys will help you eliminate power waste; their cost is low, their efficiency is GREAT.

Paper Mill for Winnipeg

Red River Paper Mills, Limited, will Undertake Reclamation of Waste Paper on a Large Scale

Within the next month or two, Red River Paper Mills Limited, in which a number of well-known Winnipeg men are interested, will start operations. The company will manufacture new paper from wastepaper which is now being destroyed and burned or disposed of to American mills for remilling. A site for the mill with 350 feet frontage on the Red River has been purchased and this will allow for ample expansion as business develops. Beaters, pulping engines, refiners, and paper machines, are now being installed and all will be driven by electrical power. Mr. Frederick T. Gilroy is manager of the company.

Form Canadian Company

Canadian Mead-Morrison Co., Limited, Will Operate the M. Beatty Plant at Welland

Reference was made in last month's issue of INDUSTRIAL CANADA to the purchase by the Mead-Morrison Co., of East Boston, Mass., of the plant of M. Beatty & Sons, Limited, Welland, Ont. A Canadian company has subsequently been formed,—Canadian Mead-Morrison Co., Limited, with general sales offices in charge of D. W. Coe, general sales manager, at 285 Beaver Hall Hill, Montreal. It is the company's intention to continue the manufacture of the Beatty products as well as to undertake the manufacture of the much more extensive line of Mead-Morrison products. The name "Mead-Morrison" is quite well-known throughout Canada, as the American company has supplied a very large amount of equipment and has built complete plants for the unloading, storing and handling of coal, ore, coke, cement, sand and other materials.

The Tavistock Milling Co., Limited, Tavistock, Ont., intend to increase the capacity of their plant by installing some new machinery.

On December 1, the Canadian Ice Machine Co., Limited, removed their office, shop and warehouse to their new building at Villiers and Munition Streets, Eastern Harbor Terminal, Toronto.

Directors of the United Grain Growers have not yet decided what course they will follow regarding rebuilding of their flour mill at Gladstone, Man., recently destroyed by fire. It will probably be rebuilt of the same capacity as formerly.

The Canada Paint Co., Limited, Montreal, have recently completed the installation of new machinery which will give their plant an increased capacity of at least 25 per cent. They are looking for a record year in the sale of their various products.

As soon as they can obtain the right textile machinery for their work, Henry Davis & Co., Limited, Toronto, manufacturers of infants' and childrens' wear, will increase their

plant considerably, but it may be some months before they will be able to do so.

A plant for the manufacture of monuments and cut stone for building purposes will be erected by Alex. Young Limited, at Regina. The plant will cost about $30,000, and employment will be given to about 50 men. Details as to size and capacity have not yet been worked out.

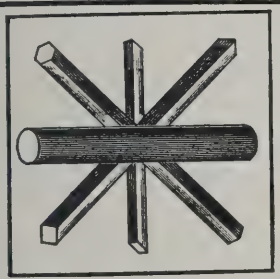
The Great West Knitting Co., Limited, Winnipeg, manufacturers of fancy sweaters, jerseys, mitts and bathing suits, have received authority to increase their capital from five to twenty thousand dollars. They have greatly increased the capacity of their plant and hope to at least double their last year's output of goods.

Western Upholstery Limited is the name of a new company which has recently been established in Calgary for the purpose of manufacturing upholstered goods for the trade. They have started in a small way, and have so far met with considerable encouragement. The president is Mr. D. S. Sykes, and the location of the industry is 407a, Eighth Avenue West.

The Beaver Soap Company, of Winnipeg, of which Mr. W. G. Fraser is president, are putting in eight thousand dollars' worth of new machinery into their soap manufacturing plant, for the purpose of doubling the capacity of the plant. The Beaver Soap Company manufacture soap for steam laundry purposes and handle other supplies in connection therewith.

The Procter & Gamble Manufacturing Co., soap manufacturers, Hamilton, are at present erecting a three storey addition, approximately 50 x 100 feet, to the building which houses their Crisco and Flakewhite departments. This building will be used as additional capacity for the manufacture of these products and they expect to have it completed early in the summer.

The Canada Linseed Oil Mills, Limited, Toronto, are putting up a new building, 30 by 40 feet, two storeys and basement, which will be used for office and warehouse purposes. Since building their mill and present office about ten years ago, business has increased to such an extent that additional clerks have been necessary, and in order to provide adequate accommodation for the office staff they are erecting a new building.



The Colonial Hide Company, dealers in hides, calfskins, pelts, wool and furs, Boston, Mass., who have warehouses in a number of Eastern Canadian cities, have bought the Pion tannery in Quebec. It was at first rumored that they would use it for manufacturing purposes, but the company inform INDUSTRIAL CANADA that they do not expect to do a manufacturing business of any kind. The purchase was made because present quarters were too small.

British Export Information

Association Receives Four Volumes of Valuable Compilation on British Manufactures

The head office of the Canadian Manufacturers' Association has recently received the following volumes of the "British Standard Exporter, 1919-1921"—

Vol. I, Leather, Earthenware and Hardware, 485 pages.
Vol. II, Groceries, Provisions, Wines and Tobacco, 540 pages.
Vol. III, Stationery and Fancy Goods, 525 pages.
Vol. IV, Engines, Boilers and Commercial Vehicles, 658 pages.

Each volume is divided into sections, and contains not only the names of British manufacturers and their products, but also illustrations, descriptions and in many cases, the prices of the articles. The volume dealing with stationery and fancy goods includes many samples.

This publication, which, when completed, will include 25 volumes represents a serious attempt on the part of British manufacturers to furnish the overseas markets with information of an adequate description respecting sources of supply in the United Kingdom. The production of the publication has involved an outlay of a quarter of a million pounds, and includes the products of over 4,500 British manufacturing firms.

At the present time these volumes should be of inestimable value to Canadian firms who are looking for sources of supply in the United Kingdom.

Propose Plant Councils

Spanish River Pulp and Paper Mills Will Hold Conference on February 16

At the "President's Banquet," held at the Soo on January 10th, several announcements of interest to employees of the Spanish River Pulp and Paper Mills were made by Col. C. H. L. Jones, the general manager. Of most importance was the intimation that the question of establishing plant councils had been taken up, and that a general conference would be held to discuss the proposal on February 16. Col. Jones also announced that it was the intention to insure all men in the employ of the company against death, sickness, and accident, to institute a system of service buttons, and to provide vacation at full pay based on length of service. The "President's Banquet," at which these announcements were made, was attended by men from all the company's mills, and was a most successful affair from the standpoint of bringing the management and the men into closer touch

Leather Manufacturer's Death

President Collis Leather Co., Limited, Aurora, in Tannin Industry All His Life

A distinct loss to the ranks of Canadian leather manufa turers was occasioned by the death on January 28 of Mr Sydney M. Collis, president and general manager of th Collis Leather Co., Limited, Aurora. Mr. Collis was an Eng lishman by birth, and had been in the tanning industry al his life. To him and his brother, the late Walter Collis credit is given for the introduction into Canada of the chrome process of tanning calfskins. The late Mr. Collis was in his 63rd year.

Resigns Management

F. R. Humpage Leaves the Wilt Twist Drill Co. o Canada, Limited, Walkerville

Effective March 31 next, Mr. F. R. Humpage has resigned the offices of vice-president and general manager of the Wilt Twist Drill Co., of Canada, Limited, Walkerville. Mr. Humpage has been in ill-health for some time and felt it necessary to give up for a time all business activities. He left at the end of January for Florida where he will endeavor to secure a complete restoration of health.

Mr. Humpage has been connected with the Wilt Twist Drill Co., of Canada for three years and a half during which period he was successful in more than trebling the output and sales of the factory, besides adding several new lines such as reamers and milling cutters. Mr. Humpage has always taken an active interest in all matters pertaining to manufacturing in Canada and has been instrumental in endeavoring to raise the standard of the drill, reamer and cutter manufacturing industries in Canada.

Pioneer Instrument Manufacturer

Late Eri Whaley, of Toronto, Said to Have Made First Cornet Produced in Canada

The late Eri Whaley, president and general manager Whaley, Royce and Co., Limited, Toronto, whose death occurred on January 28, was a pioneer in the manufacture of band instruments in Canada. Starting business life in the carriage manufacturing industry in Orangeville, he came to Toronto in 1885 and became associated with Thomas Claxton in the music trade. In 1888 he formed a partnership with George C. Royce as Whaley, Royce and Co., beginning the manufacture of brass band instruments. That year they completed the first cornet ever made in Canada. In 1890 the company engraved the first music plate made in Canada, following this up with the production of the first Canadian-made clarionets, flutes, and piccolos. In 1901 Mr. Whaley bought out Mr. Royce and became president and general manager of the company, which was then incorporated.

Catalogues and Booklets

Hoists and Conveyors

Two new catalogues, issued by the Canadian Link-Belt Co., have recently come to hand—No. 375, dealing with "Labor Saving Elevators and Conveyors," and No. 380, with "Electric Hoists and Overhead Cranes." As usual with all the advertising matter issued by this company, the utmost care has been taken to visualize the appliances described, and a series of photographs illustrating the conveyors, hoists, etc., forms a distinctive feature of each book. All these photographs have evidently been taken and reproduced by experts, for they are remarkably clear and convincing. The pictures really tell the whole story, and letter-press is reduced to a minimum. Manufacturers, who have handling problems of any kind to solve, would do well to secure copies of these books, from which they will undoubtedly get useful suggestions.

C.C.M. Bicycles

The Canada Cycle & Motor Co., Limited, have issued an export edition of their catalogue, in which they tell something of their organization, their factory and their product. It is tastefully gotten up and contains numerous illustrations, which serve to visualize the attractive qualities of their bicycles.

A Neat Diary

A neat little leather-bound pocket-size diary for 1920 has been issued by the Canadian Westinghouse Co., Limited. In addition to the ordinary diary features, the little volume contains 48 pages of useful information principally along the lines of engineering data, which will be found of value by engineers. The diary will be appreciated by all who have use for such a handy compendium.

Methods of Figuring Radiation

A new bulletin, "Dunham Heating Data," has just been issued, describing and explaining standard methods of figuring radiation and laying out piping. Valuable ventilating data is also included, the whole being put in very practical and concise form, getting at the real information without having to wade through a lot of preliminaries. Various details of piping connections are illustrated, and complete pipe sizing information given. This bulletin, together with several others of interest and value to the stationary and heating engineer, can be secured by writing the C. A. Dunham Co., Ltd., 1535 Davenport Road, Toronto, Ontario.

Saws and Saw Tools

E. C. Atkins & Co., manufacturers of Silver Steel saws and saw tools, have just issued a large and comprehensive catalogue of 264 pages, which they send out in ordinary cloth binding and also in special ooze leather binding with sunburst cover. The work of arrangement, classification and illustration has been most effectively done and from the typographical standpoint the volume is a real work of art. Every item is realistically illustrated; the descriptive matter is most complete and by means of a carefully prepared index it is possible to get at desired information without loss of time. It is in short a catalogue that will be most useful to all buyers of the kind of products manufactured by E. C. Atkins & Co.

Book Reviews

The Fuel Problem

Industrial Fuels. By J. Stephenson. Toronto: The Westman Press, Limited. Paper covers, $2.25. Cloth covers, $3.00.

The appearance of this work by Mr. Stephenson merits a special word of commendation. It marks an attempt to provide Canadian readers with technical information written from the Canadian viewpoint and dealing specifically with Canadian problems. Almost invariably in seeking information on technical themes, one must have recourse to textbooks compiled in Great Britian or the United States, and, while these are often very admirable works, they lack the application to Canadian conditions which would render them of maximum value. In the present volume, which has not only been written in Canada, but also printed and published here, these deficiencies are remedied.

Mr. Stephenson has gone into his subject very thoroughly and systematically. His ten chapters deal successively with coal, natural gas, coal gas, oil gases, producer gases, coke, fuel briquets, application of commercial gases, fuel analysis and fuels of the future. In each case he goes back to the beginning, and traces developments down to the present day, explaining and illustrating processes and appliances and weighing the relative merits of various fuels. At the present time when the fuel problem has become such a serious one, and attention is being increasingly directed towards its solution, the publication of such a book is timely and valuable and an examination of its contents should prove of service to all manufacturers.

Advice for Women Workers

The Girl of the New Day. By E. M. Knox, Principal of Havergal College, Toronto. McClelland & Stewart.

The insight and experience gained from dealing with successive generations of girls, numbering at the present time over five hundred, in the three Toronto schools under her care, give Miss Knox an unusual opportunity for studying the "Girl of the New Day" and her needs for to-day and to-morrow. In this volume much wise and kindly advice is bestowed on the young women who are just leaving school to take their place in the world of action. The author takes up the various lines of work now open to women, and deals with the special features of each. She has chapters on "The Business World" and "Salesmanship," in which she refers to these new spheres of endeavor, pointing out their advantages and drawbacks. Throughout she endeavors to inspire a desire to do work worth while, and not to be content simply to drift. It is a book of inspiration and should be of real help to many a young woman on the threshold of active life.

A New Business Publication

An interesting newcomer in the field of Canadian business publications is *Business Methods*, a monthly magazine, the first number of which was issued in December. Modelled somewhat on the lines of *System*, it aims to specialize in Canadian experience in business management, and for this reason has a special claim on the attention of Canadian business men. The initial number is a creditable production, well illustrated and gotten up in a pleasing typographical form. Among its contents one notes an interesting illustrated description of welfare work at the Massey-Harris works in Toronto, and such informing articles as "Points to know about your Fire Insurance Policy," "The Better Business Letter," "How much do you set aside for Depreciation?" "Problems of Filing Correspondence," etc. If the standard of the first number is maintained, this publication should have an assured position in the favor of Canadian readers.

INDUSTRIAL CANADA

Issued monthly as the official publication of the Canadian Manufacturers Association (Incorporated), and devoted to the advancement of the industrial and commercial prosperity of Canada.

PRESIDENT OF THE ASSOCIATION
T. P. Howard, Phoenix Bridge & Iron Works, Ltd. Montreal

VICE-PRESIDENTS
J. S. McKinnon, S. F. McKinnon & Co., Limited, Toronto
W. S. Fisher, Enterprise Foundry Co. ..... St. John, N.B.

Barrett Specification Roofs

Guaranteed for 20 Years

20-year Barrett Specification Roof, on The Canadian Bank of Commerce, Building, Quebec City, Que. Architects: The Dominion Realty Company, Limited, Toronto, Ont. General Contractors: The Dickie Construction Company, Toronto, Ont. Roofing Contractors: Douglas Bros. Co., Limited, Montreal, Que.

How to be sure of a 20-Year roof—

THE Canadian Bank of Commerce is in business for good—and everything connected with their new building was bought with an eye for the future. The roof, for instance.

When The Barrett Specification Roof was finished, we handed the directors of the Canadian Bank of Commerce a Surety Bond, issued by a well-known Fidelity and Guaranty Company, which guarantees the roof to last for at least 20 years without maintenance expense of any kind. The probabilities are that this roof will last nearer 30 years.

There is only one way to be absolutely sure of getting the kind of roof you want—a genuine Barrett Specification Roof—and that is to write this standard paragraph into the building specifications :

> "The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the contractors shall obtain for us, without additional cost, the Barrett 20-Year Guaranty Bond."

This simple paragraph takes all the gamble and worry out of roofing, for both the owner and architect.

Such expressions as "Barrett Specification *type* of roof," "Five-ply felt-and-pitch roof" or "Barrett Specification Roof *or equal*," should never be permitted in a building specification.

The 20-Year Surety Bond is Free

The 20-Year Surety Bond will be furnished on any roof of 50 squares or over, in cities of 25,000 or over, and in smaller places where Barrett Inspection Service is available. There is no charge for this Bond. Our only requirements are that The Barrett Specification shall be strictly followed and that the roofing contractor shall be approved by us.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

Editorial Comment

Made-in-Canada Goods

THE employment of architects and engineers who are citizens of other countries on building and contracting in Canada, tends to diminish the amount of Canadian-made goods used in construction. When a foreign architect is employed to design a building, he naturally specifies those goods with which he is most familiar, and, consequently, his specifications too often require or recommend the use of material which is not made in this country. In the letting of contracts, Canadian architects and engineers should be retained. There is a glamour about the prophet from the far country which tends to blind us to the merits of our own countrymen. We have very good architects and engineers in Canada, and those who are not quite up to standard through lack of experience, will never improve unless they are allowed to acquire experience. During the last five years, Canadians have shown what they can do when they get the opportunity and when responsibility is placed upon them.

When Canadian architects or engineers are employed on contracts, they incline to specify that Canadian-made material shall be used, if for no other reason than that they are more familiar as a rule with Canadian material than with material made in other countries.

It is idle for Canadian manufacturers to preach the made-in-Canada doctrine unless they practise it.

Farmers and Chambers of Commerce

WITH class movements so prevalent at the present time, especially among the farmers of the Dominion, it is rather an encouraging sign to find that agriculturists in the neighborhood of Guelph, Ont., are joining the Chamber of Commerce of that progressive industrial centre. This is a movement that should be cordially welcomed, both from the standpoint of the business man in the city and the dweller in the rural districts. The association of the two parties in the one organization, formed for the advancement of the entire community, will do much to break down prejudices and establish a hearty spirit of co-operation. The manufacturers of Guelph, coming in personal contact with the neighboring farmers, will be able to take a more sympathetic interest in the problems with which the agricultural industry is concerned, while on the other hand the farmers will unquestionably be disabused of many of the erroneous ideas which they have been holding regarding the operation of manufacturing enterprises. It is from all points of view a desirable step to take to enroll the farmers in our boards of trade and chambers of commerce and to have them feel that they form an important and responsible part of the business community.

Increase in Freight Rates

ON the return of the United States railroads on March 1st there is every indication that an advance in rates will be requested, but it is rather difficult to say exactly how much this will be. Various amounts have been mentioned, ranging from 20 per cent. to 40 per cent., but it is important to note that the new Bill, which will return the roads to private owners, directs the Interstate Commerce Commission in regard to this very question, and goes so far as to provide the amount of return which shall be given for two years from the 1st of March. This being the case, it would seem to be rather difficult for any horizontal increase in rates to become effective. It would appear rather that the rates would have to be re-aligned and this is, of course, quite a large order and would take considerable time.

In Canada we have heard remarks by President Beatty, of the Canadian Pacific Railway, and President Hanna, of the Canadian National Railways, as well as various press despatches coming from Ottawa, referring to an increase in freight rates in Canada about the same time as that in the United States, and the amount has been stated variously from 25 per cent. to 40 per cent.

There are many things, of course, which must be considered in regard to the Canadian National Railways as a whole. It has been stated that the Canadian National Railways have a very large deficit and that it must be met

by an increase in freight rates. It might be well to learn definitely what caused this deficit. It is true that there have been increases in costs of materials used by the railway companies and enormous increases in the wages paid their employees, but the question is, how much of the deficit of the Canadian National Railways is represented by these increases?

The question is a large one and every manufacturer and other shipper in the country should study this matter very carefully. The Transportation Department of the Association would be glad to have the views of any manufacturers (members of the Association), in regard to this important situation. It is urged that the matter should be studied, and studied carefully.

The Question of Customs Appraisements

WHEN sterling in New York is at $3.69 the tariff of Canada against British goods is practically eliminated; and only the enormous world demand for the products of United Kingdom factories, under conditions which clearly are temporary, prevents the flooding of our markets with shipments of goods from the United Kingdom. Evidence of this fact is found in the imports from the United Kingdom for January, 1920, which exceeded in value all such importations in any previous month of our history. As sterling falls in New York the conditions are accentuated. And if the value of sterling were determined for duty purposes by the exchange rate, customs duty would be collected on lower values than the fair market value of the goods as sold for "home" consumption in the United Kingdom. This would be contrary to the Customs Act of Canada; but if the concession could be, and were, granted, the loss in customs revenue would be very great. Moreover, it cannot be contended that transactions for "home" consumption in the United Kingdom are appreciated in price to the extent or in correspondence with the depreciated value of sterling in Montreal. This can be realized at once by consideration of our own condition for transactions in general for "home" consumption in Canada are not appreciated in price to the extent or in correspondence with the depreciated value of the Canadian dollar in the United States. The basis of sterling, the franc and the lira, still is gold, and it is to the interests of Canadian importers that there should be a settled basis for the valuation of imported European goods. If the rate of exchange were to be allowed in calculating the value for duty, it is probable that no two importers of the same goods would pay the same amount of customs duties. Thus, there would be all sorts of invidious discriminations.

The action of the Customs Departments of Canada in placing the same par valuation on sterling exchange which the United Kingdom attaches thereto in respect to sales for "home" consumption in that country, does not destroy, as some erroneously contend, the effect of the British Preferential Tariff of Canada. Examples of actual transactions will make this clear. With sterling in New York worth $3.69, the Canadian dollar in New York being at a discount of 13½ per cent., the value of the pound sterling in Montreal is $4.18. On this basis the customs duties, and laid down cost in Canada, on a direct importation from the United Kingdom into Montreal, as compared with a like shipment into the United States and reshipment thence to Canada, would be as follows:—

From United Kingdom Direct to Montreal.

1,500 lbs. tissue paper, £200; par value, $973.00.		
Duty at 15%, British Preferential Tariff, on the par value of the pound	$145 95	
Freight and insurance, say	7 00	
Actual cost in Canadian money, with sterling at $4.18	836 00	
		$988 95

From United Kingdom into United States and Reshipped thence to Canada.

1,500 lbs. tissue paper, £200; converted at $3.69	$738 00	
United States duty at 30%	221 40	
New York brokerage or commission, say	45 00	
Freight and insurance, say	7 00	
	$1,011 40	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on this sum of $1,011.40.		
Canadian duty on $1,011.40 at 25%, plus 7½% War Tariff	$328 57	
Dumping duty	151 65	
Freight, New York to Montreal, say ...	7 00	
Exchange, 13½% on $790.00	106 65	
Laid down cost in Canada		1,383 87
Difference in favor of making direct importation from United Kingdom to Montreal		$394 92

ANOTHER CASE.

From United Kingdom Direct to Montreal.

1,000 yds. woollen cloth at £1 per yd.; par, $4,860.00.		
Duty at 30%, British Preferential, on the par value of the pound	$1,458 00	
Actual cost in Canadian money, with sterling at $4.18	4,180 00	
Freight, insurance, etc., say	100 00	
		$5,730 00

From United Kingdom into U.S. and Reshipped thence into Canada.

1,000 yds. woollen cloth at £1 per yard; converted at $3.69	$3,690 00	
United States duty, 35%	1,291 50	
New York brokerage or commission, say, 5%	184 50	
Freight, insurance, etc., to New York ..	100 00	
Duty paid, fair market value in New York	$5,266 00	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on the sum of $5,266.00.		
Canadian duty on $5,266.00 at 35%	$1,843 10	
Dumping duty, 15%	779 90	
Exchange, 13½% on $3,974.00	536 51	
Freight, New York to Montreal, say ...	100 00	
Laid down cost in Canada		7,234 01
Difference in favor of making direct importation from United Kingdom to Montreal		$1,504 01

ANOTHER CASE.

From United Kingdom Direct to Montreal.		
20,000 yds. unbleached cotton fabric at 1 shilling per yd., £1,000, or (par) $4,860.00.		
Duty at British Preferential Rate, 15%.	$729 00	
Actual cost in Canadian money, with sterling at $4.18	4,180 00	
Freight, insurance, etc., say	100 00	
		$5,009 00
From United Kingdom into U.S. and Re-shipped thence to Canada.		
20,000 yds., unbleached cotton fabric, £1,000; converted at $3.69	$3,690 00	
United States duty at 20%	738 00	
New York brokerage or commission, say 5%	184 50	
Freight, insurance, etc., to New York	100 00	
Duty paid, fair value in New York	$4,712 50	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on the sum of $4,712.50	$4,712 50	
Canadian duty at 25% on $4,712.50	1,178 00	
Dumping duty	706 80	
Exchange at 13½%	536 49	
Freight, New York to Montreal, say	100 00	
Laid down cost in Canada		6,495 79
Difference in favor of making direct importation from United Kingdom to Montreal		$1,486 79

The Canadian Customs appraisement of importations from the United Kingdom according to par value of sterling cannot be evaded by shipment of such British goods into the United States and reshipment thence into Canada. If any overseas goods are shipped into the United States and subsequently reshipped into Canada, the Canadian Customs, under the law as it stands, has to appraise such goods according to the duty paid, open market, usual home selling price for consumption in the United States. Thus, the cost of goods from the United Kingdom, plus carriage, insurance and other charges into the United States, including the United States duty and the profit which would accrue if sales were made in the United States, have all to be added together to arrive at the value for duty of such shipments from the United States into Canada. Also, such importations into the United States have to be entered at the general tariff rate instead of British Preferential Tariff rate. The result is that British goods cannot be shipped into the United States and re-shipped into Canada except at a loss when compared with the laid down cost of like goods shipped direct from the United Kingdom into Canada. The provision in the Custom law of Canada referred to in the foregoing is Section 50, as follows:—

"The Governor in Council may provide that in the cases and on the conditions to be mentioned in the Order in Council goods *bona fide* exported to Canada from any country, but passing in transitu through another country, shall be valued for duty as if they were imported directly from such first mentioned country; provided that goods which have been entered for consumption or for warehouse, or which have been permitted to remain unclaimed, or which have been permitted to remain for any purpose, in any country intermediate between the country of export and Canada, shall not be considered as in transitu through such intermediate country, but shall be treated as goods imported from such intermediate country and be valued and rated for duty accordingly."

The regulations founded on this Section appear in Customs Memorandum No. 1097-B.

If the depreciation in sterling were to be allowed for Customs duty purposes, the same principle would have to apply to importations into Canada from the allied countries and also to importations from late enemy countries. Thus, a change from the present Customs requirements, to an allowance for exchange conditions, would promote sales in this country from late enemy countries, more than from any other country.

The German mark has a par value in Germany of 23.8 cents, but is worth about one cent in Canadian money. Allowing exchange as outlined would result in an article which sells in Germany for 1,000 marks ($238) being appraised by the Canadian Customs at one cent per mark, of $10. A case in point: One grade of German lead pencils were sold for export before the war at 26 marks per gross (equal to $6.18 in Canadian money). Within recent weeks they have been offered at the same price of 26 marks to Canadian merchants. If exchange were allowed, these pencils, if imported now, would have to be appraised by the Customs at about 26 cents per gross instead of $6.18; but 26 cents would scarcely buy the graphite used in their manufacture.

On the foregoing principle, goods purchased in Russian rubles should be appraised by the Canadian Customs as valueless, because the Russian ruble has no exchange value.

The adoption by Canada, for Customs revenue purposes, of this basis for the nominal valuation of goods from late enemy countries, would give to the products of those countries the most advantageous Customs tariff privilege for shipment into Canada that could possibly be extended to those countries by their greatest friend and ally. No single act of this country could be more pleasing to Germany than a change in our Customs law that would allow importations from Germany and Austria to be appraised to the exchange value of the German mark or the Austrian crown.

Australia absolutely prohibits importations from late enemy countries.

On January 14th, Australia issued a proclamation prohibiting the importation into the Commonwealth of:

(1) Goods manufactured or produced in or brought directly or indirectly from Germany, Austria-Hungary, Turkey or Bulgaria. Goods shall be deemed to have been manufactured or produced in Germany, Austria-Hungary, Turkey or Bulgaria, if more than 5 per cent. of the invoice value thereof has been derived from labor of persons resident in any of those countries, and the onus of proof of the country of manufacture shall be on the importer;

(2) The terms "Austria-Hungary" and "Turkey" mean those countries as existing before the war.

New Zealand likewise prohibits such importations.

The Dominion Government now has no power to prohibit or restrict importations from late enemy countries.

To do this there would have to be an Act of Parliament now that the War Measures Act has lapsed. And it is extremely improbable that any such prohibition would be authorized by Parliament.

Importations into European countries from North America are subject to the handicap of prohibitory adverse exchange rates. But an illustration of how these countries still further impede shipments from America appears in a recent order of the French Government. In this order France protects her markets by ruling American currency as being appreciated instead of her own currency being depreciated. Goods costing $1,000 in American money would have a par value of 5,208 francs. But France appraises such an importation at 11,600 francs for duty purposes. This raises the ad valorem tariff rates of France 123 per cent.

The United Kingdom applies the same rule on importations into that country from the United States and Canada.

It is a fact that in none of the European countries has there been appreciation in costs corresponding to the depreciated value of their currency in relation to the American dollar. And if such depreciation were allowed for duty purposes by this country in the appraisement of the currency of the exporting European country, the goods would not pay duty upon their true fair market value as sold for home consumption in the country of export. But the Customs law makes the value for duty of importations into Canada the fair market value as sold for home consumption in the country of export.

The exchange provisions appearing in the Customs Act of Canada were designed to meet the conditions in those countries whose currency standard is silver, such as Mexico, India, China, etc., where the value of the currency fluctuates in correspondence with the fluctuation in the price of silver.

When one considers that the depreciation of these currencies in relation to our money is so great as to far more than offset the Canadian Customs duty on imports it is ridiculous to contend that the Customs provisions destroy or attempt to destroy the British preference and the difference in present exchange values.

Spread the Gospel of Home Buying

THE good work of spreading the gospel of home buying goes steadily on, gaining in scope and effectiveness as more and more of the people become convinced of the great desirability of the movement. Resolutions galore are being passed by public and semi-public bodies expressing the conviction of members that only by lessening imports can we restore the Canadian dollar to its proper position in international exchange. And a great many articles are being written and published to the same effect.

Members of the Association who issue house organs or company publications might very well make use of these media to impress on their employees the importance of home buying. There are now a great many papers of the sort in Canada and in the aggregate they have large circulations and wield a good deal of influence. We have already referred to some of the arguments advanced by the editors of certain of these publications. Yet another example comes to hand in the February issue of *Gilt & Glimmer*, the house organ of Stauntons Limited, wall paper manufacturers, Toronto, in which the following article is published under the heading,—"What Is Your Dollar Worth?"

"A few weeks ago the Canadian Government shipped to Washington, D.C., the sum of twenty million dollars in gold. This was a payment, in part only, of a bill that the United States held against the Dominion for the difference between the value of merchandise that the two countries had purchased from each other during recent months. The direct object of this part-settlement was to bring down the rate of discount that owing to this large indebtedness the United States banks were able to charge on Canadian funds. The Canadian dollar would only purchase 89 cents worth of United States commodites, so in order to bring it nearer to par value twenty million dollars of our national treasure had to be surrendered. This is as much gold as our Northern mines have produced since January, 1919, and it pledges their production till next June. It is gone forever, no chance of any of us laying our hands on one solitary shekel of it again.

"And what have we received in exchange? A too large number of luxurious automobiles which quickly depreciate in value, a lot of silk or near-silk that could hardly be considered essential, nearly twenty-three and a half million dollars worth of fruit, yet Canada produces the finest fruit in the world, and with a possible few exceptions we could well live on the home-grown variety. There was some wall paper, too, which helped to swell the bill. Then there were a number of other things that could have been left outside. Finally there were necessities such as cotton and coal which we could not reasonably do without.

"So just because people must ride in imported cars and wear imported silk (alleged) apparel, and devour imported fruits, and decorate their homes with imported wall papers, unless we surrendered our gold, we were threatened with the alternative of obtaining only 89 cents worth of coal for one dollar of Canadian currency. Pretty hard on some of us when the mercury slips down below zero!

"One of America's greatest statesmen, none other than Abraham Lincoln himself, has wisely asserted:

"'I know little about tariff, but this I do kony, when I buy goods made abroad I get the goods and the foreigner gets the money, but when I buy goods made at home I get both the goods and the money.' In this case the foreigner is getting our money and giving us only 89 cents worth of merchandise for each dollar he receives from us.

"Then let our Canadian people buy Canadian products for reasons that in part may be simply set forth:

"1. Because they are of *good quality and value.*

"2. In order to bring back the full value of the Canadian dollar in the United States so that it will purchase one hundred cents worth of *necessities.*

"3. In order to give ample employment at fair wages to Canadian workers.

"4. In order to keep Canadian money at home so that it may circulate amongst our own people.

"5. In order to encourage Canadian enterprise and ability.

"So instruct your sales-people to advocate the purchase of Canadian-made goods at all times. Advertise Canadian-made goods constantly. Teach your customers that it is to their advantage to purchase naught else than Canadian-made goods. Start doing it now."

The Canadian Paper Trade Association has had the courage of its convictions. At a meeting held on February 6, in Toronto, the following resolution was passed:—

"Owing to the extremely adverse rate of exchange existing against Canada, we strongly recommend that the members of our Association refrain from purchasing in the United States (wherever possible) until the rate of exchange becomes more normal."

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting

The regular monthly meeting of the Executive Council for February was held at the King Edward Hotel, Toronto, on the afternoon of Thursday, February 26. The chair was occupied by the first vice-president, Mr. J. S. McKinnon, and there was a very representative attendance of members, quite a number being present from outside points.

A warm welcome was extended to Mr. John F. Ellis, whose resignation from the position of treasurer on account of ill-health was accepted with regret at the January meeting of the Council. Mr. Ellis has since been greatly improved in health, and has signified his willingness to retain office, at least until the next annual meeting. The Council, accordingly, considered his resignation as being withdrawn.

It was announced that, providing the vaccination requirement was lifted, the next meeting of Council would be held in Montreal. Failing that, it will probably take place at Ottawa.

Membership

The special membership campaign, which was begun on December 1 and is still being continued in certain localities, has resulted, to the end of February, in the securing of 492 new members. These are divided among the several divisions as follows: Ontario, 200; Quebec, 151; Maritime, 75; Prairie, 34; Pacific, 32. Reference was made at the February meeting of the Executive Council to the splendid work done by Mr. H. A. Telfer, Chairman, and the Membership Committee, in connection with the membership drive.

Convention Headquarters

Hotel Vancouver, one of the finest of the C.P.R.'s chain of hotels, where the 1920 Annual Meeting of the Association will be held

Ontario Division Luncheon

A luncheon arranged by the Ontario Division was held at the King Edward Hotel, Toronto, on February 26, when members were privileged to hear an address from Professor L. W. Gill, M.Sc., the recently appointed Director of Technical Education for Canada. Dr. Gill reviewed the Parliamentary history of technical education up to the time of the passing of the Technical Education Act last year, and gave the C.M.A. and the Trades and Labor Council credit for having fathered and mothered the legislation. He appealed for the continued support of the manufacturers in carrying out the purpose of the enactment. What had been accomplished to date was explained, and an outline given of the principles under which it was hoped to perfect the system. Following Dr. Gill's address, a vote of thanks was moved by Dr. A. C. McKay, principal of the Central Technical School, Toronto, and seconded by Charles Marriott, president, Toronto Board of Trade.

Motion Pictures

During the past month, on instructions from the Executive Council, an arrangement was concluded whereby Trade Sections of the Association may obtain Canadian-made films at a reasonable price, and have all their rights and interests protected. The Commercial Intelligence Department issued a circular on the subject, inviting members, if interested, to advise the secretary or chairman of any trade organization with which they were connected, so that a full discussion of the situation from all angles might be had. It was reported at the February meeting of the Executive Council that several groups of industries are now making preparations to have their industries filmed.

Exhibition Trains

A communication has been received by the Association from the Minister of Trade and Commerce, outlining a proposal to arrange for a train loaded with made-in-France products to tour Canada, and for a reciprocal proposal for a train of made-in-Canada products to tour France. These proposals were considered by the Executive Committee at its last meeting, and the recommendation was passed on to

Amid a Sea of Mountains

The valley of the Bow River at Banff with the famous Banff Springs Hotel in the foreground,—a prospective stopping off-place for the C.M.A. excursion party

Council for its approval that, while the Association would welcome and approve the suggestion that a made-in-France train should tour Canada, it did not think that it would be possible to organize a made-in-Canada train for France at the present time.

Settlement of Pre-War Debts

Through the Ottawa office, a statement has been received from the Under Secretary of State which intimates that the Trading with the Enemy Act is still in force as applying to uncompleted pre-war transactions, and that direct payment or acceptance of payment on pre-war transactions is not legal, and does not release obligation to pay. The Government policy for handling this phase of the question, together with the reparation by former enemies for Canadian property sequestrated, commandeered or destroyed by the German Government, or for losses incurred through acts of illegal warfare, has not yet been determined upon, but it is practically certain to be handled through some central clearing office. In the meantime, the whole question will be carefully followed out by the Association, and information conveyed to the membership through a circular.

Inter-Empire Trade

In accordance with a request from the Quebec Division Secretary, the Commercial Intelligence Committee have been giving consideration to a letter from H. M. Trade Commissioner's office at Montreal, in which it was pointed out that statements have been made by Canadian manufacturers, protesting against their inability to obtain supplies of various raw materials, grown or produced within the Empire, direct from business houses located in the Empire, since agents and brokers, with headquarters in New York, have been granted control of all North American sales territory, including Canada.

The general policy for the stimulation of trade through Imperial channels, wherever possible, was re-endorsed by the Committee, but it was felt in many of the instances brought before the Committee that any change rested largely with the British or Imperial house concerned making a different disposition of their selling arrangements, as may be warranted by the extent of the market in Canada for the commodity they desire to dispose of, and by the additional services or mutual advantages accruing to the Canadian importer and the Imperial exporter. It was pointed out that Imperial producers were more than ever alive to the value of the Canadian market, and that the natural course of such business was in the direction outlined above, whenever it became practicable to handle business economically through Canadian channels.

The Committee have recommended that H. M. Trade Commissioner be assured of the co-operation of the Association wherever possible.

Transportation Expert to Visit Maritimes

On instructions from the General Manager, Mr. G. P. Ruikbie, of the Transportation Department, left on March 2 for a visit to Maritime Province points, in order to give consideration to the question of freight rate adjustments from the Maritime Provinces to points in Ontario and Western Canada. It is the object of this investigation to give every assistance to members in the Maritime Provinces. The question of rates is being gone into very carefully, and every effort will be made to have the matter given proper consideration.

Cloak and Suit Section

An application has been received from a number of cloak and suit manufacturers, who are members of the Association, asking permission to form themselves into a section of the Association. As the applicants have conformed to the regulations set forth in the by-laws, the Executive Committee recommended to Council the approval of the application, which has been granted.

Calgary Branch Officers

At a meeting of members of the Calgary Branch, held on February 5, the following officers were elected: Chairman, R. J. Hutchings, Great West Saddlery Co.; Vice-Chairman, C. J. Williams, Alberta Box Co.; Hon. Secretary, P. S. Woodhall, Sheet Metal Mfg. Co. The former officers were: Chairman, Wm. Georgeson, Tuxedo Coffee & Spice Mills; Hon. Secretary, Wm. Innes, P. Burns & Co.

Co-ordination of Labor Laws

A communication has been received from the Minister of Labor, stating that he proposed to assemble a commission for the purpose of co-ordinating and unifying labor laws of Canada, in accordance with a resolution passed at the National Industrial Conference, held in Ottawa, September 15-20, 1919. This commission will assemble in Ottawa about the end of next month. The Minister of Labor has asked this Association to name the representative of the employers on this Commission.

Made-in-Empire Shopping Week

The Trade and Industry Committee of the Royal Colonial Institute, London, England, have been working on a proposal to establish simultaneously, in all quarters of the Empire, a made-in-Empire Shopping Week, to take place during the week in which Empire Day occurs next year. The Council of the Royal Colonial Institute have approved

of the plans outlined, and a request has come forward that the C.M.A. express its considered opinion in regard to the proposal. The Commercial Intelligence Committee have had the matter in hand and, while approving of the underlying principles, will give the proposal further consideration.

Canadian Goods for Big Hotel

Effective work in the direction of securing consideration for Canadian materials and furnishings in connection with the construction of the big addition to the King Edward Hotel, Toronto, was done last month by a special sub-committee of the Toronto Branch Executive. This sub-committee, consisting of W. C. Coulter, the Branch Chairman; S. R. Parsons, Thomas Roden, J. E. Walsh and H. Macdonald, waited on Mr. O'Neill, general manager of the hotel company, and urged upon him the desirability of using Canadian products to the greatest possible extent in the building operations soon to commence. Mr. O'Neill stated in reply that it was the desire of the management to give the preference to Canadian-made goods, and added that any manufacturers making goods needed by them would receive every possible consideration when it came to buying.

Activities of Quebec Division and Montreal Branch

By R. W. Gould
Secretary, Quebec Division, C.M.A.

Many matters of Dominion-wide importance have been occupying the mind of the Executive, both of the Province and the Montreal Branch, during the past month. The "Travel in Canada" suggestion, which came from head office recently, has been well received also. Manufacturers have warmed up to the suggestion wonderfully, and Quebec will fall in line at once in any scheme of this kind, calculated to make the Canadian take a greater interest in his own country as a vacation land.

We almost felt equal to Toronto at the Montreal office one day this month, when we had a visit from the General Manager, Mr. J. E. Walsh; Mr. S. B. Brown, Assistant Manager, Transportation Dept., and Mr. Alex. Marshall, of the Commercial Intelligence Department. On that day we could have very nearly held up our end against head office in any matter. The visits of Messrs. Walsh and Brown to the Montreal Branch during the past month have been heartily welcomed by the members. When we see them often we are filled with the realization that we are a real factor in the Association, and headquarters regards us as such.

Montreal promises a good representation at the "Get-Together" Luncheon, to be held in the City of Quebec on Thursday, March 4th, at the Chateau Frontenac, when the opening gun will be sounded in a membership campaign in that city.

The Division has made its helpful influence felt to a considerable extent during the month in the assistance it has given the Dominion Bureau of Statistics in collecting the census of industry returns. Mr. R. H. Coates, the Dominion Statistician, has written the Branch Secretary, thanking us for our assistance and co-operation.

The movement on foot here to hold a World's Fair in Montreal in 1925 has not gone unnoticed by the Branch. Lt.-Col. W. J. Sadler, Chairman of the Montreal Branch; Mr. C. Howard Smith, Vice-Chairman of the Provincial Division, and Mr. S. J. B. Rolland, of the Montreal Executive Committee, have been named to look after the interests of the manufacturers of Quebec in this matter, should it take definite shape. Mr. T. P. Howard, the Dominion President, is also taking a hand.

New members are constantly coming in, and the services of the Association are being more and more appreciated.

A last word. Quite a number of our Quebec manufacturers are planning to attend the annual convention on the Pacific Coast in June next. The Quebec Division is determined to be well represented on this occasion.

Alberta Manufacturers Meet

Interview Government

A meeting of members of the Alberta Branch, C.M.A., was held in Edmonton on February 9 and 10, with more than thirty members in attendance. The chair was occupied by C. G. Robson, Edmonton, and among those present were:

From Calgary: M. J. Hutchings, Great West Saddlery Co.; Brig.-Gen. H. F. McDonald, Alberta Industrial Development Co.; R. L. Fowler, R. L. Fowler & Co.; P. S. Woodhall, Sheet Metal Manufacturing Co.; Wm. Tunis, P. Burns & Co.,

A Sight Worth Seeing

Train emerging from the lower portal of the world-famous spiral tunnel near Field, B.C., on the C.P.R. transcontinental line to the Pacific coast

Ltd.; H. Hutchings, Western Printing & Litho Co.; C. Y. Williams, Alberta Box Co.

From Medicine Hat: R. P. Stewart, Alberta Clay Products Co.; W. A. Church, Alberta Linseed Oil Co.; J. B. Swan, Ajax Coal & Mining Co.; Geo. Preston, Lake of the Woods Milling Co.; A. Andrews, Ogilvie Flour Mills Co.; Geo. Lydratt, Red Cliff, Dominion Glass Co., Ltd.

From Edmonton: A. W. G. Clark, Edmonton Cement Co.; C. G. Robson, W. H. Clark & Co.; A. W. Challand, J. J. McLaughlin Co.; J. H. Millar, Acme Brick Co.; C. G. Sheldon, Humberstone Coal Co.; J. L. Moldor, Swift Canadian Co.; G. M. Hall, Edmonton City Dairy; H. F. McKee, Gainers', Ltd.; Mr. Courtney, Courtney Man. Co.

On February 10 twenty-five members of the Branch engaged in a discussion of manufacturing problems with the provincial cabinet. The delegation expressed themselves as being sympathetic with labor, averse to the granting of any special privileges, and in favor of uniformity of laws among the provinces, but impressed upon the Government their desire that before any legislation is enacted, which directly affects the business and interests of manufacturers, that members of the Association be advised of the proposed laws, and be given full opportunity for expressing their stand on such matters.

R. J. Hutchings, of Calgary, was the first speaker. Mr. Hutchings laid stress upon the necessity of encouraging manufacturing in the province, inasmuch as Alberta possessed almost unrivalled advantages in this respect. But possibly 60 per cent. of the initial manufacturing enterprises failed. While they desired, above all things, to be fair to labor, there must not be legislation which would lay any heavier burden upon manufacturing, and which would only serve to cut down production, already seriously falling short, and making the cost of living ascend more and more.

"The Government's slogan of 'Greater Production' cannot be harmonized with the agitation for shorter hours," said Mr. Hutchings. He went on to say that in some branches of business orders were plentiful, but uncertain markets and rising costs of raw material, with the certainty that there was inflation impossible to be permanently maintained, made manufacturing a decidedly precarious undertaking at the present time. This point was emphasized by other speakers repeatedly.

Charles Pratt, of Medicine Hat, urged more uniformity of laws affecting manufacturing. Alberta products were sold all over Canada, and conditions of production must be made as nearly equal as possible, in order to meet competition. The manufacturers asked fairness in legislation, and nothing more.

Secretary G. E. Carpenter, of the Prairie Division, C.M.A., complimented the Alberta Government for their courage and vision in assisting industrial research. They needed encouragement, but asked no special favors. Due to the fact that sixty per cent. of western manufactured goods must meet continental and world competition, there must, however, be no undue burdens laid on the shoulders of the western concerns. Mr. Carpenter also commended the Alberta Government highly, and his statements were applauded when he said that in the system of state insurance already carried out in the province the cabinet had strongly opposed any placing of undue burdens on manufacturers. Two years had shown this policy to be soundly based and a real success.

In view of the unsettled state of world affairs, Mr. Carpenter asked that the provincial legislature delay sanctioning the labor conventions of the peace treaty until such time as other allied countries have adopted them; otherwise, manufacturers here might not have a ghost of a chance in competition with places where the conventions would not be in force. However, Canadian manufacturers were willing to meet all competition on a legitimate level and under the same international standard of working hours, wages, etc.

Hon. A. G. Mackay suggested that labor and the manufacturers hold conferences, and try and get together on many of the issues involved, before the Government is approached. Mr. Carpenter said this was desirable and practicable in many cases where issues were purely local, but in export business this was not such an easy matter.

Premier Stewart assured the delegation of the Government's desire to see manufacturing encouraged in the province. He wanted uniformity of laws, so that Alberta manufacturers were on the same basis as those in other provinces.

Before adjourning, the delegation, on an explanation from Mr. Boyle, declared themselves in favor of inspection of factories by the Compensation Board, instead of by both Board and Factory Act officials. Mr. Boyle said this legislation was under consideration, and proposed changes also have in view a rating on the basis of merit in factory conditions and equipment. This was heartily approved by the delegation.

Activities of Toronto Branch

By H. MACDONALD
Secretary, Toronto Branch, C.M.A.

The Toronto Branch Executive have given further consideration to the effect of the harrassing restrictions imposed by the city under the smoke by-law, which are calculated to discourage industries from locating in Toronto district. The Committee have decided that, if industries are to experience further trouble, action will be taken in support of a rescission or modification of the present regulations.

British Immigration

The Toronto Branch Executive have appointed the following Committee to consider the best form of organization to assist and systematize the transportation of British immigrants anxious to come to Canada, namely: Messrs. H. A. Telfer, J. Allan Ross, H. N. Cowan and C. E. Edmonds.

Advisory Industrial Committee

Owing to increased engagements as first Vice-President of the Association, Mr. J. S. McKinnon has retired from the Advisory Industrial Committee of the Board of Education, and Mr. Henry H. Mason has also tendered his resignation, owing to business engagements. Both these gentlemen have rendered long and efficient services on the Committee. Mr. W. C. Coulter, the chairman of Toronto Branch, and Mr. W. H. Shapley were appointed in their stead.

Membership Campaign

As the result of the special Membership Campaign which was begun on December 1st, and is still being continued, 90 new members have been added to the branch, making the present membership 925.

Shortage of Power.

A special committee of the Toronto Branch has had conferences with the Commissioners and officials of the Toronto Hydro System, owing to the loss and trouble occasioned to the industries within the Toronto district, largely

due to the changing weather conditions and consequent ice trouble, which seriously reduced the output of the plants at the Falls, which supply the system. It was explained by the general manager of the Toronto system that one of the plants from which the whole Hydro demand was normally 60,000 horse-power, recently supplied only about 5,000 horse-power. The capacity of the other plant was reduced to about fifty per cent. and the power available for the system in Toronto was thus less than one-half what was required to serve customers.

In order to relieve the present conditions and make provision to meet the demand until the completion of the Chippewa development, Mr. Couzens explained that this could be met:

1. By the purchase of sufficient additional power generated by water or steam.
2. By the diversion of power (now exported to the States) to the Hydro Commission.
3. By the installation of a steam plant or steam plants.
4. By the purchase of existing plants.

As regards these, the first and fourth are under way by the Ontario Hydro Commission. The second involves a big question of policy and may readily become an international matter. The third involves heavy expense and increased charges, as the capital cost of a steam plant to-day would be in the neighborhood of $150 per kilowatt or about $110 per horse-power.

The committee think that the co-operation of every Hydro user, whether domestic or industrial, should be given to assist in conserving power and light, in every possible way, in order that an uninterrupted service may be maintained in the industries, until a further supply of power is obtained for the system.

Citizens' Research Institute

Dr. H. L. Brittain has conferred with the Toronto Branch Executive on the subject of a Dominion-wide organization of citizens, to be known as the Citizens' Research Institute of Canada, whose business it will be:—

1. To obtain, in an unbiased and non-partisan manner, the fact basis underlying the administration of the peoples' affairs in the Dominion, the Provinces and municipalities and of community interests in general.

2. Through the publication and discussion of such facts to create a well-informed citizenship.

It is thought that if such research organizations are necessary in a municipal field, there is a much greater need in the provincial and national field.

At present a very real unrest exists in the industrial, social and political phases of national life. The only way to remove this is to discover and remedy the causes. The institute, by obtaining, in an unbiased spirit of research, the pertinent facts in relation to the various phases of community life, and presenting them in a form easily assimilated by the people, should assist in promoting clear thinking and effective action in this connection.

The Institute will be governed by a Board of Trustees, who shall receive no remuneration, elected by and from the members at the annual meeting. No paid official of a Dominion, provincial or municipal government can hold the position of trustee. The Institute will be supported entirely by voluntary contributions.

The Executive Committee of Toronto Branch has, upon inquiry, endorsed the Institute and has promised to support Dr. Brittain in his new work. As Canadians, we are all vitally interested in efficient and economical administration in the local, provincial and Dominion field. The Executive has, therefore, arranged for a special conference with Dr. Brittain, with a view to determine the best means of making its endorsation effective.

Ontario Division's Work

By H. MACDONALD
Secretary, Ontario Division

A joint meeting of the Executive Committee and Transportation and Power Sub-Committee of the Ontario Division was held in the Royal Connaught Hotel, Hamilton, on January 28. Mr. George H. Douglas, chairman of the division, presided. The committee gave full consideration to the situation arising from the shortage of power and its serious effect upon many of the industries. After full discussion, taken part in by the chairman, Messrs. Waddie, Whitton and Coulter, it was resolved that a representative committee, on behalf of the Ontario industries, be organized to wait upon the Hydro Electric Power Commission on the return of Sir Adam Beck from England, to discuss the whole power situation in Ontario—the selection of the personnel of the committee being left in the hands of the Chairman and Secretary.

Employment of Returned Men

A joint meeting of the Executive Committee and Legislation Committee of the Ontario Division was held in the Association's offices on February 20th. Mr. George H. Douglas, Chairman of the Division, presided. Correspondence was submitted from the Business Council of the Citizens' Repatriation League, Toronto, referring to difficulties in connection with engaging disabled returned men on account of there being greater danger of these men meeting with an accident than in the case of a man without physical disability, and the placing thereby upon the employers the liability of heavy compensation under the Workmen's Compensation Act.

The opinion of the meeting was that there was no reason to assume that there had been any disposition on the part of employers to discriminate against any class of returned men, and they directed the Secretary to notify the Business Council that if special cases of complaint in this regard could be submitted, full inquiry would be made.

Moratorium Act

It appearing from the press reports that Attorney-General Raney had invited expressions of opinion on the question whether the moratorium legislation should be continued or repealed in Ontario, the Legislation Committee of the Ontario Division resolved to communicate to the Attorney-General an expression of opinion that repeal of the Moratorium Act should be delayed for six months after sufficient notice had been given.

Workmen's Compensation Act

The Legislation Committee of the Ontario Division have recently issued a questionnaire to employers in Ontario inviting an expression of their views as to the working out of the Act, whether generally or in relation to their particular plant. The Committee have fully considered the replies received and have referred the whole question to a special committee for further consideration and report, with special reference to recommending an adequate system of merit and demerit rating.

Who Goes to San Francisco?

By A. MARSHALL
Manager Commercial Intelligence Department

The Commercial Intelligence Committee have been invited to submit suggestions as to how best the invitation of the National Foreign Trade Council of the United States, tendered through the British Consul-General, to a representation of Canadiaa business men to attend the seventh National Foreign Trade Convention in San Francisco, may be availed of.

The National Foreign Trade Council of the United States is a non-partizan and non-political organization, devoted solely to the development of International Commerce. The Convention held under its auspices is primarily a gathering of the representatives of all phases of the international commerce of the United States, from all parts of the country, for the discussion and consideration by business men of the problems arising out of their daily transactions. Both the import trade and the export trade are fully dealt with.

The Foreign Trade Council considers that it is reciprocally to the advantage of producers and distributors in foreign markets, as well as those of the United States, to meet at such a convention for the mutual interchange of views and information regarding market conditions, production, trade customs and regulations, and all matters affecting the flow of commerce between them.

At this convention it is proposed to make a new departure from the regular procedure by inviting, as delegates from other countries, experienced representatives engaged in the different phases of international commerce. In this connection, it is planned to arrange a series of group sessions for the special consideration of trade relations between the United States and other individual countries, as, for instance, a group session on Japan, one on China, one on Australia, and so on, the groups being composed of United States business men and the delegates from the particular country whose trade is under discussion.

It is decided that all the delegates are to be representative only of international commercial interests and not of the Governments, and it is desired that some of them will be equipped to meet United States delegates in individual private consultation, for the dissemination of information as to market conditions in the countries from which they come, and for the consideration of problems arising out of the particular trades concerned.

The Foreign Trade Council of the United States also wishes to point out the value of the opportunity this plan affords to the foreign delegations to meet at one time and in one place a large number of United States business men, representing every factor of United States production and distribution and every geographical section of the United States.

However, many individuals or trades may consider it desirable to interest themselves in the proper representation of the varied Canadian interests. Will those who are interested kindly communicate their suggestions to the Commercial Intelligence Committee at the Association address, 1404 Traders Bank Building, Toronto Ont?

In the Heart of the Rockies

View of the Kicking Horse River at Field, B.C., on the return route of the 1920 Annual Meeting Excursion

Annual Meeting Itinerary

Excursion to the Coast

The following is the itinerary which has been mapped out in connection with the Annual Meeting Excursion to the Pacific Coast. Members will note that the trip will consume practically three weeks, excursionists leaving Toronto on Saturday, May 29, and arriving back on Friday, June 18.

Via Canadian Pacific Railway

Lv. Toronto	10.00 p.m.	Saturday	May 29
Ar. Winnipeg	1.30 p.m.	Monday	May 31

The Situation and Outlook at Ottawa

The Question of an Election a subject of considerable importance at the present time—A Forecast of probable legislation at the present session—Appropriations to be cut down with great severity

By Industrial Canada's Parliamentary Correspondent

Realizing the great importance attaching to developments at the Capital, arrangements have been made for the publication each month during the present session of Parliament of an article interpreting events for the benefit of our readers. The first of these articles, written at the opening of the session, appears on this and the following page.

Ottawa.—The question of an election was obviously the matter of chief concern for all persons and parties at the opening of Parliament. This was natural, as preparations for general elections have been under way for some time.

When Hon. Mr. Crerar left the Government last session, he regarded his resignation as a first step in his campaign, and he followed that step by touring Canada on a speaking trip, organizing farmers in all parts of the country for the next voting contest.

He has figured in several of the bye-elections, and to-day finds himself in the House at the head of a group of twelve men who sit on what they designate as "cross benches" and vote independent of both parties, but are generally against the Government.

The Liberal National Convention of last summer was the great preparatory step of the Liberals for a general election. It has been followed by other details of party organizing, including the appointment of a capable man, in the person of Mr. John Lewis, to prepare campaign literature and generally to look after publicity.

Government Does Not Want Election

The Government, which does not want an election, has been forced to follow the lead of its opponents, and take measures for its defence. The evidence of this is that Hon. Mr. Meighen, Hon. Mr. Calder, Sir Henry Drayton, Hon. Mr. Rowell, and other spokesmen for the Government, have been taking the platform during the past six months, whenever opportunity offered, to promote the standing of the Government in the country by spoken word.

The Speech from the Throne contained the promise of a franchise act, which was necessary for an election, as the War Times Election Act could not be used. The passage of the franchise measure will make the holding of an election possible.

The first declaration of Hon. Mackenzie King at the opening of the session was that there should be a revision of the tariff, and he closed the speech with a demand for a general election, and emphasized the demand by an amendment to the Address, insisting that the enactment of the franchise bill be followed by an immediate appeal to the people.

But, in spite of all the campaign preparation, there is not likely to be a general election this year nor, indeed, until another session of Parliament has been held, and the constituencies of the country subjected to redistribution. Sir George Foster scoffed at the idea, and intimated that the Liberal leader was posing.

The Government does not want an election, and it is suspected that neither Hon. Mr. King nor Hon. Mr. Crerar want one as badly as they declare. Neither of them feels that his organization is what it should be, and Mr. Crerar, in particular, is in the difficult position of dealing with a most radical following. He would be glad to have the farmers, east and west, who want to make him Prime Minister without delay, have the opportunity of seeing how the Drury Government of Ontario, under the responsibility of administration, handles the questions that every Government has to deal with. The followers of Hon. Mr. King would be well satisfied to draw one or two more indemnities without placing their seats at the hazard of a general election.

Might Stay Until 1923

Therefore, the problem of the Government continuing in office may not be as difficult as it appears.

Under the constitution, the Government would be able to remain in office until 1923, providing it can continue to command a majority of the voting strength of the House. At present its majority is about fifty. Bye-elections have been running against it, and may continue to do so, but a fifty majority is a large one to overcome, and should last as long as the Government wants to keep the present Parliament alive.

The argument that there should be no election until after redistribution, is one that can be strongly used in support of the wide feeling throughout Canada, among the more responsible classes, that the country is not in a sufficiently settled mood to express itself at the polls as it would desire.

The decennial census of the country will be taken in June, 1921, and the constitution calls for redistribution of electoral ridings immediately after each census, and before an election is held. If urgent conditions require, there could be a special session in the early autumn of 1921, for the passage of a redistribution bill, and an election immediately thereafter, or as long afterward as the Government pleased, up to the statutory limitation of the spring of 1923.

Election Forecast for 1922

A fair forecast would be that the redistribution would come at the regular session of the winter of 1922, and the election in the autumn of the same year.

Parliament meets with the general feeling that the standing of the Government with the country is not strong; that feeling is shared by most of the ministers of the Government. But, there will be ample time for a considerable change of sentiment among the electors if no unexpected development brings on the election until 1922. Business will have time to improve, unrest to disappear; the business relationships of Canada with the United States, with Britain

and with the world generally, may be on a considerably different basis.

One has but to glance over the events since the last general election to form an idea of how fast the world moves and what may happen between now and the next voting day to change the minds of a majority of the electors.

In the matter of leadership, for instance, since the last election, the Liberals lost Sir Wilfrid Laurier through death and acquired Hon. Mackenzie King through convention. The Conservative party, of which Sir Robert Borden was the head, was submerged by that leader in the support of the Unionist Government, and Sir Robert wore himself out in work for his country and his Empire to such a point that it is doubtful if he will be able again to take the same forceful part in public affairs that he was accustomed to take for many years.

Development of Agrarian Movement

Since the last election there has been seen the development of the agrarian movement in politics, and the tacit selection of Hon. Mr. Crerar as head of the third party. Since that election the world has seen the end of the Great War, and the effect of the conclusion of strife was profoundly disturbing in Canada. So much so, that the constitutional system of the country was challenged by the leaders who brought on the strike at Winnipeg. Since that election Canada advanced in the status of a nation through being accorded the right to address its representations to the king direct, instead of through the British Government; the right to deal directly with Washington in matters of concern only to Canada and the United States; and, finally, recognition as a nation by the gift of a membership in the League of Nations. In the last election the franchise was extended to women for the first time, and they are now secure in the possession of voting power for federal elections. The application of Government ownership was extended to the Grand Trunk Railway, and Canada became the owner and operator of a fleet upon the Atlantic Ocean. The Dominion, which was forced to cease being a borrowing nation, has become a lending nation, through the extension of credits to European countries for the purchase of goods; the authority of organized labor has been considerably extended; the practice of making gifts of knighthoods and other honors to Canadians has been abolished. Finally, for the first time in the history of Canada, a province has made the experiment of departing from the party system in politics; has rejected the trained public man, who has been contemptuously called "the professional politician," and has elected a class to govern for the whole. This was done when the great and conservative province of Ontario turned down the Conservative Government and the Liberal opposition, and voted in the farmers, with authority to carry on Government. This is an experiment in administration, which is being closely watched by both friends and opponents of the movement, especially at Ottawa, where politics is something of a science—or, at least, a study—and where there are many seasoned observers who had long since come to the conclusion that the best administration was to be obtained from the man who made elections and administration his business.

However far the next election may be deferred, it is certain that the present session will be conducted on the assumption that an election may take place this year, and every move by every faction will be made with the view of strengthening itself with the country for the voting test.

The legislative programme of the Government, contained in the Speech from the Throne, is meagre in the extreme. The promise of a franchise measure is the only item worthy of note. But this must not lead to the conclusion that the legislative measures of the Government will not go beyond the programme in the Speech. It is the habit of Governments to reserve a good deal of their business until late in the session. Last year, for instance, a session called to ratify peace wound up by purchasing the Grand Trunk Railway.

Among members there is much interest taken in the significance of two events which have taken place elsewhere in the world, and which concern the nationalization of the public utilities of a nation. In the United States the railways, which were seized during the war, have been handed back to their owners by an administration which apparently found the problem too great and the deficits too heavy. The election of Hon. Mr. Asquith in Paisley is the second. There it is recognized that a man, who had the knowledge of administration which enabled him to discuss the question of nationalization with authority, gained from experience, went into a riding which was one of the industrial hives of the United Kingdom. The workmen were the electors, and they had been taught by the labor leaders that nationalization of industry was the goal to be aimed at. Hon. Mr. Asquith challenged the soundness of the Labor view, and succeeded in convincing the Labor electors of that riding that nationalization was not sound. His return is regarded at Ottawa as evidence that a good case, well fought, will make for success in Canada as well as in the Motherland. So we have the paradox of a Unionist Government in Canada being cheered by the election of a distinguished Liberal in Britain.

There is much concern as to the future of taxation, and as to what will be disclosed along this line when Sir Henry Drayton reveals the secret in the budget speech. One of the things which war did for Canada was to advance very considerably the application of direct taxation. The demands of the treasury are so great that there does not appear a likelihood of this being modified. The income tax is in Canada to stay.

Extension of Excise Tax

It is almost certain that there will be an extension of the excise tax, which has been applied to pianos ,automobiles, and other articles classed as luxuries. There is hardly a limit to which taxation may be extended in this way, and it may be found that the list will be so enlarged as to include a good many necessities, and to yield the Government a large measure of the revenue that it requires.

The Government proposes to set the example of economy to the country. Therefore, the appropriations will be cut down with great severity. Places that desire public buildings, communities that wish the improvement of harbors or other local works, the Canadian National Railways in the matter of extensions and betterments, and a thousand other applicants for funds from the Treasury, are likely to meet with disappointment when the estimates are tabled in Parliament. With its interest and pension bills, the Government has to economize, and it is determined to do so.

The greatest expenditure of a new kind is likely to be for the construction of more ships for the Canadian Government fleet. The tonnage of the world is short, and therein lies the difficulty of extending abroad the trade of Canada. The Government is convinced that ships are a good national investment at the present time, and is willing to spend the money necessary for their construction.

Legislation and discussion are two different things in

Parliament. It takes a bill, and usually one introduced by the Government, to become law. Discussion may be brought on by any member who can frame and move a resolution. Therefore, Parliament will hear much talk that is not intended to lead to any results other than to excite or attract the people in the country. The question of exchange, of the position of returned soldiers, of membership in the League of Nations, of further railway nationalization, of domestic commercial control either through the Board of Commerce or in some other way, of immigration, highway improvement and a hundred other things, are likely to be discussed.

The question of Government is certain to be brought under review; and there will be any amount of tariff discussion.

Changes in the Trade Mission in London

OVERSEAS' BRANCH FORMED

THE Trade Mission in London during 1919, under the presidency of Mr. Lloyd Harris, carried on a successful work in Great Britain, and was instrumental in making large sales of Canadian products to that and other European countries, aided thereto materially by various credits granted by the Canadian Government. The Commission was designed to fill an emergency and was never intended to operate permanently on the basis laid down for its temporary activities.

The credits given last year fell in at the end of the year, and unless, and as renewed, that factor will hereafter be absent. In order to provide for the expenses of the Mission, whose chief business was to procure contracts for Canadian producers, supervise them and distribute them in Canada, and to facilitate and supervise delivery to European purchasers, a small commission was charged to the parties receiving the contracts. This feature will also disappear, being in fact inadvisable and impracticable on the part of a Government in the normal processes of purchase and sale.

Now Branch of Department

In the place of the Special Trade Commission, a branch of the Department of Trade and Commerce has been constituted in London, to be known as the Overseas Branch, Department of Trade and Commerce, Canada, under the direction of Mr. W. C. Noxon, who was chief assistant under Mr. Harris, and who has had the benefit of last year's operations and activities in Europe, and who has, besides, an intimate knowledge and intimate experience of trade and industrial conditions in Canada.

With Mr. Noxon will be associated Mr. Harrison Watson, Chief Trade Commissioner in the United Kingdom, who, with his associated Trade Commissioners, will co-ordinate their work with the Overseas Branch. A sufficient staff will be provided to carry on the work along the lines of commercial intelligence, shipping, publicity, and transport. The offices will be those formerly occupied by the Trade Commission—The British Columbia Building, 1 Lower Regent St.

The Trade Intelligence Branch will, through Mr. Harrison Watson, keep in close touch with the Canadian Trade Commission in the United Kingdom, and on the continent, and will receive and transmit commercial information, and so link up with the London headquarters the activities of the whole body of Canadian Commissioners in Europe. This will give a network of trained and intelligent men in the United Kingdom, France, Holland, and Belgium, Italy, Greece, Spain, Poland, Czecho, Slovakia, Servia and Southern Russia—all connected with London Overseas Headquarters and working in strict co-operation therewith.

The Overseas Branch will have the advantage of close and constant touch with the High Commissioner in London, who will be the medium and advisor in all official and governmental communications with the departments of the Government in London, with the official commercial representatives of the various Governments represented in London, and the High Commissioners and representatives of the Overseas Dominions, India and the Dependencies.

Aims of Overseas Branch

It will not be the duty of the Overseas Branch to make sales or purchases or negotiate contracts for individuals or corporations. This must be left to their own representation and effort.

It will be the aim, through the Overseas Branch:

1. To provide a convenient commercial meeting place for Canadians visiting London for business purposes, where they will be made welcome, and can find men ready and willing to give them advice and information.
2. To have at hand full and pertinent information as to the conditions of trade, openings for business, demands for Canadian supplies, and possible contracts; to facilitate conferences with business firms, manage introductions to business houses, and in every legitimate way aid Canadians to extend trade.
3. Conversely, the Overseas Branch will be a Canadian bureau of business information as to Canadian products, where persons desirous of doing business with Canadians may find ready answers, careful directions, and sound, reliable counsel.
4. To give reasonable and uniform publicity to Canadian resources and productions and opportunities.
5. To establish a wide-awake and efficient commercial liaison office between Canadian producers and world buyers in the great mart of London, and to that end the Overseas Commercial Branch in London will keep in close touch with the Commercial Intelligence Branch of the Department of Trade and Commerce in Ottawa.

The activities of the Canadian Trade Commissioners, as outlined above, in co-operation with the London Headquarters, will not interfere with the system hitherto pursued of constant communications with the Department of Trade and Commerce at Ottawa and the business men of Canada.

Scholarships at McGill

Canadian Pacific Railway Company Make Offer to Employees and Sons of Employees

The Canadian Pacific Railway Company are offering a free scholarship, covering four years' tuition in architecture, chemistry, civil, mechanical or electrical engineering at McGill University, subject to competitive examination, to apprentices and other employees enrolled on the permanent staff of the company and under twenty-one years of age, and to minor sons of employees. The competitive examination will be held at various centres in June. Scholarships will be renewed from year to year, to cover a period not exceeding four years.

The Press Condemns Business Profits Tax

Newspapers of Canada Enumerate Many Reasons Why Tax Should Not Be Re-imposed—It Impedes Business, Interrupts the Flow and Employment of Capital and Operates to Dry Up the Source Whence It Is Derived

(A Symposium of Editorial Views)

IN the opinion of many of the most influential newspapers in Canada, the business profits war tax should not be reimposed by Parliament. The serious effect which its imposition has had on the progress of industry is emphasized, while arguments are also levelled at the inadequacy of the tax to meet the needs of the situation. A number of excerpts from the editorial pages of the Canadian press, bearing on this important question, are reproduced, in order to show the attitude of the press towards the subject.

THE EXCESS PROFITS TAX

(Kingston Standard, Jan. 23, 1920)

The question of the excess profits tax will have to be considered at the coming session of Parliament, and it will prove to be rather a difficult one. There is a danger to the public which cannot be altogether disregarded, which has been pointed out as affecting it in the States, and which, of course, applies as much in Canada. It has been well stated by Mr. M. F. Frey, the well-known American Tax Consultant, when he says that a manufacturer, merchant, or other business concern, subject to the tax, in most instances, estimates in advance the amount which he is compelled to add to the selling price of the commodity, in order to pass the same on to the ultimate consumer, so as to protect himself against the heavy imposition. Because of the uncertainty and complexities of the law, a business concern is apt to overestimate, rather than underestimate, its liability. In doing this, it often becomes an unintentional profiteer, in safeguarding itself from an undue usurpation of its earnings. Thus, prices are increased to the consumer by amounts more than sufficient to cover the tax.

It may be remembered that this has been pointed out in Canada, and it will have to be considered when the tax comes up for discussion in Parliament.

SHACKLES ON CAPITAL

(Montreal Financial Times, Jan. 24, 1920)

When Hon. Arthur Meighen, in a speech to the Shoe Manufacturers' Association, almost within one breath emphasized the need of increased production, insisted that manufacturers must be taxed to the limit, and hinted at a revision of the tariff which would remove some of the protection now afforded Canadian industries he was uttering self-contradictions. The necessity for more production has been voiced by the very highest Governmental authorities and the greatest financial and industrial experts of the nation, but increased production implies the employment of increased capital, and that is not likely to be forthcoming if, on the one hand, it is exposed to a scale of taxation which approaches confiscation, and, on the other, to a devastating competition from outside. Hon. Mr. Meighen recapitulated the scale of the income taxes in force in Canada, which increases rapidly in ratio as the incomes reach higher figures, so that while a man with $20,000 income pays practically ten per cent., the possessor of a $100,000 income pays nearly one-third to the Government, while from a $100,000,000 income virtually two-thirds is taken. Quite oppositely, the Montreal *Gazette*, in the same issue in which Hon. Mr. Meighen's speech is reported, has this to say of the business profits and income taxes:

"The fault of a business profits tax is that it impedes business, interrupts the flow and employment of capital, operates to dry up the source whence it is derived. The Government must have revenue, to obtain which it should encourage the use of capital and assist the enlargement of business—not quench either at their source. An income tax is proper, and is not a new thing. From the profits of business income will be produced, upon which taxes can be levied, and it seems a mistaken policy to obstruct the flow of profits upon which the public revenue is now largely based in the form of income taxation."

BUSINESS PROFITS TAX

(Quebec Telegraph, Feb. 13, 1920)

There is considerable diversity of opinion in regard to the desirability of renewing the Business Profits Tax, and for this reason the coming budget at Ottawa is somewhat anxiously awaited. On the one hand, there are those of the Premier Drury school of politics, who would like to see all taxes paid by the "plutocrats," as he calls them. The opposition to the business profits tax is largely based upon the fact that it applies only to concerns employing more than a specified capital, permitting concerns of smaller capitalization to escape. Then, again, it applies only to certain kinds of industrial undertakings—agricultural enterprise, for example, being exempt. Large professional incomes also escape, while the business man, who takes a risk and succeeds, is taxed according to his success; while the professional man, who takes no risk, escapes everything but the income tax. Then, again, if the manufacturer has a bad year, he must bear the loss himself. On the other hand, if the following year is a good one, the Government takes the excess profit, refusing to allow any portion of it to be employed in evening up on the loss previously sustained. In illustration of these claims, a number of instances are given by some of our contemporaries. For instance, there is the case of a shoe factory which had offers of orders far in excess of the company's capacity. Early in 1919 full preparations were made for extension of the plant, including purchase of site, preparation of architects' plans, and arrangements for financing building. Then came the renewal of the Business Profits Tax, and immediately all extension was stopped. Another case is that of a leather tannery. The total output is easily sold, and export orders are being refused. The company is in a position to expand, and intends doing so as soon as the Business Profits Tax is definitely dropped—but not before. Manufacturers contend that they are justified in basing all plans for expansion of business upon the attitude of the Government in the matter of the Business Profits Tax, which has a tendency to drive Canadian capital to seek other countries for investment, and also to prevent foreign capital from coming to Canada. There is doubtless something to be said on both sides of this question.

THE PUBLIC PAYS

(Simcoe Reformer, Feb. 12, 1920)

A large part of the population imagines, says the New York *Sun*, that the one tax the public doesn't pay is the excess profits tax. It pays it all. It pays it several times over. Worst of all, because of the economic consequences of such a tax, it will go on paying it long after the Government ceases to collect it. The public pays the excess profits tax in the added prices passed along to the consumers by the industries and businesses assessed for the tax. The public pays more than the actual tax in the waste and squander to which such industries and businesses are encouraged by the excess profits measure. The public pays still more in the reckless management and demoralized working forces, which slow down production which, if it went beyond a certain point, would go into taxes. The public pays it again in the stronger and stronger demand, as expressed in currency inflation, upon a smaller and smaller supply under that slackened production induced by

the excess profits tax. And the living cost effects of this habitual inefficiency will continue for a long time. But millions of simple-minded citizens were never surer of anything than that they do not pay the profits taxes collected from richly-earning industries and businesses. They never were surer of anything than that if the excess profits taxes were taken off those opulent industries and businesses, other taxes wider and deeper, heavier and more heart-breaking, would be applied upon the people's aching backs.

BUSINESS PROFITS TAX

(Cobalt Nugget, Feb. 5, 1920)

The Business Profits Tax expired on the 31st of December last, and at the coming session of the Dominion Parliament there will in all probability be some changes made in the Act. At all events, it would seem to be only equitable that the needed revenue should be obtained in a manner that would bear more evenly upon the people. There is no reason why one class of citizen should bear a proportionately heavier burden of taxation than other classes in the same country.

The Government will have to provide ways and means for raising a much greater revenue in the years to come, and every fair-minded citizen will agree that this is necessary, but it is to be hoped that some method will be found to distribute the burden as equally as possible.

A case has been quoted of a member of a firm of manufacturers whose tax for 1918 was nearly four times that of his neighbor, enjoying the same income from a profession. It is cases of inequitable taxation such as this that are responsible for the development of criticism. Not that a business man objects to being taxed, but it is obviously unfair that his neighbor, receiving as great an income through some other source, should be allowed to get off practically scot-free from his financial responsibilities to the country.

Industry has already many handicaps, and the careful student knows that the life of the country now depends upon production, so that any further impediment would be a serious thing for the country as a whole.

THE BUSINESS PROFITS TAX

(Vancouver Sun, Feb. 10, 1920)

In the coming session of the Dominion House the Government and the country will come to grips with the taxation question. The problem of raising the large revenue which will be required in the next financial year is one to tax the ingenuity of the Finance Minister, and, perhaps, the patience of the taxpayer, to the utmost. Every kind of fiscal expedient will be canvassed, and to the discussions, in Parliament and outside it, every variety of interest and opinion will contribute.

To the nature and effects of the Business Profits Tax considerable attention is already being paid. In some quarters its repeal is demanded. It is described as inequitable, unwise and as an incentive to concealment of profits and overcapitalization. In war time, fiscal measures can be resorted to which cannot be justified or maintained in peace time, and there is no doubt that a strong case can be made out against the Business Profits Tax as a permanent fiscal instrument.

In the normal course, the profits of businesses will be distributed as dividends. The incomes of the individuals participating will thereby be increased. To tax profits before their distribution is, therefore, to alter the incidence of the income tax. The small shareholder ordinarily pays less income tax proportionately than the wealthy one, because his total income is smaller and the tax is steeply graduated. He is placed at a disadvantage when the dividends of both are taxed equally before distribution. And in all such cases there is an element of double taxation which is absent in regard to other forms of income not derived from dividends.

The known methods by which the Business Profits Tax is evaded will be increasingly resorted to, and will be supplemented by new expedients as the country gets further and further from war conditions. And it is difficult to discern why business profits should be subject to double taxation. This they must be, unless the Business Profits Tax is made simply a device for taxing incomes from business at the source. In that case the tax would be deducted from the amount of income tax payable by the individual shareholder or partner. But until that is done, there will be double taxation.

The only justification for the Business Profits Tax is the fear that excess profits will be wrung out of the people under existing economic conditions. That fear has some justification, though competition will inevitably destroy the ability to earn excessive profits, as normal business conditions return. The danger can be removed, however, by legislation controlling the purely financial operations of companies and corporations. The watering of stock, bonusing, and the creation of unnecessary contingency and reserve funds, for example, can be checked. Apart from the provision of proper reserves, all the profits of businesses ought to be distributed annually as dividends upon stocks and shares representing the real capitalization of the particular undertaking. When this course is pursued, the graduated income tax will do all that can justifiably be done by a Business Profits Tax.

This view of the problem should be fully considered by the House of Commons when the question of continuing or abolishing the Business Profits Tax comes before it. But its abolition, which is the logical outcome of the argument, must be accompanied by legislation to ensure the distribution of all profits over and above those reasonably required to ensure the stability of the business concerned by means of adequate reserves.

BUSINESS PROFITS TAX

(Montreal Gazette, Jan. 22, 1920)

The Business Profits Tax does not run beyond the year recently ended, unless Parliament revises the impost, and this method of taxation will, presumably, engage the serious consideration of the Finance Minister. The obligations of the Federal Government do not permit of reduction of taxation. Every dollar turned into the treasury is required to discharge debts due annually, and the people of Canada will be lucky if they escape further taxation to make ends meet. The problem confronting the Finance Minister is, however, not merely one of raising adequate revenue, but equally important is the question how to raise it. Before the war receipts from customs and excise duties, supplemented by revenue from the post office and public works, sufficed to meet expenditure with a frequent balance to the good; but the immense debt created by war activities, and the very considerable enlargement of staffs in Ottawa, have made necessary new taxation. In seeking sources of revenue the Government, as all governments do, resorted to an income tax, which people bear more or less contentedly, and also to a Business Profits Tax, and it is in respect of the perpetuation of the latter that controversy arises.

Business Profits Tax is not a wise tax. It may be justified as an emergency measure, but should not be carried into peace times. That is the opinion of respected critics. The United States is about to abolish the impost, and in matters of business the Americans are not slacking. The late Finance Minister, Sir Thomas White, regarded the tax with misgiving, as his remarks in his last Budget speech clearly showed. "Our business profits taxation," he said, "unless repealed as soon as war conditions terminate, must have an adverse influence upon the investment of money in business enterprise in Canada. Within bounds, such a policy is not open to criticism, but, carried beyond a reasonable point, it can only defeat its purpose, with consequences detrimental to capital, labor, and the community, as a whole." The conclusive objection to a Business Profits Tax is that it smothers business, capital is discouraged, enterprise is checked, and a premium is given to the divergence of profits to other ends than the public revenue. Mr. W. B. Colver, a United States Trade Commissioner, had this to say of the tax in a recent address to the Wholesale Dry Goods Association of that country:

"The Excess Profits Tax is passed on and multiplied until about four or five dollars is taken out of your pocket, my pocket and the pocket of the man on the street for every dollar that finally gets to the public treasury. The tax is difficult and cumbersome to collect, and bears inequitably upon different concerns of the same size and profitableness. As a matter of fact, it is a bonus for inflated capitalization and a penalty on conservative capitalization. It should be repealed at the earliest possible moment, and its repeal, I am certain, will result in an almost immediate lowering of the whole unhealthy price structure, which is

a burden alike to every citizen, whether he be consumer, merchandizer, producer or taxpayer."

The fault of a Business Profits Tax is that it impedes business, interrupts the flow and employment of capital, operates to dry up the source whence it is derived. The Government must have revenue, to obtain which it should encourage the use of capital and assist the enlargement of business—not quench either at their source. An income tax is proper, and is not a new thing. From the profits of business income will be produced, upon which taxes can be levied, and it seems a mistaken policy to obstruct the flow of profits upon which the public revenue is now largely based in the form of income taxation.

HIGH PRICES AND TAXES

(Charlottetown Guardian, Feb. 12, 1920)

Many and diverse are the views being expressed regarding the fall in the rate of exchange and on the high cost of living. When all is said and repeated, there is but one single explanation and one single remedy. For nearly five years Britain and the British Empire have been living on borrowed money—money that was used, not for production, but for destruction. To replace this destroyed capital, the gold standard was temporarily removed and a paper currency substituted. This was not done by legal enactment, but the Government permitted a larger percentage of paper circulation than authorized by the respective Bank Acts.

The money thus borrowed and expended must be made good, and the only way to replace it is by increasing production and selling the surplus to foreign nations. From the surplus produced revenue may be derived, in the form of taxation, for the maintenance of government. The first step towards the re-establishment of the gold standard and a sound rate of exchange is the curtailment of Government expenditure and the making of Government revenue and expenditure meet. The distribution of Government funds in the form of bureaus, unemployment relief and such like, tends to enhance the difficulties of the situation. Money given for doing nothing, or next to nothing, is the worst form of economics. Only productive expenditure helps a nation, and not until we get back to the pre-war state of every man being supposed to earn his living by the sweat of his brow or the genius of his mind, can we hope to re-establish finances on a sound basis and reduce the high cost of living.

In the stress and strain of war recourse has been had to the taxation of capital, and by capital we mean the money invested in business. This has taken the form of excess profits tax, and now "taxation that falls on the income from capital tends to check both the accumulation and the employment of capital. Of course, under certain conditions (such as prevailed in some, and perhaps most, industries in the present war), there may be large elements due to partial monopoly or exceptional demand. There may be what economists call quasi-rents, and, as Adam Smith observed, the gains of monopolists, whenever they can be come at, are, of all subjects, the most proper for taxation."

But if the special taxation strikes at the fair reward of enterprise and management, then both the amount and the productiveness of the national capital are injured. A similar argument applies to labor, but as the tendency is to make labor tax free, this may not be taken into consideration—except to note that the taxation on capital will indirectly affect the wages of labor and so far tend to lessen the productive power. It is the duty, therefore, of the Government to remove as speedily as possible restraints to production, and to begin to economize, in order to make revenue and expenditure meet; for thereby will the first step be taken towards stabilizing exchange and reducing the high cost of living.

THE PROFITS TAX

(Quebec Le Soleil, Feb. 19, 1920, translated)

We are wondering at the present time if the profits tax should be abolished or maintained, and the partisans of both opinions bring strong arguments to the discussion.

Those who wish the tax maintained show us the disastrous condition of our finances and the country's pressing need for revenue. They hold that if this tax were abolished, millions, becoming more and more necessary to the country, would be lost; and the partisans of the tax also wish that the public treasury benefit from the profits realized by the large industries; it is a contribution by the *nouveaux riches* to the work of improving our country's finances.

On the other hand, those who wish the tax abolished claim that it is prejudicial to industry; that it checks the investment of capital at home; and, finally, that in many cases it is illusory.

As we see, there are very good reasons on both sides.

In the ordinary course of things, it seems to us that we would favor the abolition of the tax, for we have had occasion to ascertain ourselves that it does not benefit the public treasury, because industrial promoters, in large numbers, have found means of avoiding it; because it can in reality injure industry and prevent foreign capital from coming our way.

It is an open secret that there are a number of industries with small capital which this tax does not reach. Slander goes so far as to say that some large industrial concerns have succeeded in avoiding it by forming sub-companies with limited capital. From this source, then, there is little to be gained from the tax in the way of improving our finances.

Moreover, it checks industrial expansion. It is affirmed that there is only one way by which Canada can free herself more and more from her obligations and establish normal exchange conditions, namely, by intensive production. Now, in order to do this, the number of factories must be increased; more factories, however, require considerable expenditure, for materials and labor are very dear, and what will it be when there is a profits tax to pay besides? Thus it is better to be content with what we have, and let fate do the rest.

We must rather find some means to give a fresh impulse to our industries; this would be attained by the attraction of foreign capital, but it is to be feared that capital will not come where a tax awaits it.

"We should therefore," say the opponents of the tax, "abolish it, because in many cases it is not paid, because it will harm our industrial expansion, and because it will discourage capital."

"But," will retort those in favor of the tax, "where will you get the revenue which this tax brought in?"

"Well," is the reply, "we will get it from the big incomes of individuals and from the *nouveaux riches*."

"At the present time it is a surprising thing that the small taxpayer, the small salaried man, for $2,000 is a small salary now, cannot escape the income tax, and the big millionaires do.

"The difference is that the small taxpayer has no means of escaping it, while the wealthy man succeeds in this by investing his money in industry. Now, if it has been a bad year, the Government gets nothing from the industry which has benefited by this capital, and then there are always ways of drawing up a balance sheet which will not show excessive profits; there is the item of depreciation and the increase in the cost of labor; there are several ways, and the fact is that industries get off easily.

"But the individual must declare his annual income accurately, and it is he who will have to pay."

Le Soleil is very much interested in this debate, and the coming session will undoubtedly see it under discussion in Parliament.

INCOME AND PROFITS TAXES

(Ottawa Journal, Dec. 4, 1919)

President Wilson, in his message to the United States Congress, makes a reference to taxes on incomes and business profits which is likely to arouse conflicting feelings. He thinks that the war scale of these taxes in the United States, which has been high, is unnecessarily and unwisely high now that peace conditions are restored; and he suggests lower rates as a matter of commercial and industrial wisdom. This view will be welcome to people who pay much of such taxes, and objectionable to people who pay little or nothing of them, and think that "the plutocrats," as Premier Drury calls them, should be "soaked" to the limit.

President Wilson may be right or wrong, but we have the idea that he is only half right at best. A sharp distinction exists between an income tax and a profits tax as regards effect upon the welfare of the community. President Wilson ought not to mix up the two in either a joint

Works Councils in the United States

An Illuminating Report on the Organization of These Councils, with Results Achieved to Date—Two Main Types Have Been Organized—Conclusions Reached Set Forth Concisely in a Carefully Prepared Summary

By J. T. STIRRETT
General Secretary, C.M.A., Toronto

The National Industrial Conference Board of the United States has issued a report on "Works Councils in the United States." (Research Report No. 21). INDUSTRIAL CANADA has made an arrangement with the Board to republish the following summary of this valuable report. Members who wish to secure a complete copy may do so on application to the National Industrial Conference Board, 15 Beacon Street, Boston, Mass. Price of the report is $1.50.

BEFORE proceeding with the study of this report, it is advisable to recall the fact that the subject of Industrial Councils was discussed very fully at the National Industrial Conference held in Ottawa, September 15-20, 1919. A special committee of the Conference composed of representatives of employers, employees, and the public, was appointed to bring in a report on this subject. The members of the committee were unanimous on their finding, and submitted the following report, which was also adopted unanimously by the Conference:—

"Your committee is of the opinion that there is urgent necessity for greater co-operation between employer and employee. We believe that this co-operation can be furthered by the establishment of Joint Industrial Councils. Your committee does not believe it is wise or expedient to recommend any set plan for such councils.

"We therefore, recommend that a Bureau should be established by the Department of Labor of the Federal Government to gather data and furnish information whenever requested by employers and employees or organizations of employers or employees, that whenever it is desired to voluntarily establish such councils, the fullest assistance should be given by the Bureau."

Definition of Works Councils

In the introduction to the report, "Works Councils in the United States," the Works Council is described as "a form of industrial organization, under which the employees of an individual establishment, through representatives chosen by and from among themselves, share collectively in the adjustment of employment conditions in that establishment. The Works Council is intended as one means of satisfying the desire of the worker for a share in the adjustment of his work conditions; as a means of lessening labor difficulties, of allaying industrial unrest, of increasing productive efficiency; and as an opportunity for informing employees on production, technical and economic questions. It provides, in the individual establishment, an organized form of contact between the employer and his employees."

The report is conservative in its character. It finds that as a rule, the establishment of Works Councils has resulted in the election of conservative and intelligent representatives of employees. It also states that, on the whole, the Works Council has promoted a better spirit between management and men. It point out, however, that the Works Council is, in itself, not a cure for industrial troubles, but simply provides one kind of machinery for the adjustment of problems.

The report draws a very clear indication in regard to collective bargaining, as follows:—

"Under a plan of employee representation, questions previously settled between the employer and his employees individually are handled by representatives of the employees collectively, and, moreover, on a systematic basis. Recognition of the principle of collective dealing by the employees of an individual establishment with their employer forms the very basis of the Works Council. Such collective dealing is, however, distinct from 'collective bargaining' in the sense of collective dealing with labor unions as organizations."

This means that the individual plant is the unit for negotiation between employer and employees.

Works Councils and Trade Unions

In regard to the relationship between the Works Council and trade unions the report says:—

"The Works Council, however, is not in its essence a substitute or an alternative for labor union organization. In recognition of this fact, some notable plans of employee representation expressly provide that employees shall not be discriminated against because of labor union membership. While the Works Council tends to restrict the activity of the labor union in matters purely local to the individual establishment, the union may still be potent in settling problems common to the entire craft, industry or locality."

In dealing with the distribution of Works Councils with respect to the extent of trade unionism in plants where Works Councils have been organized, the report says:—

"Of 81 establishments from which information was secured on this point, 71 reported that they maintained 'open shops,' while in three others one or more departments were conducted on the 'open shop' basis. Two were 'closed non-union shops' and another was nominally a 'closed non-union shop.' A 'closed shop' is also maintained by the 'company union' or a public service company. Two firms stated that while their establishments are nominally 'open shops,' they are practically 'closed union shops'; one is a 'preferential union shop.'

"Not all of the reports received give adequate information on the extent to which shops are unionized. Of those giving definite information, 10 reported that 90 p.c. or more of their employees belong to trade unions, three put the figures at 80 to 90 p.c., three at 70 to 80 p.c., two at 60 to 70 p.c., and eight at 50 to 60 p.c.; four reported 20 to 30 p.c. of trade union members among their employees, and 22 reported less than 10 p.c. Eight reported that they had no union members among their employees.

"Of the 26 establishments in which 50 p.c. or more of the workers were union members, 22 were engaged either in shipbuilding or in some branch of the metal trades. Of the 10 establishments unionized 90 p.c. or more, all but two were in these industries."

One Fundamental Feature

Two main types of Works Councils have been organized in the United States up-to-date, although in one fundamental feature the organization of all Works Councils is the same, viz.: Each is a representative body chosen by and from among the employees of an individual establishment. The various kinds of Works Councils, however, fall into two main

All Departments Are Represented

Works Council at Hamilton Works of International Harvester Company

divisions, first, the Government type, and second, the committee type.

The government type follows the pattern of the United States Government, and provides for a Cabinet, Senate, and House of Representatives. This is often referred to as the "Industrial Democracy Plan." The Cabinet consists of the membership of the higher executives of the plant. The Senate is made up of foremen. The House of Representatives consists of the elected representatives of the employees. In one factory the Senate, as well as the House of Representatives, is composed of representatives elected by the employees.

The committee type follows the ordinary committee form of organization, sometimes being a single committee, sometimes a number of committees.

It is apparent that the Works Council is still in the experimental stage, and in comparison with the number of plants in the United States, the Works Councils in operation represent a small percentage of the total factories of the country.

The conclusions reached in this lengthy report are very concisely set forth in a general summary, which is printed in full as follows:—

VII—General Summary

"The facts with reference to Works Councils in the United States, as set forth in the preceding portions of this report, are summarized in this chapter. The evidence assembled in the course of the investigation also suggests certain conclusions with regard to specific features of this industrial development. The latter, which are based upon impartial judgment of the facts disclosed by the investigation, are here presented without prejudice as to the desirability or undesirability of establishing Works Councils.

"Works Councils are a relatively recent development in industrial organization. Although proceeding from forces long active—a desire on the part of the employer to establish a more intimate contact with his employees, on the one hand, and a desire on the part of the workers for effective representation of their interests, on the other—the first known example of a Works Council in the United States dates back only to 1904. Up to January, 1918, only 29 such organizations had been formed, so that practically all existing Works Councils were established during a period of 18 months. Their rapid increase in number during this period is to be attributed mainly to the activity of the National War Labor Board and the Shipbuilding Labor Adjustment Board and to abnormal war-time conditions.

"The number of Works Councils disclosed by this report —approximately 225 in 176 companies—is, of course, relatively small compared with the total number of industrial establishments in the United States. Their development, while significant, must therefore be regarded as in an experimental stage.

Most Councils Among Metal Trades

"The largest number of these Works Councils are found in the various branches of the metal trades and the next largest in the shipbuilding industry. Practically all of them are located in the states east of the Mississippi River. They exist under a wide variety of conditions. While often found in small establishments, by far the greater number of them are in large establishments employing a high proportion of skilled and of English-speaking workers. With respect to the degree of unionization among employees, establishments with Works Councils are about evenly divided between those in which a majority of the employees are unionized and those in which only a small proportion or none are union members. Practically all establishments having Works Councils are 'open shops.'

"By far the majority of Works Councils are of the 'committee' type, as distinguished from the 'governmental' type modelled after our system of Federal Government. Of the total of 225 Works Councils considered in this report, only eight are of the latter type.

"While a choice between the 'governmental' and the 'committee' types of organization is largely a matter of personal

preference, experience indicates that the 'committee' type in general is the more desirable because of its greater flexibility. In large establishments, in particular, the 'governmental' type has the disadvantage that in order to be properly representative of the employees it must necessarily be so large as to be unwieldy. Also all questions, however trivial or local, arising in any part of the plant must be referred to the House or Senate, and thereby become the concern of the whole plant. These difficulties are avoidable in the 'committee' type of organization, since it permits of the development of divisional committees in the smaller units of the plant.

Advantages of the Joint Form

"As between the separate and joint form of Works Council, the latter appears to have some advantages. The Joint Works Council, composed of an equal number of representatives of the employees and of the management, tends to develop in both a sense of their mutuality of interest. As a result, its activities are more likely to be of a co-operative and constructive nature. Obviously, agreement between the parties should be facilitated by reason of the fact that the representatives of both, sitting as members of the same body, hear the full facts concerning matters under discussion before they are required to take a position. A special provision authorizing either set of representatives to meet separately may, however, be desirable, since an opportunity for either group of representatives to talk over a matter among themselves, following joint discussion, may often facilitate a settlement. Moreover, such a provision preserves the separate entity of the two parties where their interests may be in conflict.

"With respect to their constitutions, the Works Councils reported upon are about evenly divided between single Works Councils and Works Councils based upon divisional committees. The former are found mainly in small plants; where single Councils exist in large plants, the establishment is generally subdivided into voting divisions for the purpose of electing the members. Works Councils of the second class, that is, those which comprise not only a general committee for the plant, but also smaller representative units, such as departmental, divisional, shop or craft committees, are characteristic, by contrast, of relatively large establishments.

"The latter form of organization has been found especially advantageous in large establishments, where, in order that all interests among the employees may be properly represented, a single Works Council would be too large for effective work. In this connection it is to be noted that Works Councils are generally effective in actual operation to the extent that they embrace the various elements among the employees.

"It has been found necessary to determine for each establishment individually the divisions in which Councils are to be set up, the only basis capable of general application being that such divisions should be natural units of the plant. The working direction, the number of employees, their occupation, their proximity at work, and other considerations have to be taken into account.

"The employee members of the divisional committees are chosen, of course, by the employees in their respective divisions. The employee members of the General Works Council may be chosen by the employees of the plant as a whole or by the divisional committees, or they may be selected from the divisional committees.

The Management's Representation

"While foremen, rate-fixers, division superintendents, and other minor executives may represent the management on the divisional committees, the management's representatives on the General Works Council are ordinarily high executives of the establishment.

"In their procedure practically all Works Council plans prescribe that an adjustment be attempted with the foremen,

More Information Needed on Export Trade

While a Great Deal of Valuable Data Has Already Been Compiled there is Urgent Need for More—Members Who Have Not Already Furnished Particulars Are Urged to Fill in the Questionnaire Below

By ALEX. MARSHALL

Manager, Commercial Intelligence Department, C.M.A.

ONE of the most important functions of the Commercial Intelligence Department of the Association in the past has been the interviewing of an almost constant stream of visitors from Great Britain, the Overseas Dominions, India, France, Belgium, Scandinavian countries, the Balkans, Greece, South America, the West Indies, and other countries. Many of these visitors are import commission agents, merchants and import contractors, generally coming well introduced and bearing first-class references as to ability, integrity and responsibility. Besides these well equipped and well established business men of countries other than our own we have frequent calls from successful Canadian salesmen, returned officers and others, who have some adaptability for and, in some cases, past success in selling various commodities in different export markets.

It has been our privilege and pleasure to put many of these men in touch with Canadian manufacturers who were known to be interested in export trade, as well as to assist reputable Canadian export commission houses in seeking business from our members.

After consultation with many disinterested authorities on export trade, and at the request of the Commercial Intelligence Committee, this article has been prepared to get the serious consideration of the members of the Association as to the desirability of carrying out this work in a more thorough and more systematic way than has heretofore been possible with the information at our disposal.

Naturally, no attempt is ever made to interfere in any way with arrangements already made by our members for their representation or other methods of sale of their goods in export markets, and such an outcome would be too deplorable to consider.

Through the close connection of the Commercial Intelligence Deartment with the compiling not only of the information regarding the products of Canadian factories and its publication in the "Canadian Trade Index," but also with the confidential information submitted on the same schedule, and compiled from answers to circulars, etc., the Department's work has been facilitated to a considerable degree. Nevertheless, instances are not unknown where your officers have been reduced to almost sheer guesswork in supplying the names of members to first-class people who have called on us for assistance, and who present opportunities much too valuable to be overlooked, and yet who, if misdirected through lack of information, may cause some annoyance to themselves and to our members, and possibly bring down on innocent, if persevering and enthusiastic heads, the anathemas of those annoyed.

There are so many different ways of doing export business dependent on the needs of a particular business or the policy or convenience of the company concerned that some further tabulation seems essential if success more complete than in the past is to attend our joint efforts.

The members of this Association probably need little reassurance that the staff in its employ is vitally interested

---

1. In countries where your export sales are not already arranged for, do you desire sales representation?.....

.....

2. In what countries do you wish such representation?.....

3. What line of goods?.....

4. In what countries are you free to do business with outright purchasers without paying export commission?.....

.....

5. What form of sales representation suits your business best? (Indicate answer by a cross.)

   (*a*) Direct sales by your own salesman?.....

   (*b*) Sole agents on commission in different countries?.....

   (*c*) Sole agents on commission in different sections of countries? .....

   (*d*) Sole agencies with merchants in different sections?.....

   (*e*) Canadian Export Commission Houses?.....

   (*f*) Canadian reserve officers with European business connections? .....

   (*g*) Canadian salesmen with export connections or experiences? .....

   (*h*) London International Import Contractors?.....

   (*i*) Any other form of representation?.....

   (Please state it.)

For general information:

   (*a*) Are you interested in the formation of syndicates for export purposes, composed of manufacturers making the same line? .....

   (*b*) Would you value the receipt, in printed form, of information about good methods of developing and handling export trade? .....

in guarding the interests of individual members as well as those of the Association, and that no information of any character will be divulged in such a form that it may inure to their disadvantage.

In order to provide more efficient service along the lines indicated above, would members be prepared to give us on a confidential basis such information as the answers to the questions enumerated below would furnish?

We have endeavored to form the questions so as to render the answering of them a matter of ease for the man in your company who looks after the export business. At the same time comprehensive replies from all members interested in export would be of untold value to your Commercial Intelligence Department, would save much time and heartburning, and provide an efficient service that would ultimately prove valuable to members of the Association, particularly when supplemented by our Commercial Report service on foreign firms, which is also supplied free to members.

If you are prepared now to agree with this viewpoint, would you give instructions to have the questions answered, and that section of the page clipped and returned to us. Failing that, we should be glad to have any expression of opinion or further suggestions on the matter that the spirit of co-operation, which we know exists, prompts you to send to the Commercial Intelligence Department, Canadian Manufacturers Association, 1404 Traders Bank Bldg., Toronto, Ont.

Conditions in German Industries

Leipzig Fair of 1919 Gave Good Indication of How German Industry Stands—What the Germans Propose to do to Regain Lost Markets

(Commercial Intelligence Department)

IN the days before the war the National Industrial Fair held at Leipzig, Germany, usually afforded a good index of the standing as well as the growth and progress of German industries. Naturally enough, little was heard of it during the war, but reports on the activities of the 1919 Fair are available which give a reliable account not only of the Fair itself, but of the condition of the various industries and the prospective ability of Germany to compete for export trade.

The exhibitors at the 1919 Fair numbered approximately 10,000, mostly German. The attendance mark reached 118,000, or 20 per cent. more than in any previous year. This Fair must not be confused with the sort of Fair usually held in Canada. It is distinctly a buyers' and sellers' Fair where contracts are made in many cases for annual supplies of raw materials and manufactured goods.

Representative exhibitors in conversation with visitors left the distinct impression that many branches of German industry are verging on failure, due, in some degree, to the loss of export trade, but largely to the lack of supplies of coal and other necessary raw materials, many of which ordinarily come from other countries.

The German manufacturers are therefore planning to concentrate their export energies on modern mechanical contrivances and attractive novelties which they calculate will force their way into markets more readily than more staple commodities. Strong efforts are also being made to arrange for the development of their export trade through American and neutral channels.

Technical Section

From the above viewpoint, the most extensive exhibit was that section showing electrical devices, novelties, improved machines, and many types of new machine tools. Owing to maintenance of adequate supplies of raw materials in the metal working and electrical industries during the war, these industries are much better supplied than others, and are well prepared actively to re-enter export trade since the domestic demand for these products is much reduced. Foreign trade was the secret of Germany's success in the mechanical engineering trade, and it would appear that they occupy a strong position to reach competitive markets, particularly in those highly developed lines in which the labor cost is great in proportion to the cost of raw materials, provided always that they can overcome exchange disadvantages. It was noted in connection with the exhibits that the use of brass was avoided wherever possible and pressed steel substituted.

The following details regarding the technical section may be of interest:—

(1) Patents. Considerable quantities of specialized machinery was on view, and the Germans seem disposed to sell the covering patents for other countries to foreign manufacturers.

(2) Machine tool deliveries can in most cases be made from stock.

(3) A high proportion of the goods sold during the last six months has been for export.

(4) The prices are approximately 200-400 per cent. higher than for similar goods before the war.

(5) Considerable business has been developed with Holland, Norway, Sweden, Spain, and North and South America, but international banking arrangements in the unoccupied territories have not yet been re-established with England.

(6) The importer must make his own arrangements as to entry. The Germans handle the export regulations and shipping. Cash, in Germany, against invoices usually forwarded before shipment appears to be the ruling method of payment.

(7) The chief limiting factor in production is the shortage of coal.

Paper and Paper Manufactures

The exhibits displayed in this section were not at all varied in character. The principal articles of use as ordinary commodities were:—

(1) Stationery; the ordinary German quality of flat paper. No Manilla paper was shown.

(2) Art prints in wide variety comprising pictures, calendars, post cards, blotting pads, and many styles of decorative printing. Good colour work was the feature of these exhibits.

Owing to the scarcity of raw stock, many plants are closed down. The larger concerns, however, who are keeping on most of their workmen are producing about one-third of their normal maximum output.

The better grades of paper and stationery are simply not being produced. A considerable part of the low grade output has gone to South America, but the total orders in sight for export and domestic demand combined only reach about 33 per cent. of the possible output.

Similar accounts of the state of other German industries will be given in future issues of INDUSTRIAL CANADA.

How Exhibitions Attract the Public

Here are to be seen 1700 Automobiles parked in the grounds of the Great Eastern Exhibition at Sherbrooke

Our Exhibitions—A Neglected Opportunity

Apart from a Few of the Larger Fairs in the East, Our Exhibitions Are Not Being Used for the Display of Canadian Manufactured Goods as They Very Well Might Be—Manufacturers Should Take Action

By J. M. MACINTOSH

Manager, Trade Section Department, C.M.A.

CANADIAN manufactured goods are conspicuous by their absence in the great majority of the fairs and exhibitions held throughout the Dominion in the summer and fall months. There may be reasons, on account of the number of these fairs and their occurrence in all parts of the country at about the same time, for this condition, but even so, it is apparent that a golden opportunity is being lost. Some means should be worked out, particularly at the present juncture, when the made-in-Canada campaign is again being vigorously prosecuted, for placing exhibits in as many of these fairs as possible, and thus bringing to the attention of the people the merits and wide variety of Canadian manufactured goods.

The Trade Sections Department of the Association has been collecting information about exhibitions and ascertaining the facilities provided for the display of Canadian products. Its report on these fairs throws a good deal of light on the present situation and prospects. Dealing first with the Western fairs, the report reads,—

"A series of well equipped fairs are held in the Prairie Provinces and British Columbia each year, the more important being Brandon, Regina, Saskatoon, Prince Albert, Edmonton, Calgary, New Westminster, and Vancouver.

The Exhibition at Brandon

"Brandon provides buildings for the display of mercantile, industrial, motor, and a large outside space for farm machinery exhibits. They contemplate erecting another display building to meet the demand for inside space. The mercantile exhibits are from leading merchants in the province, and they include imported goods from Great Britain and the United States. In manufactures, such as farm machinery, implements, and automobiles, the principal Canadian manufacturers are represented but American manufacturers predominate. The directors are said to be desirous of encouraging exhibits of Canadian manufactured goods and are prepared to do their part in inducing Canadian firms to take advantage of 'the excellent opportunity the exhibition provides. If Canadian exhibits were equal to those in the United States, there would be no doubt as to which would get the business. Orders taken at this exhibition represent hundreds of thousands of dollars.

"Regina advises that the most important display of manufactured goods is in the implement section. Most of the exhibitors in this department prefer the out-of-doors location, but in addition to that they have an implement building with 30,000 feet of floor space. The space available is fully taken up and some demands could not be met. The Secretary reports that about nine-tenths of the manufactured goods exhibited were from the United States. The largest Canadian implement firms gave up their space last year and left the field to their American competitors.

Prince Albert Has Large Hall

"Prince Albert reports that they have a large exhibition hall for the display of manufactured goods. At the present time, there are very few manufacturers taking advantage of the space, but local retail merchants are beginning to appreciate the fact that the space is available for them. Outside that, about fifty per cent. of the products exhibited are of Canadian manufacture, the balance being of United States and British origin. 15,800 people attended the fair last year.

"Edmonton reports that they have a large manufacturers' building and in addition to that, have tent space for outside exhibits. They also have a transportation building used for exhibits of automobiles. Outside of those in the locality, manufacturers are slow to take advantage of this method of placing their wares before the public, although exhibits of farm machinery have grown so rapidly that it was found necessary to provide three times the space formerly allotted for this class of exhibit. American manufacturers are said to be much quicker to take advantage of exhibition advertising than Canadian firms.

Calgary Provides Facilities

"Calgary reports that they provide facilities for exhibits of manufactured goods in three buildings. The space avail-

ible is taken advantage of to the limit of the capacity each year. The attendance at the exhibition this year was 127,248, and most of the exhibitors are said to be Canadians.

"New Westminster reports to the effect that they have an industrial building, but that they could not provide sufficient room to take care of one-half of the applications for space. The manufactured goods exhibited are said to be mostly Canadian.

Vancouver's Beautiful Grounds

"Vancouver reports that they have the most beautifully situated grounds in Canada, and that they have the best buildings outside of Toronto. The manufacturers' building is slightly over an acre in area. One half of the building is allotted for made-in-British Columbia goods; the other half for other manufacturers. Amongst these other manufactures fifty per cent. are said to be made in Canada, and nearly all the rest are made in the United States, with a fair sprinkling of European-made goods. The forestry building displays mining machinery and products. About eighty per cent. are made in Canada and the balance in the U.S.A. In the automobile exhibit about fifty per cent. is made in Canada and the balance in the United States. This is said to be the largest fair on the Pacific Coast.

"The information contained in this report in respect to these Western fairs has been obtained as the result of enquiries emanating from this Association. The secretaries have suggested that they will welcome co-operation from the Association in any effort that may be made to induce Canadian manufacturers to make greater use of these opportunities for showing their goods to the Canadian public."

The report of the Trade Section Department also deals with the exhibitions and fairs held in Eastern Canada.

Exhibits at Canadian National

"The Canadian National Exhibition, held in Toronto, is so well known that elaboration is unnecessary. From enquiries and personal observations it is estimated that the exhibits in the industrial building and machinery hall are approximately ninety per cent. Canadian. The manufacturers' building contains the exhibits of some retailers, jobbers, and importers, but it may be said that the exhibitors themselves are practically all Canadians. The manufacturers' annex consists more of specialties, many of American origin. In agricultural implements, Canadians are well represented. The demand for space is said to be greater than the supply and, taking into consideration the distribution of exhibits as between domestic and foreign countries in the proportions referred to, it appears that Canadian manufacturers are taking very satisfactory advantage of this opportunity of displaying their products. It will be understood that the directors desire to give encouragement to those exhibits which will be most attractive to the public eye. If more Canadians apply for space and the character of their exhibits is so improved as to make them more attractive than foreign exhibits, it would eventually result in the exclusion of foreign products. The fact that these foreign exhibits may be viewed by an attendance which aggregates upwards of a million suggests the value of the advertising these foreign products obtain through this exhibition.

Large Provincial Fairs

"Immediately following the Toronto exhibition, large provincial fairs of one week's duration are held in Ottawa and London. Both these fairs open on the same Saturday that Toronto closes. The Toronto management will not allow any exhibits to be removed until after ten o'clock on the evening of the last day and in consequence many exhibits which might be sent on to either the Ottawa or London fairs are held up and not shown in either of the latter fairs. Both these latter exhibitions have accommodation for such exhibits and while creditable displays are made they might be improved and a greater variety shown if there was not this overlapping in the dates.

"In addition to these large provincial fairs 217 fairs are held in the Province of Ontario in the months of September and October. These usually are for two days. The advertising to be gained from sending exhibits of goods for which there is a demand amongst the rural population to these fairs would be invaluable. These fairs might be divided into about six circuits. Each of these circuits might be taken care of by one set of samples and one representative.

"The Great Eastern Exhibition of Sherbrooke, has a building with 40,000 square feet of floor space and is generally full, although, it is said that some exhibits could be replaced to advantage. An examination of the list of exhibitors indicates a large proportion to be of local origin, some from Montreal, and a few from Ontario."

Fire did several thousand dollars damage to the match factory of the E. B. Eddy Co. at Hull on the night of February 17. The fire originated in what is known as the "box bins," on the top floor, where several thousands of boxes are stored.

The People are in a Receptive Mood

These immense crowds at the Edmonton Exhibition have come from near and far to be entertained and are ready to be interested in anything

Blue-Sky Law---Is It Desirable Legislation?

How This Type of Law Originated and How It Has Worked Out in Practice—Views of Investigators—Remedy for Existing Evils to be Found in Provisions of Company Acts

By THOMAS MULVEY, K.C.
Under Secretary of State

THE subject for discussion is Blue-Sky Law. I think that the present is an opportune moment for discussing this subject. A bill for this purpose was introduced at the Local Legislature last session, and I understand that it is to be pressed again,—at least so it is stated in the newspapers, —it is to be pressed to enactment at this coming session. If the subject is to be discussed this is an opportune time for doing so, and I think moreover that the Manufacturers' Association as a body should consider such a question as this. The Manufacturers' Association is one of the most influential bodies of business men in the country, and this I think I can show is a matter which affects every business man. And even if it does not affect the business man individually, any question which affects the whole business community is of interest to the business man and manufacturer. It is for that reason I am glad to have the opportunity of discussing it before the Manufacturers' Association.

Measure Should be Discussed

Now this of course is a debatable question, and, while I have fairly express views upon the subject, all I desire is that a discussion of the subject should be carried on so that if it is enacted people will know the effect of the terms of the measure and how it will affect the general business community. In legislation of this kind it is beneficial to the whole community, at any rate, to have measures of this kind fully discussed. I appreciate my own personal position in appearing before you. A civil servant is not supposed to have any views. I quite agree he has no right to criticize any Government, but nevertheless I think when a matter is not one of acute partisan politics that an official who has views upon the subject which he thinks are in the business interests and interests of the community should have an opportunity of expressing himself.

Now first I think we must consider what Blue Sky Law is. As a matter of fact the term "Blue Sky" was not first of all applied to the law. They had in Kansas what they called Blue-Sky merchants. The Blue-Sky merchant was a gentleman who would sell corner lots on the Blue-Sky and guarantee title in fee simple. In other words they were vendors of absolutely fictitious securities. Now, Kansas was a splendid stamping ground for these individuals. Kansas is one of the most productive states in the whole of the United States. It is a purely rural state. The largest city, Kansas City, and that is really an overflow from Kansas City, Missouri, is 100,000, and the next largest city is only about 70,000, while the whole state has a population of almost two million, not much less than the Province of Ontario. So that when the harvest was reaped by the farmers, the Blue-Sky merchant came in for his harvest in endeavoring to separate the farmer from his money.

The legislation started there about the year 1911. Mr. Dolley, who was the originator of the Kansas Blue-Sky Law, was a successful merchant and in his business he became associated with financial institutions and he was director of a savings bank. In the campaign of 1911 he took considerable interest in one of the parties, I don't remember which it was, but at any rate his party was successful, and on account of the activity he displayed during the campaign he was entitled to what we consider is equivalent to a portfolio in our Government. He was appointed Banking Commissioner. He undoubtedly was a progressive and enterprising gentleman, and he saw the evils, and undoubtedly they are evils, throughout the state in bond salesmen and corner lot salesmen and all classes of people like that, simply defrauding the people right and left. His first move on the subject was to arrange with all the bankers in the state that, when any of their customers were seeking to draw any fairly large sum from the bank, the bank manager would enquire what was to be done with the money, and if it was to be invested in any kind of security which was being peddled about, information of it was to be sent to the Banking Commissioner at Topeka, and then an enquiry was made and information sent back to the bank manager. Undoubtedly in that way a great many people were protected from bad investments and it certainly did do a lot of good. This induced Mr. Dolley to frame the Blue Sky Law which was introduced in the Legislature of Kansas in 1911.

Now I should next, I think, describe in a few words what the provisions of this Blue Sky Law are. The main provision of it is that no one can sell a security of any kind in the State of Kansas unless not only a prospectus but a general view of the nature of the business is submitted to the Banking Commissioner and he approves of it. In fact no company may be incorporated without the approval of the Banking Commissioner. So that it is necessary for a person incorporating any company whatever to disclose the nature of his enterprise, the method by which he proposes carrying it on and the means upon which he proposes to make that successful. It is then in the business discretion of the Banking Commissioner to say whether this company should be incorporated or not. The same applies to securities of companies issued outside of the state. They must disclose their method of doing business to the Banking Commissioner before they can sell any of the securities in the state. There a lot of other provisions, one of which I will refer to more particularly, and it is that every person who sells securities of any kind should have a license from the Banking Commissioner.

The Law in Principle and Practice

There are two methods of discussing this subject. One is on the question of principle to determine if possible whether this method infringes upon any well laid down principles of business or liberty or of morality, and the second is to determine whether, in view of the experience which we have had now for about eight years of the Blue Sky Law, it has accomplished what it purported to do.

There is no question but that Blue Sky Law is a direct interference with ordinary business. None of you gentlemen who perhaps want to reorganize your business and get in fresh capital could reincorporate your companies without disclosing a great deal of information which is personal,

* An address delivered before the Toronto Branch, C.M.A., Thursday, January 29, 1920.

rivate and belongs to yourself. In the next place it gives official such a control over the general business of the mmunity which may in certain cases develop into a crime. There are a lot of well laid down principles of liberty hich have grown up in the years of trouble, years of evolution, years of war, but at the present time we seem rone to throw them aside. I can illustrate my meaning by me recent comments in the newspapers about Temperance egislation. I don't want to criticize either Temperance or ie Ontario Temperance Act or anybody connected with it, nd it is likely that this remark had no origin whatever xcept in the fertile brain of the newspaper men. It was to ie effect that the quantity of liquor in a person's cellar ould be limited. Now, that I have no doubt was given out ithout any question whatever of really what it meant. It ok the people of England many centuries to arrive at the rinciple which we now adopt without question, that a man's ome is his castle, that no one has any right to say what he hall have in it so long as he obeys,—I was going to say, beys the law, that is not what I should say,—so long as he ves peaceably with his fellowman. So long as he does that is home is his castle and he may do what he likes. That rinciple of liberty which was I say wrought out after urmoil, trouble, bloodshed and everything else would be cast way entirely if a principle such as was enunciated should e introduced. It appears to me that Blue Sky Law is in he same class as Legislation of that kind. It is very difficult o point out so clearly as you can with respect to the liquor n the cellar how it infringes ordinary business methods, but t sticks out on the face of it that the freedom of business s interfered with. A man cannot deal with his property n the way he should without State intervention. On these rounds I submit that it is wrong in principle.

The Experience of Eight Years

Now, I would like to go into consideration to some extent f the methods adopted and how they have worked out in he last eight years. One of the first references is to a eport by Mr. Dolley, on the administration of the Blue-Sky aw in Kansas during the first couple of years, and this is aken verbatim from his report. I will refer not only to some f the statements which he makes here but I would like you lso to pay attention to the wording of this clause of the eport because it indicates a great deal of the character of he man who wrote it: "The Department succeeded in getting he last legislature to pass House Bill 906, commonly known s the Kansas 'Blue Sky' Law, providing for the regulation nd supervision of the sale of stocks, bonds, and other securties. This law, as you know, was something entirely new n the business world, but I am pleased to inform you that ve have worked the same out in a very nice shape and accomlished some wonderful results. I estimate that it has saved he people of this state at least six million dollars since its nactment. Between fourteen and fifteen hundred companies ave been investigated by this Department since the enactent of this law, and of this number less than one hundred ave been granted permits to sell their securities in Kansas. The law is rapidly gaining fame all over the civilized world, nd I believe that a large number of the states will adopt a imilar law at the coming sessions of their legislatures. I elieve that a movement has been started that will eventually esult in the regulation and supervision of all kinds of ompanies in the same manner as banks are now regulated nd supervised. There are a few minor amendments that hould be made to this law, which I will be pleased to ecommend to the legislature at the proper time."

I personally investigated the files of the Banking Commissioner at Topeka, and the statements contained in that report are not facts. Down to the first of April, 1913, permits were granted to 49 companies and refused to 62. That is what the files of the Department show. The balance of the applications were held for consideration. One of them that was held, as stated to me at Topeka, was a co-operative agricultural implement concern from Chicago which applied to Mr. Dolley for license. It was held because this was a very large concern and they didn't have an opportunity of fully investigating the business outlook which it had, so it was given a temporary permit and it immediately proceeded to sell I think about $700,000 worth of its securities in Kansas. It was questioned later on. Mr. Dolley asked for the reports so that he might really consider whether a license should be granted, but they refused to do it. They had sold all the securities they desired in Kansas and they backed out. They were in liquidation, I think, within six months and shown to be an absolute fraud.

The Law was not Adequate

Nobody can say that provisions of this kind do not work some good in some places. I haven't any doubt but a number of fraudulent enterprises were chased away from Kansas during the first few years that it was in operation, but the Blue-Sky Law of Kansas was not sufficient to protect the people even in the first days of its enactment from the loss of $700,000.

These reports are issued for the general benefit not only of the people of the country in which they are issued but for the general benefit of the world at large, so that they may know how Legislation is proceeding and how it is being administered, so that they may guide themselves in similar legislation. It is a reflection upon the whole system when a report should universally misstate what took place. The statement in the part I read giving the figures of the number of companies licensed and the number refused is absolutely wrong. I do not depend upon my own investigation for that statement. I discussed it with the Professor of Economics of Lawrence University. He also had investigated the files of the Banking Commissioner at Topeka and his result agreed with mine. And not only was that confirmed at the time, but the statement which I make now was published four years ago and it has never been contradicted, and it was published in the *American Economic Review*.

Interesting Defence of Law

There has been recently a defence of the Blue-Sky Law which is rather interesting. The Investment Bankers' Association of America is a very prominent organization. It is an organization somewhat similar to this throughout the United States. It looks after the interests of, they call them there Investment Bankers, here what we call Bond Brokers. It is the Bond Brokers' Association of the United States, and it is of vital interest there to all their members that legislation of this kind should be carefully looked after. They have a bulletin which they publish very often and lately they published an article by Mr. C. J. Andre, who is Secretary of the Blue-Sky Law Commissioners. That is the Association of Commissioners that administer these laws throughout the whole of the United States. I don't know that it was intended this article should be of benefit to the Blue-Sky Law. It is quite apparent from the ending of it where the Investment Bankers' Association add a little note which gives real point to Mr. Andre's remarks. He says during the first year the law was in operation in Minnesota, it was estimated at least $50,000,000 of fraudulent securities or worthless securities were excluded from the state through the efforts of the State Security Commission. You might as well say the police of Toronto prevented robberies to the extent of $2,000,000 last year. If there were no police here it might be there would be $2,000,000

stolen, but since there are police here it does not follow that the police stopped that quantity of theft. It is an illogical statement and conclusion.

One Case Justified Expense

"Compared with the service rendered to the people of the State and to the country as a whole, the expense of maintaining the Department, which for the first year, amounted to $27,000, was insignificant. Indeed, a far greater expense would have been justified to correct the evils which had such a firm footing in the state. One case alone justified the whole expense of the Department for the first year. In that case a promoter had planned to conduct an extensively advertised selling campaign to dispose of $40,000 of securities."

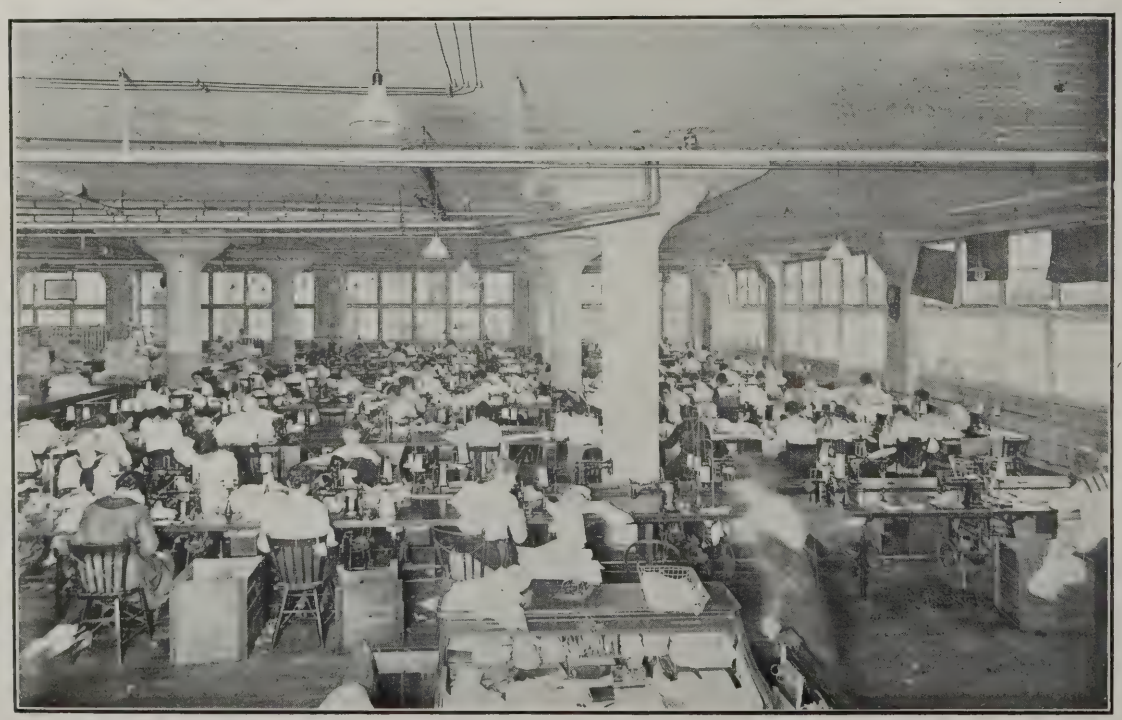
Now the note which is added to what I refer to, and which the point of is made, is as follows: "As a matter of fact the Blue Sky Information Committee reported to the press that the president and promoter of the Pan Motor Company, of St. Cloud, Minnesota, has been found by the Federal Court guilty of using the United States mails for a scheme to defraud (approximately $9,500,000, of the stock had been disposed of by alluring advertisements to about 70,000 victims), and sentenced to ten years in the Federal penitentiary."

Another case which is of very considerable interest is in Chicago. About a little more than a year ago the investigation took place. A company called the Consumers Packing Company was incorporated. They were licensed by the Blue Sky Law Commissioner and they did a very extensive campaign of stock selling, and very shortly it was found that the company was an absolute fraud after millions of dollars of securities had been sold. All the promoters of the company were indicted by the Grand Jury of Chicago, and the matter investigated by the State Attorney. I don't depend much on newspaper comments but this may show the popular view at any rate of the Blue Sky Law as held in Chicago at that time or following that investigation.

"Blue-Sky Legislation which seeks to eliminate fraudulent stock selling schemes through the medium of a state licensing system has been given a thorough try-out in Illinois and has proved a failure. The shortcomings of the existing law are more apparent perhaps than they would have been if its enactment had been accompanied by an appropriation which would permit of a thorough investigation by state officials before licenses for securities, commissions and sales were issued.

"That much is granted. Nevertheless it is a fact that salesmen armed with licenses to which the seal of the State of Illinois is affixed have found gullible investors ready and anxious to believe that the state has approved their project and has affixed its O.K. to their claims, that the person who refuses to buy the security is deliberately thrusting the opportunity of '20% dividends the first year, 30% the second etc.' aside forever.

"At the moment the Legislature is preparing a new Blue Sky Law. It is hoped by the bankers of the state, the bona fide investment houses and their securities salesmen, that licensing will be done away with. Though this system was originally intended to prevent fraud it has in itself proved one of the worst instruments in fraud."



A Function Misplaced

"It is additionally objectionable, inasmuch as it makes an executive official of the state exercise a semi-judicial function, a function that properly belongs to our Courts."

Now the Blue-Sky Law of Illinois was repealed after that investigation and they have gone in that state practically to the system which was adopted in England in the year 1900.

The subject of Blue-Sky Law has quite recently been investigated by the State of New York. The Governor of that state appointed a Commission last September to fully investigate the matter. The Bill was introduced in the last session of the New York Legislature but on account of objections which were raised it was submitted by the Governor to this Commission. I will refer particularly to the findings of this Commission, but there is one of them from which I would like to read: "The difficulty is two-fold: first, that

New United States Railroad Legislation

The Transportation Act, 1920, confers some very important and wide powers upon the Interstate Commerce Commission—Provision made that railways shall receive a fair return—The matter of claims

By S. B. Brown
Asst. Manager, Transportation Dept., C.M.A.

AT the time of writing, the bill to return the railroads to private ownership, which has been before the United States Congress for some time, has finally passed both the House and Senate and is now before the President for his signature. When it is passed, the new law will be known as "The Transportation Act, 1920."

The document, as submitted to the President, is quite formidable and contains 121 pages of approximately 30,000 words, divided into five titles, as follows:

(1.) Definitions of Terminology.

(2.) Termination of Federal Control.

(3.) Disputes between carriers and their employees and subordinate officials.

(4.) Amendments to the Act to Regulate Commerce.

(5.) Miscellaneous Provisions.

Commissions Rate-Making Powers

Some very important and wide powers are placed upon the shoulders of the Interstate Commerce Commission by this Act. One of the most important features is the rate-making provision, which requires that the Interstate Commerce Commission, in the exercise of its power to prescribe just and reasonable rates, shall institute, modify, establish or adjust such rates so that the carriers as a whole (or as a whole in each of such rate groups or territories as the Commission may from time to time designate), will under honest, efficient and economical management and reasonable expenditures of maintenance of way, structures and equipment, earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation. This is subject to a proviso that the Commission shall have reasonable latitude in any particular rate which they may find unjust or unreasonable.

For a period of two years, beginning on March 1st, 1920, the Interstate Commerce Commission, in determining a reasonable rate of return, must use a sum equal to 5½ per cent. of the aggregate value referred to above, but may, at its discretion, add thereto a sum not exceeding ½ of 1 per cent. of such aggregate value, for the purpose of providing further for improvements, betterments or equipment, etc.

Method of Determining Value

The bill also provides in this section for the manner in which the Commission shall determine the aggregate value referred to. In fact, the aggregate value is to be determined from time to time by the Commission, so that there is liable to be a fluctuation.

Should any carrier receive for any one year a net railway operating income in excess of 6 per cent. of the value one-half of such excess shall be placed in a reserve fund established and maintained by the carrier, and the remaining half shall be recovered and paid to the Commission within the four months following the period for which such computation is made. This is for the purpose of establishing a general Railroad Contingent Fund.

The new Act will also give the Interstate Commerce Commission considerable power; in fact, power similar to that of the President, in regard to the question of car supply, embargoes, etc.

How Claims are Handled

In the matter of claims: amendments to the Interstate Commerce Act are provided, which will place the shipper and carrier on an equality. At the present time if the railway company finds that an undercharge has occurred, it may sue the shipper or consignee for the amount at any time within three or four years; whereas the consignee, finding an overcharge, must sue the railway company within two years. The new provision will make it clear that all actions of law by railroads for the recovery of their charges shall be begun within three years from the time the cause of action accrues—and not after.

In connection with the question of suspending tariffs filed with the Commission, the new bill proposes to restrict the period of suspension to not longer than 120 days. After hearing, whether completed before or after the rate goes into effect, the Commission may make such order with reference thereto as would be proper in a proceeding initiated after it had become effective. Suspension cases, therefore, will have the same standing as formal complaints.

Provision for Suspension

If the hearing cannot be completed within 120 days there may be a further suspension not exceeding thirty days; and, if additional time is necessary, the proposed change of rates will go into effect at the end of 150 days. The Commission, however, is empowered to require the carriers to keep accurate account of all amounts received by reason of such increase.

The different labor organizations have been very strenuously opposing any law proposed in regard to the question of compulsory arbitration. The new Act requires the carriers and their officers, employees and agents to exert every reasonable effort and to adopt every available means to avoid any interruption to the operation of any carrier, growing out of any dispute between the carriers and the employees or subordinate officials thereof; disputes to be considered and decided, if possible, in congress between representatives designated and authorized so to confer by both sides.

Railway Boards of Labor Adjustment may be established by agreement; the establishment thereof being left entirely in the hands of the railways and their employees.

The bill also provides for the creation of a Railway Board of Labor Appeals, composed of nine members equally divided between employers and employees and the public, appointed by the President, with advice and consent of the Senate, for a five-year term. The employees and employ-

ers may each nominate six persons, from whom the President will make his selections.

Another very important change is a proposed amendment to the Interstate Commerce Act permitting the Interstate Commerce Commission to prescribe minimum rates, except when one of the carriers in a through rate is a water carrier.

Freight Classification

Proposed Supplement to Classification No. 16 Considered at Meeting in Montreal

The proposed supplement 13 to Classification No. 16 was given consideration at a meeting with the Canadian Freight Association at Montreal on February 19, which was attended by the Assistant Manager of the Transportation Department. Changes in ratings and conditions of carriage were considered in connection with the following items:

Cones—Ice cream.
Olives, in bottles, packed in boxes.
Buggies, Carriages, Wagons.
Bar Iron and Steel.
Children's Vehicles.
Dressing or Blacking.
Furniture—bamboo, rattan, reed, willow, etc.
Rubber, unvulcanized.
Shells—Clam, Mussel, Oyster, or Scallop.

The question of changes in ratings on ice cream cones has been taken up further with the interested manufacturers, and as soon as this is disposed of, the supplement will be approved by the Board of Railway Commissioners.

The other changes proposed in connection with the above-mentioned articles were satisfactorily adjusted.

Freight Tariffs

Charges for Freight Tariffs Have Been Raised by Canadian Freight Association

In the December, 1918, and March, 1919, issues of INDUSTRIAL CANADA, the charges for freight tariffs supplied by railway companies to the shipping public, as well as the method of procedure in securing same, were outlined for the benefit of our members.

We have just received a general circular, No. 14, issued by G. C. Ransom, Chairman of the Canadian Freight Association, on behalf of the various lines in Eastern Canada, which proposes to increase the present charges for tariffs by 5c. a copy up to 96 pages, and for issues of a greater number of pages a new schedule has been named, as follows:

	Charge
More than 196 pages and not exceeding 296	$1 50
" 296 " " " 396	2 00
" 396 " " " 496	2 50
Exceeding 496 pages	3 00

The distribution of tariffs will remain as at present.

War Tax on Freight Tolls

New United States Regulations Issued Regarding Shipments From U. S. to Canada

The Treasury Department of the United States Internal Revenue have recently issued revised regulations, No. 49, relating to the collection of tax on transportation and other facilities, known as Title "V," Sections 500, 501 and 502 of the Revenue Act of 1918.

These revised regulations provide, at article 18, that shipments from the United States to Canada or Mexico, under through bills of lading or under through live stock contracts, need not be covered by either the temporary exemption form or certificate of exportation.

Live Stock Contract

Hearing held at Ottawa on February 10 and Decision Likely to be Announced Soon

The General Manager and Assistant Manager of the Transportation Department appeared before the Board of Railway Commissioners in Ottawa on February 10, in connection with the question of live stock contracts.

A meeting was held in Ottawa on February 9th, with a number of shippers' representatives, and at the meeting it was decided to engage counsel on behalf of the Packers' Section of this Association, as well as the Winnipeg Live Stock Exchange, and the Western Live Stock Shippers' Association, all of whom agreed to join in defraying the expense in connection therewith.

Mr. George Henderson, K.C., of Ottawa, was appointed to handle the case for the Packers' Section of this Association and the other interests at the hearing on February 10th. The matter was given very careful consideration, and it is believed that the question will be settled definitely in the very near future.

New Steamship Service

Elder Dempster & Co. to Inaugurate Line to West African Ports in May

Commencing with sailing from Montreal in May next, Elder, Dempster & Co., Limited, will inaugurate a new service between Canada and West African ports. This service should afford an opportunity for Canadian manufacturers to find a new market for many articles now being imported by West Africa from other countries.

Among the various articles imported by West Africa are quite a number which can be supplied from Canada, as the following list will show:

Bolts.
Nuts.
Washers.
Nails.
Steel Bars and Plates.
Enamelware.
Guns.
Castings.
Lamps.
Machinery.
Matchets.
Railway Material.
Rolling Stock.
Automobiles.
Bicycles.
Brassware.
Sewing Machines.
Hardware of all kinds.
Bags.
Felt.
Roofing Felt.
Ropes.
Cordage.
Cottons.
Cotton Yarn.
Woollens.
Dry Goods of all kinds.
Bricks.
Cement.
Lime.
Coal.
Salt.
Soda.
Glassware.
Paint and Oils.
Clay Pipes.
Beads.
Matches (Safety).
Mirrors.
Brooms.
Brushes.
Earthenware.
Carbide.
Soap.
Candles.
Tar.
Disinfectants.
Creosoted Timber.
Dressed and Rough Lumber.
Furniture.
Empty Casks.
Shooks.
Packing Paper.
Musical Instruments.
Toys.
Gin.
Whisky.
Rum.
Wines and Spirits.
Beer.
Mineral Waters.
Tobacco.
Cigars.
Cigarettes.
Flour.
Biscuits.
Cereals.
Sugar.
Condensed Milk.
Jams.
Canned Meats.
Canned Fruits and Vegetables.
Beef.
Pork.
Dried and Canned Fish.
Butter.
Syrup.
Molasses and Provisions of all kinds.

The first sailing, which will commence in May next, from Montreal, will touch at the following West African ports:

Dakar, Bathurst, Conakry, Sierra Leone, Sherbo, Monrovia, Grand Bassam, Axim, Sekondi (for Kumassi), Cape Coast Castle, Accra, Lome, Cotonou, Lagos, Forcados, and Creeks, and all ports beyond and up to Calabar and other points, as inducement offers.

West Africa is also in a position to export certain raw materials, which undoubtedly can be used in Canada. The principal exports are as follows:

Cocoa.	Palm Oil.
Palm Kernels.	Ground Nuts.
Mahogany.	Ginger.
Piassava.	Hides and Skins.
Rubber and Gum.	Hemp (sisal).
Ivory.	Manganese Ore, etc.

Elder, Dempster & Company, Limited, Room 133, Board of Trade Building, Montreal, who have for a number of years operated the service between Canada and South Africa, will also operate the new service, and will be pleased to supply full particulars as to freight rates, space, and any other details in regard thereto.

It is suggested that members of the Association should endeavor to take advantage of this service, and to support it to the fullest extent.

Steamship Sailings

Proposed sailings from West St. John, St. John, Halifax, and Portland in the Near Future

West St. John to Liverpool.

*Canadian Ranger	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 10
Scandinavian	C.P.O.S. Lines	Ab't Mar. 12
Empress of France	C.P.O.S. Lines	Ab't Mar. 13

*Sails from St. John.

West St. John to London.

Holbrook	C.P.O.S.-Furness Line (C.P.O.S.)	Ab't Mar. 14
*Canadian Trooper	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 16

*Sails from St. John.

West St. John to Antwerp.

Cornish Point	C.P.O.S.-Furness Line (Furness)	Ab't Mar. 13

West St. John to Glasgow.

Pretorian	C.P.O.S. Lines	Ab't Mar. 11

West St. John to Avonmouth Dock (Bristol).

Sardinian	C.P.O.S. Lines	Ab't Mar. 13

West St. John to Manchester.

Manchester Mariner	Manchester Liners	Ab't Mar. 20

West St. John to Bordeaux (France).

Wisley	Can. Trans. Atlantic (Fran-Canada Line)	Ab't Mar. 8

West St. John to St. Nazaire (France).

Alston	Marine Navigation Co.	Ab't Mar. 10

West St. John to Belfast.

Ramore Head	Head Line	Ab't Mar. 12

West St. John to Dublin.

Carrigan Head	Head Line	Ab't Mar. 10

West St. John to Buenos Ayres, Montevideo and Rosario.

A Steamer	Houston Line	Ab't Mar. 10

West St. John to South African Ports.
Cape Town, Port Elizabeth, East London, Durban, Delegoa Bay.

Jebba	Elder Dempster Line	Ab't Mar. 10

West St. John to Australasian Ports—Melbourne, Sydney, Brisbane, Auckland, Wellington and Dunedin.

Somerset	New Zealand S.S. Company	Ab't Mar. 20

Halifax to Liverpool.

Canadian Miller	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 25

Halifax to Glasgow.

Canadian Settler	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 16

Halifax to Havana, Cuba.

Canadian Trader	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 10
Canadian Sailor	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 16

Halifax to Santiago (Cuba) and Kingston (Jamaica).

Watuka	Pickford & Black	Ab't Mar. 10

Portland to Liverpool.

Dominion	White-Star-Dominion Line	Ab't Apr. 3

Portland to London.

Venusua	Anchor-Donaldson Line	Ab't Mar. 15

Portland to Glasgow.

Saturnia	Anchor-Donaldson Line	Ab't Mar. 6

Portland to Avonmouth.

Turcoman	Dominion Line	Ab't Mar. 25
Welshman	Dominion Line	Ab't Apr. 3
Cairnvalona	Thomson Line	Ab't Mar. 15

Portland to Antwerp and Rotterdam.

Haxelhurst	Rogers & Webb (R. Reford Co. agents)	Ab't Mar. 15

West St. John to South Africa—Cape Town, Port Elizabeth, East London, Durban and Delagoa Bay.

Benguela	Elder Dempster Line	Ab't Mar. 31

St. John to Havana (Cuba).

Canadian Sower	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 10
Canadian Adventurer	Can. Gov't Mer. Marine, Ltd.	Ab't Mar. 15

John McClary's Advice

How London's Veteran Manufacturer is Playing his Part in the World's Work

(From "McClary's Wireless")

On January 2nd, 1920, Mr. John McClary, president of this company, passed the milestone of his ninety-first birthday, celebrating it in the enjoyment of comparatively robust health, and more than comparatively keen zest and unabated interest in every newest turn of the road.

If we were to ask Mr. McClary to give us, out of his greater experience a message for the New Year, we are pretty sure he would hesitate a little, likely disclaiming modestly any particular merit in what he might find to say; urged, he would perhaps accede.

Let us tell you then that practically every business day of the year, nine o'clock—promptly—sees Mr. McClary coming into his office, and taking up with never flagging interest the matter of the progress of the most important affairs of the company's management at the moment—frequently, too, they are ones of which his lieutenants may be slow to recognize the true importance.

Every day in his leisure hours he plays the games that most appeal to him, the card games they are, that bring into play the skill of combined concentration, observation and recollection, deduction and foresight. And he plays them to win.

His days, each with its quota of business, recreation and work hours, are ruled systematically, by a set schedule that long practice has now made habit.

He sees to it, so far as a mere human can, that he keeps physically fit and mentally alive and in step with the latest and best in the world's progress.

And finally, he laughs often and heartily. It isn't so long ago that he one day unexpectedly discovered a most audacious and decidedly questionable deal that someone was scheming to slip over on him while the matter it concerned was completely out of his mind as being taken care of in bulk, with others of its kind.

Does anyone imagine him giving any more or less spectacular expression to wrath, as so many in the same circumstances would have felt it their privilege to do, and as many more would have considered a duty to themselves and a rehabilitation of outraged dignity?

If anyone does imagine this he is entirely in error.

He sat silent a few minutes—righteously indignant, no doubt, but wasting no words over it Then the sheer effrontery of the attempt—the overwhelming exhibition it presented of unmitigated and unbelievable nerve—struck his sense of humor, and he laughed in a way that would have been worth several more hundreds of dollars than the sum involved. Only of course, once he learned of it, he didn't let himself be robbed of the hundreds of dollars either.

From these fragments out of the whole let us formulate the New Year's message of his deeds.

"To live long and enjoy every individual day of life, have one absorbing interest, and at least one pleasurable recreation—and play them both hard.

"Deal with unvarying justice with all men, and with kindliness with those who need it.

"Keep the mind always young, and the body as young as, with intelligent care, is possible. To do these requires care, constant and unremitting, but the result is a thousand times worth it.

"Finally, laugh often and well—at your own troubles if nothing better offers."

Canada's Industrial Expansion

A Record of Progress

Enlargement at Peterboro

Canadian General Electric Co. Have Plans for Greatly Extending Their Plant

In connection with the announcement from Peterboro that the Canadian General Electric Co. were proposing to spend between $600,000 and $1,000,000 on extensions to their plant there, an official of the company states that the programme of the company has not yet been definitely decided upon and until that time no details can be announced. The company, through its president, Senator Frederic Nicholls, is asking for certain concessions in the way of fixed assessment from the city.

Building New Plant

Fielder Paper Box Co., Toronto, Are Erecting Two-Storey Building on Berkeley Street

Rapid growth in the business of the Fielder Paper Box Co., Toronto, has led to the erection of a new factory, with double the capacity of the present plant. The business was organized in April, 1918, and operations have been carried on at 208 Victoria Street. During the past summer an effort was made to rent a larger and more suitable loft for the business, but the company were unable to secure premises, and were forced, much against their will, to erect a building for themselves. The location is on the west side of Berkeley Street, and the building is of two stories, mill construction. They hope to occupy it some time in April.

Double Their Capacity

The Newell Mfg. Co. of Prescott Acquire Two Buildings Which Will Give Greater Space

The Newell Mfg. Co., Prescott, Ont., manufacturers of upholstery, hardware, pole ends, extension curtain rods, etc., have recently purchased two one-storey fire-proof brick buildings in Prescott, which they are connecting up to facilitate manufacturing operations. The two buildings combined will give about 15,000 square feet of floor space, and being of skylight construction, will provide almost a daylight factory. The probable date of completion will be April 1. While in their new quarters the company will be able to double their present output of extension curtain rods, nickel-plated goods, and brass fixtures.

Decide on Drummondville

Jenckes Spinning Co. of Pawtucket, R.I., to Build Canadian Plant at This Point

After examining the advantages offered by several Canadian manufacturing centres, the Jenckes Spinning Co., of Pawtucket, R.I., have finally decided to build their Canadian plant at Drummondville, Que., and the contract has already been let for its construction. The main building will be about 500 feet long by 127 feet wide, four stories and basement. The work of erection will be rushed, as the company are anxious to reach the producing stage as rapidly as possible. A Canadian corporation, entirely separate from the Pawtucket organization, will be formed, under the name of the Jenckes Canadian Company, Limited. The company will manufacture auto tire fabrics, and will employ from one to two thousand hands.

To Produce in the Spring

Four Wheel Drive Auto Co. Hope to Have Factory in Kitchener Completed by Then

The Four Wheel Drive Auto Co., Limited, who are erecting the first unit of their Canadian factory in Kitchener, hope to have it ready for operation early in the spring. The building is 100 x 120 feet in size, and will be followed by other units as the business grows. It is the intention of the parent company in Clintonville, U.S.A., to do a considerable amount of export business from the Canadian plant, particularly in other parts of the British Empire. The Canadian company report prospects as being very bright. With the present programme for road building, for which the F.W.D. truck is especially adapted, they are looking for excellent results from the year's business.

Enlarge Ice Cream Plant

Proprietors of Amherst Mineral Water Co. Putting Up Extension to their Premises

Messrs. Taylor and Tennant, proprietors of the Amherst Mineral Water Co., Amherst, N.S., are at present adding a one-storey brick building, 30 x 40 feet, to their ice cream department, and equipping it with the latest machinery for the manufacture of this product. This will include ice making plant, hardening and storage rooms, emulsifier and pasteurizer. They expect to add about five hands to their staff, and have the new construction completed by about April 15.

Plans for Three Mills

Provincial Paper Mills, Limited, to Build at Thorold, Mille Roches and Port Arthur

For some time back engineers of the Provincial Paper Mills, Limited, have been preparing plans for enlargements at the company's mills at Thorold and Mille Roches, and at the mill of the Port Arthur Pulp & Paper Co., the company's western subsidiary. Land for the purpose has been acquired, and at each site buildings will eventually be erected to accommodate two machines. One machine will be installed along with the construction of each building and further machines as conditions warrant, making in all six additional machines, with a total tonnage of not less than 120 tons, making, with their present production, 200 tons per day. Plans and specifications for the first additional plant have just been completed. This plant will be fully equipped with the most modern machinery available and

will have a capacity of about 20 tons daily of either book, writing or bond papers. This plant will be rushed to completion as soon as weather conditions permit, and as rapidly as the Canadian market consumes this increased tonnage the company will proceed with the installation of further machines.

Make Foundry Extension

Philip Gies Foundry, Kitchener, Expect to Have New Plant Running by May

A foundry extension will be built this spring by the Philip Gies Foundry, manufacturers of grey iron, brass, bronze and aluminum castings, Kitchener. They expect to start building about the middle of March and have the extension completed by about May 1. It will be equipped in the most up-to-date manner, with ten-ton electric crane, electric elevator, direct-connected blower for cupola, exhaust tumbling barrels, moulding machines, new core ovens, etc.

Have Extended Foundry

The National Shipbuilding Co., Limited, Goderich, Are Making Some Interesting Developments

The National Shipbuilding Co., Limited, Goderich, have extended their Foundry Division, and have now a floor space of 16,000 square feet. They have installed two 25-ton cupolas and several moulding machines for production foundry work.

The company further announce that they intend to install a mill for the refining of fibre and seed from the flax crops in the vicinity of Goderich. Details of the project, however, are not yet available. In this connection it is interesting to note that the company have recently secured the right to manufacture a new machine for flax-pulling.

Progress at Bear River

Pulp Mill of Clarke Bros., Limited, Should be Producing by the Summer

It is estimated that about two-thirds of the work of construction on the new Kraft pulp mill of Clarke Bros., Limited, Bear River, N.S., has been completed. The cold weather has delayed operations somewhat, but it is hoped to have the mill ready for operation by summer. All brick and steel is on the ground, as well as most of the machinery. In the meantime, the new sawmill adjoining the pulp mill has been completed. This has a capacity of 6,000,000 feet per annum. At the company's clothes-pin factory at Lake Jolly production has been speeded up, and, with day and night shifts operating, output has reached 3,000,000 pins per day. These are practically all sold in the British market. So far as the pulp output is concerned, the entire output of the mill has been sold on a ten-year contract to the Ironsides Board Corporation, Norwich, Conn., manufacturers of jute boards used in the manufacture of corrugated and fibre shipping cartons. The outlook for all branches of the Clarke Bros. business is good.

Secure More Space

Sangamo Electric Co. of Canada, Limited, Take in 4,000 Square Feet of Space

The Sangamo Co. of Canada, Limited, 183 George Street, Toronto, are connecting up their factory with a warehouse building in the rear, which they are converting into a factory in order to extend their plant. This will add 4,000 square feet to their manufacturing space, one-half of which will be used for an enamelling department, and the other half as a magnet plant. The addition will help to take care of the natural increase of business.

Locate in Ingersoll

The A. I. Root Company, Medina, Ohio, Will Start Branch Plant in Near Future

The A. I. Root Company, manufacturers of beekeepers' supplies, Medina, Ohio, have selected Ingersoll as the location of their Canadian branch plant, which they hope to have in operation within the next few months. They will occupy part of the Noxon Building. They do not anticipate a full force until the season of 1922, as they are obliged to build practically all of their machines, with the exception of a few standard woodworking machines.

Just how many hands will be employed is rather uncertain, much depending upon trade conditions as they find them in Canada. They are expecting, however, not only

View showing how the pulp mill of Clarke Bros., Limited, Bear River, N.S., now in course of erection, will look when completed this summer.

to take care of the trade in Canada, but in many colonies of Great Britain. All factory operations will be the same at Ingersoll as at Medina, except that they will begin on a smaller scale. Eventually, they expect to organize a separate Canadian company, though for the present the Canadian plant will be directed from the home office.

Ladder Manufacturers Expand

McFarlane Manufacturing Co., Toronto, Moved About March 1st to Larger Premises

Having been ten years in their present factory at 154-160 River Street, Toronto, McFarlane Manufacturing Co., manufacturers of ladders, washboards and other woodenware, have been forced to seek larger quarters. They have purchased the plant on Main Street, East Toronto, formerly occupied by the Canadian Wood Products Co., and moved in about March 1. They now have double the former manufacturing space, with private siding, and plenty of room for future expansion. A lot of new equipment has been installed, and it is the intention to manufacture a complete line of kitchen woodenware along with their ladders and washboards.

Planning Large Building

Dominion Loose Leaf Co., Limited, Propose to Erect Nine-Storey Building in Ottawa

The Dominion Loose Leaf Co., Limited, manufacturers of loose leaf systems, filing systems, office furniture, etc., are having plans prepared for a nine-story building in Ottawa, which will contain approximately 70,000 square feet of floor space. The company will use about 40,000 square feet and rent the balance of the building for wholesale warehouses and sample rooms. The building will probably be completed about May, 1921. With the larger floor space, output will be greatly increased.

The growth of this industry is interesting. It was established in 1910 in a building with 290 square feet of rented floor space, and a man and a boy comprised the manufacturing staff. The next year the plant was moved to premises with 1,000 feet of floor space. Again the following year it was moved to still larger quarters, and a bindery and printing plant were installed. In 1914 there was another move. Five thousand square feet of floor space were taken in a building which provided for expansion up to 20,000 square feet, and by degrees all this space was taken. The company's market has in the meantime extended to all Canada, with branches in Montreal, Toronto, Winnipeg, Vancouver, and St. John.

Buy Out Clinton Factory

Messrs. Sherlock and Manning of London Acquire Business of Doherty Piano Co.

The capital shares of the Doherty Piano Co., Clinton, have recently been purchased by Messrs. J. F. Sherlock and W. N. Manning, members of the Sherlock-Manning Piano & Organ Co., London. It is not proposed to amalgamate the two industries, but to carry them on as distinct organizations. The Clinton business will be continued under the name of Doherty Pianos, Limited, with J. F. Sherlock, president; W. N. Manning, vice-president and general manager; C. H. Ivey, secretary, and N. C. Allen, treasurer. The head office will be in London.

The capacity of the Clinton plant is 2,500 pianos per year. They have been making about 1,500, and it is hoped this year to increase the output to 2,000. The capacity of the London plant is 1,500 pianos per year, and it is hoped to reach this capacity this year. This expectation depends in both cases on getting the necessary help. Two distinct lines of pianos will be made. In the London plant the full output will be the high-grade Sherlock-Manning piano. The Clinton plant will continue to turn out the Doherty and Clinton pianos, which are first-class commercial grades. The company hope through this plant to be able to look after the export demand.

Oddly enough, both Messrs. Sherlock and Manning were originally connected with the Doherty Company, but left its employ in 1902 to organize the Sherlock-Manning Co.

New Lines and Equipment

Plant of Reynolds, Moore & Bentz, Limited, Winnipeg, is Being Speeded Up

The name of the Dyson Co., Limited, manufacturers of "Red Cross" pickles and vinegars, etc., Winnipeg, is being changed to Reynolds, Moore & Bentz, Limited. This company has experienced rapid growth during the past four or five years, and it became necessary to expand. Under the circumstances Mr. D. J. Dyson, the founder and president, offered to dispose of his interest to Mr. E. B. Reynolds, the managing director, and his associates, and this was promptly purchased. Reorganization, involving an increase of capital, was undertaken. Mr. Reynolds became vice-president and managing director; Mr. Moore, president, though not actively associated with the business; and Mr. Charles Bentz, a chemist of high reputation in the west, superintendent of the plant. Some new kindred lines are being added and new equipment is being installed. The product is being marketed from Montreal to Vancouver, and volume is only controlled by capacity to produce.

Reopening No. 1 Plant

Smith's Falls Malleable Castings Co., Limited, Find It Necessary to Extend Operations

The Smith's Falls Malleable Castings Co., Limited, are completely remodelling and re-equipping their No. 1 plant, which has been closed down for the past six years, and will shortly resume operations in it. This plant is situated on a tract of 3¼ acres, fronting the Rideau River, and contains 60,000 square feet of floor space.

The company have in the interval been running their No. 2 plant, which is a much smaller proposition, but, owing to great expansion in business, have found it necessary to re-open the larger plant. They are manufacturers of all lines of refined air furnace castings, making a specialty of railway castings. Recently they have accepted a very considerable tonnage for United States export, both in automobile and railway castings, and the capacity of No. 2 plant has been exceeded.

In their No. 2 plant they are employing approximately 100 hands. With No. 1 plant also in operation they will have 300 hands. The capacity will be increased from 2,000 to 8,000 tons.

Will Enlarge Plant

Canadian Mead-Morrison Co., Limited, to Extend Capacity of their Works at Welland

Further information about the plans of the Canadian Mead-Morrison Co., Limited, who recently bought out the business of M. Beatty & Sons, Limited, at Welland, is contained in a bulletin issued by the company on February 7:—

"Steps have already been taken to enlarge and improve the Welland plant and the new company will manufacture the extensive line of Mead-Morrison products, as well as the

Beatty line of dredges, derricks, hoists, pumps, etc. The new company has acquired from the United States company the rights to use their engineering data, plans, patents and past and future development work. This enables the Canadian company to start under the most favorable auspices. In addition to covering the Dominion of Canada, the Canadian company will also manufacture for export to the British possessions.

"The new company will have a strong local board of directors and its general officers will be Messrs. W. S. Martin, managing director; D. W. Coe, general sales manager; J. R. Story, chief engineer, and J. A. Johnson, secretary. The general sales offices are located in the Guarantee Building, 285 Beaver Hall Hill, Montreal.

Get Site in Brantford

S. C. Johnson & Son, Racine, Wis., Prepare Plans for Canadian Branch Plant

S. C. Johnson & Son, Racine, Wisconsin, manufacturers of Johnson's prepared wax and auto products, have purchased a desirable factory location, an acre and three-quarters in extent, in Brantford, and will build a Canadian plant on this site. As the company have not yet completed plans for the plant, they are unable to give any definite information about its size or character as yet. They will manufacture the following Johnson products: Prepared wax (paste and liquid), powdered wax, carbon remover, radiator cement, wood dye, perfectone enamel, paste wood filler, crack filler, etc. They state that they have opened an account with the Bank of Montreal, Brantford, and are absorbing the exchange on all Canadian business.

Instal Large Machine

Alberta Clay Products Co., Limited, of Medicine Hat, Prepare for Greater Output

The Alberta Clay Products Co., Limited, Medicine Hat, are installing a large Fate machine for the manufacture of building tile, drain tile, etc. The machine is one that they have had on hand for several years, but have never used. They hope, if conditions warrant, to be using it during the coming summer. They had also in mind some other improvements, but doubt very much whether they will go ahead with them, as there are indications of a labor shortage. With present machinery and equipment, they can largely increase output. So far as the business outlook is concerned, they report that indications could not be better.

New Manufacturing Stationers

Hay Stationery Co., of London, launch out into New Line of Business

The Hay Stationery Co., London, have recently withdrawn from the retail stationery business and are now operating a wholesale manufacturing stationery business under the name of Hay Stationery Co., Limited. In their manufacturing plant they do printing, ruling, embossing and manufacture binders, ledgers, snap-shot albums, ring books and loose leaf goods of all kinds. They occupy a warehouse, 28 x 135, with four storeys and basement. Two floors are used for manufacturing purposes, one for show and shipping rooms, one for office and storage and the basement for storage.

To Make Oxygen

Dominion Oxygen Co., Limited Formed and Will Build Five Large Plants

Dominion Oxygen Co., Limited, have been incorporated, with power to manufacture and sell oxygen, nitrogen, argon, and all other gases. The company will proceed at once with the erection of five large oxygen plants in the principal industrial centres of Canada, together with a large number of warehouses and service stations. Officers of the company are: B. O'Shea, president; Leighton McCarthy, vice-president; E. S. Whitney, vice-president; Silas Wiley, treasurer, and J. R. Knapp, secretary. Dominion Oxygen Co., Limited, are a subsidiary of the Union Carbide and Carbon Corpora-

Sunshine and fresh air are plentiful in this fine, airy workroom, where made-in-Canada shirts are being produced.

Photo by courtesy of Williams, Greene & Rome Co., Ltd.

tion, who control thirty-six distinct companies throughout the United States and Canada. The principal product will be oxygen for use in the oxy-acetylene process of welding and cutting metal.

In New Quarters

Sherer-Gillett Co., Limited, Have Recently Made Change in Location

The Sherer-Gillett Co., Limited, manufacturers of sanitary counters, Guelph, whose plant on the York Road was taken over by the Board of Trade for the Moncrief Furnace & Mfg. Co., are now located on Suffolk Street. Their new premises will give them considerably more space, and it is their intention to build up the capacity of the plant as rapidly as possible. When they are able to get sufficient machinery and men to equip it, they will begin to think about enlarging it. They anticipate rapid growth in their business.

In Larger Plant

Canadian I.T.S. Rubber Co., Limited, Have Now Doubled Their Previous Capacity

The Canadian I.T.S. Rubber Co., Limited have recently moved into their new plant at 26-32 Alpine Avenue, West Toronto. The company, who are associated with the I.T.S. Rubber Co. of Illyria, Ohio, began operations in October, 1918, and have made such progress that a larger plant was needed. Their new premises give them double the capacity of their original plant. The company's product is confined to I.T.S. rubber heels.

Start New Industry

Tube Co., of Canada, Limited, Formed to Manufacture Tubing for Bicycles, Bedsteads, etc.

Hitherto the tubing used in the manufacture of bicycles, bedsteads, implements, automobiles, etc., has been imported from the United States, but now a Canadian supply will shortly be available. The Tube Company of Canada, Limited, have been incorporated and are fitting up a plant at 233 Dufferin Street, which they hope to have producing this month. They will make from 3-8-inch to 2-inch, 14 to 22 gauge, tubing by automatic oxy-acetylene and electric welding processes, and hope to have an initial output of from 20,000 to 30,000 feet per day. Their mill will have the latest improved machinery and will be one of the most up-to-date in America. Already they have received all sorts of encouragement in the way of orders. H. W. Carter, of the Carter Welding Company, is president; P. Sorley, secretary-treasurer, and J. F. Lawson, vice-president and plant manager. Mr. Lawson was formerly with the Pedlar people, while Messrs. Carter and Sorley are pioneers of oxy-acetylene welding in Canada.

Rubber Mill Machinery

Canadian Ingersoll-Rand Co., Limited, Have Arranged to Manufacture New Lines

Arrangements have recently been concluded between the Wellman-Seaver-Morgan Company, of Cleveland and Akron, Ohio, and the Canadian Ingersoll-Rand Company, Limited, whereby the latter firm are now making and selling in Canada the Wellman-Seaver-Morgan line of rubber mill machinery. The latter comprises crackers, washers, mixing and warming mills, grooved rolls, refiners, calenders, reduction gears, fabric driers, vulcanizing presses, tire rimming and applying presses, tubing machines, accumulators, high pressure pumps, etc. The Canadian Ingersoll-Rand Company, Limited, will also take up the manufacture in Canada of Wellman-Seaver-Morgan hydraulic turbines, and a department for this work is now being organized.

The Canadian Ingersoll-Rand Company have also been appointed Canadian agents for, and manufacturers of, the Ryther and Pringle line of wood preparing machinery, for use in ground wood and chemical fibre mills, consisting of slashers, swing saws, kickers, loaders, log hauls, splitters, chip screens, shredders, etc., including the Barienger braking device for lowering heavily loaded sleighs or other vehicles down steep slopes; and will also manufacture and sell the Bird Machine Company's pulp and paper mill specialties, comprising Bird inward flow, rotary screens, Walpole screens, beating attachments and save-alls.

The company are adding some machine tool equipment in connection with the turbine department, and have a man in England at present inspecting the machines which they are having built there for this department.

Woodstock Plant Expands

Standard Tube & Fence Co., Limited will Make New Line of Welded Tubing

Standard Tube & Fence Co., Limited, of Woodstock, Ontario, have acquired the Canadian patents of Marshall B. Lloyd, covering acetylene and electric welded tubing, and have formed a close working arrangement with the Standard Parts Company of Cleveland, Ohio, to manufacture many of the latter's line of welded products. The Standard Tube Company's product has heretofore been confined to close joint tubing, but, with the purchase of the Lloyd's patents, will now be in a position to supply welded tubing required by the automobile, bicycle, bedstead, and other trades. Extensive additions to the plant in Woodstock are contemplated for this spring. Meanwhile, equipment is being installed in its present buildings, and the company expects to be ready in a few weeks to deliver the first welded tubing of this kind made in Canada.

Home Buying Advocated

"I have gone carefully through the January number of your paper and must say that I found it very interesting. It is with deep pleasure that I will again urge our employees to buy everything they possibly can in Canada. In fact, these are the instructions that I have given to any industry or corporation in which I am interested, as I am convinced that the only way to put our finances back on a proper basis is to buy outside of Canada only what cannot possibly be made here."

—A. E. LABELLE, vice-president and managing director, St. Lawrence Flour Mills Co., Limited, Montreal.

Trade Organizations Oppose Profits Tax

Boards of Trade and other Business Bodies pass strong resolution urging the Government not to re-impose the Business Profits Tax—Many reasons given why tax should not be levied

During the past few months, numerous boards of trade, chambers of commerce, and other trade organizations throughout Canada, have passed resolutions asking for the discontinuance of the tax. The following are some of the resolutions adopted:

THE CANADIAN LUMBERMEN'S ASSOCIATION
(Quebec, February 5, 1920)

"Whereas the Business Profits Tax of 1916, and amendments thereto, have expired by effluxion; it is the judgment of this Association that this tax should not be re-enacted, as it has been proven inequitable in principle, and in opposition to individual initiative and enterprise; that this Association, however, approves of the continuance and extension of the present Income Tax, in conformity to the necessities of government to meet its incurred obligations arising out of the great war.

"That this Association calls upon its Executive to appoint a strong committee to deal with the matter as its consideration shall arise in Parliament and in Council."

MONTREAL BOARD OF TRADE
(Montreal, January 31, 1920)

"Resolved, That the Montreal Board of Trade, in annual meeting assembled, emphatically endorses recent representations of the Council of the Board, stating that, in case the Government has any idea of renewing the Business Profits War Tax, the Council is unanimously opposed to the continuance thereof, for the reason that its purpose has ceased to exist, and that, by curtailing the expansion of industrial business enterprise, said tax operates inimically to the development of this country.

"That the Business Profits War Tax was, at its inception, loyally accepted by this Board, and by the business community in general, and that the only representations made at that time by the Council were with regard to minor details, at a confidential interview with the Minister of Finance, though later on, when war requirements made necessary an increase in the tax, the Council informed the Government that it was strongly of opinion that the needed extra revenue should not, as under the law providing for that taxation, be derived from but a small section of the community, but that the taxation should apply to large classes of the population, who, under that law, entirely escape, save in a very indirect manner, contributing towards the extra revenue required;

"That this meeting, therefore, prays the Government to secure any extra revenue required by some more general method of taxation."

VANCOUVER BOARD OF TRADE
(Vancouver, January —, 1920)

"Whereas the Business Profits War Tax Act expired on December 31st, 1919;

"And whereas there appears to be a possibility that this legislation will be re-enacted at the next Session of Parliament;

"Be it resolved that the Legislation Committee of the British Columbia Division of the Canadian Manufacturers Association place themselves on record as opposed to the re-enactment of such legislation, for the following reasons:

"(1) That the Business Profits War Tax Act was introduced in the first place only as a temporary and emergency war measure.

"(2) That it checks enterprise.

"(3) That it depletes capital in many cases when most required.

"(4) That it is unfair and unjust in its incidence, but particularly to new businesses and to firms with a low basis of pre-war profits.

"(5) That it has resulted in increasing prices, right up from the raw material to the distributor.

"(6) That the withdrawal of the tax would lead to an expansion of business, a lowering of prices and an increased revenue for the Government through the operation of the Income Tax."

(The foregoing resolution has since been adopted by the individual boards in the Associated Boards of Trade of British Columbia.)

BORDER CITIES CHAMBER OF COMMERCE
(Windsor, February 19, 1920)

"Whereas the Business Profits War Tax expired on the 31st December last, unless re-enacted by legislation at the forthcoming session of Parliament; and

"Whereas it is highly undesirable that the above tax be re-enacted for the following, among other reasons:

"(*a*) Because it applies only to industries employing more than a specified amount of capital, and does not apply to similar concerns of smaller capitalization.

"(*b*) Because it applies only to industrial undertakings, and not to agricultural or professional callings.

"(*c*) Because it has rendered Canadian industrial enterprises and the Canadian industrial field unattractive to the outside capital and enterprise so essential to their fullest development. Many American concerns are now anxious to establish in this country, provided that the above tax is not re-enacted. Otherwise, they will not locate on this side.

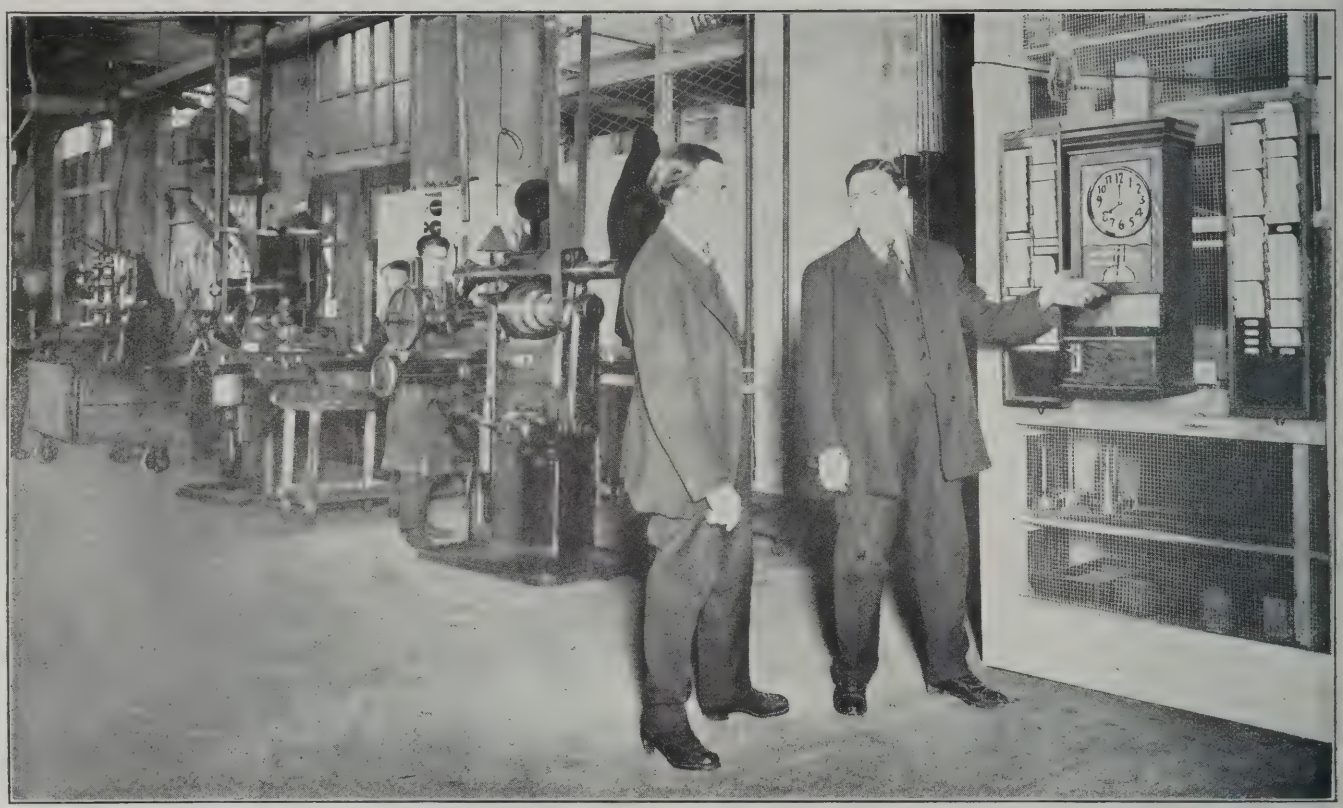
"(*d*) Because the said tax is compelling Canadian capital to seek investment in other lands—a serious and highly undesirable circumstance.

"(*e*) Because it renders impossible the provision of proper reserve funds to meet and weather periods of depression.

"(*f*) Because it absolutely restricts the possibility of plant extension, renewal and upkeep, leaving no reasonable margin for such imperative expenditures.

"(*g*) Because it hopelessly handicaps the splendidly exceptional opportunities now so freely afforded for the material and most desirable expansion of the industrial life of this young country.

"(*h*) Because it discourages the enterprise of Canadian manufacturers, who would otherwise willingly spend money necessary to secure a good foothold in foreign markets.



"(*i*) Because it seriously discourages production at a time when the highest possible output is a matter of supreme national importance.

"(*j*) Because its operation has unquestionably involved higher prices for the consumer of manufactured articles.

"(*k*) Because, if reduced to its final analysis, the Business Profits War Tax is, in reality, a penalty imposed upon industrial efficiency and enterprise.

"Therefore, be it resolved that, for the above reasons, this Border Chamber of Commerce respectfully petitions the Honorable the Dominion Minister of Finance, that the said Business Profits War Tax be not re-enacted."

S. B. Beare, Limited, wholesale manufacturing stationers, Toronto, are erecting a four-story and basement factory and warehouse, on a lot about 30 x 120 feet, at the corner of Wolseley and Ryerson Streets. They make office stationery exclusively, and hope to develop the manufacturing end of their business very considerably.

"Here's the Heart of Our Shop"---

"Every workman here knows there is a standard of production set for the work he is on, step by step. This International Job Recorder **prints** his actual starting and stopping time—there's no chance for disputes because the machine **automatically** prints the time record."

"It gives him 'his chance' to show his worth—a strong appeal to the natural ambition of a good workman—and teaches him to concentrate upon his own work. More than that, it creates a spirit of enthusiasm and friendly rivalry, of good fellowship and a determination to do the level best, which really is **the greatest asset the Company has.**"

"But, it also unerringly detects and 'shows up' the inefficient careless worker and blocks many an ingenious method of 'covering up'."

"Our shop is headed in the right direction. There's no driving. This International Job Recorder takes the place, to a great extent, of the Foreman's supervision—cuts out the 'human element,' often the cause of hostility on the part of some of the workmen and leaves the foreman free to plan for even greater production."

What the International Job Recorder does for another shop it can do for yours. Let us send you our latest literature.

Let Us Print These Time Cards for You

We would like the opportunity to prove to our customers that it will be really a great economy to use only Time Cards furnished by us.

Our cards are made from carefully selected paper, made especially for this work. Other paper stocks are apt to cause an accumulation of fluff or lint in the printing mechanism which hinders the Recorder in its work.

Our cards are smooth and tough and stand rough usage in the employees' hands.

Please let us quote you.

Board of Customs Decisions

Various Rulings Made as to the Duty Applicable on a Number of Commodities

Delphos Printing Press, model B, per illustration, declared to be dutiable under tariff item 442, at the rate of 10 per cent., plus the war tariff of 7½ per cent.

Hat bands in the piece, imported by hat manufacturers for use in the manufacture of hats, declared to be entitled to entry under tariff item 638 (a)—free of duty.

Drawing pins, push pins, or thumb tacks, per general line of samples, of brass or steel, or with glass heads, declared to be dutiable under tariff item 419, at 30 per cent., plus the war tariff of 7½ per cent.

"Chemcraft" Outfit No. 2, per sample, consisting of chemicals, test tubes, etc., for use by children in performing minor chemical experiments, declared to be dutiable under tariff item 711, at the rate of 17½ per cent., plus the war tariff of 7½ per cent.

Pillow blocks or bearings, for line shafting, declared to be dutiable under tariff item 454, at the rate of 30 per cent., plus the war tariff of 7½ per cent.

Declared that shell egg cases, made of veneered wood, having sides, tops and bottoms 3-16 of an inch in thickness, and ends and middle partitions 3-8 of an inch in thickness, when imported filled with eggs, are entitled to entry under tariff item 710 (a), the war tariff of 7½ per cent. only applying, in effect from 1st December, 1919.

Departmental Rulings

Pioneer Washing Soda, per sample, from Church & Dwight of New York, ruled to be dutiable under tariff item 777, at the rate of 17½ per cent., plus the war tariff of 7½ per cent., in accordance with ruling in Appraisers' Bulletin No. 2012.

Covered wire used in the manufacture of artificial flowers, ruled to be dutiable under tariff item 407, at the rate of 30 per cent., plus the war tariff of 7½ per cent.

Extractor, used in drying fabric in weaving and dyeing operations, ruled to be dutiable under tariff item 468, at the rate of 10 per cent., plus the war tariff of 7½ per cent.

Castings partially finished, when for parts of machinery, ruled to be dutiable under tariff item 453, at the rate of 27½ per cent., plus the war tariff of 7½ per cent.

Use Norwegian Agents

An Appeal to Manufacturers Who May be Doing Business with Norway

The Association is in receipt of a letter from the Consul General of Norway at Montreal, enclosing a circular addressed to the Norwegian trading community and urging that business with Norway should be done through the medium of Norwegian agents. The communication reads:

"The Association of Norwegian Agents have complained that the sale to Norway of different articles from abroad—also from overseas—is partly effectuated through agents which are not living in Norway, but in the neighboring countries. The said Association of Norwegian Agents have expressed their dissatisfaction that the sale of goods to Norway is not made through Norwegian agents living in Norway.

"For your information, I beg to send you a few copies of appeal to the Norwegian trading community, issued by the said Agents' Association, and I should be obliged to you

TRADE-MARKS THAT PULL. There are many kinds of trade-marks, some being most attractive but have not the pulling power for business. Let us submit you a trade-mark sketch, that's bound to pull.

MARKS

for making the appeal expressed by the agents known amongst the members of your association.

"I beg leave to add that not only to the agents themselves but also to the whole trading community in Norway would it be altogether more satisfactory if business people doing trade in Norway would try to sell goods to Norway through Norwegian agents, avoiding to let trade on Norway go through channels in other countries.

"The animosity in Norway against doing business in that way is growing stronger and the firms which really want to develop their business in Norway will certainly have advantage in considering the desirability of employing Norwegian agents, not foreign agents."

Samples Being Assembled

Commercial Samples From All Parts of the World Are Being Collected at Ottawa

Some time ago the Canadian Trade Commissioners were instructed to obtain commercial samples from the countries in which they were stationed. There was some delay in getting them owing to war conditions and difficulties in securing ship space. It was also necessary to wait some time before a suitable building could be secured at Ottawa. However, the samples are now coming to hand and photographs of them are appearing from time to time in the Weekly Bulletin of the Department of Trade and Commerce. Any manufacturer who is specially interested in a particular sample may secure a photograph of it by paying for the cost of taking the photograph.

In addition to these commercial samples, there is a department for Canadian catalogues, and manufacturers are urged to see that their publications are on fyle. It is the aim to have this department as representative of Canadian manufacturing interests as possible, so that any business men from abroad visiting Ottawa can see exactly what Canadians are manufacturing.

W. Percy Lee and Charles J. Lee have established a new industry in Owen Sound, under the name of Lees' Mattress & Cotton Products Co. They are occupying a brick building, 25 x 70 feet, two stories, and besides making mattresses will manufacture pillows, awnings and kindred lines.

Three annual scholarships for a complete four years' course leading to a degree in science in the universities of Toronto, Queen's or McGill are offered by the International Nickel Co., of Canada to minor apprentices and sons of employees in the mining and smelting division, Copper Cliff. The scholarships, which cover all expenses while attending the chosen university, are awarded on the result of competitive examinations. The first of the annual examinations was held last fall and the winners are now attending university. By the end of four years the company will be paying the expenses of twelve students continuously. So far as is known the gift is unique.

OFFICE AND FINANCE

Controlling a Company's Printing Bills

Reading the First Two Paragraphs of this Article will be to many Factory Executives like Holding up a Mirror to them

By JAMES H. SHEPPARD

(Reprinted from "Factory")

IN the spring of 1917, when the war and the draft foreshadowed a coming shortage of men, the President one day appointed a committee to investigate reports and routine with a view to cutting out reports and eliminating clerical operations wherever possible.

In the course of this investigation, the committee discovered that a tremendous variety and quantity of printed forms were being used. Waste was rampant. Almost anyone could have a form printed, and there was no check on the quantity ordered. Each department had its own store of printed matter, but it was usually in such a state of disorder that a new supply of a form would be ordered while plenty were still available but covered up.

Great Wastage Shown

Forms hastily considered and printed frequently were used only a day or two. Many were never used at all. Forms becoming obsolete were buried under new forms instead of being salvaged; in fact, no agency existed which could salvage them. All kinds of expensive fancy forms were used. Some were printed on carbon paper; some were serially numbered when this was really unnecessary; many were printed on cardboard or on an expensive grade of paper when cheap paper would do. Apparently it had never occurred to anyone that great economies could be effected in this field.

Investigation showed that many of the forms could be produced on a commonly used press with little labor—and unskilled at that—providing electrotypes were obtained. The possible saving on a number of representative forms was figured, and proved so startling that one of these special presses was purchased and installed, together with a small stitching machine and a paper shear. Near the printing room an attic full of old files was cleared out, shelving put in, and a stationery storeroom established. The storerooms for printed matter throughout the plant were next raided, obsolete forms sorted out, and good and obsolete forms carefully stacked in the new storeroom. A man in the sales department was put in charge, in addition to his other duties, as it was felt that supervision of the printing and stationery storekeeping ought to require only part of his time. This arrangement has worked very well.

At the same time that these changes were initiated, a permanent forms committee was created to reduce the cost of forms, to keep to a minimum the number of new forms used, and to co-ordinate new forms with those already in existence. The committee was given authority to decide whether a proposed form should be printed or not, and to determine in what way and of what material it should be made.

The stationery storeroom keeps a record of each form on a 5 by 8 inch card. This card shows the location of the stock on the shelving, the size and kind of material, and gives a complete record of orders, deliveries, balances, and costs. It thus tells the whole story at a glance, for it enables the committee to decide on the quantity to be re-ordered, to revise the base figure which determines when a re-order is to be placed, besides telling whether the form was made or purchased outside, from whom it has been purchased in the past, and what it cost.

When anyone desires a new form printed he accompanies his sketch with an application card. The forms committee examines the proposed form, having in mind the following questions:

1. Is the form necessary?
2. Cannot some existing form be used?
3. Does the estimated consumption justify the quantity ordered?
4. Is the proposed form properly co-ordinated with existing forms?
5. Is the proposed form properly designed as to convenience and cost?
6. What is the cheapest grade of paper that may be used?

If the proposed form is approved by the committee, bids are obtained from at least two printers, and an estimate made of the cost on the special press, and the job done wherever cheapest.

When the stock of any form falls to the base shown on the record card, which is usually one month's supply, the form is re-ordered. The re-order is passed upon by the forms committee in order that the form may be made to conform to changed conditions. When printing is done outside the plant rather than on the multigraph press, the original set-up forms a large part of the cost, so that it pays to buy a large quantity at one time. We normally order a six months' supply of a form, and in some special cases as much as a year's supply. This is advisable only if a careful investigation has been made as to the possibility of the form being changed or becoming obsolete.

Variation in Bids Surprising

The variation in the bids of several printers on the same job is often surprising, so that we always obtain quotations from at least two. The extraordinary difference between bids seems to indicate the absence of a real cost-finding system in many printing establishments.

Now as to what has been accomplished. In the first place, the company has not bought a scratch-pad of any description since the fall of 1917. Obsolete blue prints and forms, used repair orders, and the like, are cut up and padded. The result is very satisfactory, for not only is there a considerable saving in money, but the surface of the paper thus used is much better than the surface of that formerly purchased. In many cases new forms are printed on the backs of obsolete ones. This practice is particularly applicable

IMPERIAL BANK
· OF CANADA ·

CAPITAL PAID UP $7,000,000 RESERVE FUND $7,500,000

PELEG HOWLAND, President

The Bank offers a service of the highest order to Canadian manufacturers because of its 180 Branches located in important industrial and agricultural centres throughout Canada.

COLLECTIONS made at all points in Canada and in foreign centres.

DRAFTS—Money Orders and Letters of Credit issued, available throughout the world.

EXCHANGE—Domestic and Foreign Exchange bought and sold.

SAVINGS received at all Branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

HEAD OFFICE - TORONTO

to file cards which have been printed on a stock of such weight that the printing does not show through.

The direct saving in money has been remarkable. In 1917 the company purchased 2,050,000 forms at a cost of $21,000, or $0.0098 a form. In 1918, the first year in which the forms committee and stationery storeroom were in operation, we purchased and made ourselves 2,330,000 forms at a cost of $18,550, or only $0.0079 a form. A careful investigation shows that the average cost of commercial printing in 1918 was 33⅓ per cent. higher than in 1917, so that had we operated in 1918 in the same way as in 1917, our cost for a form would have been $0.0131, and our printing bill would have been $30,400, instead of $18,550.

This saving was effected at a cost of about $2,500, leaving a net saving of $9,450—quite a sizeable item for a plant employing only 1,300 people.

Aside from the direct financial benefit resulting from this newly-inaugurated system, the change was of a decided advantage to the business in yet another way. Under the old method, when almost anyone could have a form printed to suit his own desires, these changes frequently did not go through the proper department heads, who ought always to be familiar with every such change in department routine. And then, too, when there is looseness and waste in part of the routine of a business, it encourages like characteristics throughout the whole plant.

Penmans Limited

Despite decrease in volume of sales, trading profits showed an increase

Sales of Penmans, Limited, for 1919, amounted to $8,538,848, a decrease of $109,534 over 1918. Net trading profits, however, amounted to $1,293,314, comparing with $1,137,171. Surplus of liquid assets over liquid liabilities has been increased by $481,897, and now amounts to $3,636,132. The reserve account and surplus amount to $4,004,269.

Montreal Cottons

Record year in the way of earnings reported by this company last year

Income of Montreal Cottons, Limited, for last year amounted to $995,039, compared with $703,096 in 1918 and $492,720 in 1917. After deducting fixed charges, taxes and a special appropriation to provide against loss due to the adverse rate of exchange, there remained a balance of $662,538. Dividends took $345,000, leaving a profit and loss balance of $317,538, which, added to the previous surplus, brought that item up to $3,089,142.

Dominion Linens

Small increase in profits recorded with general improvement in position

Profits of Dominion Linens, Limited, for 1919 amounted to $76,190, as compared with $71,142 in 1918. The company's position showed general improvement. From the previous year there had been carried forward a balance of $36,317. Dividends on preferred stock at 7 per cent. were paid, amounting to $24,500. The sum of $5,000 was written off for deferred expenses, and the same for good-will, both unchanged from the previous year. A reserve for depreciation on plant and equipment of $19,110 was charged, a few hundred dollars higher than in the previous year, and the

reserve for $3,302 for depreciation on buildings. Provision of $5,000 was allowed for depreciation of inventories, arising out of fluctuations due to war conditions, as compared with $10,000 for the same purpose a year ago. The balance at credit of profit and loss at the end of the year was $49,594, as compared with $36,317.

Wm. A. Rogers Limited

Past Year Has Been Much the Best in the History of the Company, Profits Being Large

The William A. Rogers, Limited, experienced a most successful year in 1919, earning profits of $526,382, compared with a loss of $5,208 in 1918. The result indicates the rapid manner in which the silverware industry has recovered from its war-time handicaps. The directors will resume on April 1 the payment of regular quarterly dividends on the preferred shares, and hope during the year to make up part of the 14 per cent. arrears on this stock. Total assets at the end of the year amounted to $4,583,436, as compared with $4,239,230 at the end of the previous year.

Asbestos Corporation

Company Experienced Prosperous Year with Large Increase in Net Profits

Profits of the Asbestos Corporation of Canada for the past year amounted to $1,473,752, an increase of approximately $300,000 over 1918. Including the dividend on the common stock, which was commenced at the end of 1918, and dividend on preferred stock with bonuses, the year's distribution to shareholders amounted to $530,000, as against $190,000 in 1918. The surplus account increased from $1,205,819 to $1,568,391. The working capital shows a further material improvement within the year, rising by more than $600,000 to $2,991,728.

Woods Mfg. Co.

Profits for 1919 Were About Two Hundred Thousand Less Than for 1918

Profits of Woods Manufacturing, Limited, for 1919 amounted to $639,812, comparing with $824,201 in 1918 and $770,816 in 1917. However, deductions for interest, donations and taxes were considerably less, so that balance for dividends was $608,662 against $602,000 in 1918. After paying all dividends, surplus amounted to $294,175, compared with $287,900 the previous year. The excess of current assets, including inventories, over current liabilities at the end of the year was $2,164,239, an increase of approximately $300,000.

Gunns Limited

Stock Issue of this Company Has Been Made by the National City Company

One of the latest industrial flotations in Canada has been $1,500,000 seven per cent. cumulative first preferred and participating stock of Gunns, Limited, the Toronto packing house company. The business of the company was established in 1873, being incorporated in 1902. During 1919 interests allied with Morris & Co., Chicago, purchased a

Earnscliffe Linen Bond

White and Eight Tints

This announces that "Earnscliffe," a favorite with Canadian consumers for many years, is now being made in eight tints as well as white:

Azure, Blue, Pink, Buff, Golden Rod, Russet, Green, Tuscan

A decision to make Earnscliffe in a variety of tints came as a result of continued success and increase in sales of Earnscliffe White, Azure and Buff, coupled with numerous requests by its friends, for other tints.
To introduce the tints to consumers we have prepared an exceptionally fine booklet showing samples illustrated with printed and lithographed letterheads. One of these booklets will be very useful to anyone interested in commercial stationery. A request on your business stationery will bring one to you.

EARNSCLIFFE LINEN BOND *is supplied by wholesalers throughout the Dominion.*

substantial but not controlling interest in the company. The company owns a slaughtering and meat-packing plant in Toronto and conducts a produce business, directly or through subsidiary companies, in Toronto, Montreal, Harriston, Walkerton, Wingham, and St. John, N.B. The company is one of the largest packers in Canada, its products consisting mainly of diversified meat and produce foods. Proceeds of the present issue are to be used solely for additional working capital. The stock is offered at 97.50 per share, yielding 7.18 per cent.

F. N. Burt Co.

Profits for 1919 Show Large Gain Over Figures for Preceding Year

Profits of the F. N. Burt Co., Limited, for 1919 amounted to $795,714, an increase of $325,000 over the previous year. In addition, there have been important extensions to plants, which have been paid for out of profits, while liabilities have been reduced and liquid assets increased. The profit and loss balance brought forward from 1918 amounted to $376,783. From this was deducted federal taxes on 1918 earnings, paid in 1919, amounting to $59,415, leaving $317,368. Adding 1919 profits, $1,113,083 was left for distribution. There was transferred to realty and plant reserve, $178,377; paid in dividends, $198,548, and written off patents, $23,112; leaving a balance carried forward of $713,044. Altogether, the year was an exceedingly favorable one, and the outlook is good.

Provincial Paper Mills

Substantial Gain in Profits Recorded by this Company During Past Year

Net profits of the Provincial Paper Mills Co., Limited, for 1919 amounted to $420,573, an increase of over $16,000. Sales, which were the largest in the history of the company, amounted to $3,838,415. The president, I. H. Weldon, states that market conditions indicate a strong demand for the coming year. The year's surplus was $133,408, and this, with the previous balance of $852,406, brings the profit and loss balance up to $852,406.

Canada Cement

Company's Net Earnings for 1919 Were Considerably Less than those for 1918

Net earnings of the Canada Cement Co. for 1919 amounted to $766,176, comparing with $1,060,644 the previous year. After paying 6 per cent. dividend on the common stock and providing for reserves, the surplus account showed a deficit of $1,252,786. This, in conjunction with the previous balance of $2,677,643, left a surplus balance of $1,424,857. Working capital amounted to $6,023,902, which compares with $5,007,913 the preceding year.

In his address to shareholders, William C. Edwards, as President, said: "The demand for cement during the past year was better than in 1918, but was far below normal, and the results of the year's business are not gratifying.

"Referring to the financial position of your company, after providing for interest on bonds, dividends on preferred and common stock and ordinary reserves, the surplus account has been reduced by $1,252,786. This is accounted for by the transferring of $1,011,119 to reserve for fire in-

surance, and by drawing on the surplus to the extent of $241,666 for depreciation. We are pleased, however, that the company's financial position is strong, current assets, including investments and call loans, amounting to 7.74 times the current liabilities."

International Nickel

Nine-Month Statement Shows Very Heavy Decrease in Earnings and Net Profits

The effects of cessation of war business are reflected in the latest statement of the International Nickel Co., which shows that for the nine months ended December 31st, 1919, net profits were $1,799,957, as compared with $5,072,458 for the corresponding period of 1918. Earnings, before deductions of administration and general expenses, taxes and depreciation, amounted to $4,326,897, a decrease of $6,600,000. Total assets at the end of 1919 were $63,140,851, as compared with $66,909,166 at the end of 1918.

Canada Foundries

Total Income for the Year Showed Considerable Drop From That of Previous Year

The financial statement presented at the annual meeting of Canada Foundries & Forgings Co., held at Brockville on February 24, showed an operating profit of $149,623, which, with income from investments and gain on sale of Victory bonds, made a total income of $242,062. This compared with $612,117 a year ago. The net surplus was $169,915. The balance of surplus brought forward was $1,467,622. Dividends of 7 per cent. on preferred and 12 per cent. on common were paid, bringing the balance down to $1,285,222.

A change in the directorate occurred, the following being elected:—T. J. Dillon, Welland; J. H. A. Briggs, Brockville; J. T. Dillon, Buffalo; J. A. Mackay, Charles W. Maclean, W. M. Weir, Colin O. Cameron, Stephen J. L. E. Huray, Montreal; Lieutenant-Colonel Monsarrat, Ottawa; Lawrence Chamberlain, New York; Henry Bertram, Dundas.

When the Directors met these officials were unanimously named:—President and General Manager, T. J. Dillon; Vice-President, Hon. George P. Graham; Secretary-Treasurer, J. H. A. Briggs; Assistant Secretary-Treasurer, F. C. Hesch; Executive;, the President, Vice-President, W. M. Weir, J. T. Dillon.

A new stock issue is announced by the Canadian Salt Company, Limited, whose works are at Windsor, Ont., with executive office at Montreal. At the annual meeting of the shareholders, to be held on March 10, a by-law will be submitted for ratification, increasing the capital stock of the company from $800,000 to $1,500,000 by the creation of 7,000 shares of $100 each.

Penman, Limited, have declared a bonus of 2 per cent. on common shares, payable February 28, to shareholders of February 16. The regular quarterly dividend of 2 per cent. was also declared, payable May 15, to shareholders of May 5. A dividend of 1½ per cent. has also been declared on the preferred stock, payable April 30 to shareholders of April 21.

Works Councils in the United States

Concluded from Page 67

r other plant executive, before a matter is referred to the Works Council for consideration. In a number of cases provision also is made for an opportunity on the part of the ompany officials to use their good offices to effect a settlement in case the Works Council fails to reach an agreement.

"A few of the plans provided merely for the negotiation of ifferences between an employee's committee and certain lesignated officials of the company. In these cases no detailed procedure is prescribed. But most Works Council plans call for joint action of formally constituted representatives of the employees and of the management in the settlement of matters. Such action may be taken by a joint council comprising in its membership representatives of both parties, by an employees' committee meeting in joint session with a committee representing the management, or by a special sub-committee of the Works Council made up of representatives of both employer and employees.

Majority Vote Is Decisive

"Under a majority of the plans a simple majority vote of the combined representatives of employees and management is decisive. In the case of the 'Bridgeport Plan,' however, a majority of two is required. In only four plans is a unanimous vote prescribed.

"Ultimate settlement of matters failing of adjustment by the Works Council is provided for by compulsory arbitration in only a small minority of establishments. A smaller number of plans—effective, however, in over twice as many establishments—provide for final submission to arbitration if the parties at the time agree thereto. Ultimate power of settlement rests with officials or the board of directors of the company in only a few cases. The plans in effect in a majority of the establishments make no provision for further reference after the Works Council has failed to reach an agreement. Inasmuch as in the experience of Works Councils thus far matters have seldom reached a deadlock, the means provided for the final determination of questions have been important chiefly from the standpoint of fixing the authority possessed by the individual Works Council.

"Relatively few plans qualify the right of employees to vote for members of the Works Council, other than that they must be in the employ of the company at the time of the election. A majority of the plans, however, require that employees must have certain qualifications if they are to serve as employees' representatives. The requirement most often prescribed is that they must have been in the employ of the company for a fixed period, generally one year, preceding the election. In many cases American citizenship and the attainment of the age of 21 also are stipulated. The usual term of office is one year.

Election by Double Process

"Elections most often are by the double process of nomination and election, as distinguished from direct election. However, experience with the latter method, in the Bridgeport establishments in particular, points to its superiority in certain respects over the nomination method. A simple notice is posted in the shop stating the date and other particulars with respect to eligibility, manner of voting, etc. In the interval before the election the employees have an opportunity to talk over among themselves possible candidates, while the formality, loss of time, and other disadvantages accompanying the circulation of petitions or the holding of meetings for purposes of nomination are avoided.

"In order that a large and representative vote may be cast, it has been found desirable to hold elections on the plant premises and during work hours or immediately thereafter. Attempts to conduct elections away from the plant and outside of work hours, as in the evening, have not met with success.

"It is important that the management refrain from all participation in the conduct of elections, so as to avoid any appearance of attempting to influence the results. In this connection it is sometimes provided that foremen and other representatives of the management shall be absent from the place of voting while the balloting is in progress.

"In a majority of plans provision is made for meetings of the Works Councils at regular intervals, with added provision for special meetings. The Works Council, meeting regularly, ordinarily tends to do more constructive work than if it meets only upon occasion. The regular meetings furnish constant opportunities for the interchange of ideas and experiences. It is desirable, moreover, to have matters of vital interest to the employees constantly before the Councils, if the meetings are not to become perfunctory; again, the members have less incentive to "make" business. There is no uniform practice with respect to meeting during or after work hours or on the company's or the employees' time.

"Special provisions for protection of employees against discrimination by reason of union membership, and of representatives against discrimination by reason of their activities as Council members, for the referendum and recall, for the compensation of employees' representatives and for the creation of a department of industrial relations are included in some plans.

"Experience with plans of employee representation has not as yet been sufficiently broad to establish finally the comparative merits of many specific features of organization. It is clear, however, that no one form of organization is applicable to all establishments alike. Differences in the size of the establishment, the personnel of the management, the character of the employees, and other particulars, require variations in the plan of organization. In general, it may be said, however, that Works Councils succeed best if they are (1) comprehensive in scope; (2) sufficiently flexible to permit of adaptation and development; (3) simple and informal in structure.

Details Developed in Operation

"The Works Council, being a human institution, cannot be so planned as to meet all conditions and contingencies. Hence, even after all possible care and foresight has been exercised, many details of organization still remain to be developed in operation.

"With the exception of the small group of "limited" plans, all Works Councils deal with the terms of employment and serve as "bargaining committees" to the extent that they concern themselves with such subjects as hours of work, wages, and piece rates. Most "National War Labor Board Committees," as well as three-fourths of the employers' plans, deal with these subjects. However, they are active also with respect to social and recreational undertakings and living and working conditions. The Works Councils voluntarily instituted by employers have laid particular emphasis upon these other activities.

"In a considerable number of cases, Works Councils concern themselves with shop discipline, or with hiring, promotion and discharge, but mainly in the capacity of review and recommendation only.

"The participation of Works Councils in the improvement of industrial methods and in general management functions has been relatively infrequent.

"Works Councils have met with varying degrees of success. Of the Councils regarding which experience is reported in this study, a small minority either lapsed completely or had only a perfunctory existence. With but few

A Neglected Duty

(From the Dry Goods Economist)

Communism is basically unsound. But where the alien sees, he believes, especially if he can see it in cold type. Our duty, and it is a duty we have sadly neglected, should be to educate him that he may readily discern the truth from the falsehood given him in the syndicalist publications.

exceptions these were committees established upon the initiative of the National War Labor Board or the Shipbuilding Labor Adjustment Board. However, by far the majority of Works Councils have been active, either to a limited or considerable extent.

"In most cases, Works Councils are reported as having produced favorable results, although in a number of instances, chiefly of "National War Labor Board Committees," they have apparently accomplished little or no good. In a few cases their introduction has tended even to aggravate labor difficulties. But on the whole they appear to have produced some benefit.

Increase in Good Will Apparent

"The beneficial result most frequently reported is an increase in good will and in co-operative spirit between employer and employees. A considerable number of employers reported specifically that labor difficulties were reduced because of the introduction of Works Councils. In several instances the Works Council was the means whereby strikes were prevented in individual establishments when strikes were general in the same industry or locality. It is true that labor disturbances have at times occurred in establishments where Works Councils have been introduced. Against this unsatisfactory experience, however, are to be placed the statements of the managements of several of these establishments that, in their judgment, the Works Council had modified the severity of the disturbance, and that they still regarded the Councils as of decided value.

"In several cases the Works Council was reported as influential in reducing labor turnover. Difficult questions involved in the execution of awards of the National War Labor Board often have been satisfactorily handled by Works Councils.

"With respect to productive efficiency, evidences of positive benefit resulting from Works Councils are comparatively few, although in some establishments marked increases in output were attributed, in part, at least, to the existence of such organizations. In a few instances efforts have been made by Works Councils to reduce absenteeism and tardiness, and to develop improved working methods, but the sum total of accomplishment along these lines is small.

"Employers generally reported that a relatively high type of employee has been elected to membership in Works Councils. Further evidence of this is found in the decided preference shown for men long in the service of the establishment as Council members. Instances of radicalism or unreasonableness on the part of employee members of Works Councils are conspicuously few.

"Against the benefits thus reported from the introduction of Works Councils must be placed certain other considerations. Obviously the Works Council adds to the cumbersomeness of shop management. In place of the prompt, direct decision of the foreman, or other plant executive, committee hearings, protracted negotiation, and long discussion may be required to bring questions to a final conclusion. By reason of its very nature the Works Council does not permit of the same expeditious settlement of matters that is possible where the authority of the plant executives is arbitrary and final. This apparent drawback of the Works Council may prove an advantage if it serves to prevent the abuses frequently accompanying the exercise of arbitrary power. Furthermore, by providing a regular channel for the advance of determination of employment questions, the Works Council may be instrumental in bringing about a settlement of disputed matters before they develop into strike demands.

Members Feel Must be Active

"The introduction of the Works Council also generally results, at least for a time, in an increase in the number of matters which come up for consideration. Members of the Councils, feeling that their position requires them to be active, encourage employees to bring up matters for adjustment, and the employees themselves, stimulated by the ease with which complaints can be registered, are likely to ask for consideration of trivial claims. Experience seems to indicate, however, that this disposition tends to decrease as the Works Councils become more firmly established.

Economy Fuses

ALL CAPACITIES

Approved by Underwriters' Laboratories

December 9, 1919. Economy Renewable Fuses in ALL CAPACITIES, from 0 to 600 Amperes in both 250 and 600 Volts were approved by the UNDERWRITERS' LABORATORIES, established and maintained by the NATIONAL BOARD OF FIRE UNDERWRITERS and now bear the label "Und. Lab. Inspected." Economy "Drop Out" Renewal Links also bear the inspection symbol.

In your future purchases of enclosed fuses be sure to insist that both the fuses and the renewal links bear the inspection symbol.

"Experience has demonstrated that the self-same form of Works Council may succeed in one establishment and in another fail of its purpose. The explanation often is to be found in differences in the character of the management, of the shop environment, or of the workers of the two establishments.

"A feeling of mutual confidence between employer and employees in an establishment has been found essential to the successful introduction of plans of employee representation. So long as suspicion exists, it will tend to prevent the satisfactory operation of a Works Council.

"The personality of the manager of the plant or of the executive most directly concerned in the operation of the plan may make all the difference between success and failure. He must be in thorough accord with the idea of the Works Council; he must possess the confidence of his employees and must be sympathetic and tactful in dealing with them. Where the executive is lacking in these qualities, the formation of a Works Council may have the effect of actually accentuating friction and labor difficulties.

"On the other hand, a Works Council may be inadvisable in an establishment in which the employer, through personal contact and a policy of fair dealing, successfully maintains amicable relations with his employees. The employees themselves, being able satisfactorily to adjust claims and secure redress of grievances through personal negotiation with the employer, may see no advantage in a Works Council. This is especially likely to be the case in the small establishment of which the owner is the active head, and particularly if it be located in a small community. It is to be noted, however, that some Works Councils are in active existence in establishments which have relatively few employees and in plants located in small communities.

Character of Workers a Factor

"Again, the introduction of a comprehensive plan of employee representation may be inadvisable in an establishment where the workers are relatively unintelligent and unaccustomed to organization. To place suddenly in the hands of workers unused to organized action a more or less elaborate piece of governmental machinery may have either of two consequences: (1) The employees, failing to comprehend its meaning and workings, may take little active interest in it, in which case it will lapse; or (2) the employees, suddenly feeling their power, and being untrained to its intelligent exercise, may abuse it. Either of these results is particularly probable in an establishment where a large proportion of the workers are unskilled or are non-English speaking.

"Where conditions such as these obtain, a programme of intelligently directed industrial betterment work, designed to raise the intelligence of the employees, to better their standards of living, to give them a knowledge of English, to acquaint them with American institutions and to train them in methods of organization, may be preferable, for the time being at least, to the introduction of a Works Council.

May Leave Unfavorable Consequences

"An attempt to replace active union shop committees by a Works Council is almost certain to have unfavorable consequences, unless the workers acquiesce in the change. In an establishment which is highly unionized, the union shop committees represent a large share of the employees. In a closed union shop they obviously represent all of the employees. In those cases where, under a written agreement between the employer and the union, the union committees are recognized as the regular means of negotiation, they virtually function as Works Councils. So long as the employees prefer to act through such committees, a Works Council set up to supersede them might not only fail to receive their support but would probably encounter their antagonism.

"The success of a Works Council also depends in large measure upon the manner in which it is introduced. Such a body set up abruptly without any previous preparation of the ground, or without any participation by the employees in its development, often encounters obstacles.

"There is always danger that a Works Council initiated by the employer may be regarded with suspicion. It has been found that such suspicion may be overcome to a great

degree by giving to the employees as large a share as practicable in the development of the project. The best results generally have been obtained where representatives of the employees have been called into consultation by the management in the formulation of the plan, or where the employees have been permitted at least to vote upon the question of its introduction.

"The spirit in which the employer proposes a Works Council has much to do with the manner in which it is received. Where it is set up by the employer condescendingly, as a sort of gratuity, it is likely not to meet with a favorable reception by the workers. On the other hand, where the Works Council is put before the workers as an arrangement designed for the mutual benefit of employer and employees, it is more likely to meet with favor.

"The importance of a thorough knowledge of the form functions and nature of the Works Council on the part o both the plant executives and the employees before it is set in operation has been demonstrated. Since the Works Council is a more or less complicated piece of machinery, it requires considerable explanation if it is to be fully understood and utilized. Moreover, the adoption of such a plan generally requires a modification of ideas and practices that have long prevailed in the establishment. It calls for a considerable readjustment in attitude, especially on the part of the foremen and other minor plant executives.

"The preliminary education and readjustment is sometimes accomplished by means of conferences and meetings with foremen and with employees, at which the features of the plan are explained and discussed. It may be facilitated also by the presentation of the plan itself in simple language and in attractive form.

Epitome of the Foregoing

"In evaluating the experience assembled in this report, certain conditions must be taken into account. The first of these is the comparatively brief period during which Works Councils have been in operation.

"Experience with Works Councils must further be judged in the light of their origin and of the unusual industrial conditions which prevailed during the war period, whe most of them were created.

"Other collateral influences surrounding their formatio should also be considered. Some of the plans were entere upon hastily without a proper understanding of their sig nificance. Others were instituted in a manner which a the very outset prejudiced their chance of success. Stil others were organized with a careless disregard of details Again, the formation of some of the Councils was accom panied by a simultaneous change in management, the adop tion of a bonus system, or some other radical change i operating conditions which may in large measure be re sponsible for their seeming success or failure.

"In view of the conflict of experience, it is as yet to early to measure definitely the permanent value of th Works Councils movement. Approximately three-fourths o the employers having Works Councils from whom an ex pression of opinion was secured declared themselves in favo of this form of industrial organization or that their exper ence had been favorable. Although further experience ma lead to a revision of judgment in some cases, the result thus far obtained with Works Councils indicate that the are worthy of unprejudiced consideration on the part o American industry."

New Steel Manager

J. D. Jones Succeeds Late David Kyle at Algoma Steel Corporation's Plant

Mr. J. D. Jones has been appointed general manager o the Algoma Steel Corporation in succession to the lat Captain David Kyle. Mr. Jones has been, since last Sep tember, general superintendent of the works. He was o the staff of the Algoma Steel Corporation from 1912-191 but left in the latter year to take the position of chie engineer of the Gary plant of the United States Steel Co poration, returning to the Soo last fall.

The Canadian Appraisal Company

Limited

DURING the past fourteen years we have appraised some four thousand properties, scattered all over the Dominion of Canada.

These include the leading and most representative plants of every manufacturing industry of the Dominion.

The valuations which we make comprise land, buildings, plant, machinery and equipment, tools, water powers, etc.; in fact, all the permanent working plant of any manufacturing or other industry.

Our certificate, therefore, of values, in conjunction with the certificate of profits and liquid assets prepared by the accountant, furnishes a complete verification of a company's assets.

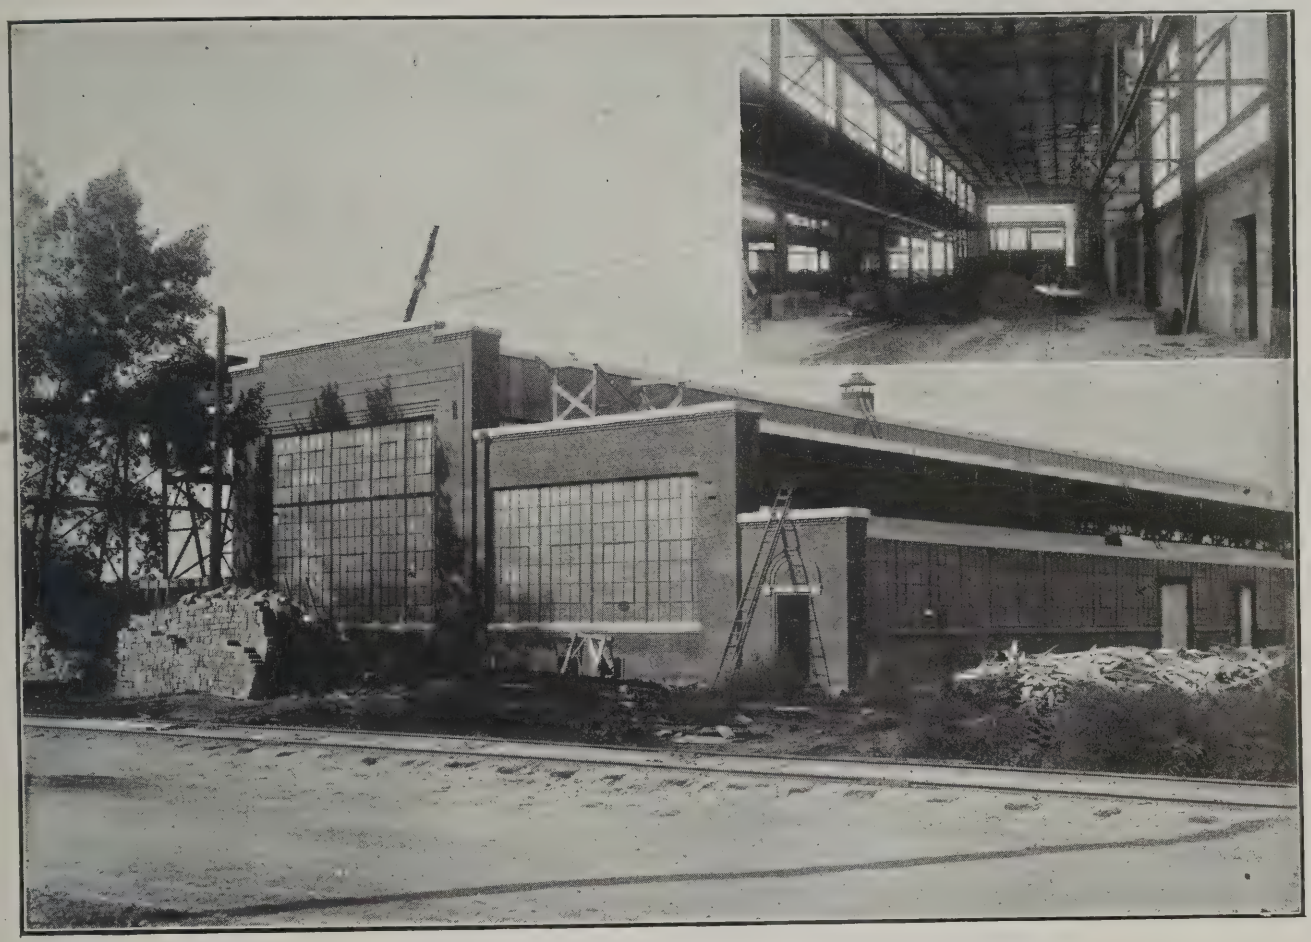
Blue-Sky Law—Is It Desirable Legislation?

(*Continued from page 74*).

legislation of this character is more effective against the legitimate dealer than it is against the crook; and, second that every attempt to assist legitimate business by striking out restrictions, tends to make the law more ineffective against the crook; and conversely, that every added restriction against the crook, applies with double and treble force against the legitimate dealer."

That is the finding of this Commission which has disapproved entirely of the introduction of Blue-Sky Law in the State of New York.

Likes the British System



I have referred to the British system, and it is one which I should like to refer to a little more fully. It was first adopted in England in 1900 as I stated, after an investigation which was carried on over a number of years. You remember Ernest Terraholley and Whittaker Wright and several other British Blue Sky merchants had a very effective campaign in the early nineties and a Commission was appointed by the British Government to investigate the matter. That Commission was appointed I think in 1895. They proposed legislation on the subject which was investigated by a Parliamentary Committee and subsequently by a Committee of the House of Lords and it was not enacted until the year 1900.

Now there is one quotation from their report which I think is quite pertinent to this subject: "Your Committee may observe that they have dismissed from their consideration every suggestion for a public enquiry by the registrar or other official authority, into the soundness, good faith, and prospects of the undertaking at this or any other stage of a company's formation. To make any such investigation into the position of every new company complete or effectual would demand a very numerous staff of trained officers, and lead to great delay and expense, while an incomplete or perfunctory investigation would be worse than none. It would be an attempt to throw what ought to be the responsibility of the individual on the shoulders of the State, and would give a fictitious and unreal sense of "security to the investor and might also lead to grave abuses."

Go to England for Precedent

Now I would suggest that we should go to England where financial operations are carried on to a greater extent, where they have perhaps the same difficulties to encounter as we have here in Ontario, rather than to one of the Western States for our precedent.

I want to refer a little more particularly to this investigation which has been conducted in the State of New York. They considered three propositions. First of all dealing with each case of fraud as it appeared by means of an investigation board which would be authorized and kept in existence for that purpose. That was approved of as a matter of fact by this Commission. As a matter of fact these fraudulent vendors of securities usually go to the poor servant girl or to some one who cannot protect himself against the fraud. He has not either the time or money or opportunity to prosecute, as prosecution should take place for frauds of this nature, and it is suggested and approved of that there should be officials who would investigate and carry to prosecution and conviction every case of fraud of that kind that could be discovered.

Canadian Mathews Gravity Carrier Co., Ltd.
PORT HOPE, ONT.

They also considered the Blue-Sky Law situation in Kansas, not only for the investigation of securities, but also the licensing of vendors, and they disapproved of all forms of Blue-Sky Legislation. There was a minority report however and it disapproves of the Blue-Sky Law, but it approved of the British method, that is the method which was adopted in the legislation of the year 1900. Now, that legislation is nothing more than the prospectus clauses which you have in the Ontario Companies Act which was introduced in 1907, and in the Dominion Act in 1917, and which is in fact the legislation of nearly all the provinces of the Dominion.

Report on British System

In the report upon that question their opinions of these clauses are worthy of consideration: "The British Companies Act has been a law in England for many years. It has worked satisfactorily and is generally commended by the British public. London has been the financial centre of the world for many years. The amount of flotations and the volume of securities offered to the public in London is far greater than the amount issued in New York, and we may conservatively conclude that a law which has worked well in England will work equally well here. The underlying principle of that Act is publicity. The promoters and vendors of securities are required to give the public full information and are made responsible for the truthfulness of such information in both the civil and criminal courts.

The majority report even against the British method, but apparently the minority have their convictions upon the subject when they approve of the British legislation.

Now there is one phase of the Kansas legislation which may be worthy of consideration. I know I spent some time out in Kansas City and Topeka and I was astonished to find that business men, bankers and everyone I ran across, lawyers too, considered that it was an effective law and that it was working out well. Now, it bothered me a great deal after seeing what they had done in the Banking Commissioner's Office to see how the public could come to such a conclusion.

Kansas Law Widely Advertised

The Kansas Blue-Sky Law was advertised perhaps more than any legislation that ever took place. For months and for years, for at least a couple of years after it was advertised nearly every paper you would pick up and every magazine you would turn to had some commendation of the Blue-Sky Law which was in fact intended to and was already clarifying the whole business community, doing away with frauds of all kinds. That was so widely spread throughout the United States that no doubt a great many swindlers and crooks left Kansas alone. That might be one reason why the people of Kansas came to that conclusion; they were not bothered by these Blue-Sky merchants, and therefore they came to the conclusion that it was because of the law that had been passed that conditions improved.

Now that may be, but I came to the conclusion that the real effective clause of the bill was one which requires all vendors of securities to be licensed; that a man before selling stocks of any concern or company should obtain a license from some official. That may or may not be a good thing, but we have a precedent for it here in Ontario. I remember years ago there were very serious frauds committed by selling United States Insurance here in Ontario. A lot of policies were written where there were no companies. There were frauds of all kinds and the correction of that was that everyone who sold insurance of a company outside of Canada was required to be licensed. I think that I am correct in making

that statement, and since then we have had no frauds of that kind. It absolutely cured the situation.

It might be that a great deal of good would be accomplished by such a provision here in Ontario so that a bond broker or anyone who is selling shares would require a license from a department of the Government, he would require to give a certificate of character, and if he was afterwards found to be selling securities which he knew to be fraudulent, a cancellation of his certificate would put him out of business entirely. That would undoubtedly prevent that business of selling fictitious securities. It might not accomplish, as no law will accomplish, everything that you would like to have it, but it might go a long way towards curing the difficulties which are undoubtedly at present in this country.

Values on Share Certificates

There is another method which has been introduced, not for that particular purpose, but which has perhaps the same result. It is the issue of share certificates without nominal or par value. Undoubtedly there is a great inducement for a person when he is offered a share and it has on the face of it a dollar, to be able to buy that for ten cents; he thinks he is getting ninety cents for nothing. As a matter of fact no share certificate upon which any dollar mark is placed is a true statement. It would be a miracle to find a company whose shares were worth $100 each. They might be worth $300 or they might be worth ten cents, but to have them actually worth $100 each would be a very strange condition of affairs. As a matter of fact the dollar mark on a share certificate is a misrepresentation. You can take a case where every cent of the subscribers' money goes into a company that is floated or promoted, and the minute the money is put in bricks and mortar and machinery there is a depreciation in value and the $100 is not worth $100. So that it is a mistake to have the dollar mark on a share certificate. This particularly applies to oil companies and to mining companies where the shares are sold under discount. If these shares were without the dollar mark, that is to say each share represented a proportional part of the capital of the assets of the company, there would be no likelihood of such misrepresentation. A man then would not be buying a dollar, he would be buying a 1/100,000 part of the assets of the mining or other company. That would be but for some fraudulent representation there made. As a matter of fact this kind of security has been quoted on the New York Exchange since about 1912; it was first introduced in New York State in that year, and it spread practically throughout the United States. It is the favorite form of security. As a matter of fact it has been introduced in the Province of New Brunswick and it was introduced in the Dominion Companies Act by the amendment of 1917. It is very popular at present with promoters of companies. Whether it is serving their own purpose or serving the purpose for which it was originally intended, that is, to prevent stock watering, I don't know, but at any rate it is a very favorable kind of security at the present time.

Mr. Mulvey also dealt briefly with the vexed question of Dominion and Provincial incorporation, and suggested that the difficulty might possibly be solved were the Dominion to pay over to the provinces interested the fees which were obtained by the incorporation of companies having head offices in those provinces.

In a general discussion which followed, Messrs. E. G. Long and Alfred Bicknell, well-known Toronto lawyers, participated, while a vote of thanks was tendered to Mr. Mulvey by Messrs. S. R. Parsons and W. H. Shapley.

The Essentials Of Good Selling

Buying, displaying and selling for profit alone, never was, never is, and probably never will be good business. Satisfaction that only lives for a short period and is then engulfed in a feeling of defeat, dismay and dissatisfaction, never did and never will add the stable solid purchaser to your list of steady and reliable customers.

Successful dealers, in large or small communities, who have covered every phase of selling experience, have bought and continue to buy their merchandise from firms with character. They display these products in a dignified, attractive manner and sell them rapidly on their merits. Allied with worthy goods, their business is stabilized, sales create sales, and profits add to profits.

The name of McCLARY'S is known Dominion-wide. The house of McClary's is respected in every dealer's store. The goods of McClary's are used, trusted and honored in a vast number of Canadian homes. The essentials of good selling are to buy, display and sell

Strike of Union Moulders

Has Now been Running Since Last May—Point of Contention has been Hours of Labor—Moulders Insist on 44-hour Week, Instead of 48 hours as Specified by Peace Treaty

A STATEMENT has been issued by the Canadian Founders' Association dealing with the strike of union moulders in Toronto and Hamilton. As the situation is one of general interest to manufacturers, this statment is herewith published in full:

"It is perhaps not generally realized that the union moulders of Toronto and Hamilton who went on strike with the other metal trades on the 1st of May, 1919, are still carrying on, or trying to carry on, their strike. The leaders of the Moulders' Union refused to allow their men to return to work on the 1st of August on the conditions offered by the employers, which were accepted by all the other trades. The point of contention was 'hours of labor'; they would not work 48 hours per week, according to the terms of the Peace Treaty, but insisted on 44 hours, though they were offered more money per week than their original demand called for.

No Concessions to Offer

"It is very difficult to understand why the moulders of these two cities should take unto themselves so much responsibility in the struggle for shorter hours, in view of the discussions at Industrial Conferences during the year, and especially the International Labor Conference at Washington, which went on record for a 48-hour week, whether worked in six full days or 5½ days. The need of greater production, the holding down of costs, and the fact that many employers of moulders also employ other trades who are working 48 hours, seems to have made absolutely no impression on these men. One leader of the Moulders' Union, who called upon an employer to try and get the strike settled on his terms, was asked, 'And what have you to give on your side, since the employers have made so many concessions?' His reply was, 'We have absolutely nothing to offer by way of concession.'

No Really Great Benefit

"If it could be shown that there was some really great and immediate benefit to moulders in the attainment of 44 instead of 48 hours per week, an unprejudiced observer might find some cause to admire men who could suffer so much loss, inconvenience and prestige, in order to gain their end; but, when one tries to get at the bottom of this strike, it is hard to see how four hours a week less work, under all the circumstances, can bring even a measure of real compensation. Moulders are not an unhealthy class of workers, and these very men worked 10 hours a day not so very long ago. Many moulders in Canada and the United States still work 10 hours a day, and the great majority work more than 48 hours per week. Surely it cannot be a health interest that sticks in the minds of these men. If it is, surely some of them have been inconsistent, because several shops in Toronto, which were unable to withstand the strike and gave in to the Union, immediately started in to work overtime, and the returned moulders and coremakers seemed to find it quite acceptable. Moreover, many striking moulders left and went to work in shops in outside places, where hours were 50, 54, and even 60 per week, and the pay much less than they were offered here. And

Canadian Blower & Forge Co.

KITCHENER, ONT.

men who came in from outside places, because conditions were better than where they came from, were put on strike pay to keep them from working. It is true that this strike has caused great loss to employers, because business in large measure went elsewhere for many months, and some plants will not get their regular business back again for a long time, even if the strike comes to an end. It is also true that the moulders have brought great loss upon themselves; they have injured their own trade beyond recovery in years. They have also injured all other metal trades which were dependent on castings for their raw material. A great deal of unemployment has been directly due to lack of castings to go on with, and men in these trades were forced to go elsewhere to obtain work. Surely these men overestimated the benefits of a 44-hour week when they place against them all these losses that the strike involved. It would look as though they were badly advised, and employers have felt that many of their old men would gladly have returned to work, except that it was difficult until permitted by headquarters.

Forcing the Issue to Conclusion

"One can understand how general headquarters might have an especial object in forcing an issue in a particular city in a case of this kind, and, assuming that to be so in this case, it would seem as though its members in these two cities were really being sacrificed to accomplish that object. Even then it is hard to find a sufficient compensation for the injury to the trade generally and to the local union in particular. Practically all the foundries in both Hamilton and Toronto are now running with non-union and ex-union men, and employers not only of moulders, but of all metal trades, have found, from their experiences in conferences and otherwise, definite lines of difference with the ideas of union leaders. This strike, because of its unreasonableness, has made it much more difficult for the unions of these two cities and the employers to find any common ground on which to work. The open shop is more definitely established as a principle than it has been before. The principle of greater production for the common good must stand, and the principle of compensation according to merit and accomplishment must stand, because they are in the best interest of all the people. Employers must be fair; they must treat their men so that they gain their confidence and co-operation. Unions would have nothing to fear, and much to gain, by standing up to all the responsibility that may come to them; they, too, must be fair if they are ever to obtain the recognition they so much desire. Fairness and integrity are hard to beat, and one might readily predict that that side to a controversy which sticks to fair methods, no matter what the other side may do, is bound to win in the end."

Built Eighty-eight Ships

Canadian Ship Yards Completed this Number for Imperial Munitions Board

It has now been announced that Canadian shipyards built 88 ships, having a total of 349,163 deadweight tons, under the Imperial Government's shipbuilding programme. Of these, 46 vessels, of 142,600 tons deadweight, were wooden, and 42, of 206,563 tons deadweight, were steel. This completes the programme, which was carried out through the Imperial Munitions Board.

Pulp and Paper Industry

Annual Meeting of Association, held in Montreal, when Valuable Reports were Presented by the Various Sections—Progress of the Industry Subject of Favorable Comment

THE seventh annual meeting of the Canadian Pulp & Paper Association was held in Montreal on January 30, when interesting reports were presented by the various sections into which the Association is divided.

In his presidential address, J. A. Bothwell, Brompton Pulp & Paper Co., gave a careful review of the year's work. It had been, he said, one of the most critical years in the history of the industry. Price regulation still continued, and that in spite of the fact that the industry was contributing

George Chahoon, Jr.
President, Laurentide Co., Limited
Elected President 1920-21, Canadian Pulp and Paper Association

upwards of $333,000 a day for every working day in the year to Canada's foreign trade, and helping to that extent to overcome the adverse trade balance with the United States.

"We are to-day permitted to do business abroad only on the condition that we submit to restrictions upon our right to do business at home. It is not surprising that some manufacturers regard the situation as intolerable, and have undertaken, in a perfectly legal way, to challenge the Government's position in respect to it. We now have the assurance of the Government that paper control will be terminated in June next and, while we are looking forward with confidence to the fulfilment of that assurance, we do not for a moment concede the justice or the right of the Government's treatment of our industry during the past three years."

In the book and writing section, success was achieved in preventing the reopening of the investigation into the price of book paper, this being shown to be totally unneces-

sary. Good work was done by means of an advertising campaign, advocating the exclusive use of made-in-Canada paper in Canada.

Mr. Bothwell also referred to the visit to England of Mr. A. L. Dawe, the secretary, with a view to promoting interest in Canadian pulp and paper products among British importers; the adoption of an Association trade mark; the engagement of a traffic expert; the removal of the Association office to larger and more convenient premises.

The report of the Newsprint Section was presented by its chairman, Geo. M. McKee, Donnacona Paper Co.; the Chemical Pulp Section, by Angus McLean, Bathurst Lumber Co.; the Mechanical Pulp Section, by D. A. Clarke, Gulf Pulp & Paper Co.; the Book and Writing Section, by S. J. B. Rolland, Rolland Paper Co.; the Board Section, by J. F. Taylor; the Technical Section, by J. Stadler, Belgo-Canadian Pulp & Paper Co.; the Woodlands Section, by Robert P. Kernan, and the Coated Paper Section, by George W. Pauline, Ritchie & Ramsay, Limited.

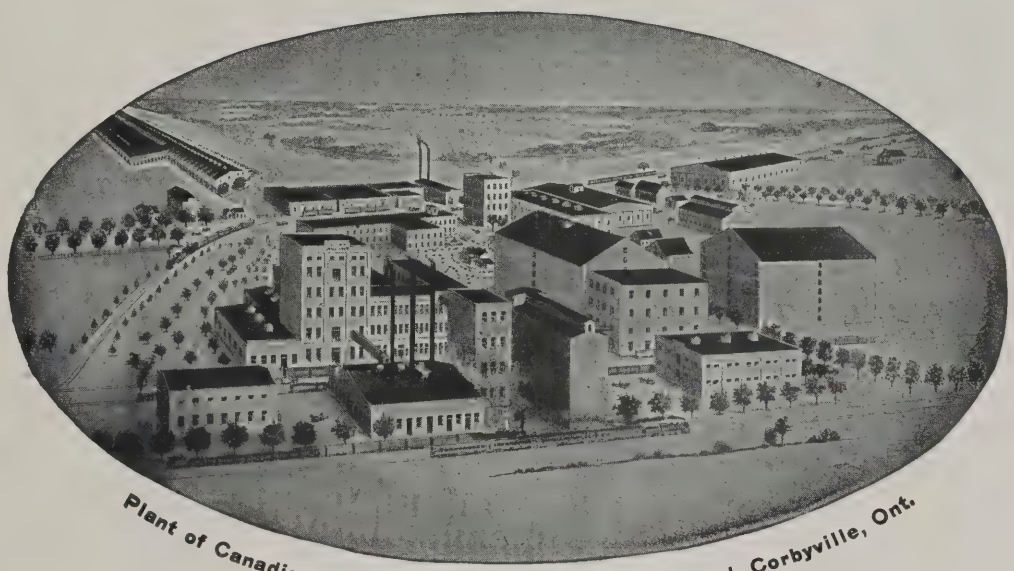
George Chahoon, Jr., Laurentide Co., was elected president; Howard Wilson, J. C. Wilson & Co., vice-president, and A. L. Dawe, secretary-treasurer.

At the annual banquet, held at the Ritz-Carlton in the evening, the principal speakers were Sir Lomer Gouin, Geo. H. Montgomery, K.C., and Henry A. Wise, New York, representing the pulp and paper industry in the United States.

Plate Mill Opened

Celebration takes place when first plates are rolled by new Sydney Industry

Scores of invited guests, including Government and city officials, attended the ceremonies at the opening of the new ship plate mill of the Dominion Steel Corporation at Sydney on February 19. The sounding of a whistle was the signal for the beginning of the demonstration. Sharp at 2 p.m., Alex. Johnston, Deputy Minister of Marine, turned the switch that set the machinery in motion, and the first ship plate to be made in Canada was produced. Within an hour and a half sixteen plates had been cut and fashioned, and regular operations had begun.



To the press, Mr. Johnston said, "The new mill started off without a hitch, and the first plates rolled are of an excellent quality, measuring up to the highest requirements of Lloyds. In fact, they are ready to go on the market right away. The 19th of February, 1920, marks a day that will be historic not only in the life of the Dominion Steel Co., but also in the shipbuilding industry of Canada and the world."

New Guelph Industry

Moncrief Furnace & Mfg. Co., Limited, Is Subsidiary of Henry-Miller Foundry Co., Cleveland

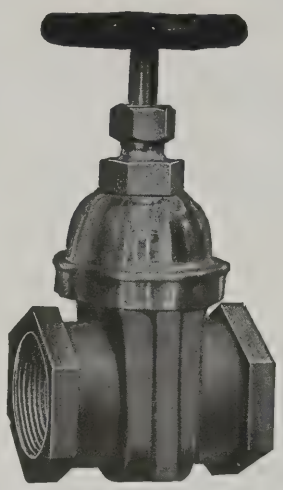
The Moncrief Furnace & Mfg. Co., Limited, who are an offshoot of the Henry-Miller Foundry Co., manufacturers of heating appliances, Cleveland, Ohio, are locating in Guelph. They have acquired the former Sherer-Gillett factory and seven acres of land. At present they are occupying the existing plant and will start operations early in the spring. It is their intention to put up another building the same size as the present one, and a little later in the summer will build a new foundry. They are now employing about ten men, who are engaged in installing machinery, and they expect in a short time to employ one hundred men. They will manufacture a full line of Moncrief hot-air furnaces, both pipe and pipeless. Mr. W. J. Shibley, late of Batavia, N.Y., is manager and treasurer.

ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.



We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.

Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

Lumber Manufacturers

Annual Meeting of Organization, held this year in Quebec, with good Attendance—Several Noteworthy Resolutions are Passed on Various Matters of Interest to the Industry

WITH the largest attendance of members in its history, the Canadian Lumbermen's Association held a very successful convention in Quebec on February 4 and 5. The reports presented were of an encouraging nature. Membership had increased from 128 to 146, and finances were in a healthy state.

In his presidential address, W. Gerard Power, St. Pacome, Que., referred to the lessened production of lumber, which he attributed to a variety of causes. This shortage precluded any possibility of a drop in prices. He spoke favorably of consolidation in order to secure higher efficiency, and urged the removal of the excess profits tax as being a hindrance to progress. On the question of labor, Mr. Power took a strong stand in opposition to the Bolshevistic tendencies of the day. The exchange situation demanded action to prevent further depreciation in the value of the Canadian dollar.

The Executive Committee's report dealt with the work of the National Industrial Conference at Ottawa, and recommended that in the interests of Canadian labor and Canadian employers, effective steps should be taken to drive out the I.W.W. and O.B.U. organizations. It referred to the gathering of trade statistics, and urged members to see that requests for information were complied with. Reference was also made to methods of employment; to a court definition of the term f.o.b.; to exhibitions during the year; to policy *re* price quotations and to the desirability of abolishing the three-cent postal rate.

Business Profits Tax

Several resolutions were adopted. On the subject of the Business Profits Tax, it was resolved that:

"Whereas the Business Profits Tax of 1916 has expired by the effluxion of time, it is the judgment of the Canadian Lumbermen's Association, in convention assembled, that the tax be not re-enacted, as it has proved inequitable in principle and operation to individual initiative and enterprise; that this Association, however, approves of the continuance and extension of the income tax, in conformity to the necessities of the government to meet its incurred obligations arising out of the war; that this Association calls upon its Executive to appoint a strong committee to deal with the matter as its consideration shall arise in parliament and in council."

Preservation of the Forests

"This convention of the Canadian Lumbermen's Association, realizing as it does the great importance to Canada of the preservation and reproduction of the forest resources of Canada, hereby endorses the work of the Commission of Conservation in conducting a survey of the forest resources of the country, and the investigation of forest reproduction, and that the Dominion Government be urged to provide the necessary facilities for the early completion of these investigations."

Increasing Export Trade of Canada

"Having in view the great disparity between the imports and exports of this country, and the resulting effects upon the value of our currency in American exchange, be

it resolved that the Canadian Lumbermen's Association desires to go on record as being strongly in favor of doing everything to increase the exports of all classes of materials, whether manufactured or the natural products of the forest, farm, mines or fisheries, and that a copy of this resolution be sent to the Dominion Government, and that the incoming Executive be requested to take such steps in the premises as may be necessary for the carrying out of the spirit of the resolution."

Providing Through Commodity Rates

"Whereas the situation frequently arises that sales of lumber are made for delivery from a given point on one line of railway to a destination on some other line, between which points the railway companies have no through commodity rates in effect, be it therefore resolved, that the Canadian Lumbermen's Association, in annual convention assembled, authorizes the incoming Committee on Transportation to take such steps as may be necessary to obtain the filing of tariffs by the railways providing through commodity rates between points on two or more railways, said rates to conform to rates for similar mileage between other points, which may be in effect already.'

Officers Elected

Mr. Dan. McLachlin (McLachlin Bros., Arnprior), was elected president; W. C. Laidlaw, Toronto, 1st vice-president, and Angus McLean, Bathurst, N.B., 2nd vice-president. A. E. Clark, Toronto, was elected chairman of the Transportation Committee; D. McLachlin, Arnprior, chairman of the Legislation Committee. The Executive Committee will be appointed by the President.

Directors for three years: James G. Cane, Toronto (re-elected); W. J. Bell, Sudbury, Ont. (re-elected); Duncan McLaren, Toronto (re-elected); Arthur H. Campbell, Montreal; Sir William Price, Quebec; Rufus E. Dickie, Stewiacke, N.S.; W. B. Snowball, Chatham, N.B. These were the seven directors elected at the convention in Quebec to serve for three years.

Those who are now on the Board to serve two years are: W. E. Bigwood, Toronto; Gordon C. Edwards, Ottawa; A. E. Clark, Toronto; Walter M. Ross, Ottawa; W. Gerard Power, St. Pacome, Que.; Alex. MacLaurin, Montreal; Angus McLean, Bathurst, N.B.

Those who will serve one year more are: E. R. Bremner, Ottawa; Dan McLachlin, Arnprior; W. C. Laidlaw, Toronto; George W. Grier, Montreal; D. Champoux, Restigouche, Que.; J. Fraser Gregory, St. John, N.B.; Sir D. C. Cameron, K.C.M.G., Vancouver.

To Operate This Month

Stratford Plant of Canadian Edison Appliance Co., Limited Will Be Ready Soon

It is anticipated that the plant at Stratford of the new Canadian Edison Appliance Co., Limited, will start operations during the latter part of the month. By the end of the year they expect to employ 250 hands, and hope by the following year to increase the number to 350. The concern is located in the building formerly occupied by the Mooney Biscuit Co. They will occupy at first the basement and first two floors of the factory, and expect by the latter part of 1921 to require the entire building.

The Hamilton Cotton Company, Limited, Hamilton, are adding a further story to one of the buildings of their plant, which will give 16,000 square feet of additional space, to be devoted to the installation of more webbing looms.

Press Condemns Business Profits Tax

Continued from Page 64

commendation or a joint criticism. An income tax is an excellent thing from any point of view. A profits tax is a rotten thing from any point of view, except war necessity. President Wilson would probably realize the difference more if he had been a business man himself.

Every business or industry, to be progressive, or even safe, must make enough profit to not merely pay a fair annual dividend, but to provide for two things in addition—namely, first, a reserve against possible bad years; and, secondly, a fund for expansion—for new branches, or new equipment, or new machinery, or larger stock, or larger staff. Now, any tax upon profits tends to destroy this necessary business surplus, and so tends to injure and depress business and industry, to block progress and lessen employment.

Still, if there were no other way for the Government to get at some of the money made in business profits, a profits tax might be justifiable. But no need exists to get at such money in such a way. It can be got at in another way, a sensible way, a just way, and an easier way—namely, by income tax.

A profits tax is a tax on business surplus. An income tax is a tax on private wealth. But all business surplus must go to one of two things sooner or later—namely, either to private wealth or to business expansion. If it goes to business expansion, it should not be taxed; if it goes to private wealth, income tax can reach it.

Consider a moment. Let a business or industry show a large profit any year, or every year. What must become of that profit? Unless used in expanding the business, nothing can be done with it except divide it among the owners or shareholders. What else could you do with it? It can't go on accumulating unused. What good would it be to the proprietors in that case? Beyond what a business needs or uses, all business profit must sooner or later be divided up among the owners of the business. And whenever so divided, it becomes private income, and becomes subject to income tax.

All, therefore, that can be done by taxation to reach business profits can be done by income tax, and ought to be done by only income tax, because when you take the money away from a private individual by income tax you do not really hurt anybody or anything; whereas when you take the money away from the business of the country before it reaches any private individual, you are almost certain to be doing the whole community an injury. We have used the phrase, "you do not really hurt anybody or anything" by income tax, because the recognized principle of income taxation is to allow small incomes to be either exempt altogether from tax, or be very lightly taxed; and as to big incomes, they can stand a heavy rate of tax, without any hardship to the payers, except in their minds. In *The Journal's* estimation, taxation of large incomes can hardly be too great, and ought to be lavishly imposed by the public law, but taxation of business profits should not be tolerated in the slightest. This is an important question for Canada, because during the war a profits tax was imposed which has done harm to business and industry, and which should be stopped; while our Canadian income tax is not as heavy as it ought to be. The profits tax expires on December 31st, unless renewed by Parliament. It should not be renewed—neither in whole nor in part; but the income tax should be increased to make up any seeming loss.

A TAX ON SALES

(Toronto Mail & Empire, Feb. 10, 1920)

If the Business Profits Tax is dropped, it will not be because the revenue yielded by it is no longer needed, but because it is less defensible as a peace measure than as a war measure of finance. In war time we had to have the money, and it was right to turn to account temporary conditions that practically invited taxation. Large profits were

being made in trades and industries to which the war brought vastly enlarged business. Persons and corporations engaged in those trades and industries were justly required to give the Government a share of their earnings above a margin covering charges on expense and renewal account, and a liberal rate of profit. As it was impossible to draw a line between businesses deriving benefit from the war and other businesses, the rule was adopted that all non-agricultural businesses, on a certain scale of operation, should share with the Government all that came under the definition of excess profits.

War time is past, and reconstruction time has come. Government orders will not figure in industrial and commercial business as they did in war days. Hence, the fairness of the requirement to divide profits, as such, with the Government will seem more questionable. Moreover, in a time of reconstruction, it will be an object of public policy to encourage enterprise of an industrial and commercial character to expand and increase production. By giving the conductors of trade and industry a chance to add to capital, the Government will promote enlargement of manufacturing capacity and trading operations; will in this way enable the body of returned men and of worthy immigrants to become absorbed in wage-earning employment; will conduce to the wealth of the country; to the lowering of the cost of living, and to the balancing of our trade with the United States. And, of course, the fountains of revenue from the other sources of ways and means devised by the Government will be made more flowing, and the solution of the national problem of making ends meet will be facilitated.

In reconstruction time the Excess Profits Tax might prove a hindrance to such development. Further, it might be a waning source of revenue. The Business Profits Tax was a good milch cow in war time, but might prove disappointing in peace time. Prices cannot keep up in the face of the omens to be read in the almost daily quotations of the international exchanges. There is certain to be a steady contraction of currencies towards the normal gold basis. Prices will come down and profits will be made to look less ample. The time for depending on the excess profits for satisfactory results to the national revenue and to the industry of the country is fast passing, if it is not already past.

But instead of less revenue, the Government has need of more revenue. Some mode of taxation must be devised to take the place of the Business Profits Tax, a mode that will give a still larger return, without handicapping commercial enterprise. A small tax on turnover would satisfy the conditions. A tax of one-half per cent. on the total value of the sales made in every business would yield a very much larger revenue than the $32,000,000 obtained from the Business Profits Tax in the last fiscal year, and would be practically unfelt. While business men could recoup themselves for this tax out of prices, it would not have a tendency to inflate prices by swelling profits. It is an objection to the Business Profits Tax that it is regarded by some people as a license to profiteering. At a time when most people will find it necessary to carry on business at moderate prices, a turnover tax would seem to be the ideal arrangement. Even a higher rate than we have suggested would not be burdensome to anybody, because of its wide final distribution over all the people, and it would not retard business at any stage or discourage expansion or new ventures. Not less than $50,000,000 might easily be raised from a small tax on sales, and even a larger amount might be obtained without being missed.

FOR AN EQUITABLE TAX

(Chicago Tribune, Jan. 27, 1920)

Excess profits taxes provide money quickly. But it is doubtful if the long continued policy of excess profits taxes is an economic advantage. It is one thing to take satisfaction out of an increased national bank account; quite another to batten that account at the expense of the healthy growth of industry when other means are accessible.

We are not so ingenious as to think that industry is to escape its obligations to the Government, but we are concerned about the proper methods of imposing those obligations. Industry—to employ a rough figure—is the cow that gives us our milk. Is it just to take the milk and also slice off choice porterhouses? And may we expect the animal to survive such exorbitant demands?

263 NOTRE DAME STREET WEST, MONTREAL

If an industry earns a profit, no matter how large, that profit must soon or late find its way into the hands of the individual, provided there is no obstacle placed in its way, the excess profits tax being such an obstacle. The individual is entitled to a fair return on his investment, whether that investment be labor or capital, and a fair opportunity to enjoy the rewards of his zeal. But the Government, which protects and makes possible these rewards, may impose an obligation on him. Thus the income tax.

If the Excess Profits Tax is interposed as we have indicated, the profit neither reaches the individual nor has the slightest incentive for being. The excess tax is a burden upon industry at the very point where, for the enrichment of the national treasury, we ought least to burden it and most encourage it. Industry ought to be encouraged to make greater profits, so the Government may have a greater field for revenue. But the Government should not attach the profits as such, but levy on personal incomes as such. In this wise industry is not discouraged from growth and prosperity, revenue flows just the same and with equitable distribution; the stream is made to yield at its mouth instead of at its source.

It seems obvious that an industry taxed directly in its profits speedily will lack ambition to earn beyond a fixed point—the point at which taxation begins. This means lost revenue. For why should a business, governed, as all human activities are governed, by natural impulses, develop energy toward production in which there is no profit? Lacking the incentive to earn, business adjusts its pace to the restrictions, and taxes fall off.

But industry and the individual are animated by somewhat different emotions. An individual might be content to see his personal business slacken if there were no object in earning above a fixed point. Yet if there were no restrictions, no fixed Excess Profits Tax, he would eagerly push his business for the sake of his personal income, for the reason that even though his income tax might be severe, still the more income tax he pays the more he would get for himself. It is evident that any person would rather pay income tax on a million than a thousand.

These taxes, then, income and excess, are chiefly engrossing in consideration of the new revenue bill. Excess tax is likely to mean less excess profits. More excess profit means more income and more revenue. Our revenues ought to be steadily flowing, copious and equitably exacted, always with the view of sustaining in the healthiest and most prosperous condition the processes that provide them.

The income tax takes its toll from industry, through the individual, just as surely as from industry direct; but it encourages the industry to yield always more.

WAR TAXES

(Ottawa Le Droit, Feb. 17, 1920)

Undoubtedly money is needed, but it is crying abuse to maintain exceptional duties voted only for the duration of the war; it helps to keep up the high cost of living.

The same can be said for the war profits tax. Without doubt the excessive profits realized during the war should in part revert to the public treasury, but a single levy should be made on them, they should not be reached by means of a certain percentage deposited periodically, for profiteers will take this opportunity to raise prices, and make up their losses at the expense of the public.

POLITICS AND TAXATION

(Montreal Star, Feb. 14, 1920)

While the most active criticism of the tariff and the most urgent demand for taxation reform comes from the farmers' party, it is worth noting that during the four fiscal years, 1915-19, the agricultural half of the Canadian population paid 29 per cent. of the total increase in taxes and the non-agricultural population more than 71 per cent. The war taxation levied upon the agricultural population was $16 per capita, and upon the non-agricultural population $46 per capita. Direct war taxation during the four years produced $83,768,110. Of this amount the non-agricultural population paid $83,379,099, while the agricultural population paid $389,011, or less than one-half of one per cent. These figures are not quoted in order to discredit the farmers of Canada, nor to create any impresion that the industrial communities were badly treated, but simply to show how the burden

of taxation is distributed and to establish the incontrovertible fact that no excessive burden has been imposed upon the agricultural population.

But it is almost impossible to impose direct taxes that will not become indirect in their incidence. The excess profits taxes have had consequences which no one foresaw. President Wilson has never been thought to have any unholy alliance with "the interests." Indeed, he has never been regarded with excessive favor by "American business." But he has said "there is a point at which in peace time high rates of income and profits taxes destroy energy, remove the incentive to new enterprises, encourage extravagant expenditures, and produce industrial stagnation, with consequent unemployment and other attendant evils." Mr. Glass, Secretary of the United States Treasury, declares that the excess profits tax, no higher in the United States than in Canada, "encourages wasteful expenditure, puts a premium on over-capitalization and a penalty on brains, energy and enterprise, discourages new ventures and confirms old ventures in their monopolies." He adds: "In many instances it acts as a consumption tax, is added to the cost of production upon which profits are figured in determining prices, and has been, and will so long as it is maintained upon the statute books, continue to be a material factor in the increased cost of living."

Mr. William B. Colver, of the United States Federal Trade Commission—which is denounced by President Nicholas Murray Butler, of Columbia University, for "unwarranted persecution of industrial enterprise"—has described the excess profits tax as "the corner-stone on which the structure of the high cost of living has been erected," because on everything sold "there are from one to fifty excess profits taxes." He continues "The excess profits tax is passed on and multiplied until about four or five dollars is taken out of your pocket, my pocket and the pocket of the man on the street for every dollar that finally gets to the public treasury. The tax is difficult and cumbersome to collect, and bears inequitably upon different concerns of the same size and profitableness. As a matter of fact, it is a bonus for inflated capitalization and a penalty on conservative capitalization. It should be repealed at the earliest possible moment, and its repeal, I am certain, will result in an almost immediate lowering of the whole unhealthy price structure, which is a burden alike upon every citizen, whether he be consumer, merchandiser, producer or taxpayer."

While consumption taxes are denounced in Canada there is an increasing general disposition in Europe to impose such taxes. In various countries of the Old World and in the United States a tax upon retail sales is advocated. Mr. Otto H. Kahn, a leading New York banker, advocates a tax of one per cent. on every single purchase above $2, which he estimates would produce in the United States from $2,000,000,000 to $4,000,000,000 annually. But the object of the moment is not to condemn excess profits taxes, nor to advocate specific changes in the Canadian system of taxation. It seems to be clear that we must have income taxes and corporation taxes, and that those best able to bear taxation must carry a heavy burden. It is, however, idle to suggest, even from the standpoint of revenue alone, that we can yet find substitutes for customs duties which must incidentally afford a considerable protection to Canadian industries. Indeed, if by some decree of Divine Providence, no man in Canada from this time could remember that we ever had a tariff controversy, we would proceed to solve with common consent more of the problems that perplex us and the differences which now divide East and West, and Industry and Agriculture, would not even be whispered at the council table around which the statesmen of the nation would deliberate upon the things vital to its security, stability and expansion.

Business is entitled to an immediate announcement as to whether the Business Profits Tax is to be renewed or not. There are enough uncertainties in the commercial and industrial world to be contended with at the present time without this unnecessary suspense. A few remarks from Sir Henry Drayton would be in order.

Company Reorganized

Canadian Flax Mills Limited now in hands of a New Set of Officers

Canadian Flax Mills, Limited, are now settled in their new office at 43 Victoria Street, Toronto. While officers of the company have been changed, operations are being carried on as in the past. The company are at present operating six mills, with a monthly capacity of approximately 125 tons of flax fibres and tows, and this production they hope soon to increase. J. M. MacKenzie is now president; John H. Campbell, vice-president and general manager, and F. C. Annesley, secretary-treasurer.

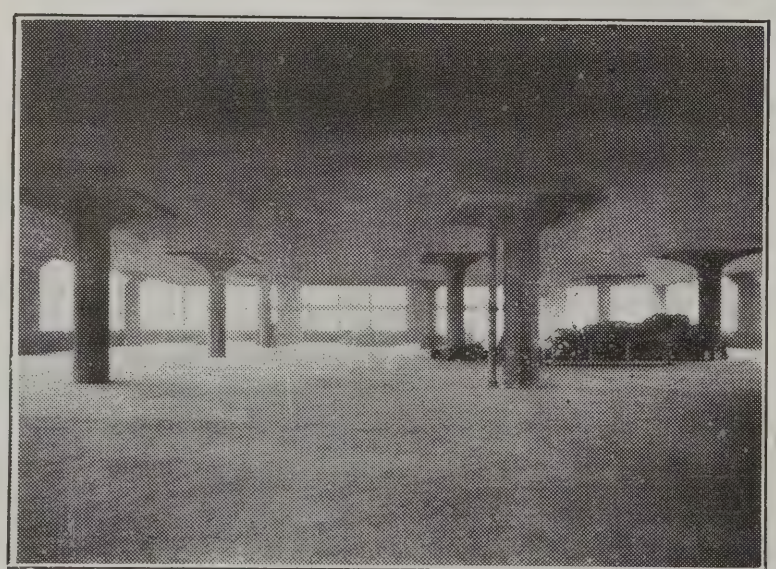
Plant Officially Opened

Factory of Champion Spark Plug Co. of Canada, Limited Has Started Operations

The official opening of the fine new plant of the Champion Spark Plug Company, of Canada, Limited, took place on February 16, Mayor Winter of Windsor officiating. The factory was thrown open for inspection by the public and all day throngs of people passed through. A luncheon for members of the staff and guests took place at the Essex Country Club, and at night the employees dined at the Detroit Athletic Club. The factory is a fine steel and cement structure. All parts of the spark plug, with the exception of the porcelain, are made in the plant, which is the first of its kind in Canada. The plant, when in full operation, will employ about 150 hands and will produce plugs at the rate of 40,000 a day.

Re-open Welland Plant

Canadian Steel Foundries Closing Contract Which Will Lead to Operation of Industry Again



The Welland plant of Canadian Steel Foundries, Limited, which was closed down last summer, will probably be re-opened this spring, according to information received from a reliable source. The company, it is understood, are only waiting to settle the terms of a contract with the Belgian Government for the construction of cars, and the expectation is that this will be settled and executed within the next few weeks. Immediately thereafter the plant will resume operations with a full force.

Move to Owen Sound

operations to a synthetic rubber tire filler, for which they state that orders are in excess of their ability to supply. They believe that the plant is likely to grow into a very large one, but at present can form no estimate as to output or number of hands. Later on they may be able to consider the manufacture of other lines. Henry W. King, Toronto, is president of the company.

Book Large Orders

Canadian Locomotive Co., Limited, Kingston, to Build Thirty-Three Locomotives

The Canadian Locomotive Company, Limited, Kingston, have recently received orders for thirty-three locomotives. Of these, ten 12-wheel locomotives are for the Jamaica Government Railways, and of these three have been delivered; three Mikado locomotives for the Pacific Great Eastern Railway, and twenty switching locomotives for the Canadian National Railways. The company's present capacity is twelve engines per month, so that this will give about three months' work.

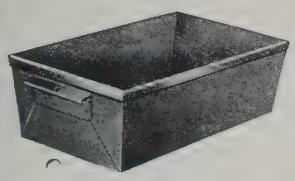
Make Three-Storey Addition

Harvey Knitting Co., Limited, Woodstock, Will Increase Output by 25 per cent.

Harvey Knitting Company, Limited, manufacturers of high-grade underwear, Woodstock, are erecting an extension, 66x63 feet, three storeys and basement, which they fully expect will enable them to increase their output by approximately 25 per cent. This is to look after Canadian trade only. The company state that their business has gradually increased on both fall and winter goods for the last five years and two years ago they eliminated their sweater department to allow more floor space for underwear. At present this floor space is fully occupied; hence their reason for building. The business on their books this year shows an increase of approximately 100 per cent. over last year.

Being Rebuilt

Core-Making Department of Taylor-Forbes Co., Limited, Guelph, Damaged by Fire



Fire which broke out about 6.30 o'clock on the morning of February 20 in the core room of the Taylor-Forbes Company, Limited, Guelph, did a good deal of damage to the plant. The company state that the fire was reported out at 10 a.m. At 11 o'clock contractors were on the ground looking over the mess, and at one o'clock structural material was delivered and they had men at work. Inside of ten days from the date of the fire the damage was repaired. Meantime the company did not close down and no one was out of work.

Take over Streetsville Plant

The Harris-Wood Products Co., Limited, Start Operations in Existing Building

The Harris Wood Products Company, Limited, manufacturers of Harris System sectional construction, have taken over a plant in the town of Streetsville. They are at present turning out sample houses for England and France and filling a few domestic orders. When these are completed, they intend closing down during the rest of the month of March to install new machinery and erect a new plant. The present floor space is over 4,000 square feet and this will probably

be doubled in the new factory. They have six acres of land, which will allow for expansion. They anticipate doing a large export trade.

Open Canadian Plant

Hall-Thompson Co., of Hartford, Start Manufacturing in New Factory in Montreal

In order to take care of their Canadian business, the Hall-Thompson Company, manufacturers of chemical automobile specialties, Hartford, Conn., have built a factory at 3150 Mance Sereet, Montreal, specially adapted for the work. The building is now completed and they are installing machinery in expectation of starting to operate early in March. Their line is known as the "Wonder Worker" and is confined entirely to automobile necessities, including polishes, dressings, cements, patches, paints, etc.

Double Their Capacity

William and J. G. Grey, Toronto, Erect Five Storey Building to Enlarge Plant

William & J. G. Grey, Toronto, manufacturers of milling machinery, etc., have added a new machinery and manufacturing department to their plant which will about double its capacity. The new building is 90x160 feet, five storeys high, and is equipped with travelling electric crane, freight elevators and all modern improvements. They are also installing in the building some machinery for handling heavy work, including a 96-inch boring mill, weight 65,000 pounds, and other equipment.

Will Remove Plant

Ontario Spring Bed and Mattress Co., London, Buy Property of London Foundry Co.

The Ontario Spring Bed and Mattress Co., manufacturers of beds, springs, mattresses, pillows, brooms, whisks, etc., who are at present located at 88-90 York Street, London, have purchased the property formerly occupied by the London Foundry Co., and are remodelling and refitting the same for their requirements. The new plant differs very little in size from their present plant, but they will have considerable space to take care of their needs for the future. They do not intend to move for two or three months yet.

Hoover Plant Inspected

Banquet Held in Hamilton to Mark Inauguration of Operations in the New Factory

On invitation of the management, the Mayor of Hamilton, members of the board of control, local members of Parliament, the Hydro Electric Commission, and a body of representative citizens, inspected the new plant of the Hoover Suction Sweeper Co. of Canada, Limited, Hamilton, on February 12. The entire process of manufacture was shown. In the evening a dinner was tendered to the visitors and dealers from all parts of the country at the Royal Connaught Hotel. Speeches of a most felicitous character were delivered by Hon. S. C. Mewburn, Hon. W. R. Rollo, Mayor Booker; George H Douglas, Chairman Ontario Division, C.M.A.; H. W. Hoover, general manager, and F. G. Hoover, associate general manager of the parent company in North Canton, Ohio.

With the exception of the motors, all parts of the sweeper are made in the Hamilton plant. At present the staff num-

bers about 100 and the output amounts to thirty sweepers a day. This will be increased to 200 daily in the present plant, with an ultimate output of 500 daily within two years, the additional 300 being for export. The output of the parent plant is 1,200 daily.

Plant Nearly Ready

Factory of Butterfly Hosiery Co., Limited Drummondville Soon to be Operating

The Butterfly Hosiery Co., Limited, a company incorporated under a Quebec charter, and in which some shareholders of the Chipman, Holton Knitting Co., Limited, Hamilton, are interested, have been erecting in Drummondville, Que., a new plant, the main building being about 150 x 50 feet, two stories, with separate dye house, boiler house, etc. The company will make fine gauge goods in cashmere, silk, etc. The factory is nearly completed, and it is expected that operations will commence within the next few weeks.

Hamilton's New Industries

Thirty-two New Plants Were Located in the City During the Past Year

Interesting information about the industrial growth of Hamilton during 1919 is contained in the annual report of C. W. Kirkpatrick, Commissioner of Industries and Publicity. From this report it is learned that during the year thirty-two new industries, representing a total capitalization of $15,670,000, and an employment, when in operation, of 4,700 hands, were located in the city. The value of the industrial building permits issued was $1,614,780, which does not include the Firestone Tire & Rubber Co., whose buildings are just outside the city limits.

"Quite as important as the number of new industries secured," states Mr. Kirkpatrick, "is the number of new lines of manufacture added to the city's already long list. These total upwards of fifty, chief among them being automobile tires and rubber goods, commercial felts, suction sweepers, hosiery needles, carbonated gases, varnishes, etc. The diversity of Hamilton's industries is one of the factors in its steady prosperity, being a safeguard against slumps and unemployment, as it is seldom that all classes of industries are slack at the same time.

"Another interesting feature of Hamilton's 1919 industrial growth was the securing of the city's first Canadian branch of an English manufacturing concern, the Porritts and Spencer Company, of Bury, England. Now that a start has been made, there are good reasons for hoping and believing that other British industries will follow. In fact, I expect in the near future to be able to announce the location here of another very important English concern.

"Eleven of the new industries secured last year are either Canadian branches of American companies or are controlled by American capital, while six others are industries that had located, or decided to locate, in other Canadian cities, but were afterwards induced to come to Hamilton, because of its superior manufacturing and distributing advantages. Notable among the latter is the Hoover Suction Sweeper Company, of North Canton, Ohio, which had an assembling plant at Windsor, but last spring decided to make Hamilton its Canadian and export headquarters, and has since erected and equipped a model manufacturing plant on Gage Avenue, which is a credit to the company and the city.

The list of new industries includes the following companies:

Firestone Tire & Rubber Co., Akron, Ohio; Porritts & Spencer Co., Bury, England; Zimmerman-Reliance Co., Toronto and Hamilton; Hoover Suction Sweeper Co., North Canton, Ohio; Carr Fastener Co., Cambridge, Mass.; Norton Co., Worcester, Mass.; Industrial Varnish Co., New York and Toronto; Beaver Truck Builders, Chicago, Ill.; Quaker City

Option at Toronto

[Semet-Solvay Co. Get Option on Twenty Acres for By-Product Coke Oven Plant]

The Semet-Solvay Co., Syracuse, N.Y., confirm the report that they have secured an option on twenty acres of land in the eastern industrial area of the Toronto Harbor Commission, with the intention of possibly utilizing it for the erection of a by-product coke oven plant. They are not prepared, however, to give any further information about their plans at the present time.

The Kelsey Wheel Co., Limited, manufacturers of auto wheels, hubs, rims and stampings, Windsor, are erecting a new building, 50 x 150 feet, to be used principally as a galvanizing and pickling plant.

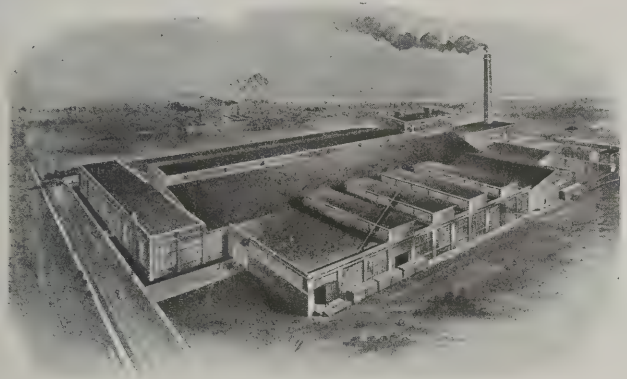
Production of vegetable parchment paper was started by the Canadian Vegetable Parchment Co., St. Catharines, at their new plant, on February 12. Ground for the construction of the plant was broken in August last.

Firstbrook Bros., Limited, manufacturers of boxes and shooks, Toronto and Penetang, are at present erecting a small box shook plant at Thessalon, Ont., which will probably be in operation about May 1. At least fifty hands will be employed.

The Laidlaw Bale Tie Company, Limited, Hamilton, are erecting a building 210 x 40 feet, one story, saw-tooth construction, which will be used principally to relieve congestion in their present premises, though it may result in an increased output.

Tallman Brass & Metal, Limited, Hamilton, have purchased 14 acres of land on Burlington St. They have no intention of making any plant extension at present, but have secured the land so as to be prepared for enlargement whenever it becomes necessary.

The Tolton Manufacturing Co., manufacturers of "Quality Trousers," Guelph, Ont., are now a limited liability company. Mr. William Tolton, the president, states that no new capital has been taken in, nor is it the intention to extend the business other than through natural growth.



Merner Bros. are establishing a flax mill, with a capacity to work up from 300 to 400 acres of flax, in Clinton, Ont., and expect to have it ready for operation for the 1920 crop. J. J. Merner, of Merner Bros., is at present operating a mill of the same capacity in Seaforth, the style of the firm being Merner and Fell.

The Toronto Putty Co., specializing in the manufacture of all grades of putty, have started operations at 17 Jarvis Street, Toronto. The capacity of the plant is about a ton and a half a day, but plans are already being considered for enlargement of its capacity. The industry was started on January 1.

Deaths Among Prominent Manufacturers

A Veteran Stationer

Death of Richard Brown Removes Grand Old Man of Stationery Manufacturing Industry

For sixty years the late Richard Brown, whose death occurred in Toronto on February 14, was head of the manufacturing stationery firm of Brown Bros., Limited. He was indeed the Grand Old Man of the industry and, until quite recently, even after he had passed his eightieth birthday, took an active, everyday interest in the business. Born in Newcastle, England, eighty-six years ago, he came to Toronto at the age of twelve, and was a resident of the city ever since. During his long career, he saw the business, which he helped to start, expand from a small beginning to its present large proportions, with *clientèle* extending from Atlantic to Pacific.

Was Prominent Canner

David Marshall, M.P., Was Long Associated with Canadian Canning Industry

The career of the late David Marshall, M.P. for East Elgin, whose death occurred quite suddenly at Vancouver on February 14, was an interesting one. Born at Eden Mills, near Guelph, in 1846, he was brought up on a farm. For some time he was employed at scaffolding work in the Petrolea oil fields, and then formed a partnership for the operation of a threshing outfit. He continued at this work for five years, when he established a shingle factory. Three years later he bought out a grocery business in Aylmer, which he conducted for ten years. He was one of the promoters and for twenty years manager of the Aylmer Canning Co., which was eventually merged in the Dominion Canners. Of the latter, Mr. Marshall was for three years general manager, and, at the time of his death, a director. He was also one of the promoters of the Aylmer Condensed Milk Co., being president until the business was purchased by Carnation Milk Products Co.

Interested in Many Industries

Late Edward L. Goold, of Brantford, was closely associated with city's industrial life

On February 16 there passed away, at Brantford, Mr. Edward L. Goold, president of the Goold, Shapley & Muir Company. Mr. Goold was closely identified with the industrial life of the city. His father came to Brantofrd in the early forties, and as far back as 1850 the firm of Goold, Bennett & Company, iron and brass founders, was quite a flourishing concern. Mr. Goold, Jr., went as a young man to Chicago, where he was for a short while with Marshall Field & Company. It was not long, however, before he returned to Brantford. He first of all became senior partner of Goold & Agnew, stove and hardware merchants, and in 1881 joined the firm of J. O. Wisner, Son & Company, manufacturers of cultivators, harrows and other farm implements. After the absorption of this business by the Massey-Harris Company, Mr. Goold threw himself into the manufacture of bicycles, having with him as partners Messrs Shapley and Knowles. This industry reached large proportions, employing at one time 600 hands. Ultimately the

business was sold to the Canada Cycle & Motor Company. Further back than this, Mr. Goold had established Goold & Company for the manufacture of beekeepers' supplies and refrigerators. Messrs. W. H. Shapley, John Muir and E. Yeigh later joined with him, and the outcome was the firm of Goold, Shapley & Muir Company. Mr. Goold was also president and main promoter of the Brantford Oven & Rack Company; one of the leading spirits in the establishment of the Brantford Screw Company, now merged in the Steel Company of Canada; the president of the Beaver Oil & Gas Company, and interested in many other companies.

Was Expert Steel Maker

Late Captain David Kyle, M.C., Vice-President Algoma Steel Corporation, Held in High Esteem

In the death of Captain David Kyle, M.C., vice-president of the Algoma Steel Corporation, which occurred at the Sault on February 1, the company has lost a valuable official. The late Captain Kyle was born in Scotland, and came to the Sault in 1910 as engineer in charge of the construction of the merchant mill, and was later in charge of the construction of the gas engines. When that work was completed he joined the staff of the steel plant, and was placed in charge of maintenance.

In 1912 he was made general superintendent of operations, and in the fall of 1914 left the service of the company and went overseas and served in the war, during which he won the Military Cross. In 1917, by special arrangement with the military authorities in London, Captain Kyle was allowed to come back to Canada, and again take his place in the executive offices of the steel company, and two years ago, when Mr. Franz came back to the Sault from Cleveland, Captain Kyle was elected a director and vice-president of the steel company. Mr. Kyle was about thirty-six years of age, and his death brings a distinct loss to the steel plant and to the city.

B.C. Box Manufacturers

An Organization Formed at the Coast as a Section of the Canadian Manufacturers Association

As the outcome of a meeting of the box manufacturers of British Columbia, a decision was reached to affiliate themselves with the Canadian Manufacturers Association and form a Box Manufacturers' Section. The section starts out with a membership of nine manufacturing firms out of a total in the province of seventeen, and it is hoped before long that the others will come in.

The objects for which this section was formed are the building up of the export trade of box shooks in the province, and the maintenance of standards in sizes and quality of packages for various commodities shipped from the province, the principal of which are fruit and fish. There is also a big demand for box shooks in the United Kingdom, South Africa, Australia, New Zealand, Mexico and South America, and it is felt that by getting together they will be in a better position to meet the transportation difficulties in connection with this export trade.

The officers of the section are: R. B. Sharp, of the Pacific Box Co., Vancouver, Chairman; W. B. Mitchell, of the Cameron Lumber Co., Victoria, and D. Lloyd-Jones, of the Kelowna Saw Mill Co., Vice-chairman; J. H. McDonald, of the British Columbia Manufacturing Co., New Westminster, Treasurer; Hugh Dalton, Secretary.

Catalogues and Booklets

Pratt Ballast Cleaner

A new development in the line of link-belt labor-saving machinery is described in a folder just issued by the Link-Belt Company. This is the Pratt Ballast Cleaner, a machine for use on railways, which speeds up ballast cleaning and at the same time reduces labor cost. The machine is described in detail, with a number of explanatory illustrations.

Sectional Construction

The Harris Wood Products Co., Limited, Toronto, issue an attractive catalogue, illustrating and describing their system of sectional frame construction. This system applies bridge-building methods to all manner of frame construction. Houses, etc., are built in standardized, interchangeable sections, these sections being complete in themselves and of a size convenient to handle. Also the buildings can be put up most economically.

High-Class Art Work

Small scale productions in full colors of the three Victory Loan posters, designed by the Art Department of Rous & Mann, Limited, Toronto, have been sent out by this company in a handsomely prepared folder, for the purpose of demonstrating the character of the work of which the Art Department is capable. The designs and workmanship afford convincing evidence of the capabilities of the company, both in the creation and execution of advertising designs.

Anglin-Norcross Calendar

A neat little calendar, the feature of which is a series of illustrations of fourteen buildings erected by the company, has been sent out by Anglin-Norcross, Limited, contracting engineers, Montreal, Toronto and Halifax. Several industrial plants are included in the series.

Electric Steel Furnaces

Catalogue No. 2 of the Volta Mfg. Co., Limited, Welland, contains an interesting foreword on the growth of the electric steel industry, followed by a complete description of the "Volta" furnace. At the end of 1919 it is estimated that 815 electric furnaces were in operation or installed throughout the world for the production of electric steel ingots and castings, of which number 330 are in Canada and the United States. In 1910 there were only 114 furnaces, of which 13 were in Canada and the United States. The production of electric steel castings has been very marked, while it is readily seen that the electric furnace is rapidly replacing the crucible process.

Seventy-Year Development

With the title "Inter-related Industries," the Grinnell Company, Inc., have produced a handsomely designed booklet, giving a brief story of the seventy-year development of several inter-related industries, founded on industrial piping. It is explained at the outset that the company's former name, the General Fire Extinguisher Co., was misleading in that it connoted fire protection, whereas the company was also a producer on a large scale of heating, power piping and specialties, drying, etc. The history of the organization, from its inception in 1850, is traced and its various productions explained. The plants operated, including those of the Grinnell Co. of Canada, Limited, at Toronto and Montreal, are illustrated, and altogether a most comprehensive idea of the activities of the company are given.

BEFORE
Canal St., East, Dunnville, Ontario, in 1915, before the use of Tarvia.

AFTER
The same street after three years of service. Note its perfect condition.

Dunnville turns to Tarvia

THE left-hand photograph shows Canal Street East, a busy street running past the T. H. & B. Railway Station, at Dunnville, Ontario, as it was in 1915.

But in that year the people of Dunnville decided that it was time to do away with this kind of street. They wanted a firm, smooth, mudless highway that would be good *all the year round,* and one that automobiles wouldn't demolish.

So they turned to Tarvia. They built a street with a "Tarvia-X" penetration surface—a smooth, firm, easy-traction street, as shown in the right-hand photograph.

Every community needs such streets

The Tarvia made the street waterproof all the year round. No mud or ruts in the winter or spring! No dust in the summer! And it also made it automobile-proof, for it gives a road a very tough, slightly plastic surface that is admirably suited to stand up under heavy automobile traffic.

Many other Dominion communities are turning to Tarvia to solve their road problems. Tarvia offers better roads for less money because it preserves the road surface and reduces the annual upkeep expense to such an extent that it more than pays for itself.

Illustrated booklet telling about the various Tarvia treatments, free on request.

Industrial Canada

ISSUED BY

The Canadian Manufacturers Association
INCORPORATED

Vol. XX. TORONTO, APRIL, 1920 No. 12

Editorial Comment

A Great Canadian Industry

IN point of value of output, the agricultural implement manufacturing industry is well known to rank high among the industries of Canada, and creditable indeed has been the way in which those responsible for its well-being have carried it forward to its present large dimensions. The reputation of Made-in-Canada farm implements is world-wide in extent, while at home the importance of the industry in the industrial fabric of the country is such as to deserve general recognition.

The present status of the industry is reflected in the figures recently issued by the Dominion Bureau of Statistics, applying to the year 1918. These taken in conjunction with the figures of 1910, provide some interesting comparisons. It is to be noted that in the eight-year interval, the number of plants has grown from 77 to 84, while the capital investment has grown from $45,232,098 to $74,410,603. Of this the investment in land, buildings and plant showed a growth from $9,621,256 to $13,528,395.

Oddly enough the number of employees has been nearly stationary. The 1910 figures gave 726 employees on salary and 8,834 employees on wages, a total of 9,560. In 1918 there were 865 employees on salary and 8,782 employees on wages, a total of 9,647. But the startling change has been in the amount of wages paid. In 1910 wages only amounted to $4,739,750 or $536 per head; in 1918 they had risen to $8,632,201 or $982 per head.

The cost of materials was figured at $10,477,140 in 1910 and at $17,319,840 in 1918. The value of products stood at $20,722,722 in 1910 and at $34,853,673 in 1918.

Interesting figures are given in the 1918 report as to the quantity and value of various materials entering into the manufacture of implements and as to the number and value of each kind of implement made. For instance 30,367 m.f. of lumber; 77,338 tons of steel and steel castings; 49,712 tons of pig iron and iron castings and 14,351 tons of malleable iron were required.

So far as output was concerned, 117,226 harrows were made; 70,522 plows; 37,751 mowers; 35,467 cultivators; 31,270 drills; 30,435 harvesters; 24,556 hay rakes; 11,801 hay carriers; 10,025 fanning mills, etc.

A GREAT TRIP

No member of the Canadian Manufacturers Association, who can possibly afford the time, should fail to enroll himself among those who will take in the trip to the Pacific Coast and attend the 1920 Annual Convention in Vancouver and Victoria, on June 8, 9 and 10. No more favorable opportunity for seeing the West and meeting western manufacturers under the most pleasant conditions could be imagined. It will be a trip well worth while.

Lightning Rod Installations

AMONG the contents of the current issue will be found an article by Prof. W. H. Day on the subject of lightning rods, which is published on instructions of the Insurance Committee. In this connection it may be interesting to note that a bill has been drafted by the Ontario Fire Prevention League and submitted to the Provincial Cabinet, the purpose of which would be to control the sale of lightning-arresting systems and to make the use of lightning rods on certain specified structures obligatory.

While it is uncertain what action if any will be taken by the Government with regard to this proposed legislation, it may be stated that in its tentative form the bill is decidedly drastic in character. For example, it would render it compulsory to rod all buildings 60 feet in height or over, a provision which would apply to many city structures. However serious the risk may be in the country, it is open to question whether it would be worth the cost to protect city buildings as specified. There should clearly be some differentiation in this respect.

A Famous Hostelry

This is the Empress Hotel, overlooking the beautiful harbor of Victoria, B.C. and basking in the genial sunshine and balmy air of the Pacific Coast. Here the C.M.A. will have its headquarters on June 10, when the annual banquet takes place in Victoria.

So far as the sale of apparatus for the protection of buildings from damage by lightning is concerned, the provisions are equally severe. Licenses from the Provincial Fire Marshal must be obtained and a bond of $10,000 provided. A fee of $50 is required to secure the license, while a tax of 80 cts. on every $100 received from the sale of lightning rods and equipment will be levied. Strict conditions surround the transaction of business in order to ensure that the systems installed will be efficient and the work properly executed. The general idea underlying these conditions is good but it will possibly be questioned whether equally satisfactory results might not be obtained by making the restrictions less arduous.

Farmers and Boards of Trade

THE action of the Guelph Chamber of Commerce in securing the admission of farmers to membership, reference to which was made in our last number, is by no means an isolated instance of an effort to get the business men of the farms and the business men of the cities together. A correspondent, Mr. Russell T. Kelley, President of the Hamilton Advertisers' Agency, Limited, says:

"Over two years ago the writer had the honor of organizing a Farmers, or as we call it an Agricultural Section in the Hamilton Board of Trade. We have about one hundred and thirty members. They have a luncheon one Saturday each month and the average attendance has been over one hundred. We always have a number of Hamilton business men present in addition to the farmers.

"Addresses are given on subjects of vital importance to the agriculturists, and this Department of our Board of our Board of Trade is considered to-day one of our most important. It has done a wonderful work in bringing about a better understanding between the urban and rural citizens.

"Personally, I believe that an effort should be put forth to establish similar departments in the various Boards of Trade and Chambers of Commerce in Ontario. Just four weeks ago I had the pleasure of having a part in organizing the Agricultural Section of the Stratford Chamber of Commerce."

This is fine work and should merit the commendation of all people who are desirous of seeing the best possible spirit of co-operation engendered among all sections of the community. It is desirable, as Mr. Kelley says, that other boards of trade should take similar action to that of the Hamilton, Guelph and Stratford boards.

The Claims of the Canadian Architect

EVERY reasonable effort to make the Made-in-Canada campaign thoroughly consistent should be practised by its sponsors and supporters. It should unquestionably be a well-rounded and comprehensive scheme to maintain and enlarge the business and industrial activities of the nation. Nor should it be limited to the buying and selling of commodities. It is quite as deserving of recognition in the case of the professional man, who is contributing his quota to the upbuilding of the country.

The business and professional elements come into close contact in the case of the architect. Not only does the architect create, but he also has a great deal to do with prescribing methods and materials. To urge upon him the desirability of using Canadian-made materials in the erection of buildings is important but it is equally important that the men or companies who are erecting buildings should give a preference to the Canadian architectural profession in arranging their plans. The brains of Canadians are as deserving of recognition as the products of Canadian factories, and when new construction is contemplated, the consistent course to pursue will be not only to requisition the use of Made-in-Canada materials but to insist on the employment of Canadian architects and contractors as well.

Workmen's Compensation in British Columbia

IT is apparent from a perusal of the 1919 report of the Workmen's Compensation Board of British Columbia that the Board has finished a third successful year. It is a noticeable feature that the administration of the Act is appreciated by all parties concerned; the employer, inasmuch as he is no longer bothered by litigation that was so common in the olden days; the workman because he quickly receives his compensation without dispute; the medical man, because his bills are paid promptly; and the

hospitals, because accounts incurred in connection with hospital treatment of workmen are promptly paid.

The first aid regulations, which were brought into effect some two years ago, have proved particularly efficient, inasmuch as a very large number of minor injuries receive first aid treatment, and the result is that the consequences from lack of attention and failure to obtain medical treatment, are no longer serious.

Compared with 1918 the 1919 industrial activities of the province show that 500 new employers are now engaged in industries covered by the Act that were not in operation before. Over 110,000 workmen are covered, and the 1919 payrolls of the industries covered by the Act amounted to approximately $130,000,000.

The rates charged by the Board are considerably less than were charged industries heretofore. This is only possible by reason of the Act providing for the administration of the accident fund by a board appointed for that purpose and to the exclusion of all intermediaries. Notwithstanding the increased volume of business, the charge to employers was only 4.781 per cent. of the amount collected from them, being slightly less than the ratio of expense during either of the previous two years. Of every $100 collected from the employer, $95.21 goes direct to the workmen or their dependends without any expense whatever to them.

By a 1919 amendment to the Act, the pensions paid to dependents residing in foreign countries were revised according to the cost of living in those countries as compared with the cost of living in Canada. The surplus so obtained by such amendment was divided among the dependents of deceased workmen residing in Canada. This meant a total payment to the dependents in Canada of $65,870.51, with the result that after the first six months' operation of the Act, all widows have been receiving $35 per month and each child $7.50 per month.

During 1919 a total of 18,185 claims were made upon the Board. Of this number 17,908 were non-fatal claims, and 277 were fatal. Of the 277 fatal claims made, 93 were in respect of accidents happening during 1918, leaving 184 men fatally injured during 1919. This represents the lowest number of fatal accidents during any of the past years. The Board points out that in comparison with previous years, it is noticeable that the percentage of accidents to the number of workmen covered is considerably lower not only in number but in extent of severity and time loss.

During the past three years there has been paid out in compensation, pensions, and reserves, $4,209,468.94. There has been paid out for medical aid, hospital and nursing, $620,761.46; making a total paid out for compensation, pensions, reserves, medical aid, etc., of $4,830,-

Little Glimpses on a Famous Route

From Edmonton to Vancouver, the C.M.A. Excursion Party will travel via the Canadian National Railway. Along this route through the Yellowhead Pass and down the North Thompson and Frozen River Valleys there is some grand scenery, snatches of which are shown in the illustrations above.

230.40. During 1919 there was paid in compensation, pensions and reserves $1,391,993.35. The amount paid for medical aid, hospitals, and nursing was $289,108.39 or a total for the year of $1,681,101.74.

The Delusion of the Class War

THE Moose Jaw *News,* in referring to the recent discussion by the British Columbia Federation of Labor of a resolution in favor of a Soviet Government, quotes most appositely an article by Robert Blatchford, the well-known English socialist, entitled "Tosh About the Class War." It takes such a commonsense view of the situation and so completely exposes the delusion that classes can be obliterated, that we are tempted to repeat the *News'* condensation of its argument.

"I think it is time somebody who understands Socialism and the British people," he says, "said a few words of cool commonsense about that weird chimera—class war. The idea behind the class war, as exploited by the blood and thunder apostles of 'direct action' is that the 'working class' or 'Labor' is robbed and repressed by the upper and middle classes, and that the only hope of the working class, or Labor, lies in overcoming the upper and middle classes by force and then robbing and repressing them in turn." But, he asks, where do we all stand? Who are we to fight? To these questions he replies that "it is the habit of the 'direct action' blowhards to speak of the classes as though the whole nation were rigidly divided into three castes, as the Army is divided into officers, non-commissioned officers and privates. If that were so, the meaning of the class war would be clear. It would mean that the privates wanted to be officers and non-commissioned officers, and reduce the present officers and N.C.O.'s to the ranks. . . . It may be useful to point out that all the privates could not become officers or even sergeants, and that to change the individuals of the classes is not to abolish the class system. Or, if such be the idea, to abolish all ranks in the Army, would be to abolish the Army." What is a working man? he then asks. "A working man is a man who works." Therefore, he contends, "editors, doctors, bank clerks, engineers, managers and salesmen, captains of the mercantile marine, designers, artists, musicians, are all working men. Then upon what grounds of logic do the mechanics and labourers claim to be the working class and to exclude other working men and denounce them as enemies in the class war?"

From this he draws the following very straight deduction. "Now what does the inflammatory orator mean us to understand when he talks about the 'workers' or the 'working man' or 'Labor?' He wants to impress us with the idea of some thirty millions of manual workers, all users of tools, all 'wage slaves,' and all united in their interest and desire against the classes. This imaginary army of emancipation does not exist. I do not believe it ever will exist in our country. This hypothetical 'class' sometimes spoken of as the proletariat, is not a coherent class at all. It is a mass of people divided into classes and sects more arbitrarily than the nation's division into three classes. 'Labor'! There are male and female labor. Are these at one? Do not the engineers love to be called the 'aristocracy of labor?' Do the best-paid and most highly skilled crafts believe that the mere laborers should equal them in rank and wages? If the skilled worker is exploited by the employer, then the laborer is exploited by the skilled worker. If the whole 'proletariat' are justified in 'direct action' against the 'classes,' the laborers would be justified in 'direct action' against the skilled workmen. The women would be justified in 'direct action' against the men."

Why, he says, even the "Soviets have bosses." "Suppose the 'proletariat' hanged or deposed, the whole of the upper and middle classes and decided to run the country by soviets, there would arise the question of the composition of these soviets. There would have to be directors, and managers and foremen. Would the very best men surely get those jobs? Would they be better than the men displaced? Would there be no danger of the directors, managers and foremen solidifying into classes? I should be very reluctant to live in England under the rule of soviets. If the soviets were to be controlled by the garrulous, malignant bounders who are at present shouting for soviet government, I would very much prefer to be decorously hanged. And I am a democrat, and a Socialist, and a working man, and don't you forget it."

A Reduced Fire Waste

STATISTICS recently issued by the Fire Marshal of Ontario indicate a really remarkable reduction in the fire loss of the Province for 1919. While the number of fires was not markedly less, the wastage in dollars and cents showed the very decided decrease of $6,182,762 or 40 per cent. For all Canada, the reduction in fire waste was 27 per cent. and for the whole of North America, 15 per cent., which gives to the Ontario figures all the greater significance.

Analyzing the figures, it is to be noted that, while the reduced loss in Ontario applied to practically all classes of risks, the bulk of the saving occurred under the heading of factories, and manufacturing and special hazards. Here there was a reduction of approximately five million dollars or 85 per cent. of the total. Various reasons will doubtless occur to account for this improvement. The cessation of the manufacture of munitions was undoubtedly one potent factor. So also would be the mild weather conditions of the winter of 1918-1919, which lessened the risk from over-heated pipes. Apart from these considerations, however, credit must unquestionably be given to the progress of the educational movement. More care is being taken. Protective measures are more adequate and the fact that replacement values have increased enormously has had its influence on the situation. In short, a real gain has been registered, which should give encouragement to the forces battling against the appalling fire waste of the country.

A WORD of appreciation of the services so zealously performed by the Ontario Safety League in its campaign of educational effort is well deserved. A glance over the brief synopsis of work done in 1919 is sufficient to show how widespread is the propaganda being conducted by this organization. Cards, letters, bulletins, seals, pay envelope slips, by the hundreds of thousands, have been distributed and, while much of the material has doubtless fallen on barren ground, yet enough must have taken root to produce worthwhile results. The careless and indifferent are always with us, but the persistent preaching of the Safety League will in time have its effect and manufacturers may well wish more power to its arm.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Will Require Several Special Trains

THERE is every likelihood that it will require several special trains to handle the Association's Excursion to the Pacific Coast in June. At time of writing, reservations for the first train out of Toronto on May 29th have been practically completed. That there will be a second train from Toronto is pretty well assured, while a complete train will probably be necessary to accommodate Quebec and Maritime members, leaving Montreal. The success of the Excursion, as well as of the Annual Meeting, is well assured and those members who have still to make a decision about going are urged to do so at once. This will ensure accommodation and be of assistance to the management.

Executive Council Meeting

The March meeting of the Executive Council took place at the Windsor Hotel, Montreal on March 25, following a luncheon held under the auspices of the Quebec Division. The president, Mr. T. P. Howard, was in the chair and there was a good attendance of members. Business of much importance was transacted, including the reception of reports from the various standing committees. The Council went on record as in favor of daylight saving.

The April meeting of Council will be held in Toronto on the usual date, the fourth Thursday of the month.

Membership Continues to Grow

The membership drive inaugurated last December continues to pile up encouraging totals. Between December 1 and March 31, 545 new members have been added to the roll, bringing the total membership of the Association up to approximately 4,100. The new members are divided among the five divisions as follows: Ontario, 205; Quebec, 180; Maritime, 77; Prairie, 42; Pacific, 41.

Edmonton Branch Annual

The Edmonton Branch of the Association held its annual meeting on March 10, G. W. Hall, manager of the Edmonton City Dairy, was elected chairman; C. G. Robson, president of W. H. Clark Co., honorary secretary, with the following executive committee: Harvey Shaw, North-West Biscuit Co.; C. A. Graham, Great Western Garment Co.; J. T. Molitor, Swift-Canadian Co.; J. A. Bullman, Alsip Brick Co.; C. G. Sheldon, Humberstone Coal Co., Limited. From this it will be seen that the Edmonton Branch has been fully resurrected and is now firmly established.

Ontario Division Annual Meeting

A circular has gone out announcing that the annual meeting of the Ontario Division will be held at the King Edward Hotel, Toronto, on Thursday, April 29. Proceedings will commence with a luncheon at 12.30 p.m., after which business will be transacted, continuing until disposed of. Reports of officers and committees will be presented and officers for the coming year elected. Nominations will be received up to April 17th, at 3 p.m. As important matters will come up for consideration, a large attendance of members is desired.

Toronto Branch Annual Meeting

The annual meeting of the Toronto branch is scheduled to take place on April 29, immediately following the annual meeting of the Ontario Division. It will probably start about 4 p.m. Dinner will be served at 6 p.m., after which business will be resumed and continued until disposed of. As in the case of the Ontario Division, the usual reports will be presented, officers elected, etc.

National Fire Protection Association

Announcement is made that the twenty-fourth annual meeting of the National Fire Protection Association, which met last year in Ottawa, will be held in the Auditorium, Insurance Exchange, Chicago, on May 4, 5 and 6. Members who intend attending the convention, are being urged to make their hotel reservations as early as possible.

Canadian Trade Index

The Commercial Intelligence Department are directing the attention of members to the early appearance of the 1920 edition of the *Canadian Trade Index*. A circular states that "This is the outstanding publication of its kind in Canada, that it is compiled, published and owned by your Association, and is the only publication of its kind that is in any way authorized or endorsed by your Association.

"Its national character and scope are recognized by the Dominion Government, whose departments and overseas representatives will be fully supplied with it for purchasing and publicity purposes.

"This issue will also be carefully distributed to all large buyers of goods throughout Canada, and copies will be placed for reference purposes in all localities.

"Special pains are being taken to ensure a thorough and adequate circulation in all countries where Canadian manufacturers are doing business or may hope to do business.

"All this circulation is backed up by an information service such as no other organization in this country has facilities for rendering.

"This is your own proposition. It has been backed up well by your advertising support. We believe our efforts in achieving a thoroughly representative domestic and exports circulation will warrant a continuance of that support in the event of the publication of the *Index* annually, which is now under consideration."

Industrial Alcohol

A deputation consisting of Messrs. T. H. Wardleworth, of the National Drug & Chemical Co., Montreal; T. F. Monypenny, Imperial Varnish & Color Co., Ltd., Toronto; Mr. Haldane, Sherwin-Williams Co., Ltd., Montreal; G. M. Edwards, Canadian Paint, Oil & Varnish Association; Messrs. Hickman & McLaren, Ottawa Paint Works; W. A. Oliver, of J. Oliver & Sons, Ltd., Ottawa; J. F. Edgar, Synthetic Drug Co., Ltd., Toronto; J. E. Walsh, E. Blake Robertson and J. M. McIntosh, of the Canadian Manufacturers Association, waited upon the Hon. The Minister of Customs and Inland Revenue and the Hon. The Minister of Finance on Friday the 26th March, and urged the enactment of legislation which will provide for the manufacture and sale of industrial alcohol for manufacturing purposes. There is now an alarming shortage of methylated spirits, and the output of many manufacturers is seriously handicapped. The enactment of the legislation proposed will place Canada on a level with British and American competitors.

Death of F. R. Allward

Members of the Association, who read with interest the series of articles on the handling of freight claims, which appeared in recent issues of INDUSTRIAL CANADA, will be sorry to learn of the death of their author, Mr. F. R. Allward, Chief Clerk of the Transportation Department. Mr. Allward was one of the most conscientious and painstaking officials of the Association, who brought to his work a zeal and thoroughness that were above praise. He was a young man, who devoted his leisure hours assiduously to self-education and was steadily and earnestly making himself a master of transportation problems through the medium of correspondence courses. Starting in the service of the Grand Trunk Railway, he became later traffic officer of the Quaker Oats Company in Saskatoon. He enlisted for military service, but through exposure at Camp Borden, contracted an illness which prevented his going overseas. In fact, it was through the debility occasioned by this experience, that his constitution was unable to resist the attack of the flu to which he succumbed on March 19th last. His death is a distinct loss to the Transportation Department and through it to the Association in general.

Chocolate Manufacturers in the West

A party consisting of Mr. H. P. Cowan, Cowan Co., Ltd.; R. P. Smith, Wm. Neilson, Ltd.; E. A. Chidley, Willard's Chocolates, Ltd.; Alex. Norman, Rockland Chocolate Co.; George W. Robertson, Robertson Bros., Ltd.; and C. J. Bodley, Secretary, Confectionery, Biscuit and Chocolate Industries of Canada, have recently returned from an extended tour of Western Canada. The itinerary included Winnipeg, Brandon, Regina, Moose Jaw, Saskatoon, Edmonton, Calgary, Vancouver and Victoria. At each of these cities meetings were held, the purpose of which was to assist the confectionery jobbers' associations of the various districts to a fuller realization of their objects. Price-cutting and many unfair methods of competition have tended, in the past, to make much dissatisfaction. The chocolate bar manufacturers, represented by the above men, were able to assure the Western dealers of their co-operation on all contentious matters.

One great benefit that will grow out of such meetings is a better understanding between the East and West—(so called.) The various cities seemed to vie with each other in the warmth of their welcome to the manufacturers, and many expressions of satisfaction were expressed that the delegation had come to visit them, and to study the problems confronting the western distribution.

Addresses were delivered by the Secretary, Mr. Bodley, at every meeting, in which loyalty to Canadian industry was made the key note. An appeal was made for a better appreciation of the work being done by the Canadian manufacturer in the development of the country. The importance of our Imperial connection was emphasized, and it was urged that trade be kept within the Empire.

Exhibitions in Prairie Provinces

The Trade Sections Department are directing special attention to the opportunity afforded by the exhibitions in western cities for bringing Made-in-Canada goods to the attention of the people of the Prairie Provinces. The dates for this year's exhibitions are as follows:—

Calgary - - -	June 28th to July 3rd.
Edmonton - -	July 5th to July 10th.
Saskatoon - -	July 12th to July 17th,
Brandon - -	July 19th to July 24th.
Regina - - -	July 26th to July 31st.

These exhibitions comprise what are known in the West as "A Circuit," and might be described as the annual outings of the Western people. They are widely advertised and attended by hundreds of thousands of spectators, but as opportunities for showing goods that are made in Canada, they are sadly neglected.

On the contrary, however, reports which we have received indicate that American manufacturers are very quick to take advantage of these Fairs as means of developing their sales in the Prairie Provinces. At least fifty per cent. of the goods shown are said to be of American origin and in one instance last year foreign competitors occupied ninety per cent. of the space.

In view of the keen demand for the products of Canadian manufacture fostered throughout the country by public institutions, boards of trade, commercial and social organizations, coupled with the necessity for an equalization of trade as between Canada and the United States, it is incumbent upon Canadian manufacturers to place their goods prominently in the lime-light, and we therefore submit that the anomalous situation in connection with these important exhibitions where goods of American origin predominate should be corrected.

Made in Canada

A conference of the Toronto Branch Executive with representatives of the Ontario Association of Architects was held on March 11, when it was decided to intensify the "Made-in-Canada" campaign, which the Association has carried on for some years. The Association desires to co-operate with organizations of engineers and architects with a view to encourage them to specify Canadian material, whenever possible in Canadian contracts.

With the issue of the new *Trade Index*, it is now convenient to prepare lists of articles not "Made-in-Canada" to determine the making of selections, when contracts are let. A special committee has been appointed, consisting of four

representatives of the Ontario Association of Architects, together with an equal number of manufacturers to work out definite plans.

Renewed Scholarship

The Toronto Branch Executive have agreed to renew the scholarship of $50, which has been contributed by the Committee for the past six years to the Ontario College of Art.

Peterborough Branch Inaugurated

A special meeting of the manufacturers of Peterborough was held in the Princess Hotel, Peterborough, on Monday, March 29th, to formally inaugurate the Peterborough Branch of the C.M.A. Mr. W. R. Breyfogle, chairman of the branch, presided, and Messrs. J. E. Walsh, general manager, and H. Macdonald, secretary of the Ontario Division, were guests of the branch. The chairman reported that the City of Peterborough had been able, without difficulty, to reach 100 per cent. membership of the local manufacturers in the branch, and explained the advantages of membership in the national Association.

Mr. Walsh made a detailed statement, explaining the introduction of the divisional organization and of the services of the Head Office departments. The departments were officered by experts, such as individual manufacturers could not retain including Transportation, Tariff, Insurance, Legal, Trade Sections and Publicity. He stated that the present membership in Ontario was 2,139—in Toronto 929, and in Peterborough 35.

Mr. Macdonald explained the work of the branch as being two-fold. They had their domestic problems, covering such questions as Industrial progress, "Safety" and Technical education. The larger questions received consideration through the committees of the Division and finally, in the Executive Council. He invited the branch to consider its problems from a provincial standpoint rather than in their purely local aspect. The questions of workmen's compensation and of taxation had a special interest for Ontario manufacturers, and the Legal Department was well equipped to advise on all such questions, as well as on the various problems of commercial law that presented themselves.

The secretary of the branch is Mr. J. J. Turner, who has had the assistance of Mr. Leonard Fraser, secretary of the Board of Trade.

Freight Rates for Maritime Provinces

By G. P. Ruickbie

Transportation Department, C.M.A.

Acting on instructions from the General Manager I left Toronto on March 2nd, for a visit to the Maritime Provinces, in order to investigate complaints from members in that section of unfair freight rate adjustments to points in Ontario and the Northwest, caused principally by the percentage increases which have taken place during the war.

Mr. H. R. Thompson, Secretary of our Maritime Division, met me in Fredericton, N.B., on March 4th, and we subsequently visited St. John, Halifax, Sydney, North Sydney, New Glasgow, Amherst, Moncton and Bathurst. Prior to this Mr. Thompson had sent out notices to all our Maritime members, advising them of our itinerary, and inviting any who had transportation problems they wished to discuss, to make an appointment with us, or, if this were not practicable, to submit their views in writing to him at Amherst.

At each place we visited we met various manufacturers and other interests. Transportation matters in general were fully discussed, and the consensus of opinion was that the ever-widening spread between rates from the Maritime Provinces and rates from Montreal to points in Ontario and the Northwest, caused by increases being made on a straight percentage basis, was working a real hardship on Maritime industries, particularly those who must look to other provinces to market a portion of their output. Some lines of industries are more adversely affected than others, due to the nature of the articles they manufacture and the fact that their raw materials have to be transported from far distant localities,

It was considered advisable to get further detailed information as to how each line of industry is affected, and with this end in view a questionnaire is being sent to all members, which will give those who have not already done so, an opportunity of setting forth fully the difficulties under which they are operating.

Activities of the Quebec Division

By R. W. Gould

Secretary Quebec Division, C.M.A.

The Quebec Division held a "mission" in the City of Quebec last month. We secured thirty new converts, who are members of the Canadian Manufacturers' Association for the first time in their lives. A luncheon was held at the Chateau Frontenac on March 4th, at which there were present about 75 members and guests. Louis Letourneau, M.P.P., the chairman of the Quebec branch, acted as chairman. The Provincial Government was represented by Hon. L. A. Taschereau, the Attorney-General, and now acting Prime Minister, who addressed the Association at some length, dwelling in an optimistic vein upon the possibilities of Canada in general and the Province of Quebec in particular.

Other speakers were His Worship, Mayor Samson, of Quebec, who is an enthusiastic member of the Association; Colonel W. J. Sadler, chairman of the Montreal branch of the Association, and Hon Frank Carrell, M.L.C., of Quebec. Mayor Hayes, of St. John, N.B., one of our eastern members, happened to be in Quebec, and also made a short address, as did also J. E. Walsh, the general manager of the Association Your secretary had splendid support from the members of the Montreal branch in the effort, and some ten or fifteen went to Quebec to attend the meeting. Among them were J. H. Sherrard, A. H. Brittain, W. J. Sadler, P. E. Joubert, W. S. Fallis, J. E. Riley, and others.

Following the luncheon a meeting of the Quebec branch was held in the round cafe. There was present at this meeting George D. McKinnon, of Sherbrooke, and Robert Ryan, of Three Rivers. The question of a renewal of interest in the Quebec branch was discussed, and the business profits war tax came in for a considerable amount of discussion.

It was decided that so far as the provincial division was concerned that hereafter four meetings a year would be held in Montreal, four in the City of Quebec, one in Three Rivers, and one in Sherbrooke. The Sherbrooke meeting will be held, it is hoped, during the month of May, and the Three Rivers meeting in the month of September this year. A movement is now on foot to form a new branch in Three Rivers, which, during the past two years has become one of the most important manufacturing centres in eastern Canada. There is enthusiasm galore in Three Rivers.

Following the effort in Quebec on March 4th, your secretary called a meeting of the Quebec branch on March 16th. The meeting was held in the L'Union Commercial Building. It was decided at this meeting to hold a monthly meeting of the branch hereafter. This programme has been rather lax during the past two years, and the new decision is part of the programme to engender a new interest in the branch

in the City of Quebec. The meeting of the Quebec branch will be held on the 20th of April. The field is white unto harvest in Quebec, and the Association hopes to have a real progressive report to present at the annual meeting on the coast so far as the Quebec branch is concerned.

The meeting of the Executive Council of the General Association was held in the Windsor hotel on the 25th, and was well attended. Montreal has not had the honor of a meeting of the Dominion Council for some time owing to the smallpox epidemic, but happily this has subsided, and we are again able to mingle one with the other. J. A. Woodward, president of the Canadian Railway Brotherhood, addressed the divisional luncheon at this time, taking as his subject, "Service as the Social Law," and it was much enjoyed by those present. It was something of an innovation for a labor man to address the Manufacturers' Association in Montreal, and one which was enjoyed equally by labor and the manufacturers.

A large number of our members are intent upon attending the annual convention of the Association on the coast, and are making their plans for the trip. It is the intention of the division to carry on a more intensive programme of organization during the summer months in the Province of Quebec than has been the case hitherto.

Alberta—B.C. Industrial Congress

Outline of Arrangements

All arrangements have been completed for the Alberta-British Columbia Industrial Congress, and the tour of Western Canada by a large body of representative industrial and financial men from Canada, Great Britain and the United States, which takes place from June 2nd to 10th, and coincides with the itinerary of the Canadian Manufacturers Association on their way to their annual meeting in Vancouver. The Congress is this year being managed from the office of the Alberta Industrial Development Association in Calgary, and Brigadier-General F. H. McDonald, C.M.G., D.S.O., general manager of this organization, is handling the details of the big gathering. He recently returned to Calgary from Vancouver, where the details of the British Columbia end of the trip were arranged.

The Industrial Congress tour commences at Medicine Hat on June 2nd, and synchronizes with the itinerary of the C.M.A. specials in visiting Lethbridge, Calgary, Edmonton and then on to the Coast cities. At Edmonton the main sessions of the Congress will be held, and the delegates will have the opportunity of listening to addresses on Western Canada by practical men of great experience, who are thoroughly familiar with this part of Canada.

The Congress Executive look forward this year to having a particularly strong British representation, and are in touch with the National Manufacturers Association of Great Britain, with the idea of organizing a British party to attend the sessions in June. Those in charge of the Congress are confident that it will be a great success and surpass that of last year in every respect.

Canadian Industries Exhibition

Instructions re Shipments

Instructions as to the best method to ship material to the Canadian Industries Exhibition, London, are contained in a bulletin just issued by Mr. O. C. Pease, the Canadian representative of the exhibition. These apply to all exhibitors who have not already made private arrangements and who wish to take advantage of the system of bulk shipments. The material is to be handled by the shipping firm of Morison, Pollexfen & Blair of Canada, Limited, of whom Mr. Pease says:—

"The company of Morison, Pollexfen & Blair has been chosen by the Canadian Manufacturers Association and the Exhibition Management to take care of all shipments placed in their charge by intending exhibitors. The Morison Company is one of the best of the English forwarding houses, has been established in the United Kingdom for over 60 years, and is thoroughly well represented in Canada.

"In brief, the Morison Company will collect all material and assemble at the port of Montreal. The company will then re-mark all packages and crates, and arrange for the shipment of all material in one consignment. This one consignment will be shipped to the Morison Company at the Royal Agricultural Hall, Islington, London, Eng. The goods will arrive at the point of destination on or about the 24th of May. For the information of shippers who are handling their own consignments, I may say that the hall will be open to receive shipments on and after May 20th.

"Your company's representative in England will thus be able to proceed direct to the representative of Morison, Pollexfen & Blair at the hall, and on payment of all shipping charges and transportation costs, etc., will be able to obtain a release of your exhibition material and proceed at once upon the arrangement of your space contracted for.

"Exhibitors who intend to place their shipments in 'bulk' consignment must advise M. P. & B. just as quickly as possible, so that the latter may make full arrangements regarding ocean space. A knowledge of the weights, measurements, etc., of shipments is of course absolutely necessary.

"The Morison Company of Montreal and Toronto offers every facility they have to inexperienced shippers, and I suggest to the latter that they utilize the services of the forwarding agents to the fullest possible extent."

Mr. Pease's circular gives details as to crating and marking invoices, charges, etc.

Activities of the Prairie Division

By G. E. Carpenter
Secretary Prairie Division, C.M.A.

At the recent session of the Manitoba Legislature the Provincial Government appointed a joint committee consisting of ten members of the Legislature, five representatives of organized labor, and five representatives of the employers in the province, to deal with labor's requests for provincial legislation, the two chief items being a demand for 100 per cent. compensation and a compulsory collective bargaining law.

The Joint Committee acquiesced in the employers' request that actuarial experts be employed to advise upon labor's request for a state fund for workmen's compensation insurance. These experts have visited Winnipeg, and reported that state insurance is feasible in Manitoba. They have recommended that compensation to injured workmen be increased from 55 per cent. to 66 2-3 per cent. of wages; that the waiting period be reduced from six to three days; that pensions to widows and children be increased from $20 and $5 respectively to $30 and $7.50 respectively; and that funeral expenses be increased from $75 to $100. They reported that, with the elimination of agents' commissions Government taxes and other overheads, which they term "waste," which are paid under the present scheme of private insurance, the increased benefits referred to could be paid under a state plan without increasing premiums at present being paid by employers. They have made it plain in their report that these benefits go as far as labor can ever expect; that they represent the proper balance between the workers and employers, and should be accepted by labor as final. While labor repre-

sentatives on the Joint Committee were asking for 100 per cent. compensation, they have agreed to the report, and employers' representatives have acquiesced in its main points, which are outlined above. A bill was introduced embodying these provisions.

On the vexed question of collective bargaining, labor and employer representatives on the Joint Committee could not get together. Labor started out by requesting enactment of a law providing for the interpretation placed upon collective bargaining by the Strike Committee at the time of the Winnipeg general strike, which the representatives of the running trades on the railways and the Minister of Labor all held to be incorrect, so there was very little likelihood of the parties getting together. Numerous meetings were held in an endeavor to reach some common ground, but without avail. Labor's representatives ultimately withdrew from the meetings. The ten members of the Legislature were expected to make a report before the close of the session, but at the time of writing had not yet done so.

Electricians' License Act.

When the Electricians' License Bill was passed three years ago, providing that all electrical work in Manitoba should be performed by journeymen electricians holding a license under the Act, this branch arranged that exception be made to cover repairs to plant equipment and clause No. 14 was added to the bill, providing that this work could be done by the chief engineer of the plant. Every session since that time an amendment has been introduced seeking to cancel this clause. In the amendment of the Act this year cancellation of clause 14 was provided for. The branch secured the co-operation of the Manitoba Employers' Association, the Winnipeg Board of Trade, and the Engineer's Organization, and appeared before the Law Amendments Committee, with the result that clause 14 was allowed to remain in the Act, the statement being made by the Attorney-General that no reference should have been made to it in the amendment.

Temperance Act Amendment.

An amendment was introduced at this session providing for the purchase of alcohol for manufacturing purposes from or through a Government vendor in quantities not exceeding 10 gallons at one time, and restricting the size of the package in which the manufactured product containing alcohol could be marketed. A committee from the branch waited upon the Law Amendments Committee and pointed out that when a similar practice has been invoked in another province, manufacturers had to pay 50 per cent. more for their alcohol than it could be obtained from the distillers. Strong objection was, therefore, taken to purchasing from or through a Government vendor, although the committee expressed its willingness to assist the chief inspector, administering the Temperance Act, to keep a proper record and check of all alcohol used for manufacturing purposes. It was also shown that the quantity of 10 gallons was insufficient and impracticable; that the alcohol was usually purchased from distillers in bond; that the inspector of the inland revenue department would only release an original package at one time, and that the alcohol was actually mixed with other ingredients under the supervision of the inland revenue inspector. In fact in some cases the duty was paid on the product which was manufactured under his supervision. At the suggestion of the Attorney-General a conference was arranged with the chief inspector of the Temperance Act, and an amendment was redrafted to enable manufacturers to import any quantity of alcohol for manufacturing purposes in bond, and secure a permit from the chief inspector to store while being used in manufacturing. Restrictions as to the size of the bottles in which toilet articles and flavoring extracts could be put up, namely, 2½ ounces, were also cancelled.

Legislation, Saskatchewan.

The Saskatchewan Legislature, at its recent session, passed an Act to create a Bureau of Labor and Industries to gather information and publish statistics regarding employment, hours, labor difficulties, labor organizations, relations between capital and labor, conditions of employment, resources of Saskatchewan and industrial development. The Bureau will open and maintain employment agencies and administer the Factories Act, the Building Trades Act, the Electrical Workers Act, Employment Agents Act, the Mines Act, and the Minimum Wage Act of the Province.

An amendment was passed to the Factories Act limiting the hours of employment for youths, young girls, and women in factories to 48 hours per week, and authorizing the Lieut.-Governor in Council to make regulations for the construction and operation of elevators, hoists and dumb waiters. The amendment also provides that any person under 16 years of age shall not operate an elevator for the carriage of passengers.

Accident Prevention.

Mr. E. McGrath, Secretary of the Bureau of Labor, submitted by letter to a general meeting of Manitoba members particulars of a plan to facilitate accident prevention in plants by forming ambulance classes to whom Mr. Ward, superintendent of St. John's Ambulance Society, will give instructions. In addition to this the Bureau of Labor will furnish Safety First bulletins to employers, and request that these be kept posted in a conspicuous place in the factory, as it has been found that these have a great educative value with workmen. The meeting endorsed the proposed movement, and when Mr. McGrath takes the matter up with the members they are requested to give it their active and cordial support.

Steam Boiler Act, Manitoba.

The Steam Boiler Act of Manitoba provides that where fires are maintained in boilers overnight a third-class engineer must be employed where the capacity of the boiler is over 20 lbs. pressure. A committee from the branch, appointed at a general meeting of members, interviewed Mr. McNamara, chief inspector. He stated that the examination for the third-class engineer was very simple, and advised manufacturers to have their employees take the examination. He recommended a study of the first two chapters of Odell's Engineering Treatise, stating that it was very simple, and that anybody of average intelligence could readily pass the examination after reading these two chapters. He stated that where any firm had employed a night watchman for some time, and through illiteracy or lack of knowledge of the English language it might be impossible for him to pass a written examination, if the firm would write Mr. McNamara explaining these circumstances an oral examination would be arranged. The committee reported accordingly at a general meeting of members, and it was decided to adopt these suggestions.

Increased demand for fire protection has rendered larger factory accommodation necessary for the American La France Fire Engine Co. of Canada, Limited, Toronto, and an addition is under construction. This is 60 x 100 feet and will cost $35,000. Twenty additional hands will be needed.

The Situation at Ottawa Reviewed

Position of the Three Parties at the Close of the First Portion of the 1920 Session—Permanent Organization of the Unionist Party—Measures that have been Introduced to Date and Probable Action Thereon.

By Industrial Canada's Parliamentary Correspondent

OTTAWA,—Twenty-four sittings of Parliament were held before adjournment for Easter holidays, and they were sufficient to demonstrate that neither of the three parties seriously want an election. It is true that the Opposition leader, the Hon. Mackenzie King, declared, by resolution, that there should be an immediate appeal to the people, and the Liberal Opposition as well as the Agrarian third party voted for it. But the attitude of these groups since, makes the declaration appear like a party formality rather than a fighting declaration. There has been much business since the session opened, but no real hostility. It seems clear that, at the earliest, there will be no general election until 1922.

Members of the group of twelve, who constituted themselves the Agrarian third party, under the leadership of Hon. Mr. Crerar, fear that they have made a mistake in formally forming themselves into a Parliamentary group. They find that group action involves more responsibility and gives less liberty of action than individual independent membership. Most of the membership of the group are from the west and their decision to vote for an election has resulted in protests from Western constituents. The organized farmers of the West have intimated to their representatives that they made a serious mistake in voting for a general appeal to the people. It would not be surprising to see Parliament, in the near future, reduced to two formal parties with a sprinkling of independent individuals having the liberty to cast their votes with either side.

A Permanent Unionist Party

The organization of a Unionist party, with all the ramifications needed for a campaign, will be undertaken at the close of the session. It is recognized that something of this kind is essential before an election. The 1917 election was run by the Government largely with the old Conservative organization. Since that time this organization has been disappearing, so there has to be a survey of conditions in constituencies and the organization of willing workers into committees under the direction of experienced chairmen so that the vote may be brought out when the time comes. Sir Thomas White asked a Government caucus to begin the organization of a "National Liberal-Conservative party," but was met with a letter from Sir Robert Borden asking that there should be nothing done in this direction until his return, when he undertook to gather the Government supporters for a decision as to a permanent party and its policy. Reports from Sir Robert Borden indicate that his health has largely returned. He will be back in Parliament in the not distant future and it may be found that his health has so improved that he will be able to take his old place at the head of Canadian affairs.

There has been introduced the franchise measure needed for the holding of an election. It extends to alien-born Canadians more generous voting powers than had been expected by many supporters of the Government. The measure was supported by the Opposition leader and, when criticized by some of his supporters, the Government undertook to meet the new demands and still further extend its generosity to the alien-born citizens. It has been suggested that the Senate might exercise its authority and curtail the voting power of the alien-born, but this is not considered likely, as the franchise and all matters connected with voting are considered peculiarly within the province of the Commons.

A Disposition towards Economy

Main estimates for the year show a strong disposition toward economy on the part of the Government. Even by the exercise of economy and the elimination of money provisions for many works, such as the Hudson Bay Railway, the Government will have to find more than five hundred millions during the year. The revenue from all forms of taxation will not go much beyond three hundred millions. The most hopeful estimate, before the budget, is for three hundred and seventy-five millions. However, there is a handsome balance from the last loan, for which subscriptions totalled seven hundred millions, and this balance will cover the gap between revenue and expenditure. It will also make it unnecessary for the Government to ask the country for another loan this year.

Not only were the subscriptions to the last loan very generous, but payments of subscriptions have been exceptionally good. A greater proportion of this loan has been fully paid up than was the case with any of the previous loans during the same elapsed period. There have been fewer failures to make good on subscription undertakings. Out of the seven hundred millions subscribed, it is believed that there will be less than a million dollars which will not be finally paid in. The loan has proved a remarkable one in every respect.

The year's showing of the Canadian National Railways proved disappointing to Parliament. It is recognized that the systems taken over by the Government have not been co-ordinated to their full efficiency and the Grand Trunk has not been taken over. Still an adverse difference of forty-seven millions between what was taken in and what was paid out on railway account is regarded as a serious thing.

Fixed Charges on Railways

The fixed charges, or interest payments, on the Government railways totalled nineteen millions during the year. When the Grand Trunk is taken over and dividends paid on the guaranteed debenture stock of that company, and the charges on Grand Trunk Pacific securities are taken into account, the annual bill of fixed charges will amount to thirty-seven and a half millions a year. Therefore, the operating expenses and thirty-seven and a half millions more will have to be earned before Government railways begin to turn anything into the treasury.

The competition of the Canadian Pacific is one of the controlling influences in the railway situation. The fixed charges of the Canadian Pacific are only ten millions a year.

The Government is faced with the option of paying the railway deficit out of general taxation returns or raising the rates to a point which would provide for operating costs and fixed charges. If the rates on the Canadian National system were raised the Canadian Pacific rates would have

to be raised or the Government railways would not be able to compete for business. The suggestion that the rates of both lines should be raised and the surplus taken by special taxation from the Canadian Pacific does not meet with favor, for the Minister of Railways has stated that the Canadian Pacific would be able to put its extra earnings into betterments instead of into the Canadian treasury. This would mean that when the Canadian National system developed to a self-sustaining point, the Canadian Pacific would be developed to such a degree of physical perfection that it would be more than able to compete with the Government system. An increase in the transportation rates of the country would handicap business and be the subject of as great protest as would the paying of the railway deficit from the treasury. It is conceded that the management of the Canadian National Railway system is earnestly striving to make ends meet, and President D. B. Hanna has declared that given the Grand Trunk and reasonable time for co-ordination, he will be able to make the Government railways a paying proposition. This may be the worst year, and it is certain that Mr. Hanna and his associates will be given a further opportunity of making good their undertaking to turn the Government Railway system into a profitable thing for the country, without resorting to a general rate increase, except such as is given to Canadian and American competitors.

Progress of Merchant Marine

One link of the Canadian transportation system is paying its way and even better. This is the Canadian Merchant Marine, which consists of twenty-three ships, and which earned a profit of a million and a half dollars last year, although not all of the vessels had been launched and in service long enough to contribute to the earnings. The total fleet, when completed, which will be this year, will number sixty-three vessels and will be operated in conjunction with the Canadian National Railway system. As long as tonnage rates keep up this fleet should prove a profitable venture and will enable the Government railway management to maintain an efficient carrying system on both sea and land. Properly handled the rail and ocean services of the Government should prove a strong factor in developing Canada's foreign trade. Already Canadian Government vessels are on all the oceans and the Canadian flag on Canadian Government ships has been flown over cargo carriers in European, Asiatic, and South American waters.

The measure providing for Canadian representation at Washington has been introduced and will be one of the early bills to become law. The extent of Canada's representation at Washington is not indicated beyond a vote of sixty thousand dollars in the estimates. It is held that this should provide adequate representation, as the salary of the Canadian High Commissioner in London is only ten thousand dollars. There is no indication of who may be named for the Washington post, but the Government feel that there should be a strong man placed there.

Prospect for Labor Legislation

It is not expected that there will be labor legislation looking toward the eight-hour day or collective bargaining. It has been pointed out to organized labor that in this as in any other matters Canada cannot lead such powerful competitors as the United States. That country has not become a member of the League of Nations and has not enacted the legislation promised by the Peace Treaty. Canada has to compete with the United States as well as with the other strong nations of the world, and cannot enact laws in respect to labor or any other problem that will make competition impossible.

The naval programme of Canada will be modest for some years. Admiral Jellico made a report showing how Canada could participate in naval development if she desired to do so. The British Government offered ships. The situation was placed before a caucus of Government followers and the verdict of the caucus was that for the present there should be little or no expenditure on navy. But with ships on the seas carrying cargo it was felt that there could be no absolute abandonment of the navy. Therefore, the Government has decided to accept a cruiser and a couple of destroyers from Britain and to reorganize thoroughly the Canadian naval department. It is known that this has been badly needed. During the war first-class naval men were placed in Britain where they were most needed; and what was left were assigned to the outlying posts. Now that the war is over, it is held that the overseas naval organizations, such as that of Canada, are due for improvement. Canadians in the naval service of Britain are to be recalled to Canadian posts and men on this side, who have not shown high efficiency will be dispensed with. The work of reorganization has already begun.

There is no indication that the present session will be prolonged, controversial or anything but a good working meeting of the Canadian law-makers.

Important Customs Announcement

Drawback Regulations Are Amended

The general drawback regulations applying to articles manufactured or produced in Canada wholly or in part from imported duty paid materials are amended, to take effect from the 6th June, 1919, as follows:—

"When imported materials on which duties have been paid are used, wrought into or attached to any article manufactured or produced in Canada, there may be allowed on the exportation of such articles beyond the limits of Canada a drawback of ninety-nine per cent. of the duties paid on the materials used, wrought into or attached to the articles exported; provided that when both imported and domestic materials of the same class are used in the manufacture of the articles exported such drawback shall not be computed on a greater quantity of materials than entered into the exported goods; provided further, that such drawbacks shall not be paid unless the duty has been paid on the materials so used as aforesaid within three years of the date of the exportation of the Canadian article, nor unless the claims as presented at any one time aggregate ten dollars.

Claims for drawback submitted after the 31st day of December, 1920, shall not cover goods exported for more than one year and must be presented to the Customs with complete evidence attached within a period of six months from the date of the last export entry covered by the claim."

Exports to Newfoundland

Imported duty paid goods have been permitted to be exported to Newfoundland subject to drawback of 99% of the duties paid. The order-in-council authorizing this arrangement is dated 17th July, 1879, as amended by O. C. dated May 25th, 1883. These provisions have now been extended so as to include any British colony or possession in the Western hemisphere. Thus, imported duty paid goods may be exported in the same condition as imported to any British colony or possession in the Western hemisphere subject to drawback of 99% of the duties paid thereon. The claim for drawback must be made within six months of exportation of the goods; and the value of the articles claimed on at any one time must not be less than $100. Customs Form K. 13, is to be used in filing these drawback claims with the Customs.

Drawback for Home Consumption

When imported woven fabrics, on which customs duty has been paid, are used on and after the first day of January,

1920, in the manufacture of hatters' bands, there may be paid a drawback of ninety-nine per centum (99%) of the duty paid on the woven fabrics so used.

Canadian Section Revived

Franco-Canadian Trade

The Association has been informed that the Canadian Section of the British Chamber of Commerce, Paris, which was inactive during the war, has been revived, with the co-operation of Lieut.-Col. H. Barre, the Canadian Government Trade Commissioner, and that an effort is being made to secure support from Canadian manufacturers, merchants and traders.

The aims of the Canadian Section include such matters as (1) the obtaining of information on the commercial standing of French firms; (2) supplying of exact customs classifications of goods; (3) putting Canadian houses in touch with suitable agents; (4) notifying changes in French customs duties and proposed commercial legislation likely to affect special trades; (5) communicating enquiries from French buyers of Canadian goods; (6) filing members' catalogues for the information of buyers; (7) giving commercial and statistical information concerning Franco-Canadian trade; (8) aiding members in customs and technical difficulties; (9) providing means for the settlement of trade disputes by arbitration.

The subscription to the Canadian Section amounts to frs. 100 for non-resident members, and frs. 200 for resident members. The subscription includes a monthly bulletin, giving valuable information regarding new French legislation, change of regulations, decrees, etc.

Industrial Control

The Plant Executive or the Labor Leader—Which?

By A. B. WEEKS

General Manager, Canadian Northwest Steel Co., Limited, Vancouver

ESPECIALLY since the ending of the war by the signing of the armistice on November 11, 1918, the clamor by labor organizations for increased wages, shorter hours, better working conditions, collective bargaining, and their attempt at industrial control through recognition of the unions, and their attempt at industrial control through the closed shop, have been continuous and persistent.

Our industries, both great and small, through their executives, in the face of insistent economic reasons, or may we say international economic reasons for increased production and lower production costs, have granted one demand after another in the way of wage increase and curtailment of hours, at the behest of the labor organizations.

What is the Solution?

This clamor by organized labor is becoming ever louder, and their demands ever more insistent, until we have reached that stage in our industrial life where not only our continued prosperity but our very existence is threatened, at least temporarily, through our disregard of the laws of business economics, particularly as they relate to international trade.

For many years it has been a continuous contest on the part of the employer against outside forces, namely, the labor unions, for the control of the men engaged in industrial labor in our various industrial establishments. In the past few months the demand on the part of labor unions for a share in management through collective bargaining, through the labor unions, plant councils, etc., have become insistent, and the questions confronting business management at present, in the face of these ever-increasing demands, is, What is the solution?

Much has been said in the meetings of the various manufacturers' and employers' organizations, of the necessity for a campaign of public education. The writer grants that the necessity for such a campaign exists, but that a campaign of this character would of itself cure the present labor unrest is very doubtful. In the writer's opinion the time for an active campaign for the control of our labor by the plant executive has arrived. The campaign on the part of labor leaders for the control of labor is continuous and persistent, until the average workman is inclined to accept the teachings of the labor leader and classify the very occasional remarks of his employer as "some more hot air from the boss." Tactics must be met by tactics, and if the contest on the part of the labor leader for control is continuous, then on the part of the employer his endeavor for control must be continuous, collective and persistent.

In the writer's opinion much may be accomplished to gain the confidence and control of our men by closer co-operation with them; by a series of thoroughly organized and regular round table conferences, whereby the employer may gain a better understanding of the workman's viewpoint, his necessities and the conditions surrounding his life, and at the same time show the workman that the matter of wages and hours of work are not governed by the mere arbitrary ruling of the boss, but are on the other hand governed by the economic laws which control our national and international trade relations.

The average workman is an intelligent, fair-minded and patriotic citizen, and by instructing him in at least the fundamentals of the natural economic laws governing industry, his viewpoint toward wages, hours of labor and amount of production will be materially changed through his ability to analyze cause and effect, and in place of the present misunderstanding and unreasonable demands, we shall soon find that in our workmen we have a co-operative force working toward our mutual welfare and the public weal through the establishment of harmonious relations between employer and employee, without the intervention of any third party in the shape of labor unions.

Employers Should Get Together

Can the employers of this country not get together along these lines and effect a solution of our present vexing labor questions? This lack of co-operation and understanding between the employer and his employee, in the years past, has paved the way for the labor union, and is it not worth while, by endeavoring to establish confidence, co-operation and understanding between employer and employee, to arrive at those better relations which will make the labor union unnecessary and undesirable?

The answer to the question of "In whose hands shall industrial control rest—a plant executive or the labor leader?" lies in the hands of the employer himself. Which shall it be? Are you going to answer the question or allow the labor leader to answer it for you?

The 1920 Convention Province

An Account of the History, Resources, Scenic Attractions and Industrial Development of the Province of British Columbia in which the 1920 Convention of the C. M. A. will be held

As a useful preliminary to the Excursion to the Pacific Coast, in which a large number of manufacturers from the Eastern and Prairie Provinces will participate, there is presented in the following pages a section devoted specially to a description of British Columbia. The Coast province is one possessing a rich and varied interest, not alone for the searcher after natural beauty, sport and recreation, but for the man of affairs whose concern is with the making, transportation and sale of goods. The coming Excursion will afford a unique opportunity for an examination at close range of many of the more famous attractions of the Province as well as of that rapid growth in industrial activity which has characterized the past few years. To give excursionists a valuable basis of knowledge, which will enable them to appreciate more fully the position occupied by British Columbia in the Canadian Confederation, is the more immediate purpose of this compilation.

Starting with the history of the Province, which is rich in romantic interest, its extent and resources are taken up, and then attention is devoted to such prominent industries as Lumbering, Mining and Shipbuilding. Here will be found useful statistics and other information that will give a comprehensive idea of the development of each industry. Space is also given to the industrial activities of Vancouver, Victoria and New Westminster, and the special attractions of each place are enumerated. Altogether, when one has read through the various articles, a very good idea of the position of the province is obtained.

The 1920 Excursion to the Wonderland of the Pacific, undertaken as it will be in one of the most charming seasons of the year, is certain to prove a delightful experience for all who join it, while from the business standpoint it should result in the establishment of a stronger bond of sympathy and interest between East and West.

The Excursion party will leave Toronto on special trains on the evening of Saturday, May 29th, and after making brief stops at Winnipeg, Brandon, Regina, Moose Jaw, Medicine Hat, Lethbridge, Calgary and Edmonton, will reach Vancouver on the morning of June 7th. The interval from June 7th to June 11th, will be spent in Vancouver and Victoria. On the return journey stops will be made at Lake Louise and Banff and excursionists will have the choice of travelling by all rail or rail-and-water route from Winnipeg to Toronto.

An Inspiration in Stone

Diagonally across the Inner Harbor of Victoria from the Empress Hotel rises the stately pile of the Provincial Legislative Buildings, one of the most beautiful and ornate buildings in Canada. This will be one of the sights to attract the interest of visiting members.

British Columbia in the Making

By B. A. McKELVIE

ACCORDING to a local legend, two angels were sent to seek the most favored portion of the earth as the future home of a worthy nation, and to endow it with the richest gifts from Nature's store-house. They selected the northern half of this continent, and lavishly bestowed on it the wealth of minerals, forests and waters which they had brought. When the work had been done, the angels paused and surveyed it. One was satisfied, but the other exclaimed: "We have distributed our treasures with an indiscriminate hand, but have left no place for the husbandmen of a mighty race." So they returned to their labor and swept the riches westward, piling up treasure-bearing hills and creating fertile valleys in order to leave in the centre of the domain a rolling plain ready for the plough of the tiller.

Discovery of the Province

This, then, is perhaps the reason that British Columbia has such a wonderful proportion of Canada's natural resources; why its great wooded mountain ranges, bursting with gold, silver and baser metals extend from the prairies to the sea, forming thousands of land locked harbors and winding inlets teeming with fish, while its countless valleys are productive of the best to be found in the realm of agriculture.

It was fitting that the discovery of this Province should have been made by men who were seeking the Eldorado of tradition. That they found it is the belief of those who have the "open sesame" to the rock-ribbed chambers of wealth in this western land. The magic words of success are, they say, "faith and work."

Tradition says that Juan de Fuca was the first to visit this part of the Pacific Coast.The date of his journey is given as 1592, but reliable information respecting it is not available. His name was given by a later explorer to the straits separating Vancouver Island from what is now the State of Washington. No actual record is obtainable before the year 1775 when Bodega and Hecate visited the locality.

British Columbians really date the history of their province from the arrival of Captain James Cook in 1778 on his third voyage of discovery. He had been commissioned by the British Government to explore north of the 45th degree in the hope that a passage might be discovered from the Pacific to the Atlantic. In this, of course, he failed, but he gathered valuable data respecting the coast, and chartered and named such places as Nootka Sound, Prince William's Sound, and Cook's Inlet.

Chelikoff, a Russian, was the next explorer of note to arrive. He examined the country from the south-west extremity of Alaska to Prince William's Sound. This was in 1783, the same year that the North-West Fur Trading Company was formed in Montreal to carry on business in the western wilds.

Other seamen and traders followed, and in 1787 Captain Barkley records the discovery of the Straits of Juan de Fuca, which he named after the Spanish navigator of two centuries before. The following year Captain Meares started shipbuilding on this coast when he launched the "North-West Coast" at Nootka. In 1789 a dispute arose between the British and Spaniards over the trading rights to the country. The Spaniards seized the British post and ships. The "Nootka affair" was the result. For a time it looked as if war might eventuate, but the settlement of the difficulty, October 28, 1790, put an end to such fears.

Arrival of Capt. Vancouver

It was to settle the claims arising out of the "Nootka affair" that Capt. George Vancouver was sent out by the British Government as commissioner. Having accomplished his mission he continued on the coast exploring the uncharted waters, and to him belongs the credit for first circumnavigating the great island which now bears his name.

The years which followed are replete with tales of wild adventure and daring exploits on the part of the intrepid traders who ventured into the country in search of wealth.

The first journey overland from Eastern Canada was made by Sir Alexander McKenzie, who reached tide water near Bella Coola, in 1793. Fifteen years later Simon Fraser explored the river, named in his honor, reaching the Gulf of Georgia along its banks.

The boundary between Alaska and the British territory was fixed by a treaty between Great Britain and Russia in

1825. The same year Fort Vancouver, now in the State of Washington, was located.

The Hudson's Bay Company, the trading organization which had so much to do with the development of Canada since its incorporation in 1670, was given exclusive privileges in the western country in 1836. In 1842 this company selected Victoria as its headquarters on the coast, and the next year erected a fort and stockade.

Settlement was fairly rapid about Victoria, with the result that in 1849 Vancouver Island assumed the status of a crown colony. Fort Nanaimo was founded in 1852, following the discovery of coal at that place two years before. The old blockhouse is still standing in an excellent state of preservation, in the business section of the city. The stockade, however, disappeared many years ago with the growth of the town.

The first elections on Vancouver Island were held on August 4, 1856, and eight days later the first Legislative Assembly convened at Victoria.

Gold was discovered on the Fraser and creeks of the Cariboo district in 1856. Two years later there was a rush of gold seekers to the vicinity, and thus started the first real settlement of the country. A few of these pioneers who came in the first stampede are still alive to tell of those adventurous days.

It was in 1858 that the mainland of British Columbia became a Crown Colony, and its boundaries were defined. The capital of the new colony was located on the banks of the Fraser River. It was to have been called Queensborough, but Her Majesty, Queen Victoria, who was asked to name it, expresed her desire to have it known as New Westminster. The first session of the Legislative Assembly met at New Westminster January 21, 1864. Vancouver Island and the mainland united as British Columbia in 1866, the first Parliament meeting at Victoria in 1868. Two years later the province entered Confederation.

November 6, 1885, saw the connecting by steel of British Columbia and the Eastern Provinces, when Sir Donald Smith, later Lord Strathcona, drove the last spike on the line of the Canadian Pacific Railway. The terminus of the line was to have been Port Moody at the head of Burrard Inlet, but later it was moved fourteen miles nearer the mouth of the inlet to the small settlement of Vancouver. The City of Vancouver was incorporated in 1886, and was destroyed by fire the same year.

Such, in brief, has been the story of Canada's Pacific province. In the thirty-five years which have elapsed since the first locomotive brought through communication from the East, the development has in many ways been phenomenal, and as yet its natural resources are to a great extent unknown and practically untouched.

The discovery of gold in the Klondike in 1896-7 gave the trade of the province considerable impetus, and laid the foundations for many of the manufacturing plants of to-day. Full advantage was not taken at the time of the opportunities offered by the northern gold fields. The result was that the Port of Seattle gained a lead over Vancouver, which the Canadian city has not yet overcome.

The industrial development of British Columbia in the days before the war was greatly retarded by local conditions. Transportation problems, high wages, and production costs and lack of markets. Like every newly opened western region of great potentialities, the province suffered from the activities of the "wild-catter" and his fellows, the "boomster" and "land speculator."

A Giant of the Forest

Big timber on Vancouver Island, between Nanaimo and Alberni

From the trial and sobering influences of war, British Columbia has emerged keen, alert and sensible to the necessity for business on business lines. Land values have been reduced, and are more in keeping with their real worth. The "wild-catter," "boomster" and "speculator" have departed, and in their place are to be found men ready to discuss expansion and development along sane and reasonably safe commercial lines.

No longer is the province served by one railway. Three transcontinental lines traverse the mountain passes of the Rockies, opening up rich areas for settlement. Two of these are under the control of the Dominion Government, while the Provincial Government railroad is being completed this year diagonally across the province. The settlement of the coast district with its 27,000 miles of tidal shore line, is resulting in new and more frequent marne communication. The waterborne commerce of the world is increasing to and from Canada's Pacific ports, demanding the construction of great concrete piers, wharves, warehouses, dry-docks, etc.

The greater equalization of living conditions between the western province and the older portions of Canada with the consequent levelling of wages paid in dustry, the utilization of by-products, and the introduction of improved machinery and business methods have reduced the margin between production costs of the East and West. Thus British Columbia manufacturers have better opportunities in the competitive markets of the Dominion.

The Extent and Resources of the Province

GEOGRAPHICALLY, British Columbia comprises about 3,815,855 square miles. Its rugged coast line is deeply indented with thousands of bays and inlets, while islands, varying in size from bleak, barren rocks a few acres in extent to Vancouver Island, with its thousands of square miles of mountain peaks, forest and farming lands, parallel the shore line of the mainland.

Just what the population of the province is at the present time is something on which there is no authentic information. Some authorities compute the population at 400,000, while others declare that the province is the home of as many as 700,000 persons. In 1913 it was estimated that there were approximately 400,000 people. The early years of the war saw a great decrease, not only of urban, but of the agricultural population. The clarion call of battle drew men from the land, the forest, and the mine. The Empire's danger brought the sturdy manhood of the West forward in unexpected numbers. More than 35,000 were accepted for British Columbia's fighting battalions, while thousands went overseas as mechanics in non-combatant services, or as reserves for Britain's army or the gallant navy. The men who left the province for the battlefields of Europe numbered at least 50,000, although there is no way in which the exact total can be ascertained. Certain it was that many communities were denuded of their physically fit men, and before conscription.

A Mighty Catch of Fish

Scowload of salmon from the west coast of Vancouver Island being landed at Victoria

The initiation of shipbuilding and other war industries brought a rush of artisans to the manufacturing centres, particularly Vancouver, Victoria, and New Westminster. The close of the war and the return of the veterans from Europe has greatly increased the population. While not all those who left the province have returned—British Columbians having died gallantly on every field from Ypres to Mons—the total number of citizen-soldiers in the province to-day is far greater than the quota enlisted here. Every man who went away from this province, it has been said, was a publicity agent, and as a result of their stories of the wonders of "Old B.C.," thousands of their pals of the trenches and billets have come west to make their homes on the Pacific.

Greater Vancouver formerly boasted 150,000 residents. It now has, on a conservative estimate, at least 25,000 more than that number. In 1912, the banner year, 102,000 persons resided in the city proper. The assessment census for 1919 shows over 112,000. The same applies to the City of Victoria which now has a resident population of approximately 65,000.

The population of the agricultural districts has increased as rapidly as has that of the cities. This has been largely due to the Dominion and Provincial Government efforts to settle veterans on the land. It is safe to consider the population of British Columbia to-day at 500,000.

The actual resources of the province are fairly distributed. The coast district from the international boundary line to the Portland Canal, including the islands, is rich in mineral, coal, timber, and fishery wealth. The sheltered valleys, particularly that of the Fraser River and on Vancouver Island, are productive agricultural areas.

Farming and mining are extensively carried on in the interior districts, while lumbering is added to the returns from these sources in the mountain regions. The great central districts have countless fertile acres, capable of supporting a tremendous population. The rivers and creeks bear values from the hidden gold of the hills.

An illustration of what can be accomplished in the development of this western country may be cited from the returns in agriculture for the past year. Since the war greater attention has been paid to land settlement and agrarian pursuits than ever before. Although the areas on which veterans have settled under the direction of the Dominion and Provincial Governments have not yet been able to demonstrate their productivness, the richness of the soil has been amply proven.

The increase in the value of the crops for 1919, was more than $10,000,000 over the aggregate of the previous year. The acreage of grain was greater and the yield 50 per cent. above that of 1918.

The increase in dairying was marked. The returns were $676,452 greater than ever before. This was largely made up by the manufacture of 29,604 pounds of butter more than the 1918 total, and by the sale of 300,000 additional gallons of milk.

On an estimated value of $12,287,510 invested in live-stock, there was, according to the Provincial Government Department of Agriculture, an increase in horses, sheep, swine, and other farm animals amounting to $2,588,631. Of this amount $1,786,280 represents the increase in the value of cattle.

Poultry ranching is being largely engaged in. During the year a desirable increase in production from these small farms was reported. This included the sending to market of 834,484 dozen eggs and 1,096,801 pounds of poultry meat over the total disposed of in 1918.

British Columbia fruits have long been noted for their excellent quality, size and coloring, and this branch of farming is becoming more and more important each year. Orchards planted in pre-war days are now coming into full bearing. Each year the proportions of the crops will increase. The added value of the fruit shipments of 1919 over the corresponding twelve months was $2,498,766, representing 26,743,744 pounds.

Under its land settlement scheme the Provincial Government cruised 101,309 acres during the year, and actually acquired by purchase 18,763 acres. Of this land, 10,000 acres was allotted and sold to 68 settlers, and 8,500 acres were made ready for settlement. Work was started on 13,000 acres additional.

Province's Mineral Wealth

While the mineral production of British Columbia last year, as was anticipated, did not reach the total of 1918, it aggregated $33,,421,333. The decrease was almost entirely due to the falling off in the demand and price for copper which followed the end of the war. It is declared by experts that the prospects for the industry have never been more hopeful, nor the proposed development greater than at present. The ore reserves of British Columbia can never be estimated, but scientists have calculated the coal deposits at 83,828,523,000 tons. The mines of the province have produced to December 31, 1919, the vast total of $670,774,914.00.

The lumber industry is one from which the people of the Pacific Coast derive an immense revenue. With the greatest stand of saw log timber on the continent, and illimitable stocks of pulp wood, the future of the lumbering industry is filled with promise. It has been computed by one statistician that if the timber of the province was all cut that a board walk 2,000 feet wide could be built around the equator, and there would be enough left over to construct a stairway to the moon.

While fishing resources of the coast waters still yield a rich harvest, the intensive methods used in the past on the Fraser River have practically eliminated the runs of sockeye salmon. The returns, however, are still exceedingly profitable. The public, canners, and fishermen are now fully alive to the need for rehabilitating the rivers, and are giving careful study to the propagation of salmon. It is expected that in a few years, with proper handling, the Fraser River runs will again reach the proportions of other years. The deep sea fisheries are in a prosperous state, and there is every indication of their growing importance.

Not alone by the growth and development of her vast natural resources does British Columbia expect to become a wealthy and progressive province. It is expected that the trade development of Canada will be carried on largely through the Pacific ports of the Dominion. This idea is strengthened by the belief that the Canadian Government will, through its ocean services, bring great quantities to the Port of Vancouver for shipment over its railway, and will export largely from British Columbia.

Across the broad Pacific are countries and peoples anxious and ready to do business with Canada. They require our manufactured articles, and in return are ready to send us such essentials as we need in our industries. Such trade means much to the future prosperity of the nation. British Columbia realizes the importance of it, and is preparing to fit its harbors and ports to handle the great fleets of commerce-carriers which will undoubtedly come as economic conditions rectify themselves after the turmoil of war.

B.C.'s Shipping Facilities

Dry docks are being constructed at Vancouver and Victoria. There is already a giant dry dock at Prince Rupert, now being used for steel ship construction. Government docks are being started at Vancouver to cost $4,000,000, while other harbor improvements under contemplation will cost another $1,000,000. The Dominion Government is already possessed of one concrete dock at Vancouver, which cost $2,000,000, and a grain elevator which holds 2,500,000 bushels. The C.P.R. will shortly start on the expenditure of several million dollars for additional docking facilities demanded by the increased trade of its services.

While British Columbia can do much to bring prosperity through trade to the Dominion, the whole of Canada must cooperate, and particularly the manufacturers of the nation. The markets are waiting and the people of the west are ready to do their share in keeping wide open the sunset gateways to the future prosperity of the great Dominion. Let everyone help to bring that prosperity as speedily as possible.

Lumbering in British Columbia

LUMBERING is British Columbia's most accessible natural resource, and the one most easily exploited. It is not surprising, therefore, that the contributions from this source to the public revenues and the prosperity of the province are larger than those from any other industry.

It has been said that "the forest reserves of British Columbia are inexhaustible." This, of course, is true only to the extent that measures are undertaken for conservation and reforestization. At the present time the natural growth of the forests is approximately three times the yearly cut, but the destruction by fire reduces this to a narrow and dangerous margin. So extensive, however, are the woodlands of the coast and interior hills and valleys that with the natural increment entirely off-set by conflagrations, it will take two hundred years to denude the province of its merchantable timber at the present rate of production.

The cut for last year was 1,758,329,995 feet (board measure). The stand of saw log timber is variously estimated from 350 billion feet to 400 billion feet. The immensity of this can be judged from the fact that the Dominion forestry experts give the total standing timber in Canada as being between 600 billion and 800 billion feet. This gives British Columbia credit for one half of the forest reserves of Canada. The pulpwood stand in British Columbia is calculated as being 250 million cords. The line of demarkation between pulpwood and saw timber is variable. Ordinarily saw-log timber is said to be trees having a diameter of more than 10 inches, those of smaller thickness being used for pulpwood purposes. But as trees of this thickness and under are often used in saw mills and those of larger dimensions for pulp, the exact reserves of pulp wood cannot be exactly stated. The figure given, however, is considered to be a conservative one.

Some idea of the menace of fire can be gleaned from the estimate of Government engineers that twice the amount of the present stand in the province has been destroyed by fire in the past. Or that the fire fiend has wiped out the equal of the total available supply in Canada to-day.

Interior of Dining Room
A view showing how well the men are provided for in the way of food and service

While the cut of saw logs was not as great during 1919 as in the previous year, the value of the timber products showed an increase of more than $16,000,000. The decrease in the cut was due to the cessation of the War Board's spruce production camps—for airplane timber—on Queen Charlotte Islands. Here during 1918 some 28 million feet were cut—more than the total of all other districts on the North American Continent.

The development in the lumber and pulp industries during the past year are indicated in the comparative tables:—

	1918	1919
Lumber	$26,219,697	$31,000,000
Pulp and Paper	10,517,250	12,554,257
Shingles	5,805,417	12,801,564
Boxes	1,845,195	2,142,000
Piles and Poles	394,871	769,962
Miscellaneous (cut by railroads, mines, etc.)	1,773,821	5,256,520
Ties	*	2,091,346
Additional value contributed by the wood-using industry	1,689,810	1,720,000
Product of Dominion lands	4,953,829	*
Laths	120,278	195,594
Logs exported	148,808	991,365
Total	$54,162,523	$70,285,094

* Included in other items.

Water-borne shipments from British Columbia ports in 1919 show an increase of about 17,000,000 feet over those for 1918. The total was 105,111,090 feet, the shipments in 1918 being 88,069,029 feet. Roughly, 60 per cent. of the water-borne shipments were to Great Britain, no less than 65,264,720 feet being sent there in the twelve months ending December 31. Exports to other countries were: Australia, 6,891,728; South America, 1,551,574; China, 16,218,533; Japan, 4,537,959; Africa, 5,044,852; United States, 4,139,074; Manila, 987,562; Straits Settlement, 475,088.

A typical logging scene on the Pacific coast, showing the goodly sizes of some of the logs taken from the forests of the province

Pulp and paper industry figures for the year were most gratifying, both in point of value and production. In 1918 the newsprint manufactured was 112,206 tons. This increased the following year to 123,607 tons. The production of sulphite pulp increased from 66,054 tons to 80,047 tons. Sulphate pulp reduced from 12,188 tons to 9,473 tons, being reflected in the decrease in the weight of Kraft papers, of which 7,202 tons were manufactured in 1919 as against 8,277 tons in 1918. The manufacture of ground wood pulp increased from 91,145 tons to 99,769 tons. The value of the outfut of the pulp and paper industry increased by $2,000,000.00.

Where Heaviest Timber Stands

The heaviest stands of timber and most extensive forest areas are located in what is known as the coast district. This is West of Cascade Range, and is again sub-divided into districts termed: Southern Mainland, East Coast of Vancouver Island, West Coast of Vancouver Island, Northern Mainland, and Queen Charlotte Islands. Logging in the past has mostly been carried on in the Southern Mainland and East Coast of Vancouver Island districts, where the majority of the lumber mills are located. Incidentally there are about 390 mills in operation in the province, about 150 of which are in the interior districts, and the balance on the coast. Most of these are located in the vicinity of Vancouver, New Westminster, Victoria, and Nanaimo.

In these districts it is estimated that there is still standing 120 billion feet of timber, made up as follows: Douglas fir, 50 billion; Western cedar, 35 billion; hemlock, 20 billion; balsam, 10 billion; spruce, two billion, and the remainder of less commercial varieties. On the West Coast of Vancouver Island there is judged to be, 55 million feet of the varieties named. This added to the reserve on the East Coast and Southern Mainland gives 175 billion feet, or 50 per cent. of the estimate for the province.

The Forests of the North

The Northern Mainland district, extending from Queen Charlotte Sound to Portland Canal is a rocky and mountainous country, timber being confined for the most part to the shore line and valleys. This district contains, however, 23 billion feet of saw timber and considerable stocks of pulp wood.

The stand of 15 billion feet of timber on Queen Charlotte Islands is mostly Sitka spruce and hemlock.

While the forests of the interior do not cruise as heavy to the acre, the total merchantable lumber is high in the aggregate. Owing to the difficulties of transportation the development inland has not been as rapid as on the coast. The estimate of timber is given at 136 billion feet, divided as follows: Spruce, 58 billion; cedar, 18 billion; balsam, 14 billion; Douglas fir, 12 billion; hemlock, 12 billion; lodge pole pine, 12 billion; bull pine, four billion; larch or tamarac, three billion; Western white pine, two billion feet.

The Douglas fir, the most valuable tree on the Pacific Coast, is highly prized for its strength and durability. It grows to tremendous heights, specimens 300 feet high being not uncommon, while its base circumference is often from 30 to 50 feet. It grows as far north as the 52 degrees, from where red cedar, hemlock, and spruce predominate in the forests. Douglas fir is not confined to the coast, being found as far inland as the slopes of the Rocky Mountains.

Some Famous Kinds of Wood

The red cedar is next in importance. From it the shingles which are exported in such profitable quantities are milled. These are gaining in popularity in the markets of the world.

The varieties of spruce which grow in such quantities throughout the province are fast gaining in value, furnishing the supply for the pulp mills, while the coast, or Sitka, spruce is especially suitable for airplane construction on account of its strength, lightness and elasticity.

For a long time hemlock was not used to any great extent, but this excellent wood is gaining in popularity as its admirable qualities are recognized. White pine, tamarac, balsam, yew, maple and cottonwood are also cut for commercial purposes.

There are twenty-three coniferous trees and a like number of broad leaf trees indigenous to the Province. The capital invested in the lumber industry of British Columbia

Ships in the Process of Building
View of one of the six shipbuilding plants in operation in the Vancouver district

The Coast Shipbuilding Industry

BRITISH Columbia shipbuilders—even in the hectic days of war production—never attempted to sacrifice efficiency in construction and reliability of workmanship for records of speed in launching. They preferred to build ships that would serve the Empire's needs in the long years of peace rather than hulls which would serve only for the emergencies of war.

In localities to the south where the advertising value of rapidity in building was highly regarded, useless, unseaworthy boats swing idly at anchor—representing millions of dollars of wasted public funds, while long, tedious enquiries and nasty scandals now occupy the attention of Government officials. Foreign buyers, anxious for bottoms to replace those scuttled by Hun submarines, have had to refuse acceptance because the vessels delivered to their order were unable to make the trip across the Atlantic.

Boats Built Seaworthy

It is not with any sense of jubilation at the loss to the commerce fleets of the world that British Columbians view these circumstances. But a sense of pride is permissable in the fact that the boats launched from the Canadian ways are now carrying cargoes to and fro across the oceans of the two hemispheres. This pride is especially worthy when it can be openly stated that acceptance was not refused of a single ship put into the water from a Western Canadian yard.

When, in the days before the war, suggestions were made that British Columbia should be the home of extensive shipbuilding plants, the idea was ridiculed. "Where would the shipwrights come from?" was one of the questions asked by scoffers. "Did British Columbia hope to build boats as seaworthy as those from the Clyde?" was another oft-repeated interrogation, while the concluding argument was the statement that local constructors would have to import all the machinery and auxiliary plants for the finished ships.

Such were the objections raised by those who doubted the energy, resource and determination of western business men. The answer has been given by the dozens of wooden craft and great steel freighters that are to-day scattered over the face of the globe. The declaration of the Department of Marine that the ships constructed on Government order at Vancouver were the equal of any afloat, has proven the workmanship, while the busy mechanics in the metal shops of Vancouver and Victoria have given denial to the libel on their capabilities by turning out first-class boilers, engines and auxiliary equipment.

It may be of passing interest that the cabled reports for one week recently showed that British Columbia-built boats were at such remote ports as: Sevastopol, Newport News, Liverpool, London, Yokohama, Rotterdam, Boston, Barry, Trieste, Barcelona Martinique, Constantinople, Cardiff, Immingham, Malta, Venice, Buenos Aires, Gothenburg, and Sydney.

Active shipbuilding commenced in British Columbia when the Provincial Government offered a guarantee of interest on the earnings of wooden ships constructed and operated from the province, as an encouragement to the industry. Advantage was taken of the offer by Mr. H. W. Brown and associates. Work was started on a fleet of twelve auxiliary five-masted, bald-headed schooners for the lumber trade by the Wallace Shipyards, Ltd., of Vancouver, and the Cameron-Genoa Shipbuilding Company, of Victoria. These boats were equipped with 320 h.p., Bolinder Diesel engines.

The "Mabel Brown," 2,500 tons, was the first boat launched, taking the water from the Wallace ways on January 27, 1917. In the following five months this yard launched these schooners at the rate of one a month.

Before the first wooden schooner was well on the stocks, Mr. A. Wallace, head of the shipbuilding company, determined to extend his operations to include steel ship construction. J. Coughlan and Sons, steel fabricators, had also embarked on an ambitious scheme for building steel boats, locating a four-ways yard on False Creek. The first boat was an 8,800 ton ship, originally on private order, but requisitioned by the Admiralty for the period of the war. This was the "Alaska," the largest vessel of its kind attempted to that time in Canada. Its launching on January 19, 1918 was a complete success. But the honor of putting the first steel ocean-going cargo steamer into the water from a Canadian shipyard went to the Wallace Company. It was the "War Dog," 4,800 tons d.w., which went down the ways, May 20, 1917.

The Tonnage of 1918

During 1918 forty-two vessels were launched in British Columbia, having a total tonnage of 155,600 tons d.w. Of these, Vancouver contributed eight steel and twelve wooden steamers, and six wooden schooners. Victoria built nine wooden steamers; New Westminster four wooden steamers; and Coquitlam three wooden steamers.

During that year there were in addition to the steel shipyards already mentioned, the following yards engaged in building wooden craft; Cameron-Genoa Shipbuilders, Ltd., and the Foundation Co., of B.C. Ltd., at Victoria; Pacific Construction Co., Ltd., Port Coquitlam; New Westminster Construction Co., Ltd., New Westminster; Western Canada Ship-

yards, Ltd., William Lyall Shipbuilding Co., Ltd., which took over the Wallace Shipyards' wooden construction ways, at Vancouver.

Two new yards started work on steel boats during 1918. These were the Harbor Marine Co., Ltd., of Victoria, and the Prince Rupert Drydock and Engineering Co., Ltd., Prince Rupert, both of which undertook Government contracts.

The year saw the closing of the wooden shipyards of the province. This class of vessel had been constructed to meet the emergencies of war, and with the coming of peace boats of a more durable type were required.

During the year the output of British Columbia yards totalled ten steel and forty-six wooden vessels, with an aggregate tonnage of approximately 170,500 d.w. Four of the larger craft were delivered on the order of the Imperial Munitions Board, while six were for the Canadian Government Merchant Marine. The wooden craft were for French, Norwegian, and Greek interests. Forty of them were wooden steamships for French buyers, two Greek, one Canadian, and three Norwegian vessels were launched during the year.

The programme was as follows:—

J. Coughlan and Sons, Vancouver, six steel ships, with a total of 51,400 tons.

Wallace Shipyards, Vancouver, four steel ships of 18,800 tons.

Foundation Co., Victoria, twenty French steamers, 60,000 tons.

Cholberg Ship Co., Victoria, three Norwegian sailing vessels, 4,500 tons.

Lyall Shipyards, Vancouver, eight French ships, 12,000 tons.

Western Canada Shipyards, Vancouver, five French ships, 7,500 tons.

New Westminster Construction Co., five French ships, 7,500 tons.

Pacific Construction Co., Port Coquitlam, two French and two Greek boats, 8,600 tons.

B.C. Marine Railway, Vancouver, steamer, Canadian, 500 tons.

The end of the year found approximately 65,600 tons of shipping on contract for 1920. The Coughlan Company had two 8,100-ton steel ships to complete for the Canadian Government Merchant Marine. One of these has since been launched. The Wallace Yard recently launched an 800-ton steel boat for the Union Steamship Co., and will build two 8,100-ton steel vessels for the Government.

The Harbor Marine Co. (Victoria Machinery Depot) of Victoria, is working on an order from the Government for two 8,100-ton boats, while similar work is engaging the Prince Rupert Drydock and Engineering Company at Prince Rupert.

Efforts are being made to induce the Government to place further orders for ship construction on the Pacific Coast, it being contended that, with some such encouragement for a short period, the industry will become permanently established, and orders can be secured in competition with foreign builders.

The Federal Government has made an offer to finance wooden shipbuilding at Victoria to seventy per cent. of the cost. There is no intention on the part of the Government to build boats of this class for its own services, but in order to assist the industry will advance, as a loan, up to seventy per cent. of the money required by private interests to build wooden boats. This, it is expected, will result in a revival of the industry to a certain extent.

It is particularly gratifying to the people of British Columbia that the boats now building in this province for the Canadian Government Merchant Marine will be put in service from British Columbia ports. It is also pleasing to know that the suggestion that steamship lines be established from Vancouver to Australasia came first from the British Columbia Division of the Canadian Manufacturers' Association.

The service was inaugurated on January 24 this year, when the "Canadian Importer" left British Columbia for the Antipodes with a Canadian cargo. Before long it is expected that the Canadian Government Merchant Marine will also ply be-

Wharves at Anyox, B. C.

Showing the facilities for handling ore and coal and shipping metal from the big smelters in the background

tween Vancouver and South American points, and perhaps to South Africa.

The shipbuilding industry has meant much to the coast province. Just how much can be judged from the fact that during 1919 the Coughlan yards alone employed on an average 2,500 men, and the earnings in wages amounted to approximately $2,100 each. In addition hundreds of persons were employed in metal trades shops and other smaller concerns dependent largely on the shipyards.

British Columbia steel shipbuilders have labored under difficulties. The supply of steel for their plants was largely imported from Eastern United States, and in this they suffered, not only from uncertain deliveries, but arbitrary freight rates, One of the greatest complaints voiced by British Columbia manufacturers is in connection with the six-cent arbitrary freight charge above the terminal rates to Seattle and Puget Sound points on rail shipments originating in Eastern United States. This charge on the steel required for a standard vessel amounts to between $8,000 and $10,000. An earnest effort is now being made to have this charge eliminated.

With steel water-borne from Nova Scotia it is expected that greater progress can be made at reduced costs. Eventually, if there is promise of permanency for the industry, British Columbia will have its own steel plants, manufacturing materials from native iron ores, it is predicted.

The Mining Industry of British Columbia

EXAGGERATION is unnecessary and words of fulsome praise idle, in describing the mineral wealth and potentialities of British Columbia. The accomplishments of companies operating on lines of scientific engineering and following common sense methods of business, bear sufficient testimony to the possibilities of the mineralized hills and valleys of the Province, while the romance of the industry has been such as to fire the mind of the most unimaginative.

Mining first attracted an influx of settlers to British Columbia. To-day it is regarded as the industry upon which the future will be most solidly established. Every portion of the Province is mineralized, and practically every metal known to North American geology is found within its borders.

Development work in the metalliferous mines has chiefly been confined to the recovery of gold, silver, lead, copper, zinc and iron, but considerable effort is now being put forth in the exploitation of the known resources of molybdenite. platinum, manganese and chromite.

Lack of transportation has retarded the growth of the mining industry, especially in those metals requiring heavy machinery for production, or necessitating the shipment of ores long distances for treatment. The great producing camps of the Province are situated either contiguous to the coast or close to railway lines. The great central and northern interior country with its veins of gold, silver, copper and lead bearing ores, must wait for the opening of roads before full development can be attained. These will only be built as required and a capital comes forward to develop the latent resources of British Columbia.

It has been often stated by public men, conversant with the extent to which British Columbia's industries have been developed: " The mining resources of the Province have not yet been scratched." The truth of this may be realized when it is stated that the great northeastern corner of the Province, comprising thousands of square miles has not yet been sufficiently explored as to admit of the publication of maps of it.

Nor have the mineral deposits of the coast districts been more than approached. This is indicated by Mr. G. A. Clothier, resident government engineer, for District Number One, comprising the coast, north of Vancouver Island, who says in his report to Hon. William Sloan, Minister of Mines:

" I would like to again call the attention of the prospector to the immense field open to him along the coast on the islands and from the head of Portland Canal north, along the eastern contact of the coast granite with the interior sedimentaries, to the Stikine river, and north of that on the same belt, through the Atlin country. The coast and islands, as can readily be seen on the map, are easily accessible at any point. The eastern contact belt, from the head of Portland Canal north, gives promise of becoming a great mineral producing area, judging from those portions of it which have been developed to any extent—the Salmon and Bear River sections, the Anyox section and the Alice Arm section. The southern portion of this belt is reached from Stewart, either by way of the Salmon River valley, over the Salmon River glacier, or the Long Lake glacier, or by way of the Bear River valley over the Bear River divide on the Bear-Naas trail, which extends through to Meziadin Lake. The northern portion is accessible by way of Stikine River, on which the Barrington Transportation Company runs a weekly boat from Wrangel to Telegraph Creek, commencing about May 15.

A Typical B. C. Mining Town

This is Anyox, 100 miles north of Prince Rupert, where the Granby Consolidated Mining and Smelting Co., operate an immense smelter

"In all probability prospectors' trails will be put into that belt this coming year by the Government from the Stikine and Iskut Rivers, south following the south branch of the Iskut, north from some point on the Bear-Naas trail, over the Bear River divide, and over the Salmon River and Long Lake glaciers, thus assuring definite and serviceable routes to facilitate the prospector in his work of extending the known mineral producing area."

By the foregoing it will be seen that not only does the Government believe that there is ample opportunity for the prospector, but that every assistance is to be given in developing a section of the Province in which the production and advancement of the industry last year proved so attractive. There is already every indication of a rush to this locality during the present summer.

The mineral production in this district during 1919 was very satisfactory. The value of the aggregate production of the Province as a whole was below that of the previous year, but far ahead of the total of any pre-war period.

A Power House in the Mining Country

Water is led down in a pipe-line from a dam high up in the hills and turns the water wheels in the power house

The out-put of the mines in 1919, was valued at $33,421,333. This was $8,361,141 less than the amount for the preceding twelve months. The falling off was almost entirely due to the demoralization of the copper market, following the close of the war. With accumulated war stocks on hand, production necessarily slackened, while the price fell away. During the last months of the European struggle copper was quoted at 26 cents a pound at New York. With the demand for copper halted, the price naturally declined, reflecting on the aggregate income from mining in this Province. The decrease in the value of the products of metalliferous mines, amounting to $7,815,221 was almost entirely due to copper conditions and quotations. The production of gold showed a decrease of $506,947, but again this was due to slackened demand for the baser metal, as practically all of the copper ores of British Columbia carry appreciable gold values.

The output of silver during the year showed an increase, not only in value, due to high prices, but in tonnage as well. New properties were opened, and old workings revived.

While the collieries showed an increase in 1919 on the coast, several of those of the interior were closed for considerable periods with labor troubles, caused, it is stated, by aliens employed there. The net result was that a decrease of $357,718 was shown in the total value of coal produced for 1919.

The production during 1919 may be given as follows: Gold, placer, 14,325 oz., $286,500; gold, lode, 141,769 oz., $2,930,365. Total gold, $3,216,865.

Silver, 3,667,516 oz., $3,871,631; lead, 32,134,136 lbs., $1,658,121; copper, 45,984,046 lbs., $8,631,205; zinc, 43,694,583 lbs., $2,717,803. Total, metalliferous, $20,095,057.00.

Coal, 2,357,218 long tons, $11,786,090; coke, 98,598 long tons, $690,186. Total of collieries, $12,476,276.00.

In addition to the above, miscellaneous metals and building materials had an aggregate value of $850,000.

The feature of coast mining during the year was the activity in the Portland Canal and Alice Arm districts. The Premier Mine, near Stewart, at the head of Portland Canal, made rapid progress and blocked out sufficient high grade ore to maintain operations for a great many years. The outlook for this mine was so promising that New York capitalists bought a controlling interest in it at a price said to run into the seven figures. Like most of British Columbia's successful mines, its history is one of hard luck for the original operators and success for those who had faith enough to continue development under discouraging circumstances. When Mr. R. K. Neill, the managing director of the company took hold of it several years ago, he found that the mine had been run parallel to the main ore body and that drifting had ceased within a few feet of high grade rock. Under his management ore valued at $10,000,000 was blocked out, and it was on this showing that the New York syndicate took an interest in the mine.

The Dolly Varden Mine, at Alice Arm, is another romance of western mining. The Taylor Engineering Company, of Vancouver, contracted to build a railroad from tidewater to the camp, 18 miles inland. The company then in control, sold out to an eastern concern, but in the transfer no provision was made by either party to liquidate the debt against the property to the engineering company. This was not paid. The matter was taken before the Legislature and after a lengthy investigation, an act was passed authorizing the Taylor interests to take charge of the mine in the event that the company operating the mine refused to meet the liability, amounting to $462,000. The company defaulted payment, and the Dolly Varden was taken over by the Taylor Engineering Company. Since that time it has developed into a "wonder mine." The Government report cites: "Five months from the time work started, 6,373 tons of ore had been shipped that will yield approximately 400,336 ounces of silver; about 40 tons of this was 'bonanza' ore."

While practically every other copper mine in British Columbia reduced its tonnage during 1919, that of the Britannia mine, near Vancouver, and incidently the largest copper mine in the British Empire, actually increased its output. The concentration mills at Britannian Beach, 28 miles from Vancouver, on Howe Sound, received from the mine 750,000 tons of ore, which yielded approximately 20,000,000 pounds of copper, 110,000 ounces of silver and 3,200 ounces of gold. Several months during the year the production reached more

The Impressive Skyline of Vancouver, our 1920 Convention City

Vancouver's Industrial Achievements

By J. REGINALD DAVISON
Industrial Commissioner

VANCOUVER, "The Lion Guarded City," is strategically located at the portal of a province immensely rich in natural resources. Through its splendid harbor, as well as by its numerous railway arteries, it is in a position to receive from and ships to all parts of the world those raw materials and manufactured goods which are the source and product of industrial effort.

British Columbia is first of all a producing province. Its 395,000 square miles of area contain natural wealth of such immense extent that translated into a commercial story of dollars and cents, the sum total is well-nigh beyond comprehension. Lumber, minerals, water power, pure drinking water, wild medicinal herbs, agricultural lands, are a few of the land riches, and, in the fresh and salt waters are fish.

Three Canadian transcontinental railways and every trunk railway in the United States are connected with Vancouver, as well as the Pacific highway motor road from the Mexican border and the network of North American paved roads that will be joined into one grand evergreen highway. Eight trans-oceanic shipping lines and a fleet of coastwise vessels bring and carry goods from and to Vancouver's docks in ever increasing volume.

Vancouver never has a closed harbor. Three hundred and sixty-five days in the year—and sometimes 366—ships come in and go out, and, not only is shipping uninterrupted the year round, but the generally mild climate gives much economic advantage industrially. Without heavy snow or deep frosts, buildings are of less expensive structure; work is not delayed, health is not impaired, and materials are not destroyed.

Some Outstanding Figures

Vancouver bank clearings for the year 1919 were $655,913,205; more than ten million and a half greater than they were during the biggest boom year that Vancouver ever experienced. Vancouver has no boom now, yet there is a steady growth in population, land settlement, wages, and all industries. There is an almost weekly discovery of something new that can be made from local resources, that at once develops into a new industry. The population of Greater Vancouver is now 195,000, and the city is 34 years old.

During the years 1918-19 an industrial island has been built within the heart of the city; a working Venice, it might be described, in the centre of a shipping Liverpool. An arm of the sea, spanned by five wide viaducts, cut through the wholesale and retail district of Vancouver, dividing it nearly in half. At the times of high tide this arm, known locally as False Creek, was a mighty river. When the tide was out it was an unsightly stretch of mud flats. Many big industries are built on the waters of Burrard inlet and the Fraser river, but it was divined by minds looking towards the best interests of the city and of the manufacturers, that False Creek would, if reclaimed, add greatly to the city's appearance, to the city funds, and to manufacturers' interests. The matter was taken up by representative men with the proper authority, and permission given to "go ahead with the project."

Development of Granville Island

In less than two years Granville Island, as the reclaimed land is called, is a hive of industry reached by roadways from the different sides of the city, and having one wide canal as a front street for all factories. It is a 28-acre industrial site, with 39 factories working at full strength, while negotiations are pending for the remaining sites.

These factories built upon Granville Island are nearly all new to Vancouver, the list comprising the Etna Saw Works, Ltd., saw manufacturers; British Columbia Equipment Company, Ltd., machinery; Canadian Waterwheel Company, water power machinery; Atlas Steel Products, Ltd., metal working plant and storage; Crane Company, Ltd., valves, steam fittings, plumbing goods; A. Carruthers, Ltd., hides and furs; Dominion Construction Co., Ltd., builders, engineers and contractors; Electrical Manufacturing Company, Ltd.; Harrison and Lamond, Ltd., builders and contractors; Albert Kerr Co., Ltd., hide and skins; Lang Electric Company; Morrison Steel and Wire Co., wire nail factory; National Machinery Company; Pacific Roofing Company, Ltd., patent roofing; Pacific White Lead Company, Ltd., pigments; Paul and Watkins, coal; Pacific Construction Company, Ltd., engineers, contractors; Pacific Sheet Metal Works; Palmer Brothers, machinery; Shaake Company, Ltd., machinery; F. R. Stewart, produce merchants; Vancouver Pickle Company; Vulcan Iron Works, Ltd.; Wallace Foundry, Ltd.; Watson Bros., Ltd., fish curers and packers; Walsh Construction Company, Ltd:, construction engineers; Britannia Wire Rope Company, Ltd..

The building industry in Vancouver, notwithstanding the high price of lumber and other materials, keeps steadily on. During the first 17 days of this year $167,355 worth of work was contracted for. Building permits during 1919 amounted to $3,563,332 (Vancouver centre and Point Grey), a jump of $1,692,701 above the year before. Some of the buildings contracted for for immediate erection are the Martin-Senour Co., Ltd., remodelling, $10,000; Canadian Carbonate, of Montreal,

Vancouver's New Industrial Section

View of some of the industries on Granville Industrial Island, in the heart of Vancouver

new factory, $70,000; Mainland Cold Storage and Ice Company, cold storage plant, $15,000; Nash Motor Company, garage, $30,000; Britannia Wire Rope Company, $40,000 (initial expense); Harrison and Lamond, $15,000; Robson Street Theatre $300,000 (seating capacity 5,000, revolving stage showing six separate wings. Two other large theatres are in the course of construction. Bank of Hamilton, alterations; Royal Bank of Canada, new building; the David Spencer Departmental Store, addition and alterations, $100,000; Clark and Stewart, printers and stationers, new building. The Shaw Baby Carriage, of Vancouver, have erected a factory at Burnaby, a suburb. The C.P.R. will extend their car repair shops at Vancouver to attend to the general overhauling and renovation of passenger equipment formerly done in the Winnipeg and Montreal shops.

Vancouver harbor stands first in Canada for shipping. Through it passes practically all Canada's trade with the Orient. Eventually it is expected that the export of a large part of the prairie grain will flow through this port, and the Dominion Government has already built tremendous elevators for storage purposes at the Government docks.

Three hundred and twenty-one ocean going vessels entered Vancouver harbor during 1919, handling $84,000,000 worth of imports and exports. The 1919 tonnage for Vancouver harbor exceeded 10,000,000 tons, of which two-thirds was coastwise. On an average each ship that come to Vancouver as a port of call during 1919 spent $6,000 while in port, for stores and longshore wages. The ocean going ships of the class of the dollar boats and the smaller C.P.O.S. liners that make Vancouver a home port, leave $40,000 in Vancouver every trip. The big Empress boats average about $90,000 a trip, and, besides this, there is the revenue from the coastwise ships. (These figures do not include the seamen's wages.)

Another Canadian Pacific Railway pier is commenced immediately in Vancouver, to be known as Pier "B.C.," length 1,100 feet, width 340 feet. A second Government pier, to be completed before the end of 1921, will be built into Burrard Inlet, length 1,070 feet and 1,200 feet, and width 340 feet, the difference in length being caused by the contour of the shore line.

Wooden ships were built in Vancouver yards during 1919 comprising, in all, 100,300 tons. Forty of the ships were for France; three for Norway; two for Greece; and one a B.C. marine steamer. More ships are under way.

Catching and packing salmon and other fish (herring being a recently begun industry) in and about Vancouver and further north is one of Vancouver's special industries, and the three-year-old whaling business is now conducted on a big scale.

No less in importance to the toll of the sea is the toll of the land. Growers of small fruits in the Fraser Valley, adjoining Vancouver, have organized and systematized their work into a very big asset among Vancouver industries.

Another Glimpse of the Industrial Island

Its rapid development will be appreciated when it is pointed out that in 1917 the district was nothing but a series of mud flats

A Charming Prospect in Victoria

View taken from the grounds of the Parliament Buildings and embracing from right to left, the Empress Hotel, Belmont House and Victoria Post Office

The Charm of Victoria and Vancouver Island

By "ISLANDER"

SITUATED on an excellent harbor at the southern extremity of Vancouver Island, Victoria, the capital of British Columbia, is, indeed, a "City Beautiful," as it is often described by delighted visitors. Fanned by Pacific winds, warmed by the beneficent Japanese current, which is responsible for the mildness of the temperature of the Coast, the climate is the most delightful to be found in Canada; the scenery of the surrounding country superb, and the business opportunities and advantages many.

The local history of Victoria is as picturesque as its natural location. It was established more than half a century ago, when a boundary dispute threatened to end in difficulties between Great Britain and the United States. The Hudson's Bay Company, which had been located in the disputed territory, later ceded to the United States, to make sure of the permanency of its Western headquarters, moved to Victoria, attracted by the strategical position and natural harbor. Great Britain, at the same time, established in the adjacent harbor of Esquimalt her first Pacific naval station.

The political growth of British Columbia centred about Victoria, and it was fitting that the city should have been chosen as the capital when the two Crown colonies which sprang into existence with the settlement of the country united.

Facing the business centre of the city are located the magnificent Parliament Buildings. Patterned after the princely palace of a Nabob of India, the great grey stone pile is a structure of rare architectural beauty.

Not only are the scenery, cosy villas and well-ordered gardens suggestive of the Old Country, but an English atmosphere pervades the whole city. The gnarled oaks, clumps of willows, and gorse covered cliffs complete the picture and give justification to the oft-repeated description, "A Little Bit of Old England on the Shores of the Pacific."

Its geographical location makes the city a point of commercial and industrial importance. The business centre of Vancouver Island, Victoria, enjoys a large volume of trade from the numerous smaller communities to the north, and from the development of the natural resources of the great island which parallels the mainland coast for a distance of 285 miles. Its breadth averages sixty miles. On the map of the trade countries of the Pacific, Victoria assumes a real importance, for it is the first port of call for the big cargo and passenger steamers from the Orient, Australia and New Zealand.

For a long time the argument was advanced that its insular position would prevent the city from ever becoming the location or distributing point for manufacturing plants. The fallacy of this contention has already been proven, while there is every prospect for a great development in different lines of industry. Vancouver Island is possessed of a wonderful store of natural resources. Its shores are covered with heavy stands of timber, its hills have already yielded rich returns in minerals, while great coal fields have for decades supplied domestic and export trade. The fisheries of both coasts are extremely profitable and the agricultural areas are among the best in the Province. With such a hinterland, Victoria is justified in being optimistic.

Railway car ferries operate from Vancouver across the Gulf of Georgia delivering freights at terminal rates, thus overcoming what might have proved to be a serious barrier to the progress and business development of the city.

Already there are many important factories located in and about the city. Included in the list are, two cement works at Tod Inlet, where 5,000 barrels of cement are manufactured daily; three brick works, two chemical works, five box factories, one stove, range and furnace factory, eight sheet metal works, three paint factories, one rubber roofing plant, one clam cannery, one macaroni factory, three rice mills, three coffee and spice mills.

In addition there are ship-building plants, dockyards, saw mills and other large industries.

During the war Victoria became a centre of shipbuilding activities, both steel and wooden vessels being constructed. Work is now proceeding on steel freighters for the Dominion Government.

Victoria's Fine Harbor

Extensive plans are now under way for the expansion of the harbor facilities. A breakwater and Government docks were completed a few months ago, greatly adding to the port accommodation, and it is proposed to construct, near the city, a huge dry dock. A valuable site, known as the Songhee Indian reserve, was purchased from the aborigines a few years ago, and this will be developed into railway terminals for the C.N.R. and C. P. R. lines, both of which have systems on the island. Already there are three marine ways in operation about Victoria.

The city with its suburbs comprises 8,692 acres. It has a population estimated at nearly 70,000. There are 132 miles of concrete sidewalks, and 65½ miles of boulevards, 77½ miles of unpaved streets; 135 miles of water mains, 30.43 miles of street railway tracks.

The drive from Victoria North to Nanaimo and then across the island to Port Alberni, is one of the most beautiful in British Columbia. It is an attraction that annually draws many hundreds of tourists from Seattle and other United States centres. Passing over the Gorge, the approach to the city's natural park—and through the picturesque suburbs of Victoria, the highway winds across Langford Plains and upwards, twisting and turning, over Malahat Mountain. At places the roadway has been blasted in the hill which falls away into the blue waters of Saanich Inlet many hundreds of feet below. A wonderful view of the scenic beauties of this reach of the sea are obtained before the Summit has been passed and the descent is commenced.

Through a wooded country where settlers are fast establishing comfortable homes and profitable homes, the road descends to Shawnigan Lake, a spot much favored by sportsmen and summer campers. Continuing, it leads through rich agricultural lands to the Town of Duncan.

This little community has even a more distinctive English atmosphere than has Victoria. The farm owners who settled this desirable locality many years ago, were mostly from good English homes, and they have preserved in the community the suggestion of the land of their nativity. Duncan is the centre of a fertile and productive valley, and enjoys a good measure of trade. One of the best examples of a co-operative creamery can be seen at Duncan, its products being of such a quality that the operators cannot supply the demand for them.

From this thriving little centre, the Island Highway traverses the Westholme district dotted with well developed farms, past Mt. Sicker, where some years ago copper-gold properties were extensively worked, and where there is every evidence of a revival in mining.

The first glimpse of salt water since leaving Saanich Inlet is obtained when Chemainus is reached. This is the little town which largely depends for its existence on the big mill operated by the Victoria Lumber Manufacturing Co. This mill was at one time rated as being the largest of its kind in the world. It is capable of tremendous production, and great cargo ships may be seen at the company's wharves loading British Columbia timber for the four quarters of the globe. Considerable trade is done in Chemainus with the farmers who work the land in the vicinity of the town.

Seven miles distant from Chemainus is Ladysmith, situated on one of the best harbors in British Columbia. This city, of 4,000 inhabitants, may be said to be on the fringe of the Vancouver Island coal areas. It is the shipping point for the Canadian Collieries (Dunsmuir) Company, Limited, which operates mines twelve miles away at Extension, and also for the Granby Mining Company's collieries at Cassidy's.

Ladysmith, a Summer Resort

The harbor view from Ladysmith is entrancing, and it is fast becoming popular as a summer resort, the crescent-shaped beach, carpeted with powdered sea shells and screened by small wooded islands opposite to the town, affording an excellent camping ground and vacation centre.

In addition to being the shipping point of the coal mines in the district and the home of the miners who travel to and from Extension by train, the town boasts a large smelter and

View of Part of the Industrial Section of New Westminster

The Industrial Importance of New Westminster

By R. A. MCLELLAN

INDUSTRIALLY the City of New Westminster, on the banks of the historic Fraser River, has always been firmly founded on the sound economic principle of exploiting the natural resources of the country, not by the export of these resources in their raw state, but by their manufacture into the finished article. In earlier days, it canned the world-famous sockeye salmon, and it still cans to the limit of a depleted supply. It is, of course, the market centre for the greatest farming district of the lower mainland, the Fraser Valley, but the purpose of this article is not to deal with that phase of the city's activities, except in so far as they have created industries. Now the industrial life of New Westminster is based on another great natural source of wealth, the timber of British Columbia forests; and the principal industry is the manufacture of lumber and of lumber products. The lumber industry of the lower mainland is destined more and more to concentrate on the Fraser River, for reasons that will be dealt with later. As long as there is timber to cut on tidewater, and men shelter in houses built of lumber, so long will lumbering be one of the great basic industries of this community. But there is also good ground for the hope that side by side with lumbering there will grow up here the great iron industry, which must eventually come from British Columbia's ore wealth.

The people of New Westminster have never been prone to advertise. For this reason, although the name of Vancouver is known all over this Dominion, relatively few people know that its smaller neighbor is already a sound, well-established industrial community, and offers for certain forms of manufacturing the greatest advantages to be found anywhere in British Columbia. But of that, more anon.

With a population of perhaps 18,000 New Westminster and its environs in 1919 exported a really respectable quantity of lumber and lumber products. Four plants alone cut 154,000,000 feet of lumber, which was despatched to all parts of the world. The same four plants in that year paid out approximately a million and a half dollars in wages. This sum, however, represents more than the work done in the sawmills, for some of these plants produce also shingles, boxes, and other manufactured articles. The production of shingles probably ran into the billions.

The biggest lumber plant in the world is conceded to be that of the Canadian Western Lumber Company, which is located in a self-contained community, Fraser Mills, adjoining New Westminster on the east. Within the city limits are the plants of the Brunette Sawmills, the Small-Bucklin Lumber Company, and the Westminster Mill Company. All

New Westminster from the Fraser River Bridge

Labor's Requests and Government's Answer

The Various Subjects Dealt With by the Trades and Labor Congress of Canada in Its Interview With the Government and the Reply of the Acting Prime Minister to the Representations of the Interviewers

FOR the information of the membership, and also as matter of record, there is published on this and the following pages the summary of representations submitted to the Government by the Executive Council of the Trades and Labor Congress of Canada, on the occasion of their annual interview with the members of the Cabinet. This took place on January 8 last. It is followed by the reply of the acting Prime Minister, which appears in the form of a letter to the Secretary of the Congress, dated March 4.

Labor's Representations

To the Premier
and Members of the Dominion Cabinet:

Honorable Sirs:

During the years of the war the Dominion Government enacted very little labor or social legislation. The declarations in the labor sections of the Peace Treaty; the report of the Industrial Relations Commission, which investigated conditions throughout the Dominion last May and June; the recommendations of the National Conference of Employers, Employees, etc., held in Ottawa in September last, and the findings of the International Labor Conference recently held in Washington, all emphasize the need for immediate action in this direction.

The Trades and Labor Congress of Canada, at its 35th annual convention, held in Hamilton, September 22nd-27th, 1919, and at which about nine hundred and fifty delegates were in attendance, reached many important decisions reflecting the opinions of the workers throughout the entire Dominion as to the imperative necessity for enacting new legislation and amending existing legislation.

Extended summaries have been prepared relative to some of the outstanding legislation affecting labor. Other requests are submitted in condensed form, mention being made of the number of the resolution and the page in the proceedings of the Trades and Labor Congress Convention (copy of which is enclosed) on which the full text can be found.

Now that peace has been finally established, we look forward confidently to the requests being granted, which we herewith respectfully submit on behalf of the Trades and Labor Congress of Canada.

TOM MOORE, *President.*
ARTHUR MARTEL, *Vice-President.*
H. J. HALFORD, *Vice-President.*
A. MCANDREW, *Vice-President.*
P. M. DRAPER, *Secretary-Treasurer.*

INCREASE AND USES OF MILITARY FORCES

Now that the war, which was to end all wars, has been won, we regret to note that steps were taken last year to increase the permanent military forces of Canada from five thousand to ten thousand men. Coincident with this action, the jurisdiction of the Royal North-West Mounted Police was extended to other older settled provinces of Canada and its personnel largely augmented.

Reports reached the Executive of the Trades and Labor Congress of the bringing of military forces into districts where labor disputes were existing.

These actions are strongly protested, and the tendency towards building up Canada during peace times as a military power is considered as detrimental to the development of this country along democratic lines, and liable to lead to unnecessary infringement and curtailing of the rightful liberties of its citizens.

We ask, therefore, that steps be taken to relieve the country of as much of this burden as can properly be done and the non-military policy of pre-war times re-established as soon as possible.

ORDERS IN COUNCIL AND AMENDMENTS TO CRIMINAL CODE

We express our satisfaction that the repeated requests of the organized workers have been heeded and the restrictions upon freedom of speech and press have been removed to a large extent by the repeal of all Orders in Council dealing with these matters. It is with regret, however, we again have to draw to your attention that the amendments, passed during the last regular session of Parliament to the Criminal Code incorporated many of the provisions of the Orders in Council above referred to and make possible prosecutions and infliction of heavy penalties for possessing certain literature and attending meetings and committing other innocent acts, which would not be dangerous to the general peace of the country.

With the country now on a piece basis, we ask that immediate consideration be given to our request for the repeal of the amendments to the Criminal Code, here referred to, believing that the law, as it previously existed, is sufficient to maintain law and order.

IMMIGRATION

The whole question of immigration is one in which organized labor has continually taken a keen interest. Many requests for measures of protection against indiscriminate admittance of emigrants to this country have from time to time been presented. Amongst these recommendations are:

(*a*) The appointment of a representative of the organized workers, along with others, on a Central Empire Board. (See page 45, Congress Proceedings, 1919.)

(*b*) The necessity of revision of the present method of admittance of Orientals, by either total exclusion or international arrangement, limiting the number to one per thousand of the population.

(*c*) The elimination of any system whatever of bonusing for the introduction of industrial workers.

The adoption of a literacy test is highly approved, as is also the formation of a National Council to control the immigration of women emigrants for domestic service, etc., and the representation provided thereon for returned soldiers and organized labor. Our co-operation to make this a success is sincerely promised.

Strong protests have been lodged during the past year against the amendments to the Immigration Act incorporated in Bill 03, and some in Bill 52, especially the amendments which make possible the deportation of British-born subjects after having fulfilled the provisions of the Act giving them domicile as Canadian citizens. The repeal of these sections are strongly urged.

Request is made that the proper authorities be asked to intercede with the United States immigration authorities in order that Canadian theatrical mechanics entering the United States be given the same consideration as American theatrical mechanics coming into Canada. (Resolution 15, page 138, Congress Proceedings, 1919.)

RIGHT TO ORGANIZE

The right of workers of all grades to free association for their own protection has been made the subject of important declarations during the past year. The Treaty of Peace (Paris), Article 2, says:—"Employers and workers should be allowed the right of association for all lawful purposes." The Industrial Relations (Mathers) Commission makes a similar recommendation. This was again endorsed at the National Industrial Conference by both employers and employees. (Page 221.)

It is regrettable to note, therefore, that the Dominion Government have passed legislation making illegal the right to organize by many of their own employees (Dominion Police, many of whom are merely watchmen), and that other public bodies have enforced regulations abridging this right to organize of their employees, and private employees are from time to time emulating their example and endeavoring to prevent organization by discharging and otherwise discriminating against employees who do not organize.

We urgently call your attention to the need for legislation which would make such acts against workers illegal and

action which will restore to all workers the absolute right of organization. (See page 188, Congress Proceedings re police.)

COLLECTIVE BARGAINING

The acceptance of this principle should be given all possible encouragement in order to lessen the time lost by industrial disputes. We would draw your attention to the findings of the Mathers Industrial Relations Commission on this subject and also the representations made by the workers at the National Industrial Conference based upon these findings and ask that, in harmony with recommendations commonly accepted at the National Industrial Conference, that the Government institute in its own departments, wherever practicable, this principle and undertake the initiative in establishing councils in industries, recognizing trade unions as the basis of representation. These measures, we feel sure, will assist materially in bringing about the more general adoption of the principle of collective bargaining.

EIGHT HOUR DAY AND FORTY FOUR WEEK

We request legislation providing for a maximum work day of eight hours and a maximum work week of forty-four hours, and the establishing of a minimum wage adequate to insure a fair standard of living. In presenting this we wish to briefly review as follows:

The efforts to establish this shorter work day and week and an adequate wage have been the most fruitful cause of strikes.

The justice of the claim for a maximum eight-hour day is recognized in the Treaty of Peace, to which Canada is a signatory.

The Washington Conference (League of Nations, Labor Section,) almost unanimously adopted a draft convention declaring for the universal acceptance of the principle of eight-hour maximum day as a minimum condition in all except a few Oriental countries.

Canada is more fortunately placed than many other countries as regards raw material, etc., for her industries and therefore is able to adopt more than the scant minimum provided in the general convention, and we therefore ask for the half day holiday on one day of the six, making a forty-four-hour week.

Most of the Central European countries, including those most devastated by war, have already established laws providing variously for the forty-eight-hour week, the maximum eight-hour day and in some cases the forty-five-hour week is the legal maximum. The countries referred to include France, Belgium, Italy, Germany, Czecho-Slovakia, the Netherlands, Sweden, etc., whilst others, including Great Britain, are committed to legislation which is now pending.

Reports issued to the National Conference, Ottawa, by the Minister of Labor, showed nearly fifty per cent. of Canadian workers in industry already enjoy the eight-hour day or less and a great proportion five and a half day week or less.

The short work day is most generally established in Canada where conditions are most unfavorable, that is in the building industry, which has a limited season. In the Western Provinces, where industrial development is smaller and has to meet heavy costs of transportation, etc.

Employers and workers are agreed on the necessity of uniform legislation on this matter throughout the Dominion.

The cost of living is now only barely met in better paid trades by present wages, and for that reason we ask consideration of provision for protection against reduction in aggregate wages by the introduction of the eight-hour day, which would leave them below the proper standard of existence.

TECHNICAL EDUCATION

On this subject the report of the Congress is:

"It is noted with pleasure that the Dominion Government have decided to appropriate certain sums of money for the purpose of providing technical education, and desire to add the suggestion that both the Dominion and Provincial Governments should spend more money on this work."—(See page 159, Congress Proceedings, 1919.)

CO-OPERATIVE LEGISLATION

The prevailing high cost of foodstuffs and other necessities of living demand radical changes in the method of distribution throughout this country. As a means to this end, the co-operative movement has proven, in other countries, to be of inestimable value; we therefore request that all possible assistance and encouragement be given by your Government to the formation and operation of co-operative societies throughout the Dominion and that legislation making easy the incorporation of such societies be enacted. (See Resolution 3, page 218, Congress Proceedings, 1919.)

REGISTRATION OF UNION LABELS

This subject has been frequently submitted in subsequent years and we again reiterate our request for legislation granting to trade unions the right of protecting their union labels and emblems from infringement. Reference to this is made in President's report, page 127, Congress Proceedings, 1919.

INDUSTRIAL DISPUTES ACT

During the past years, the Trades and Labor Congress have requested the repeal of this Act. The compulsory clauses in this Act have been shown time and again to be generally impossible of enforcement, and the Government, whilst refusing to repeal them, have nevertheless refrained from enforcing them. This attitude brings about a disrespect for the law and is undesirable. The other sections of the Act, owing largely to the growing industrial importance of widely scattered sections of Canada, are becoming more difficult to administer promptly and effectively. Some provinces are also instituting machinery for the settlement of industrial disputes, and, in view of all these circumstances, we suggested that the time has arrived for an entire revision of the machinery of investigation and arbitration. The Congress stands ready to participate in a conference to undertake this work in order that legislation may be devised to provide for quick and satisfactory settlement of disputes.

Decisions rendered that the Act does not apply to public-owned utilities, whilst being compulsory on private-owned utilities of identically the same nature, causes discontent and confusion amongst the workers concerned, and we, therefore, request that pending change and acquiescence with the request made above, that the Act be made applicable to all workers named in the Act, whether employed by a private company or a public authority or a Government department.

HEALTH REGULATIONS FOR PAINTERS

Last year a resolution was presented asking for compulsory labelling of receptacles containing white lead, etc: This is again reiterated.

A further resolution presented to you last year dealt with the denaturing of alcohol, thus rendering it less injurious to men who inhale the fumes. This is reiterated in resolution 82, page 84, Congress Proceedings, 1919.

PROPORTIONAL REPRESENTATION AND OTHER AMENDMENTS TO ELECTION ACT

This subject has been presented by representatives of organized labor on subsequent occasions. The adoption of this measure is reported by the Mathers Commission on Industrial Relations, paragraph 68. It was later made the subject of debate at the National Industrial Conference (Ottawa, September 15th to 20th, 1919,) and received the unanimous approval of the employers, employees and the public groups. Much information as to this measure is furnished on pages 168 to 178, National Industrial Conference Report, 1919. The definite request of labor is that this measure may be made applicable to all future elections, in the belief that it will assist in establishing confidence in constituted authority.

We further reiterate our previous request that election days should be declared public holidays; or, alternately, the hours of voting should be extended until 8 p.m. in the evening. (See Resolution 5, page 220, Congress Proceedings, 1919.)

CANADA COPYRIGHT ACT

Amendments are sought to the Canada Copyright Act which will give a greater measure of protection to Canadian authors and composers, and, at the same time, encourage the printing of copyright books in Canada. This request is covered by Resolution 13, page 120, Congress Proceedings, 1919.

HOUSING

Attention has been directed to the assistance given to housing by the Dominion Government and Provincial Legislatures. A special report on this subject is found on pages

(*Continued on page* 144.)

Lightning Rods for Factory Protection

A Consideration of the Laws of Science on Which the Practice of Rodding Depends—The Old and the New System of Rodding Buildings Explained—Insurance Rates Reduced Where Buildings Have This Protection.

By PROFESSOR W. H. DAY

A Well-Rodded Factory Building

A MILLION five hundred thousand dollars in round figures was paid out by insurance companies in Canada in 1918 to cover losses to buildings caused by lightning. In the light of this appalling loss, can the subject of lightning rods be regarded as an unimportant one?

Surely it is of great importance and not only so to the agriculturalist, whose barns are so frequently a favorite target for the lightning bolt, but for the manufacturer as well. Factories and mills are often damaged by lightning, the high chimneys and somkestacks being particularly susceptible to stroke. The writer saw one chimney that was fractured from top to bottom in this way and sometimes they are so shattered as to be practically useless thereafter.

Professor Day, who was formerly on the staff of the Ontario Agricultural College, Guelph, is recognized as one of the foremost authorities on lightning rods in Canada. When connected with the College he made an exhaustive study of the subject and proved that the efficiency of the protection on rodded buildings was over 90 per cent. He is now secretary and manager of the Shinn Mfg. Co. of Canada, Limited, lightning prevention experts, Guelph. The following article has been written by him at the special request of the Insurance Committee of the Canadian Manufacturers Association for the information of members.

While engaged as Professor of Physics at the Ontario Agricultural College during the past fifteen years, it was my duty and privilege to make an extended study of lightning rods, first, as to their efficiency, and secondly, as to how the laws of science can best be applied so as to reduce the hazard from lightning to a minimum.

It is almost 170 years since Franklin invented the lightning rod. Yet it is only within the last five years that we have known from compiled data its actual efficiency when properly installed. And the efficiency was first worked out at the Agricultural College for the Province of Ontario. I need not detail how this was done—that is all told in Bulletin 220, issued in 1914, by the Ontario Department of Agriculture, and which is distributed free on request. Suffice it to say that we found the efficiency to be over 90 per cent. in most cases, and sometimes nearly 100 per cent. Since then other investigators, following similar lines, have obtained like results, notably, Professor J. Warren Smith, of Colombus, Ohio, whose investigation included fifteen States of the American Union. The results over the entire field covered by his investigation, showed an average efficiency of 90 per cent. In other words, lightning rods as installed saved $90.00 out of every $100.00 it was possible for them to save!

Why do not rods save the full $100.00? In a word the answer is that many of them are not scientifically installed. in fifteen years' study of this subject I have yet to learn of the first case of a scientifically rodded building being burned. In every case investigated it as been found that the simplest, yet most fundamental laws of the science of electricity have been grossly violated. Let me illustrate. Most ground rods in the past have been run straight down the gable end from the peak to the ground. Let us study this case. When the roof becomes wet it is a conductor because water is a conductor. The lightning does not always strike the highest point. Near Enterprise, about 20 miles north of Napanee, on a certain farm I visited to investigate the case, it struck a low pig-pen located by a high barn, incidentally killing the pigs ,the barn itself being untouched. Now let us return to the building grounded from the peak. Suppose a stroke occurs at the eave or part way between there and the peak. The current will not travel upward to

(*Continued on page* 136.)

Definitions of Foreign Trade Terms Adopted

American Trade Bodies, After a Conference, Agree on Standard Definition of Such Frequently-Used Terms as F.O.B.; C.&F.; C.I.F.; F.A.S., etc. —Much Confusion Might Be Avoided by Recognition of Definitions

Interpretation of the terms, f.o.b., c. and f., c.i.f., f.a.s., etc., so frequently used in commercial transactions, has at times been so diverse that a good deal of confusion has resulted through a misunderstanding of just what is intended. To obviate this difficulty, and produce a uniformity of use of the terms, a conference was recently held by representatives of a number of trade organizations in the United States, including the National Foreign Trade Council, Chamber of Commerce of the U.S.A., National Association of Manufacturers, American Manufacturers' Export Association, Philadelphia Commercial Museum, American Exporters' and Importers' Association, Chamber of Commerce of the State of New York, New York Produce Exchange, and New York Merchants' Association. The conference finally adopted what is termed the American Foreign Trade Definitions, which cover the terms and conditions of sale, particularly on export shipments.

As members of the C.M.A. will doubtless be interested in this standardization of terms, the definitions of the conference are reproduced herewith:

As the most certain means of insuring unmistakable clarity in terms and conditions of sale, the conference voted to recommend to manufacturers and exporters that all use of abbreviated forms of export price quotations be abandoned, and that such terms be written out in full.

The conference recognized, however, that this recommendation is not likely to be accepted generally at once, and therefore, in the hope of effecting a simplification and standardization of American practice, it adopted the following statement of definitions of the abbreviated forms in more common and general use in the export trade: The conference strongly recommends to manufacturers and exporters that wherever abbreviated forms of export quotations are employed the forms herein defined be used, as far as possible, to the exclusion of other forms.

Definitions of Export Quotations

Trere are, in their order, the normal situations on which an export manufacturer or shipper may desire to quote prices. It is understood that unless a particular railroad is specified the property will be delivered to the carrier most conveniently located to the shipper. If the buyer, for the purpose of delivery, or in order to obtain lower transportation charges, desires that the goods be delivered to a carrier further removed from the shipper, and entailing a greater cost than delivery to the carrier most favorably situated, the carrier to which the buyer desires delivery of the goods should be named in the quotation. The terms "cars or lighters," as used herein, is intended to include river, lake, or coastwise ships, canal boats, barges, or other means of transportation, when so specified in the quotation.

1. When the price quoted applies only at inland shipping point and the seller merely undertakes to load the goods on or in cars or lighters furnished by the railroad company serving the industry, or most conveniently located to the industry, without other designation as to routing, the proper term is:

"F.o.b. (named point)."

Under this quotation:

A. Seller must—

(1) Place goods on or in cars or lighters;

(2) Secure railroad bill of lading;

(3) Be responsible for loss and/or damage until goods have been placed in or on cars or lighters at forwarding point and clean bill of lading has been furnished by the railroad company.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Pay all transportation charges, including taxes, if any;

(3) Handle all subsequent movement of the goods.

2. When the seller quotes a price including transportation charges to the port of exportation without assuming responsibility for the goods after obtaining a clean bill of lading at point of origin, the proper term is:

"F.o.b. (named point) freight prepaid to (named point on the seaboard.)"

Under this quotation:

A. Seller must—

(1) Place goods on or in cars or lighters:

(2) Secure railroad bill of lading;

(3) Pay freight to named port;

(4) Be responsible for loss and/or damage until goods have been placed in or on cars or lighters at forwarding point and clean bill of lading has been furnished by the railroad company.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Handle all subsequent movement of the goods;

(3) Unload goods from cars;

(4) Transport goods to vessels;

(5) Pay all demurrage and/or storage charges;

(6) Arrange for storage in warehouse or on wharf where necessary.

3. Where the seller wishes to quote a price, from which the buyer may deduct the cost of transportation to a given point on the seaboard, without the seller assuming responsibility for the goods after obtaining a clean bill of lading at point of origin, the proper term is:

"F.o.b. (named point) freight allowed to (named point on the seaboard)."

Under this quotation:

A. Seller must—

(1) Place goods on or in cars or lighters;

(2) Secure railroad bill of lading;

(3) Be responsible for loss and/or damage until goods have been placed in or on cars or lighters at forwarding point, and clean bill of lading has been furnished by the railroad company.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Pay all transportation charges (buyer is then entitled to deduct from the amount of the invoice the freight paid from primary point to named port):

(3) Handle all subsequent movement of the goods;

(4) Unload goods from cars;

(5) Transport goods to vessel;

(6) Pay all demurrage and/or storage charges;

(7) Arrange for storage in warehouse or on wharf where necessary.

4. The seller may desire to quote a price covering the transportation of the goods to seaboard, assuming responsibility for loss and/or damage up to that point. In this case, the proper term is:

"F.o.b. cars (named point on seaboard)."

Under this quotation:

A. Seller must—

(1) Place goods on or in cars;

(2) Secure railroad bill of lading;

(3) Pay all freight charges from forwarding point to port on seaboard;

(4) Be responsible for loss and/or damage until goods have arrived in or on cars at the named port.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Unload goods from cars;

(3) Handle all subsequent movement of the goods;

(4) Transport goods to vessel;

(5) Pay all demurrage and/or storage charges;

Made in Canada Conduit

Labelled under Supervision of Underwriters' Laboratories

XCELADUCT

GALVANIZED

Manufactured by

National Conduit Company, Limited

Toronto

(6) Arrange for storage in warehouse or on wharf where necessary.

5. It may be that the goods, on which a price is quoted covering the transportation of the goods to the seaboard, constitute less than a carload lot. In this case the proper term is:

"F.o.b. cars (named port), l.c.l."

Under this quotation:

(1) Deliver goods to the initial carrier;

(2) Secure railroad bill of lading;

(3) Pay all freight charges from forwarding point to port on seaboard;

(4) Be responsible for loss and/or damage until goods have arrived on cars at the named port.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Handle all subsequent movement of the goods;

(3) Accept goods from the carrier;

(4) Transport goods to vessel;

(5) Pay all storage charges;

(6) Arrange for storage in warehouse or on wharf where necessary.

6. Seller may quote a price which will include the expense of transportation of the goods by rail to the seaboard, including lighterage. In this case the proper term is:

"F.o.b. cars (named port), lighterage free."

Under this quotation:

A. Seller must—

(1) Place goods on or in cars;

(2) Secure railroad bill of lading;

(3) Pay all transportation charges to, including lighterage at, the port named:

(4) Be responsible for loss and/or damage until goods have arrived on cars at the named port.

B. Buyer must—

(1) Be responsible for loss and/or damage incurred thereafter;

(2) Handle all subsequent movement of the goods;

(3) Take out the insurance necessary to the safety of the goods after arrival on the cars;

(4) Pay the cost of hoisting goods into vessel where weight of goods is too great for ship's tackle;

(5) Pay all demurrage and other charges, except lighterage charges.

7. The seller may desire to quote a price covering delivery of the goods alongside overseas vessel and within reach of its loading tackle. In this case the proper term is:

"F.a.s. vessel (named port)."

Under this quotation:

A. Seller must—

(1) Transport goods to seaboard;

(2) Store goods in warehouse or on wharf if necessary, unless buyer's obligation includes provision of shipping facilities;

(3) Place goods alongside vessel either in a lighter or on the wharf;

(4) Provide the usual dock or ship's receipt;

(5) Be responsible for loss and/or damage until goods have been delivered alongside the ship or on wharf.

B. Buyer must—

(1) Be responsible for loss and/or damage thereafter, and for insurance;

(2) Handle all subsequent movement of the goods;

(3) Pay cost of hoisting goods into vessel where weight of goods is too great for ship's tackle.

8. The seller may desire to quote a price covering all expenses up to and including delivery of the goods upon the overseas vessel at a named port. In this case the proper term is:

"F.o.b. vessel (named port)."

Under this quotation:

A. Seller must—

(1) Meet all charges incurred in placing goods actually on board the vessel;

(2) Provide the usual dock or ship's receipt;

(3) Be responsible for all loss and/or damage until goods have been placed on board the vessel.

B. Buyer must—

(1) Be responsible for loss and/or damage thereafter;

(2) Handle all subsequent movement of the goods.

9. The seller may be ready to go farther than the delivery of his goods upon the overseas vessel, and be willing to pay transportation to a foreign point of delivery. In this case the proper term is:

"C. and f. (named foreign port)."

Under this quotation:

A. Seller must—

(1) Make freight contract and pay transportation charges sufficient to carry goods to agreed destination;

(2) Deliver to buyer or his agent clean bills of lading to the agreed destination;

(3) Be responsible for loss and/or damage until goods have been delivered alongside the ship and clean ocean bill of lading obtained (seller is not responsible for delivery of goods at destination).

B. Buyer must—

(1) Be responsible for loss and/or damage thereafter and must take out all necessary insurance;

(2) Handle all subsequent movement of the goods;

(3) Take delivery and pay costs of discharge, lighterage, and landing at foreign port of destination in accordance with bill of lading clauses;

(4) Pay foreign customs duties and wharfage charges, if any.

10. The seller may desire to quote a price covering the cost of the goods, the marine insurance on the goods, and all transportation charges to the foreign point of delivery. In this case the proper term is:

"C.i.f. (named foreign port)."

Under this quotation:

A. Seller must—

(1) Make freight contract and pay freight charges sufficient to carry goods to agreed destination;

(2) Take out and pay for necessary marine insurance;

(3) Deliver to buyer or his agent clean bills of lading to the agreed destination and insurance policy and/or negotiable insurance certificate;

(4) Be responsible for loss and/or damage until goods have been delivered alongside the ship, and clean ocean bill of lading and insurance policy and/or negotiable insurance certificate have been delivered to the buyer or his agent. (Seller is not responsible for the delivery of goods at destination nor for payment by the underwriters of insurance claims.)

(5) Provide war-risk insurance, where necessary, for buyer's account.

B. Buyer must—

(1) Be responsible for loss and/or damage thereafter, and must make all claims to which he may be entitled under the insurance directly on the underwriters;

(2) Take delivery and pay costs of discharge, lighterage, and landing at foreign port of destination in accordance with bill-of-lading clauses;

(3) Pay foreign customs duties and wharfage charges, if any.

Explanation of Abbreviations

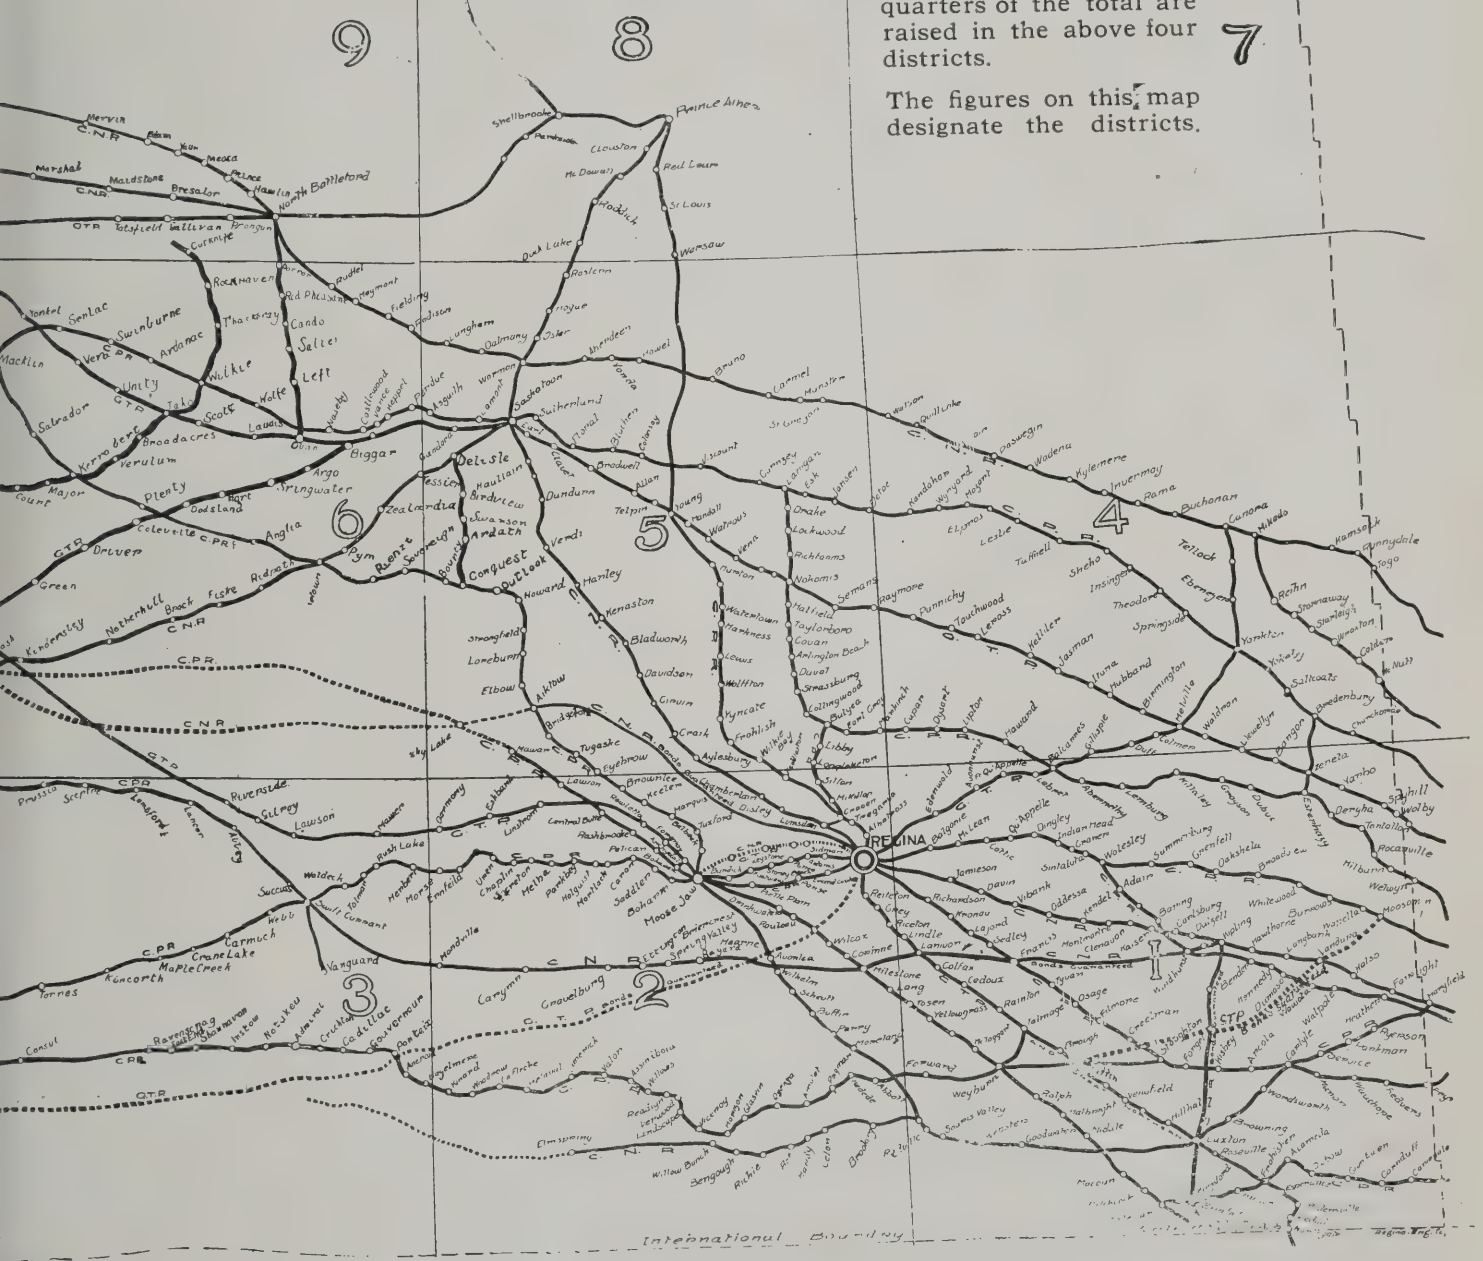
F.o.b., free on board.
F.a.s., free alongside.
C. and f., cost and freight.
C.i.f., cost, insurance, and freight.
L.c.l., less-than-carload lot.

General Recommendations

In reaching the conclusions set forth in this statement the conference considered the fact that there are in more or less common use by manufacurers in different parts of the United States numerous variations of the abbreviations practically all of which are employed to convey meanings substantially synonymous with those here defined. For instance, there are manufacturers who quote "f.o.b. cars," "f.o.b. works," f.o.b. mill," or "f.o.b. factory," meaning that the seller and buyer have the same responsibilities as those set forth in section 1. The conference considered all those variations and determined to recommend the use of "f.o.b. (named point)," as "f.o.b. Detroit," "f.o.b. Pittsburgh," etc. Of the considerable number of these abbreviations which are used in the United States, the conference felt that the form "f.o.b. (named point)" is most widely used and understood, and therefore should be adopted as the standard of practice.

The chief purpose of the conference is to simplify and standardize American practice, and to that end it urges manufacturers and exporters to cease the use of synonymous abbreviations and quote habitually in the terms here recommended, just as far as these terms will cover the price conditions which it is desired to arrange with the buyer.

Variations of the abbreviations recommended in other sections also are in more or less common use throughout the United States. The recommendations of the conference set forth above apply to them with the same force as to those cited under section 1.



REGINA
Saskatchewan
Canada

1920

Regina serves 2,255 miles of Railway and 250 towns and villages. Population of District 466,666.

In districts Nos. 1, 2, 4 and 5 are two-thirds of the population of the Province, and over two-thirds of the grain of the Province is raised in these four districts. Of the 1,870,123 head of stock in the Province, three-quarters of the total are raised in the above four districts.

The figures on this map designate the districts.

REGINA, the capital city of Saskatchewan is situated on the main line of the Canadian Pacific Railway, Grand Trunk Pacific Railway and Canadian National Railway. It is the principal city between Winnipeg and Calgary, lying 357 miles west of Winnipeg and 483 miles east of Calgary.

REGINA is the largest distributing centre of Western Canada and, as a distributor of farm implements, the greatest in the world, business in this line in one year having reached a total of over $25,000,000.

REGINA is the distributing centre, the commercial centre and the educational centre of this part of Western Canada. Building construction already arranged for, in 1920, amounts to $4,500,000. Every lot in the wholesale area is served with railway tracks; a large portion of the area is still available for building purposes and may be obtained from the City.

For further information apply to L. T. McDONALD, Board of Trade, Regina or Commissioner L. A. THORNTON, City Hall, Regina

Manufacturers and exporters are urged to bear in mind that the confusion and controversies which have arisen have sprung, in part, from the use of an excessive number of abbreviated forms with substantially similar meanings, as well as from the use of abbreviations in a sense different from their original meanings, or in an application not originally given them and different from the sense or application understood by foreign buyers.

In simplified and standardized practice lies the best hope of reducing confusion and avoiding controversy.

The conference urges upon manufacturers and exporters the very great importance at all times of making their intention in whatever quotations they employ so thoroughly clear as to be impossible of misunderstanding or misinterpretation. It is much better to take the time and space at the outset to make the quotation clearly understood than to be compelled in the end to go through vexatious controversy or litigation, which costs not only time and expense but customers as well. Misunderstandings can best be avoided if the seller will formulate a written statement of the general conditions under which his sales are to be made, and will see that the foreign buyer possesses these terms of sale when considering a quotation. The items which may be included in such a statement deal with delivery, delays, partial shipments, shipping instructions, inspection, claims, damage, and payment. If all contingencies are thus covered by carefully considered conditions of sale, disputes will largely be prevented.

The quotation "f.o.b. (named port)," as "f.o.b. New York," "f.o.b. New Orleans," "f.o.b. San Francisco," is often used by inland producers and distributors to mean merely delivery of the goods at railway terminal at the port named.

This abbreviation originated as an export quotation and had no application to inland shipments. It was used only to mean delivery of the goods upon an overseas vessel at the port named. That, in fact, is the meaning universally given to the phrase among foreigners, and is the meaning which the best practice among exporters requires it invariably to have. But because of the confusion which has arisen through the use of that form with a different meaning by inland producers and distributors, and, in the interest of unmistakable clarity, the conference most strongly urges the invariable use by American manufacturers and exporters of the form "f.o.b. vessel (named port)." This adds only one word to the abbreviated form and has the great advantage that it can not be misunderstood. It also avoids the difficulty which might arise among foreigners not always well versed in American geography, through confusing an inland forwarding point with a shipping port at seaboard.

The conference calls attention to the fact that in selling "f.a.s. vessel," manufacturers and exporters should be careful to have their agreements with buyers cover explicitly the question of responsibility for loss after goods have been delivered on the wharf or alongside the vessel, and before they are actually loaded on the ship. There is no generally established practice on this point. The recommendation of the conference in the definitions of responsibility, under section 7, sets up a rule which it is hoped will lead to the establishment of a standard practice.

It is understood that the provision of lighterage covered in several of these recommendations is only within the usual free-lighterage limits of the port, and that where lighterage outside such limits is required it is for buyer's account.

In order to avoid confusion in another particular, attention is called to the care which must be exercised in all cases in making weight quotations. The net ton, the gross ton, and the metric ton, all differ in weight. Similarly, there is a variation in the use of the term "hundredweight," to mean either 100 pounds or 112 pounds. It is, therefore, not sufficient to quote a price per "ton" or "per hundredweight." Instead, the conference recommends the use of the terms "ton of 2,000 pounds," "ton of 2,240 pounds," or "ton of 2,204 pounds," etc., whichever is intended.

It is also important to note that a carload lot in the United States means the quantity of the particular commodity in question necessary to obtain the carload freight rate for transportation on American railways. This quantity varies according to the commodity and also varies in different parts of the country. Certain commodities being more bulky than others, the minimum carload for them is less than for heavier products occupying less space. The load required may range anywhere from 12,000 to 90,000 pounds. Consequently, it is important, when quoting prices applicable to carload lots, to so state and to specify the minimum weight necessary to make a carload lot of the particular commodity for the particular shipment in question.

The conference points out that in quoting "c. and f." or "c.i.f.," manufacturers and exporters moving large quantities of material by one vessel should be careful to ascertain in advance the buyer's capacity to take delivery. This because, under these terms and as a condition of making the freight rate, transportation companies may require a certain rate of discharge per day, and that rate of discharge might be in excess of the buyer's capacity to take delivery. In such event an adjustment with the transportation company would be necessary, which might affect the freight rate, and consequently the price to be quoted.

The conference also strongly urges shippers clearly to understand the provisions of their insurance protection on all foreign sales, irrespective of the general terms used thereon. In almost all cases it should be possible, when making shipments by steamer, to obtain insurance cover, giving full protection from primary shipping point to designated seaport delivery, and/or foreign-port delivery. As ordinary marine insurance under f.p.a. conditions, i.e., free of particular average, gives no protection against deterioration and/or damage to the merchandise itself while in transit, when caused by the recognized hazards attending such risks, shippers should endeavor in all cases to obtain insurance under w.p.a. (s.p.a.) conditions, i.e., with particular average (subject to particular average), when in excess of the customary franchise of 3 per cent. to 5 per cent. Under such form of insurance underwriters will be called upon to pay claims for damages when these exceed the stipulated franchise.

The conference points out that inasmuch as fees for consular invoices and similar items are arbitrary charges fixed by foreign Governments, they are not included in the terms of c. and f. or c.i.f. quotations, and it is part of the duty of the buyer to meet them.

Finally, the conference strongly recommends, as a most effective measure of simplification, the general practice of quoting for export, as far as possible, either "f.a.s. vessel," "f.o.b. vessel," or "c.i.f." Concentration on this small list, all of which terms are readily understood abroad and are difficult of misinterpretation, will, it is felt, be markedly influential in avoiding confusion and controversy.

The conclusions and definitions set forth above are the recommendations of a conference which was composed of representatives of nine of the great commercial organizations of the United States interested in foreign trade. Not all have as yet the force of law or long-established practice, but it is the hope and expectation of the conference that these recommendations will receive such adherence on the part of American producers and distributors as to make them in fact the standard of American practice. And it is, therefore, expected that in due time they will receive the sanction of legal authority.

Shipment of Eggs

Members are Urged to Co-operate with Express Companies by Packing Eggs Properly

The Express Traffic Association of Canada have issued a circular, No. 96, referring to the requirements of the Express Classification on page 14, item 16, in connection with shipment of eggs in cases. This circular is addressed to the attention of employees, and requires that they adhere to the regulations set forth in the above mentioned item. It is stated the highly perishable and fragile nature of eggs makes it difficult to prevent breakage even with the best of packing, and careless handling in transit only aggravates the matter. It is therefore, necessary that eggs be given the careful handling they require.

The circular then goes on to state the different causes of damage such as breakage, extreme cold, heat, moisture and bad odors. The boys are also directed to refuse any containers which are not in sound condition, and to notify shippers that first-class fillers must be used as well as cushioning material in both the top and bottom of the cases.

All members who are interested in the handling of eggs should assist the express companies in their endeavor to have the goods properly protected and handled while in their care

Track Scale Allowances

Railway Companies Likely to Put New Scale into Effect at an Early Date

The Board of Railway Commissioners on February 24th, 1920, issued General Order No. 283, in connection with track scale allowances. The judgment in connection with this question was reported in INDUSTRIAL CANADA of January, 1920, page 229. The order above referred to is for the purpose of bringing the judgment into effect. No date has been set for the changes ordered, but it is understood the railway companies will put them into effect at an early date.

For the information of our members the following is submitted:—

TRADE SCALE ALLOWANCE..

Comparison of allowances at present named in tariffs of the carriers with those ordered by the Board of Railway Commissioners in General Order No. 283, dated Ottawa, February 24, 1920:

Commodity.	Car.	Maximum Allowances. Present.	Proposed.
Agricultural Implements.			
Machinery	A	x1,000	x650
Stoves	B	x1,500	x650
Vehicles—all kinds (see Note 1).			
Acid, in carboys (see Note 3)	C	1,000	x650
Ashes		(1) 500	Cancelled
		(2) 1,000	Cancelled
Bark	A	(1) (2) 500	Cancelled
	D	(1) 2,500	1,000
		(2) 2,000	1,000
	E	(1) 1,000	1,000
		(2) 500	1,000
Lumber and other forest products not elsewhere provided	A	(1) (2) 500	Cancelled
	B	(1) 1,000	*500
		(2) 500	*500
Perishable Freight.	F	1,500	†2,000
	G	2,000	†2,500

D—Flat or gondola cars with temporary racks.
E—Flat or gondola cars with permanent racks.
F—Box or stock cars lined with lumber by shipper.
G—Box or stock cars lined with lumber by shipper and containing fuel and stove.
(1) December 1st to April 30th.
(2)—May 1st to November 30th.
X—Actual weight but not more than the maximum shown—shipper must certify as to weight on shipping order and bill of lading.
*Actual weight when ascertainable, but not more than maximum shown—shipper must certify as to ascertained weight on shipping order or bill of lading.
†Lumber—actual weight, but not more than 800 ft. board measure at 2½ lbs. per ft. (2,000 lbs.).
Stove and fuel—actual weight, but not more than 500 lbs. in addition to above.
Note 1—Present allowance does not include self-propelled vehicles—proposed allowance will include all kinds.
Note 2—At present allowance for snow, ice, refuse obsorption of moisture is included in weight—allowances under proposed will be an estimated allowance adequate to actual conditions in each case at time of weighing.
Note 3—At present allowance applies only on shipments from points east of Fort William to points west thereof. Proposed allowance will apply between all points in Canada.

From the above, it will be seen that, generally speaking, the new maximum allowance for dunnage will be 500 lbs., or the same as at present; on agricultural implements, machinery, stoves and vehicles, it will be 650 lbs.

In connection with vehicles, it might be pointed out that automobiles and other self-propelling vehicles are not now provided with an allowance. The extension of the allowance to cover such vehicles will be of interest to the automobile industries.

The allowance on bark has been made the straight 1,000 lbs., as against the present varying amount from 500 to 2,500 lbs.

As regards the question of snow, ice and refuse, the maximum allowance is now generally about 500 lbs., whereas under the order it must be the actual amount in each case, but this is to be allowed by the carriers' weighmen.

Demurrage

Association's Application in Connection with the Average Agreement Has Been Dismissed

The Assistant Chief Commissioner Board of Railway Commissioners, Ottawa, on January 26th, completed a judgment dealing with the "average agreement" in connection with the application of the Canadian Manufacturers' Association for an order directing the extension of the Canadian Car Demurrage Rules for the purpose of including this agreement.

On February 6th this judgment was concurred to by the Chief Commissioner and Commissioners Goodeve, Boyce and Rutherford, and was sent to the Association on February 27th.

Position as General or Works Manager

THE advertiser is a Canadian, at present satisfactorily connected with a Company (as General Works Manager) employing 2,100 men in two widely separated plants. For personal and family reasons desires to return to Canada.

Has had many years experience in charge of design and manufacturing of gas engines (marine and stationary) oil engines, tractors, auto parts of all kinds, boilers and engines (marine and stationary), structural and platework, contractors' equipment and dredges, etc.

Thoroughly experienced in all metal working processes, and the management of foundries producing steel, grey iron and brass castings, drop and hammer forging shops, machine shops, pattern and woodworking departments, metal heat treating departments, also the management of engineering and drafting departments.

Understands sales and general business.

Very successful in organizing and planning for profitable production; thoroughly understands the control of indirect costs and the making of budgets for same.

45 years of age and in good health.

Seeking connection with a worth-while concern which will pay a good salary for profitable operation of its plant.

Position wanted is that of General Manager or Works Manager and must be permanent.

Prefers location in or near Toronto.

Write Box 200, Industrial Canada, Toronto.

Our Modern Plant is fully equipped to supply castings of every description in

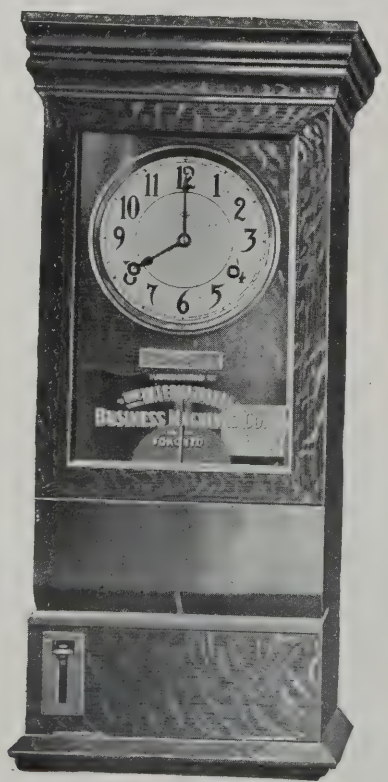
Let us quote you

Hull Iron & Steel Foundries, Ltd.
HULL QUEBEC

Here is your future Superintendent.



Here is the Machine that helps you find Him.

HE'S one of your producers! The "International" Job Time Recorder finds him for you. There are other good workers, and there are also non-producers.

¶ It is production you are after and this International Job Time Recorder will show you exactly where you are getting it. Automatically printed on each Job Card is the exact starting and stopping time on each and every operation.

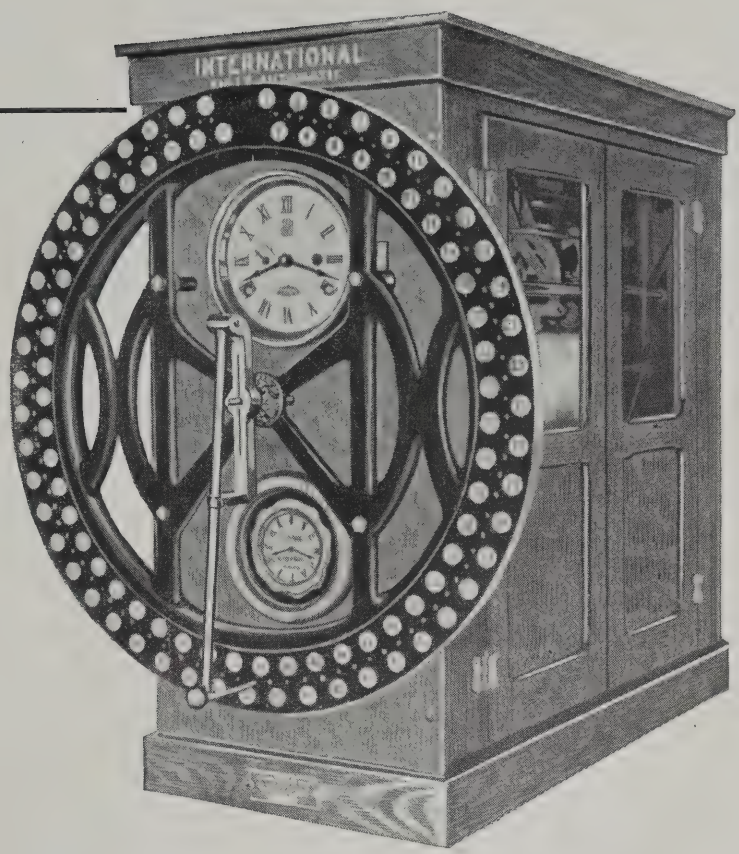
¶ The International unerringly records the points of high and excessive production costs through every stage of manufacture—indicates the inefficient workmen, the non-producers and helps you clear out the "deadwood." Best of all, it ***shows the men who are producing*** and develops them by stirring up lively competition. You can ***watch them grow,*** and out of this group who take an interest in your business you'll pick your "Job Bosses" and, when the time comes, your Assistant Foremen.

Why keep your modern machinery hitched to an ancient time and cost recording system when an International Job Recorder will help you "jump" production records to the peak?

International Job Time Recorder

There's an International for every business. Let us send you our literature.

International Business Machines Company, Limited



Time Recorder Division

FRANK E. MUTTON, Vice-President and General Manager

Head Office and Factory: Campbell Ave., Toronto, Ont.

Branches in all Principal Cities

(Also makers of Hollerith Electric Tabulators and Dayton Computing Scales)

Labor time is the most costly raw material you buy

What kind of a jolt would you give your bookkeeping department if you found they did not have a real, efficient, practical, infallible check on the materials you buy?

Why not have just exactly that kind of a check on the labor time you buy? Why stick to an old-fashioned, cumbersome time-keeping system dependent on the "human element" for its efficiency, impartiality and reliability?

This is the age of machines. Check your labor time purchases by a machine. Ninety-eight per cent. of the world's successful firms do so, and we've supplied ninety-five per cent. of ***them.***

We supply time-keeping systems for any and every purpose or business

International Business Machines Company Limited

Vice-President and General Manager

Branches in all Principal Cities

(Also makers of Hollerith Electric Tabulators and Dayton Computing Scales)

The judgment dismisses our application on the following grounds:—

1. That the consignee has no right to an allowance for any time between the actual time used in unloading cars, and the free time period of 48 hours.

2. That this plan (average agreement) would be discriminatory as between different sections of the shipping public; in other words, the larger manufacturer or shipper would have an advantage over a smaller manufacturer or shipper.

3. The adoption of the plan would not increase the car supply available at any given time.

In support of the first point, numerous cases have been cited, particularly English Law.

The Royal Bank of Canada announces the opening of branches at Santos and Sao Paulo, Brazil. With a branch already located at Rio de Janerio, this makes three branches now doing business in Brazil.

EXCELLENT FACTORY SITE

FOR SALE OR LEASE

Location.—Live town on lake front close to Toronto, with fine harbors, 3 transcontinental railways and 7,000 population. **Power.**—250 electric horse-power, fully developed, including cement dam, water-wheels, large brick power house and other buildings with abundant additional hydro electric power available if desired. **Labor.**—Supply will be found most satisfactory, both male and female. This is a splendid opportunity for either a new industry or branch of existing industry requiring immediate supply of power and labor and first-class shipping facilities. Special inducements offered.—Address Box 100, Industrial Canada, 1301 Bank of Hamilton Building, Toronto.

Prospects for Industries

Some of the possibilities for future industrial developments in British Columbia

Mr. W. C. Oliver, of the Douglas Fir Turpentine Company, California, is advocating a new industry for British Columbia. Wonderful possibilities are connected with it. The matter has been brought before the Provincial Government. Mr. Oliver describes the Douglas fir as the most valuable economic timber in the world. It can be made to produce hundreds of millions of dollars worth of turpentine, resin and other by-products, while, at the same time, the timber growth of the tree will be enormously accelerated. His list of more than 100 staple commercial articles that can be manufactured from the by-products of the forest opens up an amazing vista—from the fibre silk to the Japanese silk (so much used in hosiery), to linoleum, resins and acids.

Sir George Bury, on a recent return from the Whalen Pulp Mills, up the Coast, was enthusiastic about the manufacture of underwear from pulp fibre.

Professor John Davidson, Botanist of the British Columbia University, Vancouver, has discovered a certain kind of Douglas fir tree that grows in the Dry Belt of British Columbia, whose leaves exude a fine white sugar in masses of one-quarter of an inch to two inches in thickness. Indians have known of and used this sugar for centuries, and there has been no time when grizzly bears did not feast upon it. Professor Davidson says its use in medicine and chemistry may be very important, and now remains only to be brought out by chemist investigators.

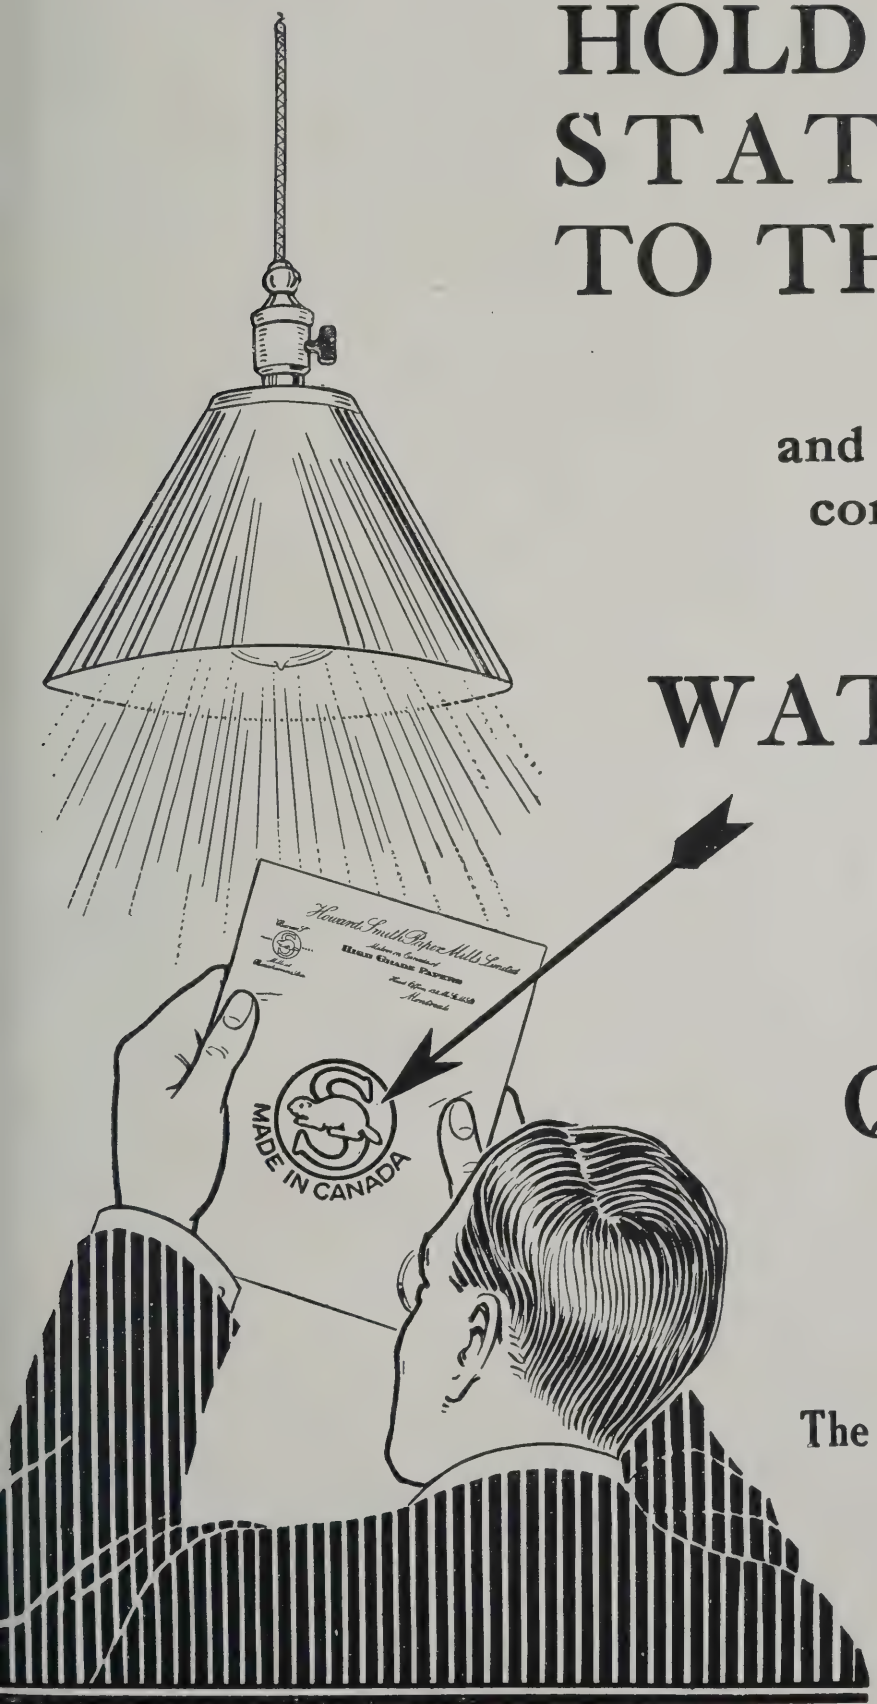
Palladium has been found in a copper mine discovered up the coast from Vancouver. Being one of the richest known metals, this discovery will add greatly to the wealth of British Columbia.

An iron, equal to the best Norwegian metal, is now being produced in British Columbia.

British Columbia magnite ore is now being transported 400 miles by water to Seattle, and is there smelted successfully in an electric smelter in less than two hours' time. A company is being formed in Vancouver to do similar work.

During the war a process of refining zinc was discovered and worked out at the Trail smelter, B.C., and many trainloads of zinc slabs were shipped by rail to Vancouver and over-the-world by steamships.

Had Many Interests



Late John Whyte, of Stratford, Took Foremost Part in Industrial Life of City

John Whyte, president of the Whyte Packing Co., Stratford, whose death after a long period of ill-health occurred on March 14, was an honored citizen with widespread business interests. A native of Scotland, he began business life in the meat business in Mitchell, being associated with his father. On the death of the latter, he removed the industry to Stratford, erecting the big plant of the Whyte Packing Co. in 1899. He was also interested in the Stratford Brass Co., Macdonald Thresher Co., Avon Knit Mills and other local industries, besides taking an active share in the work of the Board of Trade, Board of Health, Hospital Board and Children's Aid Society.

PATENT FOR SALE

Patent for sale on Lamp Chimney Holder. Simple and inexpensive to manufacture. Will sell outright for cash or sell right to manufacture in Canada. Stays on burner when chimney is pulled off, but may be removed or put on any time. Miss Amanda Halverson, Delavan, Minn.

AUDITORS' REPORT

In accordance with the provisions of Sub-sections 19 and 20 of Section 56 of the Bank Act, we report to the Shareholders as follows:

We have examined the above Balance Sheet with the books and vouchers at Head Office and with the certified returns from the Branches, and we have obtained all the information and explanations we have required, and in our opinion the transactions which have come under our notice have been within the powers of the Bank.

We have checked the cash and verified the securities of the Bank at the Chief Office and at several of the principal branches during the twelve months covered by this statement, as well as on February 28th, 1920, and have found that they agreed with the entries in the books of the Bank with regard thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given us, and as shown by the books of the Bank.

OFFICE AND FINANCE

The Philosophy of Thrift

By F. W. HARDING

Part I
Methods of Thrift

THRIFT is much written about and often talked of, but very little if anything is said as to a proper method of practising it. The interpretation of the idea ranges from the one who saves every penny to the one who occasionally saves.

One man conceives the idea that thrift means the laying aside of every penny, the denying of himself and those dependent upon him of everything that makes life worth living. He would spend money for only the barest and plainest food and clothing, shriveling his very soul, and stunting the spiritual life of himself and his family. He is rarely a person worth meeting, for he probably denies himself good reading, and has not developed mentally. His apparel is such as to cause him to stay at home and literally bury himself.

Another has the happy-go-lucky idea of saving a little now and then, and somewhere between these two extremes is the level-headed idea of methodical living and saving.

The first example, if followed by all, would at once plunge the country into the direst of financial distress and hard times, and only those engaged in the production of food and cheap clothing would have employment, the rest would be in want. This is a strong statement, but true, and if it causes the thoughtless and miserly to stop and think, it has served a good purpose.

Civilization demands not only necessities, but some luxuries and many semi-luxuries. The large proportion of the population are busily and happily engaged in supplying these wholesome needs. It is easily seen then, that the happy-go-lucky man, in scattering his money freely, helps to make the country prosperous by keeping money in circulation. He would not be able to buy many Government bonds it is true, neither has he done much to provide for a rainy day or for his old age, but he has enabled others to do so. He is the better man of the two extremes at that, for he has added to the happiness of his fellows. It is well for the country, though, that all are not like him, for our prosperity would be fictitious and inflated and there would be no money in the banks to promote enterprises, or to assist the Government when it needs assistance.

Artificial wants and desires create a mental habit of dissatisfaction with life, and it has been found that no ordinary salary, however large, can cover all these desires. A man is happy in proportion to the absence of artificial wants, and it takes firmness of mind and purpose to prevent their creeping in.

A sensible, thrifty man realizes that to properly support his brain he must have plenty of good and wholesome food (but he does not waste it), and that good clothes enhance his self-respect, enabling him to appear among his fellows without embarrassment; also that good reading and music enlarge and exalt the mind and make him a desirable companion and good citizen. By the indulgence of these modest wants he helps others to prosper, and if a man of family, his children are likely to be happy; and a happy childhood is the best kind of foundation for a country's future manhood. His is a simple, fine life and his real needs go no further. These are the people whose lives and savings are methodical; the ones who have bank accounts, and who can buy victory bonds or thrift stamps and provide for old age.

All of this is obtainable at a comparatively small expense above the barest necessities of life, and is within the reach of most people, in proportion to the position of life they occupy.

Part II
How to Get Rich on a Salary

The wailing cry we ever hear is "You can't get rich on a salary." This is the excuse of the self-indulgent and thoughtless. The pity of it is that so many believe it because it is oft repeated.

The word "riches" really does not mean much, for it cannot be defined to the satisfaction of every one. To one man it may mean a comfortable reserve fund that will tide him over adversity, and be large enough to provide for his old age in the way of life he has been accustomed to.

To another, it means unlimited wealth, and to such a man the possession of a half million of dollars would not make him feel rich. Riches are relative. It depends upon our mental attitude toward the world. Each must decide for himself the definition of riches. No ordinary income, however large, will satisfy those who have vain and foolish wants.

It is to the first man that these lines are addressed, and a method outlined. The saving of much money above a fixed scale of comfortable living is altogether dependent upon a *regular habit of saving;* occasional savings will not do it. It is a mathematical proposition entirely, based on the fact that money makes money, and this interest money, and *all raises of salary*, bonuses, etc., go into the reserve fund.

To illustrate: suppose that a man received $125.00 per month and saves $25.00 per month, or $300.00 per year. He received a raise to $150.00 per month, and by keeping on the same scale of living he will save $600.00 per year, or 100 per cent. more saved on a 20 per cent. increase of salary. How many will do this? Very few, but the wise man will if he was comfortable before; at least until his reserve fund warrants an increase in his way of living. To show how money makes money, suppose that the ordinary man at the age of 35 has a reserve of $5,000.00, in 12 years at 6 per cent. this will be $10,000.00, and in 12 years more $20,000.00, without bonuses or increases being taken into account, and this, too, without having saved another cent after 35 years old. It shows plainly that if one kept on saving after 35 years he would accumulate a large sum.

This is an appeal to the young man to form the *habit* and begin saving *regularly now.* The advice is good for the older men too. It is only the old, careless, thoughtless men who originated the saying quoted above. Regularity, *method and habit* of saving bring home the bacon.

Part III
Fear

Fear is mankind's worst inheritance from the remote ages. One can almost imagine the scene when he first ap-

Collections made at all points in Canada and in foreign centres.

Drafts—Money Orders and Letters of Credit issued, available throughout the world.

Exchange—Domestic and Foreign Exchange bought and sold.

Government and Municipal Securities dealt in at all branches.

Savings received at all branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

HEAD OFFICE - TORONTO

peared on earth and his plight must have been pitiable in the extreme, for he was defenceless as compared to other animals. He had neither claws nor teeth for defence, and could not fly, nor could he run very fast. The great beasts, reptiles and birds of prey, in those far-off days were his physical masters, and it is a wonder that he ever survived. His abode was either in trees or caves and neither was safe from intrusion; further, his subsistence was very precarious. He was in constant terror all of the time, and a form of this fear is instinctive in all of our minds to this very day. It is true that at that time he was nearly, if not quite, an animal himself; but his experiences have left their mark upon our minds. When he learned to throw stones and use clubs he made a little progress towards survival.

Not only did he have the beasts of prey to contend with, but he also had to defend himself from his fellow savages. The strongest killed the weakest and appropriated all of his belongings.

As time went on, men formed in clans and tribes for mutual protection. The upheavals of mountain ranges and gradual cooling of the earth's surface caused great climatic changes, which resulted in the extinction of some of the larger and fiercer beasts and birds of prey, and man began to have an ascendancy over the remaining animals. Mankind then began to multiply, but they still had the fear of death in some violent form, from either animals, or their fellows in numerous tribal wars.

As civilization advanced this fear became somewhat lessened, and the fear of death from starvation became more prominent. If he was thrust out of the tribe, death was sure, from either starvation or violence, so he became afraid of other men. In patriarchal times men were more or less slaves, and lived by the favor of the master, and feared its withdrawal. This debasing fear of man and the fear of starvation is our inheritance from those far-off times.

Fear is paralyzing, and it more or less prevents our best efforts and full development. If we were without fear we would be more likely to courageously attack the biggest problem with our heads up and chins in the air, facing the world squarely.

But we are held back by fear. If we labor for others, as most of us do, we hesitate to take a chance, because a failure may mean being thrown out of employment, and thus through fear we become craven in a more or less degree. Worry, too, takes something out of us, and we are handicapped by it to a large extent.

What is the remedy to-day for fear and worry? Simply money; a Reserve Fund, such as a wise business man provides to carry him over bad times. You are a business man, too, for while he sells commodities, you sell skill. So *get a reserve.* It is to be had by denying yourself the things not absolutely necessary to procure for you happiness and comfort. If you are the head of a family, it is true that it is hard to deny others some of their foolish desires, but it is your duty as the provider and head of the family to do so, until you have a reasonable reserve. It is a mistaken kindness not to refuse. A man with a reserve against sickness or lack of employment, even though small, has little fear; he is more cheerful, and because he is so, he is more apt to be given better employment, and socially sought out. His work is better, and he is more likely to be advanced in position, because the employer realizes that a man who can manage his own affairs well, can help to manage his. Is it not then worth while to get rid of *fear?*

National Breweries

Company Changes Fiscal Year to Correspond with Calendar Year and Shows Large Profit

Trading profits of National Breweries Limited for fourteen months ended December 31, 1919, amounted to $1,061,350, compared with profits of $616,265 for the twelve months ended October 31, 1918. After providing for depreciation, interest on bonds and dividends, the balance at credit of profit and loss was increased from $900,592 to $1,379,938. The company's active assets show an increase from $2,462,652 to $2,681,369, while property assets are up from $4,268,982 to $4,569,834.

Ames, Holden, McCready

Eight-month Report Makes Good Showing Compared With Previous Fiscal Year

Owing to a change in the fiscal year, the report of Ames, Holden, McCready, Limited, recently issued, covers eight months only, this being from May 1 to December 31. Net profits, after all deductions except preferred dividends, amounted to $307,400, as compared with $323,322 for the full 1918-19 period. It is pointed out that the four months excluded are those when business is at its height, so that the showing was even better than was indicated. Total sales were $4,269.368, being an increase of $1,022,642 over those in the corresponding period of the previous year. Prospects for 1920 were promising.

Nova Scotia Steel

Profits for 1919 Were Affected by Decreased Output and Lower Prices Prevailing

Combined profits of all departments of the Nova Scotia Steel & Coal Company, Limited, for 1919, were $2,193,304, as compared with $3,535,525 in 1918. The volume of business was smaller than for several years, being $6,889,941, as compared with $11,525,779 in 1918 and $12,359,113 in 1917. Net profits were $1,029,876, against $1,716,492 in 1918. The balance available for distribution on the common stock was $859,876, or at the rate of 6.39 per cent. The report states that during the depression, in order to furnish employment and hold the organization together, a considerable amount of business was taken below cost. The demand for steel improved towards the end of the year and at the date of the report the tonnage of unfilled orders was larger than at any time since the signing of the armistice.

Canadian General Electric

Profits for 1919 Showed Reduction, but Business at End of Year was in Large Volume

Total profits of the Canadian General Electric Co. for 1919 amounted to $1,617,989, with net profits of $1,093,320, the latter comparing with $1,436,483 in 1918. Dividends of $780,000 were paid. Adding the undivided profits from the previous year of $522,776 and then deducting $400,000 transferred to reserve, there remained at credit of profit and loss $436,097, which with the reserve of $5,000,000, left a surplus of $5,436,097.

The report refers to the depression which was felt in the first half of the year and to the great improvement in the last half of the year, when sales exceeded those of any previous period in the history of the company. It forecasts a continu-

ance of profitable business, basing this belief on the great prospective development of the electrical industry. Reference is then made to the extensions and additions to manufacturing and distributing facilities at present being proceeded with.

Dominion Canners

Higher Profits Recorded as a Result of Greatly Increased Sales

Profits of Dominion Canners, Limited, for 1919, before deducting bond interest, but after providing for Business Profits War Tax, amounted to $819,823, as compared with $745,324 in 1918. After paying bond interest and preferred dividends, the sum of $559,683 was added to profit and loss, bringing the undivided balance in this account up to $2,031,905. The directors decided against paying a dividend on common, although earnings on common amounted to over 18 per cent. It was felt that the money was needed for the company's operations.

Riordan Pulp

Substantial Increase in the Earnings of the Riordan Pulp and Paper Co., Limited, in 1919

Gross earnings of the Riordon Pulp & Paper Co., Limited, in 1919 amounted to $1,810,126, an increase of $367,080 over 1918. After all charges were met, the balance available for application to the common stock was $851,088, equivalent to 18.91 per cent., this comparing with $816,563, or 18.14 per cent. in 1918. The regular common dividend disbursement of $450,000 was paid, leaving a balance of $401,088 to be added to surplus account, bringing this up to $2,591,796. Announcement is made that the common capitalization will be increased to $6,000,000.

Dominion Foundries

Earnings for the Past Year were in a Considerably Lower Scale than in 1918

At the annual meeting of the Dominion Foundries & Steel, Limited, held in Hamilton on March 10, earnings for 1919 of $654,000 were reported, comparing with $1,228,614, unofficially reported a year ago. After deducting preferred dividends, $596,400 remained, equal to 24 per cent. on the common stock. The company have $712,000 in cash, a plant valued at $2,000,000 and $651,000 in its investment fund. There is no bonded indebtedness. A large new plate mill is under contruction.

B. C. Fishing

Small Gain for the Year in Surplus of the B. C. Packing and Fishing Co.

While details of the profit and loss account are not given in the annual report of the British Columbia Packing and Fishing Company, it is shown that the surplus has increased from $1,439,694 to $1,465,802, with reserve up from $726,257 to $751,614. Dividends to the amount of $234,081 were paid and on August 21 last the dividend rate was increased from 5 per cent. to 6 per cent.

Among the total assets are included real estate, buildings, canneries, etc., less depreciation, to the value of $2,462,648.97, as against $2,610,539 last year. Insurance fund and other investments are given as $265,400. Shares in and advances to other companies are $369,172. These two items compare with a total of investments in last year's report of $580,251.78, which shows an increase of $54,320.43 Inven-

tories of stores, nets and supplies total $628,330, and fish canned and in cold storage are valued at $386,050, which make a total under this head of $1,014,381, which is slightly under the total for the same items last year, which was $1,035,553. Accounts and bills receivable (less provision for doubtful accounts), are $189,961, which compares with $421,264 in 1918.

This item last year makes special mention in itemizing of sundry debtors, including fishermen's accounts Cash on hand and in bank this year was $223,962, which is somewhat of an increase over the same item last year, which amounted to $6,116.

Brandram-Henderson

Increased Earnings and Record Sales Reported by This Company for the Past Year

Net profits of Brandram-Henderson, Limited, for 1919, amounted to $299,736, which compares with $238,133 for the thirteen months ended December 13, 1918. After meeting all charges, including depreciation, dividends and war tax, the balance at the credit of profit and loss was increased from $501,519 to $639,027. The balance sheet shows total current assets of $1,610,703, as against current liabilities of $339,410.

Regarding general trade conditions, George Henderson, the President, reports: "During the early months of the year foreign sales were disappointing, but by the end of the year export shipments and booked orders represented a bigger percentage of total than ever before. This was in no way attributable to any decrease in home trade, because each Canadian division reports a half-yearly increase, and also an increase for the year."

Canadian Salt Co.

Profits for 1919 were on Practically the Same Scale as in Previous Year

Operating profits of the Canadian Salt Co., Limited, for the year 1919 were $226,881, as compared with $223,342 in 1918. Net profits amounted to $136,286, or almost exactly the same figure as the previous year. A balance of $72,286 was added to surplus, which now stands at $595,858. Mr. E. G. Henderson, president of the company, in the directors' report, states that great difficulty was experienced during the year in obtaining a requisite supply of fuel, owing to strikes and embargoes in the United States, and in addition at times the supply of hydro power was greatly curtailed, which prevented the plants being operated at full capacity.

Howard Smith Paper Mills

Big Gain Recorded in Net Profits and Working Capital Position During Past Year

Net profits of Howard Smith Paper Mills, Limited, for 1919 amounted to $429,228, compared with $252,604 in 1918 and $200,546 in 1917. After other revenue is added, total income for the period amounted to $437,990, which compares with $257,241 in the previous year. Deducting bond interest and preferred dividends, a balance of $369,524 remained, which represented earnings of 34.8 per cent. on the common. A generous amount was allowed for depreciation, and $181,552 was carried to general reserve, bringing it up to $643,793.

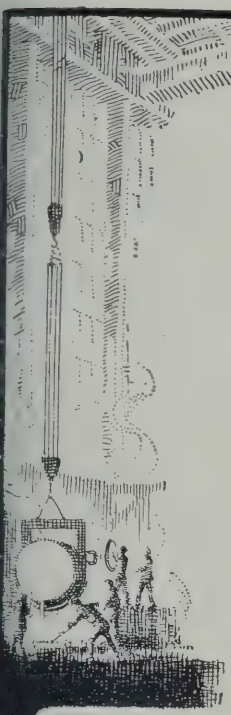
Banishes Work-day Weariness by Saving Countless Futile Steps

MODERN business demands that the costly wastefulness of mis-directed efforts—the work-day weariness of futile steps be saved. As the craftsman with the better tools is always the better workman, so the office man or woman with the better tools can be depended upon for more work and better work.

The OFFICE SPECIALTY Record Desk banishes the countless futile steps required to run to and from the ordinary filing cabinet. It enables the worker to concentrate her mind on the work to be done. With the Record Desk, one clerk can do more work than two working under old fashioned conditions. It helps greatly to eliminate errors and thus improves the quality, as well as increases the volume of work accomplished.

The Record Desk is compact and occupies but little floor space. It is sectional and can be arranged to accommodate any record card file, large or small. It places thousands of card records within arm's reach and combines every advantage of the serviceable desk with those of the ordinary record filing cabinet with every step in between saved.



There is no other desk like the OFFICE SPECIALTY Record Desk, because it is the only one into the building and designing of which go more than thirty years of experience in designing and building office equipment for Canada's more important firms.

This is the age—the day—the *hour* of service. Success is assured only to those firms and individuals who can deliver service. Competition demands speed and accuracy. Good judgment dictates that wasted energy which so makes our work day wearisome, be banished and tasks made easier. The OFFICE SPECIALTY Record Desk will accomplish both in every office where a record filing system is used. Especially desirable in purchasing departments, advertising departments, warehouses, store rooms, and all similar branches of business in which careful and accurate filing and quick availability of the larger card records are a necessity.

System Service goes with all OFFICE SPECIALTY equipment. It does not end with the completion of the sale but, is given free with perfect willingness to all who need it as long as desired. If you have Office System problems to solve, OFFICE SPECIALTY System Service Experts, men schooled and experienced in systematizing and the organization of office routine are at your call. A card or phone message will receive prompt attention.

Industrial Chemistry
Speeds Production—Cuts Costs

The explanation of the remarkable success of many of our leading industries may be stated in a phrase—Scientific Control in Manufacturing.

Each step in every process, every method, every practice, has been subjected to the closest scrutiny with a view to securing an increasing degree of accuracy in control.

Gradually there has been evolved a plan of operation that has completely eliminated everything unnecessary or wasteful, speeding up production and cutting down costs.

What mighty corporations have done every progressive manufacturer can do.

Let us make a survey of your plant and give you confidential suggestions calculated to increase its efficiency—and your profits

MILTON HERSEY COMPANY, LIMITED

Industrial Chemists, Engineers and Inspectors
MONTREAL and WINNIPEG

Factories Damaged by Lightning

Tall chimneys and high structures are particularly susceptible to damage by lightning. Not all the damage comes from direct flash. When a stroke occurs all the metal parts, such as steel beams, pipes, electric wiring, roof gutters, etc., are ***charged*** by "Induction," frequently producing sparks which cause fire. Last year the insurance companies paid $1,500,000.00 in Canada for damage by lightning. All risk of fire or damage by lightning can be eliminated and 100% protection ***guaranteed*** by installation of

Shinn-Flat
System of Lightning Prevention

This system embodies the scientific principles discovered by Prof. Day in his 16 years' research work, both in regard to the kind of "rod" that is safest, and the kind of "installation" that will make a stroke of lightning harmless. It requires as much expert and scientific accuracy to "rod" a building correctly, every building being different, as it did to discover the most efficient kind of lightning rod. The Shinn-Flat Lightning Rod of copper wires woven into a flat ribbon is the last word in Scientific Lightning Protection. Ask Shinn Mfg. Co. about protecting your chimneys and factories.

Agents Wanted—It is a profitable business to be agent for the Shinn-Flat System of Lightning Prevention. Dealers or responsible individuals who wish to represent our line please write for particulars and terms.

Write for full information, Prof. W. H. Day's Book "Lightning, Cause and Control." Mailed on request.

Canada's Industrial Expansion

A Record of Progress

Secure Canadian Plant

The Republic Stamping & Enameling Co., Canton, Ohio, Take Over a Toronto Industry

The Republic Stamping & Enameling Co., Canton, Ohio, manufacturers of "Old English" grey enameled ware, have purchased the entire stock issue of the Consolidated Stamping & Enameling Co., of Toronto, and will form the Republic Stamping & Enameling Co. of Canada, Limited, to operate the Canadian industry, at 2382 Dundas Street, Toronto. Decision as to the enlargement of the plant will be made by the directors, and an early announcement of the company's policies will shortly be forthcoming.

To Make Auto Tops

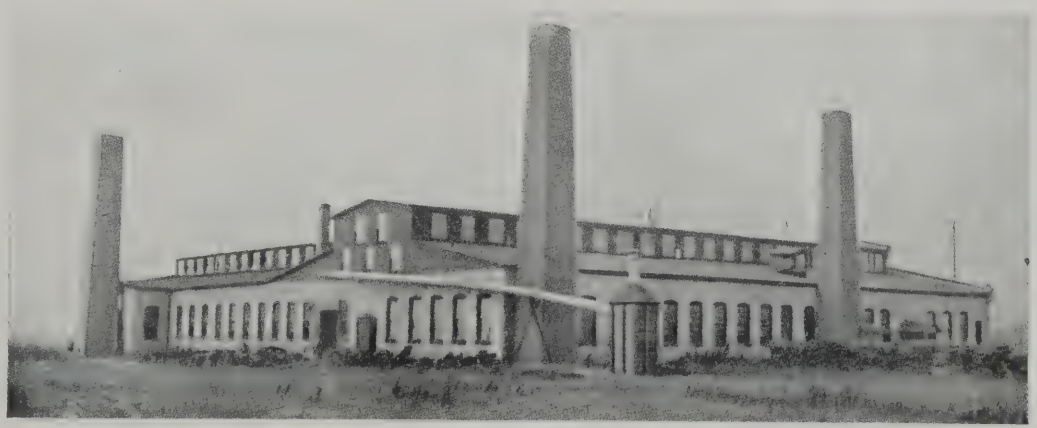
General Top Co., of Canada, Limited, Take Over Aeroplane Plant at Toronto

The General Top Company of Canada, Limited, have been incorporated to manufacture a new type of automobile top, known as the Artcraft Top. It possesses certain special and exclusive features which make it a desirable article. The company have taken over part of the old Curtiss Co.'s plant at 163 Dufferin St., Toronto, and started producing about the first of the month. When operating at full capacity, they expect to employ from 125 to 150 hands.

The officers of the company are: President, R. C. Kilgour, President Packard-Ontario Motor Car Co.; Vice-President and General Manager, Lawrence W. Lee, formerly Asst. Supt. of the Ford Motor Car Co.; Secretary, W. L. Cowan, Treasurer Ontario Motor Car Co.; Directors—E. G. Baker, Secretary F. N. Burt Co.; C. R. Norton, President General Top Co., Cleveland; H. S. Norton; E. A. Petriquin, Cleveland, and H. P. Macintosh, Jr., Cleveland.

New Product for Canada

Diamond State Fibre Co. of Canada, Limited, to Make Vulcanized Fibre and Its Products



The recent incorporation of the Diamond State Fibre Co. of Canada, Limited, is a matter of considerable interest to Canadian industry. The company will make vulcanized fibre and its products, under the name of "Diamond Fibre." This substance has a varied use in the electrical and mechanical fields. In the former it is used for insulating bushings, gaskets, washers, wire conduits, handles, track insulation, etc.; in the latter for noiseless gears, discs, wheels, timer rings, frictions, bearings, etc. It is also extensively used in the manufacture of trunks, suit cases, trucks, barrels, baskets, boxes, etc.

For the present the Canadian company will not manufacture the raw material, but will import from the Maidstone, England, or Bridgeport, Penn., mills of the Diamond State Fibre Co., the raw material, and machine the finished products in Canada, the company's plant in Toronto being fully equipped for the fabrication of fibre specialties. It is understood that

Has Proved Too Small

The No. 2 Plant of the Smith's Falls Malleable Castings Co., Limited, capacity of which has not been adequate to handle business offering

Again in Operation

The No. 1 Plant of the Smith's Falls Malleable Castings Co., Limited, which was closed down for several years and has again been requisitioned

just as soon as the demand warrants, a mill for the manufacture of the raw materials will be erected in Canada.

The Diamond State Fibre Co. are the world's largest manufacturers of vulcanized fibre. They have mills and factories at Maidstone and London, England, and at Bridgeport, Pa., West Consihohocken, Pa., Elsmere, Del., Boston, Mass., and Chicago, Ill. The Canadian company are now prepared, under the management of Mr. T. Ellwood Webster, to give the best service to the Canadian market. Hitherto it has been necessary for the Canadian buyer to import from the United States, which involved delay in putting shipments through the customs and securing delivery. With the establishment of the Canadian company, this difficulty will be eliminated.

New Cement Enterprise

Ontario Cement Co., Limited, will Build Plant at Beachville, near Woodstock

The Ontario Cement Co., Limited, who have acquired the physical assets of the late Ontario Portland Cement, Limited, whose plant was located at Blue Lake, are proceeding with the erection of an 800-barrel mill at Beachville, midway between Woodstock and Ingersoll. Here are located valuable deposits of clay and limestone, sufficient to supply a 1,500-barrel mill for fifty years at least, while the property is admirably located for transportation and power.

Directors of Ontario Cement Co., Limited, include D. L. Adams, Adams Wagon Co., Limited, Brantford; E. P. Watson, Watson Manufacturing Co., Limited, Brantford; K. W. Harvey, Harvey Knitting Co., Limited, Woodstock, and George McCrae, formerly with the Ontario Portland Cement Co.

The company's prospectus states that building operations will be commenced as soon as weather permits, and it is confidently expected to have the plant in operation by August 1. In the meantime, the company intends to reopen the Blue Lake plant in order to take advantage of the present demand for cement, and material will be drawn from the Beachville property.

Building Large Addition

Parisian Corset Mfg. Co., Limited, Quebec, to Have 21,700 feet More Floor Space

An addition 70x62 feet, five storeys, and containing 21,700 square feet of floor space, is being erected by the Parisian Corset Manufacturing Co., Limited, Quebec, and will be ready for occupancy about May 1. With this expansion adjoining the main building northward, the floor area will be about 70,000 square feet. The building will extend from Colomb Street to St. Valier Street, and the offices will be removed to the latter street. A lunch room will be provided for the employees on the fourth floor, where coffee or tea will be served gratuitously by the company.

New Milk Factory

Bowes Milk Products, Limited, Are Erecting New Powdered Milk Plant at Sydenham

A building of brick construction, 96x196 feet, capable of enlargement, is being erected by Bowes Milk Products, Limited, at Sydenham, Ont., for the manufacture of dry or powdered milk. With equipment, the plant will cost from $150,000 to $200,000, and it will be ready about the middle of May. It is located on the Canadian National Railways, immediately opposite the Sydenham depot, and will have its own siding. Reports indicate a milk supply of 150,000 to 200,000 pounds per day within a radius of twelve miles.

THE GOLDIE & McCULLOCH CO., Limited

Head Office and Works: GALT, ONTARIO, CANADA

TORONTO OFFICE: Suite 1101-2 Bank of Hamilton Bldg.

WESTERN BRANCH: 248 McDermott Ave. Winnipeg, Man.

BRITISH COLUMBIA AGENTS: Robt. Hamilton & Co. Vancouver, B.C.

QUEBEC AGENTS: Ross & Greig 400 St. James St., Montreal, Que.

The company contemplate drying an average throughout the year of 50,000 pounds per day, and this will be exceeded in the flush season.

The Sydenham plant is the second plant of Bowes Milk Products, Limited, they already operate a factory at Bloomfield, Ont. Here the process building is 40x140 feet, two storeys, with storage warehouse on siding 200x40 feet, also two storeys. The capacity is 50,000 pounds per day.

To Double Capacity

J. Ford & Co. are Making Improvements to Their No. 2 Paper Mill at Portneuf Station

Considerable additions are being made at present to the No. 2 mill of J. Ford & Co., manufacturers of hard sized news lining, hanging, colored poster, wrapping and bag papers, Portneuf Station, Que. These consist of a new reinforced concrete, fireproof building, 200 x 80 feet, two stories, with an extension for boiler room. It is intended to move the 120-inch Fourdrinier machine from the old to the new building, and a second machine is on order, though it will be some time before it is delivered. Capacity will then be doubled.

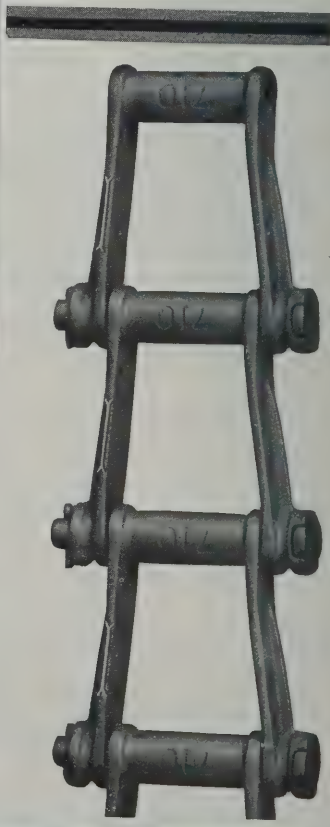
Have Taken Over Plant

Independent Concrete Pipe Co., Limited, Formed to Operate Woodstock Industry

The Independent Concrete Pipe Co., Limited, have taken over the plant in Woodstock of the B. Blair Co., Mr. Blair becoming president and manager of the new company. John E. Russel Co., Toronto, are general sales agents. The company will continue to turn out a full line of concrete pipe, in sizes from 6 to 108 inches in diameter, and the plant has been considerably enlarged and improved. They have also secured the right to manufacture lock-joint pipe in Ontario. Later on the company may see fit to manufacture other concrete products. Capitalization is $200,000.

New Shoe Industry

Owen-Elmes, Limited, Toronto, Are Going in for the Manufacture of Pumps and Slippers



It is announced by Owen-Elmes Limited, Toronto, that they will undertake the manufacture in Canada of hand-turned pumps and slippers, lines not hitherto made in this country. They have not yet made final arrangements but, as the industry will not require any great floor space or much heavy machinery, the question of building accommodation is a minor consideration. Full details of the new undertaking will be available later.

Established in Cornwall

Canadian Linoleum & Oilcloths Limited, are Getting Plant in Readiness for Early Operation

Canadian Linoleums & Oilcloths, Limited, who were recently incorporated with a capital of one million dollars, have purchased a site in Cornwall, on which is erected a new solid brick and stone building, 45 x 112 feet, four storeys and a half in height. Work has commenced on alterations and additions to this building, and machinery has been secured and will be installed shortly. While it is impossible to state definitely when manufacturing will commence, it is hoped that some lines, at least, can be produced within the next two or three months. A loan of $40,000 is being

DAYLO—a safe-guard of industry

—where the smallest crack or flaw, overlooked, would mean disaster

—down in the cellar of the sky-scraper

—in the murky gloom of a ship's stoke-hold

—in the boiler room of the industrial plant

—wherever the safety of lives and property depends upon thorough and accurate inspection

—*there a DAYLO is needed*

There are a dozen places in your plant where a DAYLO is needed to make sight clearer.

And there are a hundred other places where a DAYLO can quicken production, reduce break-down delays, prevent minor accidents, and help improve quality of the work.

One for every purpose

A few of the Daylo types suitable for industrial use are shown here—there are many more to fit the varied needs for quick, sure and strong light throughout the plant.

All leading hardware, electrical, drug, sporting goods and auto accessory dealers can show them to you.

made to the company by the town of Cornwall, and exemption from municipal taxes has been allowed.

R. E. Kingsley, managing director of the company, was until recently comptroller of the Dominion Oil Cloth Co., Limited. He spent fifteen years with the latter company, and prior to that was engaged in the cotton trade both in Canada and in the United States.

New Company Formed

Bourget & Guy, Cigar Manufacturers, Montreal, Are Succeeded by Prince Rupert Co., Limited

The Prince Rupert Co., Limited, incorporated with a capital of $75,000 under a Dominion charter, have succeeded Messrs. Bourget & Guy, cigar manufacturers, Montreal. They have recently established a second plant at Quebec. They are making high grade Havana cigars, such as "Prince Rupert," and also have a contract from S. Davis & Sons, Limited, for grades such as Davis Noblemen, Panetelas, Couchas, Maurice, Souchez, and Gene Vall, etc. They employ over 60 hands in Quebec and more than 100 in Montreal.

Making Large Expansion

International Metal Works, Limited, Brockville, Have Big Building Programme Under Way

Considerable additions are being made to the plant of the International Metal Works, Limited, Brockville. An additional storey, giving approximately 8,000 square feet more floor space, is being put on the main building. A two-storey addition, containing 3,500 square feet, will then be made. These additions are for the purpose of carrying on regular auto sheet metal parts production, which has increased in volume approximately 50 per cent. over the previous year. Besides this, the company have started the manufacture of automobile bodies, and for this have leased a portion of the National Manufacturing Co.'s building, occupying three floors of fairly large dimensions.

25 Per Cent More Output

De Long Hook and Eye Co., of Canada, Limited, Will Enlarge Their Plant

The De Long Hook and Eye Co. of Canada, Limited, St. Mary's, are proposing to add another storey to their present factory or, as an alternative, build a warehouse. They are also re-arranging their present factory to enable them to increase their output by at least 25 per cent. These arrangements, they state, are merely temporary, to enable them to cope with increasing business during the present year. Beyond that they have not decided what move or further addition to make.

Building Large Addition

The Perfect-Knit Mills, Limited, Listowel, Are Putting Up a New Four-Storey Mill

Work was started recently by the Perfect-Knit Mills, Limited, Listowel, on the erection of a new knitting mill. This will be 50 x 250 feet, four storeys with basement and attic. During the five years the company have been in business, they have not been able to take care of orders, and are now planning this extension in order to meet further business. They hope that the addition will largely increase output. It will be completed in the summer.

The Canadian Appraisal Company

Limited

FULL consideration must be given to the present conditions of high costs if adequate insurance is to be provided, an adverse operation of the Co-insurance Clause is to be avoided, and a satisfactory adjustment is to be assured in the event of fire.

Buildings erected only a few years ago may very possibly be worth double their original cost to-day. *This increased value is insurable and must be insured.* A bitter experience awaits the manufacturer who has not considered the necessity and who may have to rebuild after a fire.

To guess at values when insuring is obviously bad business. A leading Insurance Company states: "It is a fact that 85 per cent. of manufacturers do not carry enough fire insurance as compared with their present valuations."

An Appraisal made on the basis of to-day's costs of labour and material is the only sound foundation for correct methods of insurance.

NEW YORK
Equitable Building

There they hang—helpless!

One in every corner. One or more in every hallway. One on every stair.

There they hang, those wonderfully efficient chemical fire extinguishers.

Hose reels everywhere. Standpipes and hydrants galore.

"Perfect fire protection."

Yet buildings equipped with all of these humanly operated fire extinguishing devices burn every day in the year.

Why?

Because every one of these perfect fire fighting appliances needs a man behind it or it won't work.

That's why non-automatic fire apparatus so often fails.

That's why Grinnell Automatic Sprinklers are better fire-stoppers than the most efficient manual apparatus.

Long before the man-worked fire appliance can get to the heart of the fire, the little Grinnell Sentinel has put an end to threatened ruin, trouble and loss. When the fire starts, the water starts. Not a second is lost in getting ready or "getting there."

That's why the insurance rate on Grinnell protected buildings is so much less than on unprotected ones, that it soon pays for the entire equipment. Your insurance man will tell you just how much the saving will be on your own building.

Important

Heretofore the underwriters have often required a tank supply for automatic sprinklers in addition to the city mains. Now, however, Grinnell Sprinkler equipments can often be installed without a tank.

Don't "think it over" without the facts to guide you. Write us for actual figures to-day.

approximately 55,000 square feet. It is two storeys high, but is being built for future extension to five storeys, and should be ready not later than July. Hitherto the Burroughs Company have merely assembled machines in Canada from parts made in the United States. They expect now, however, to undertake the manufacture here of certain parts, and will ultimately extend the scope of this activity. With their new plant, they will be able to double output. The demand for their machines from foreign countries is reported to be increasing rapidly.

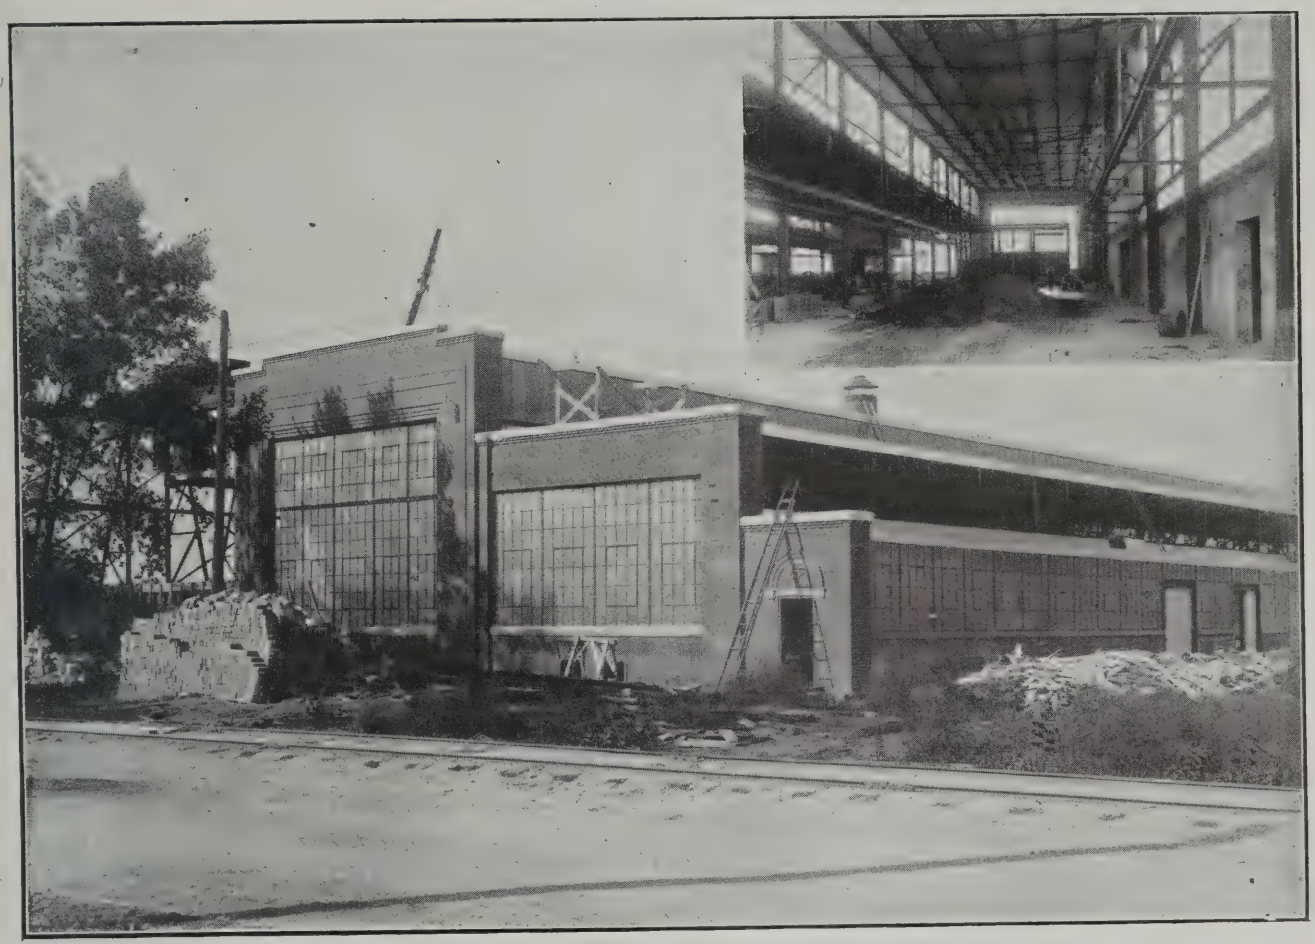
Will Make Juniper Oil

Quinte Chemical Co., Deseronto, Has Plant Nearly Ready for Operation

The Quinte Chemical Co., Limited, who were incorporated Feb. 19, 1919, with capital of $40,000, have their plant located near Deseronto, nearly 90 per cent. complete and, if sufficient capital is available, expect to begin operations early this spring. The company propose to distill juniper oil from the juniper bush and berry and cedar oil from the cedar bush and their plant has an initial capacity of a ton of bush per day, which can be increased to another ton per day by adding another still. They have eleven acres of ground and the plant is over 100 feet long by 30 feet wide, with other buildings for laboratory, shop, office, etc. The plant's capacity is at least 40 pounds per day. Col. W. J. Malley is president and treasurer and George F. Palmer, Secretary.

New Powder Industry

The Thompson Powder Co., Limited, Deseronto, Expect to Start Operations in About a Month



The Thompson Powder Co., Limited, have recently secured incorporation for the purpose of manufacturing and selling explosives. They have taken over some existing buildings in Deseronto, and are making necessary additions and equipping plant, which they expect to have operating some time next month. The company's prospectus explains that they will manufacture a new high explosive, called "Thompsonite," which not only does not throw off noxious fumes, but does not require thawing even in the coldest weather. It has also several other qualities which, it is claimed, will commend its use to mining men and contractors. J. D. Thompson is president and general manager; H. C. Anderson, vice-president, and J. A. Griffith, secretary-treasurer.

Plant for New Toronto

Lion Tire & Rubber Co., Limited, Propose to Erect Large Tire Factory at this Point

The Lion Tire & Rubber Co., Limited, have recently been organized for the purpose of establishing a factory in New Toronto for the manufacture of a high grade line of motor vehicle tires and tubes. A site has been secured on the Hamilton Highway, consisting of a fraction over five acres and the first unit of their contemplated plant will consist of a building 100 x 300 feet, two storeys, with an estimated capacity of 500 tires and 1000 tubes per day. A large part of the factory will be equipped for the manufacture of cord tires. Foundations will be strong enough for the addition of two extra

Fifty Per Cent More Space

Eze Manufacturing Co., Limited, Toronto, Have Acquired Larger Premises for Expansion

The Eze Manufacturing Co., Limited, manufacturers of grocers' sundries, who have been located at 182 Adelaide St. West, Toronto, have purchased the building at 187-189 Parliament Street. Here they will have nearly 50 per cent. more floor space, with opportunity for doubling capacity again later on. The move is being made by the company to take care of rapidly expanding business, as well as to have their own premises in which to instal some new machines.

Make Exclusive Line

The Kimber & Hillier Mfg. Co. Now Manufacturing Drop Forge Dies and Tools

The Kimber & Hillier Mfg. Co. are a new company recently established in St. Catharines for the manufacture of drop forge dies, trimming dies, punching and bending tools. Their plant is composed of a three-storey brick building, with large frame building for storage in the rear, and is located on the Thorold Road. Their efforts have been favorably received, and they are at present making drop forge dies for several of the foremost drop forges in Canada. They claim to be the first and only firm devoted exclusively to the manufacture of drop forge dies and tools.

New Sales Office

Engineering & Machine Works of Canada, Limited, Open Eastern Sales Office in Montreal

The Engineering & Machine Works of Canada, Limited, St. Catharines, Ont., owing to the rapidly increasing demand for their products, consisting of boilers of all types, horizontal, vertical, locomotive and marine, tanks, plate work of all descriptions, etc., and particularly in connection with their recent and very successful venture, the manufacture in Canada of the Keystone Light Traction Excavator, Model 4, have found it necessary to open another eastern sales office in the Birks Bldg., Montreal, where inquiries can be more quickly and satisfactorily handled. This is in addition to their sales office in the Sun Life Bldg., Sherbrooke, Que.

Concentrating at Thorold

Beaver Board Companies Centre Their Canadian Plants to Facilitate Production

In order to effect economies in production, the Beaver Board Companies have removed their board mill from Ottawa to Thorold. The plant at Ottawa formerly supplied all the Canadian and export trade, but with increased demand it has been unable to supply these markets and during the past year or more a large part of the trade has been handled through the Buffalo plant. At Thorold a new finishing plant, 125 x 362 feet, has been built, which will give an output of 5,000,000 square feet of finished board per month at the outset, this being capable of increase. A new office building, 48 x 80 feet, has also been built.

Making Improvements

Midland Woodworkers Limited are Adding to Equipment and Increasing Capacity

Midland Woodworkers Limited, Midland, Ont., who took over the business of the Georgian Bay Shook Mills last October, have discontinued the manufacture of box shooks and are devoting all their attention to the making of doors, sash, mouldings, hardwood flooring and veneer panels. It is planned to develop the business as much as possible, especially in the hardwood flooring department, and new machinery is being installed for the purpose. The door plant, which has a present capacity of 250 doors per day, will be doubled before long. The president of the company is A. H. Vanderburgh of Toronto; W. H. Firstbrook of Toronto is vice-president; R. H. Scrivener, Midland, secretary-treasurer, and Fred M. Beatty, formerly of Saskatoon, is managing director.

Rebuilding Plant

Columbia Handle and Lumber Co., Limited, London, are Replacing Factory Damaged by Fire

The Columbia Handle and Lumber Co., Limited, London, whose plant was recently damaged by fire, are rebuilding, and expect to be in operation again early in May. The new plant will be the same size as before, but, by installing more up-to-date machinery and making other improvements, capacity will be increased. About fifty or sixty men will be employed. The product of the company consists of handles of all kinds, neck yokes, whiffletrees, and hardwood lumber.

To Start This Month

Canadian Nashua Paper Company, Limited, Peterboro, Expect to Start Some Machines Shortly

Owing to delays in getting machinery, the Canadian Nashua Paper Co., Limited, Peterboro, have not yet started operating, but hope to get some machines going this month. The plant has about 70,000 square feet of floor space and the work of erecting both waxing and gumming machinery is now going on under direction of Mr. George W. Watson, the company's engineer. Supplies of suitable raw materials have been secured in Canada and while a close relationship will be maintained with the parent company in Nashua, N. H., the Canadian enterprise will be an entirely separate business. Mr.

Erect New Plant

St. Lawrence Welding Co., Limited, Montreal, Replace Building Burned in February

The tank manufacturing department of St. Lawrence Welding Co., Limited, Montreal, which was destroyed by fire on February 5, has been replaced by a fireproof brick and steel structure, 148x60 feet and 25 feet high, into which the company moved about the first of the month. It has been equipped with two travelling cranes on run-ways, with individual jib cranes over all the heavy tools. The smaller tools which were damaged by the fire have been replaced. This new shop will greatly increase the company's capacity. Orders are being received beyond their best expectations.

Glass Factory for Coast

Alunite Mining & Products Co., Limited, Secure Site for Plant in Vancouver

The Vancouver Harbour Board have just leased four lots on Granville Island to the Alunite Mining and Products Co., Limited of Victoria. The company intend to erect a glass factory on the site, and according to information given the Harbour Commissioners, expect to begin production of glass within four months. The company hold an extensive series of claims on Kuyquot Sound, on the west coast of Vancouver Island, and plan extensive developments.

Extension of Soap Works

Lord Leverhulme Has Acquired Extensive Property in Vancouver for Enlargement

Lord Leverhulme when recently in Vancouver completed negotiations for the purchase of extensive water-front property on Vancouver Harbour. It is stated that the intention of the purchaser is to erect a factory as an adjunct to the present local industry, and to build docks and wharves. It is probable that the wharves will also be used in connection with the fishing interests in which Lord Leverhulme is concerned on the Pacific Coast.

Link Up Steel Industries

B. C. Commissioner of Industries Has Plan for Consolidating a Number of Companies

Major D. B. Martyn, D. S. O., Commissioner of Industries for British Columbia, has under consideration a scheme for the consolidation of the several companies at present manufacturing steel from scrap iron on the mainland and islands of this province. There are at present in British Columbia a number of companies engaged in the steel industry, each of them using scrap iron with imported pig iron as their basic material. The British Columbia Government consider the industry of such intrinsic importance that the plan now being considered will probably result in the amalgamation of existing plants, possibly assisted financially by the Government in order to place the industry on a well-founded and profit-

able basis. The companies at present existing possess among them sufficient machinery and equipment to provide for one plant of considerable dimensions.

Will Build New Plant

Laminated Materials Company Propose to Erect a Second Plant in New Westminster

The Laminated Materials Company of New Westminster will shortly establish another plant, the city of New Westminster having recently given this company an option on a site for that purpose. Under present conditions, where the company's plant is now located, there are difficulties which hamper larger operations, although the more specialized lines can be carried on economically. It is probable, therefore, that the present plant will continue to operate in that direction after the new one is built.

To Enlarge Scope

Sidney Rubber Roofing Co., Sidney, B.C., Will Enter the Pulp and Paper Field

One of the more recent firms to take advantage of the British Columbia Government's policy of assisting financially in the extension of industry in this Province is the Sidney Rubber Roofing Company of Sidney, B.C. This company has arranged a loan from the Government, through the Industrial Commissioner, Major D. B. Martyn, of $100,000. The chief object to which this loan will be applied is the erection of a pulp and paper mill, and generally to add to existing facilities at its command. It is the firm's intention to branch out in the paper business, and to develop a connection that will enable it to compete with other and older paper concerns in this and other provinces.

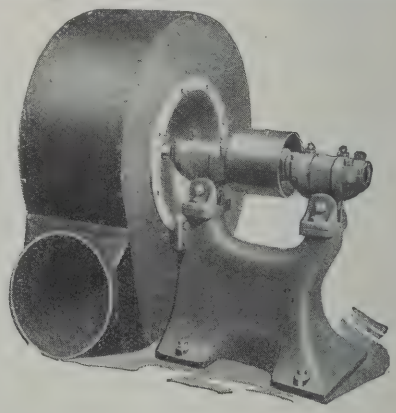
Branch in Vancouver

Woodtite Laboratories, of Modesto, California, Intend Establishing a Canadian Subsidiary

The Woodtite Laboratories of Modesto, California, recently advised the Vancouver Office of the Association that it is the intention of that company to establish a plant in Vancouver. This plant is for the purpose of meeting present and future requirements of the Canadian trade west of Winnipeg. The Woodtite Company manufacture specialties known as Spoktite, Toptite, Kantmar Autowash, Gasketite, and other auto accessories for which there is a wide demand in Canada.

Plant Near Completion

Canada Western Cordage Co., New Westminster, Will Be Operating in the Near Future



The buildings for the plant of the Canada Western Cordage Company at New Westminster are nearing completion and it is expected they will be in operation shortly. The loan of $200,000 from the British Columbia Department of Industries is assured and the company consequently will not be hampered by the lack of funds. Brig. Gen. V. W. Odlum was recently added to the directorate of the Company, as representative of the Provincial Government in connection with the disbursement of the government loan.

etc. The latter will secure possession in the course of a few weeks and as soon as possible will start manufacturing operations.

In the meantime announcement has been made that arrangements have been completed for the association of the business interests in Canada of the Walter M. Lowney Co. of Canada, Limited, and J. S. Fry & Sons, Limited. The identity and good-will of each firm will be maintained, but economies will be effected through the association, both in the purchase of raw materials and in the marketing of the finished product. A Canadian corporation, J. S. Fry & Sons (Canada), Limited, has been established to conduct the business of the Fry Company.

Branch at Gravenhurst

Rubberset Co., Limited, Toronto, Take Over Plant for Manufacture of Wooden Handles

The Rubberset Co., Limited, Toronto, have acquired property in Gravenhurst with a view to establishing a branch industry for the manufacture of wooden handles for use in paint, lather, tooth and nail brushes. The size of the plant is approximately 40 x 250 feet with various additions, kiln facilities, etc. The company expect to start operations within the next two months and will employ about fifty hands.

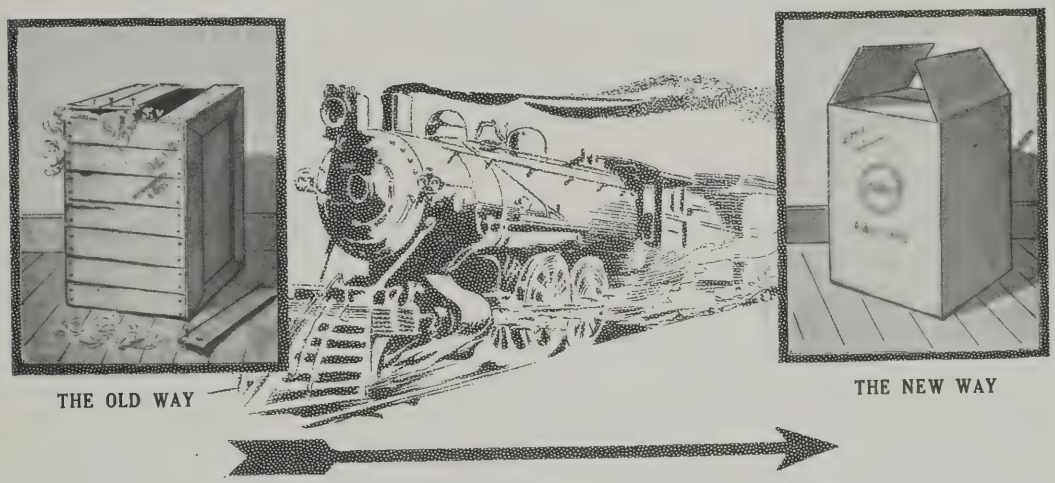
Have Completed Addition

John Palmer Co., Limited, Fredericton, N.B., Now Occupy Large Extension to Their Plant

During the past fall and winter the John Palmer Co., Limited, Fredericton, N.B., tanners and manufacturers of oil tanned footwear, have erected an additional wing, 50 x 100 feet, three storeys and basement, similar in construction to the main building. The building was completed in February. The extra space was required to take care of the general expansion of business on regular lines of shoepacks, moccasins, farm and sporting shoes. During the past six months from 50 to 60 new names have been added to the payroll.

Doubling Capacity

Canadian Postum Cereal Co., Limited, Windsor, Make Addition to Grape-Nuts Building



An addition, which will practically double its capacity, will be made by Canadian Postum Cereal Co., Limited, Windsor, to their Grape-Nuts process building. This will be 80 x 146 feet and is required by the extensive demand for export. The company are also putting an addition, 84 x 98, to their warehouse for the purpose of stocking sufficient goods to take care of the demand in the busy season.

A Fine Installation

The Brown Boggs Co., Limited, Hamilton, Have Plans for Wash, Lunch and First Aid Rooms

Additions to their foundry which will more than double their present output, are to be made by the Brown Boggs Co., Limited, Hamilton. The installation will eventually include a 25-ton travelling crane, a new heating system and all the latest improvements in foundry equipment and shop conditions. There will be a wash-room and lunch-room, 64 x 20 feet, finished in white tile with steel lockers, enameled wash basins and space for ten shower baths. There will also be a first-aid room large enough for three stretchers, fully equipped to give aid in any kind of accident. This equipment will be one of the finest foundry installations in Canada.

STRUCTURAL STEEL
and
BRIDGE BUILDERS

We build and erect all kinds of Structural Steel, Bridges, Roof Trusses, Bank and Office Railings, Stair Work, Elevator Grills, Fire Escapes, etc.

Over 5,000 Tons in Stock of Beams, Column Sections, Angles, Tees, Plates, Bars, Checkered Floor Plates, etc.

McGregor & McIntyre, Limited
1139 SHAW ST. TORONTO, CAN.

The Preston Woodworking Machinery Co., Limited, Preston, expect to complete a 100-foot-square addition to their plant this spring. They are forced into this extension to take care of orders which are much beyond the capacity of their present plant.

H. J. Jones' Sons, Limited, lithographers, London, will make an addition to their plant, 40 x 90 feet, two storeys and basement, to be used for extension of business. It will be ready in the summer.

Valleyfield Coated Paper Mills, Limited, have been incorporated, with capital of $300,000, to take over and operate the National Paper Co., Limited, Valleyfield, Que. The company have completed an extension, 36 x 100 feet, and have added equipment increasing output by about 50 per cent.

The Toronto Carpet Manufacturing Co., Limited, are increasing the capacity of their power-house and are erecting a new dye-house.

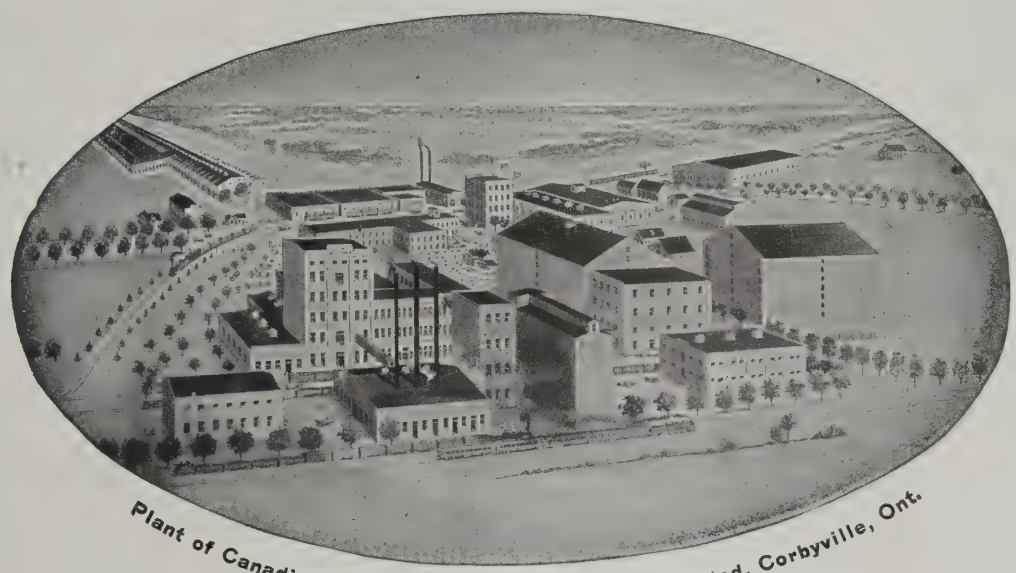
The firm name of the Ham & Nott Company, Limited, Brantford, has been changed to Ham Brothers, Limited, and the capital stock has been increased to $1,000,000. The change is one of name only, and will not affect in any way the control or policy of the company.

The Prest-O-Lite Co., of Canada, Limited, are erecting a two-storey battery warehouse and assembly plant on Tache Avenue, Winnipeg. It is only a small plant costing approximately $25,000 and is purely for storage and assembly of the company's product shipped to Winnipeg knocked down.

An industry which has been coming to the fore during recent years in British Columbia is the manufacture of fish oil and fertilizer from dog fish, fish scraps and refuse from the canneries. A plant for this purpose is now being operated at Rendezvous Island by Mr. Johncox, and another plant for carrying on the same business is expected to be in operation soon under the management of Mr. J. B. Jardine.

Plans have been completed for the construction of a $10,000 addition to the already extensive premises of the Vancouver Knitting Company in Vancouver.

A new plant for canning tomatoes, apricots, peaches and apples, is proposed for Summerland, B.C. The intention is to interest local capital in the construction and operation of the new plant.



It has recently been announced that the B.C. Marine Limited of Vancouver have increased their capitalization to $1,000,000, and propose extensive alterations and improvements, with a view presumably to taking up shipbuilding on a larger scale.

The Western Canada Woollen Mills are installing machinery at their buildings in Clark Drive, Vancouver, and expect to be in operation this month.

The first unit of the plant of the Britannia Wire Rope Company on Granville Island, Vancouver, is now nearing completion. This building is 120 ft x 200 ft in size, and the contract price is $40,000. As soon as the new building is completed it is expected that work will be commenced on the necessary wire rope machinery now en route from England.

Contracts for the Canadian Carbonate Co's new plant at Vancouver report satisfactory progress and it is expected that production will be started not later than June.

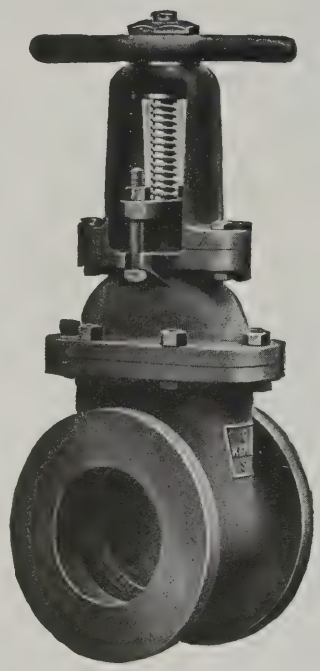
ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.



Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

SELLING IDEAS TO EMPLOYEES

An American manufacturer believes that it is advisable to move quietly and without urging in getting employees to take up new ideas. For example he has introduced a shoe repairing department and each year sells employees their potato supply, but it took a long time to get them interested in these two plans.

(From "Factory.")

That a man cannot do good work when his feet are not properly shod is a pet theory of William L. Ward, President of the Russell, Burdsall and Ward Bolt and Nut Company.

But Mr. Ward did not merely believe it and let it go at that—he put his theory into practice. He ordered that a cobbler be hired and space be provided for him in the plant. Then he practised another theory of management which has become a policy in his company—he had a simple notice posted announcing to employees that the cobbler was there, that he would fix their shoes and the footwear of their children, and that he would do it at cost.

Then he waited. "Announce a move and then quit talking about it. Let it have its effect naturally and gradually. Then you'll avoid the appearance of forcing something upon employees that they don't want," Mr. Ward says.

Well, that's the policy he followed in this cobbler case and four or five weeks went by and the cobbler was paid his wages, but he earned none. And still Mr. Ward stuck to his announce-it-and-quit-talking policy. The notices on the bulletin boards were beginning to yellow at the edges when a foreman left a pair of shoes with the waiting cobbler. And then another, and then gradually the more cautious came in till in only a short time after the ice was broken the shop was doing a large shoe-repair business which has held up ever since.

With this plan in effect there is little excuse upon the employee's part for a boost in the accident rate or an increase in illness due to out-at-the-toe shoes or those having flimsy, leaky soles.

Mr. Ward has been successful before in getting plans started, that involve some action on the part of the workmen, by letting the idea soak in slowly with no attempt to force the issue. He says that some workmen are suspicious of anything new. They want to walk all around a thing and size it up from all sides before committing themselves. This takes time, but it's a good management policy to be patient in such cases, Mr. Ward says.

For instance, here's an example where the reward didn't come for over two years. Some years ago Mr. Ward thought it would be a good plan to buy potatoes in quantity and sell to employees at cost. So one fall he bought a large quantity and posted a simple announcement. Only a very few workmen bought, however.

But no follow-up notice was ever put up. Those who wanted to, bought—the rest were not urged. He sold what were left to retailers in the town. The next year he repeated the plan even to the simple notice on the bulletin board. This second year there were a few more customers, but still a surplus of potatoes.

But in the years following it has been difficult to get enough potatoes to supply his employee demand.

Doesn't all of this tend to emphasize the fact that management not only involves getting the idea, but a study of sales methods in selling it to the workman? And letting a good plan sell itself often has some distinct advantages.

INCREASE IN JAPANESE SHIPPING

Japan's fleet increased by about forty per cent. both in number and tonnage during the war. However, not a single good passenger steamer was added, only standardized freighters of certain types being built. Many things are yet to be done by the country if she wishes to maintain the trade captured during the war.

(From "American Industries.")

Including the vessels registered in her colonies Japan's total fleet numbered 11,943 aggregating 2,419,928 tons gross, at the end of 1914. The fleet has increased greatly since that time, and at the end of 1918 the total number of vessels was 16,676, totalling 3,388,085 tons. It will be seen that the fleet has increased by about forty per cent. both in number and tonnage.

A Temporary Slump.

Following the conclusion of the armistice the shipping market slumped and a number of shipyards suspended their operations or were closed. This slump was, however, only a temporary phenomenon, and the shipping market will surely improve, for it will take considerable time to make good the loss of tonnage suffered by the belligerents during the war and to ship supplies of foodstuffs and other materials required by the European countries. As a matter of fact, there has recently been a steady advance in freight and charter rates. The shipbuilding industry has also become active, and in addition to the vessels for the United States much tonnage is under construction. The ships which are now on the stocks alone amount to about 400,000 tons gross. The activity in the shipping and shipbuilding industry is a matter for congratulation, but when we consider the cause of this activity and the seaworthiness of our vessels it is impossible for us to remain idle.

It is superfluous to say that the activity in Japan's shipping trade is due to the effects of the war, which has led to the withdrawal of foreign shipping lines from certain quarters of the world and which has increased the world's demand for tonnage. The situation must change when European and American countries have resumed their shipping services in various parts of the world, and when foreign countries are in a position to build ships for other countries.

Only Freighters Built.

Not a single good passenger steamer was added to Japan's fleet during the war; only standardized freighters of certain types were built. The Japanese shipbuilders gained experience in building such steamers within a comparatively short space of time. They secured no additional experience in building vessels of a superior type. Many things are yet to be done by us if we wish to maintain the trade which we captured during the war and to further extend our activities against the competition of foreign countries. Among other things, restrictions on the employment of a certain class of ships should be removed in order to promote the development of Japan's shipping, and this is the reason why the Government has recently extended the areas of the near-sea route beyond the bounds of which second-class cannot sail.

During the war, vessels were generally built hastily and many ships were put to too great a strain in war time. Marine officials, should, therefore, exercise a greater care in inspecting the seaworthiness of craft.

Lightning Rods for Factory Protection

Continued from page 87

the peak to get to the rod, but travels downward along the wet conducting roof—it will probably follow a rafter if the roof is dry—and then along the eave trough and water spout then jumping from the spout to the ground, or into the basement, as is more often the case, frequently killing stock and sometimes firing the building. If there are no troughs or spouts, it follows the posts, shattering them more or less and frequently causing fire. Five years ago, when Bulletin 220 was written, this was all pointed out, yet many are still rodding buildings in the same old defective way.

In December 1918 the company with which I am now identified, offered me my present position. At the college scarcely a week went by but someone wrote me asking if their buildings were properly rodded. In many cases they were not, and it vexed me sore to know that so much improper rodding was being done, chiefly because the men doing the work in those cases were ignorant of the scientific principles involved, and so could not really be expected to turn out a scientific job of rodding. Many times in the past five years I had thought seriously of quitting the college and entering the lightning rod business, with a view to trying to put it on a scientific basis. But each time I was confronted with the need of capital—the one thing that a professor at the college can never have if dependent on his salary.

No Rule of Thumb can be Given

Grounding from the peak is not the only defect existing in much rodding already done, and still being done. The principle to be kept uppermost in mind when devising a plan for a building is: To provide a system that will prevent strokes in all cases where prevention is possible, and which, at the same time, will carry off harmlessly any strokes that cannot be prevented. For devising such a system no rule of thumb can be given. Each building must be considered individually, for no two are constructed alike. All the eave-troughs, water-spouts, roof gutters, water systems, structural steel, and other metallic portions of the edifice must be connected up in such a way that when a stroke occurs it cannot find any place to jump. It finds all conductors connected in the system and all grounded, thus providing continuous passage to the ground along all possible paths. If the current finds no gap to jump, it can do no harm. Recently I spent two days starting one of our dealers. We studied out systems for several large, complicated buildings in his territory. He has been rodding for ten years, and after getting a grasp of the scientific principles and seeing the importance of working in harmony with them, and learning how to do so, his verdict was that he had been working in the dark all those years. And he is one of the best rod men I have met, being the secretary of a real live mutual insurance company and engaged in other lines of business as well. If he was working in the dark, there are still many others who are doing so.

Since the above was written I have received a report of a so-called rodded building being burned—a barn 54 x 66, with two additions 16 x 46 and 12 x 44, and only one ground rod

for that great area. Any man or company doing rodding like this to-day should be open to prosecution.

Two Kinds of Electric Charges

Science lies at the bottom of lightning rods and rodding, as explained. The laws of science, on which the practice of rodding depends, will now be considered.

Electric charges in the thunderstorm are of two kinds, positive on the cloud and negative on the earth. A positive charge attracts a negative and vice versa. Similarly like charges repel one another, e.g. positive repels positive and negative repels negative, giving us the law that "like charges repel one another and unlike charges attract." From this law several very important results follow.

First, thunder clouds travel low because of the attraction between the cloud and earth charges. And as these charges increase the cloud is pulled lower and lower until by and by the distance is short enough and the electric pressure great enough that the electricity jumps from the cloud to the earth, heating the air white hot as it does so. This is the lightning flash.

Secondly, the earth's negative charge is located directly under the cloud, and travels along as the cloud moves forward. When the earth's charge finds a building or a smoke-stack it is drawn up on the structure by the attraction of the cloud's charge, which often brings them close enough together to cause a flash between the two charges.

Thirdly, electric charges reside on the surface. Take the cloud for example. Since every little particle of positive repels every other, none of it stays in the centre of the cloud, each particle being driven to the surface by the repulsion of all the others. Similarly the negative charge on the building resides on the surface.

Fourthly, "electricity leaks off points." Why does it not leak off a round ball? Because the air offers great resistance. But when there is a point on the charged body particles of electricity get directly behind those on the point and hence are able to push them off into the air in spite of the resistance. This can all be illustrated by an electric machine; and the charge leaves the point so rapidly that it makes a hissing sound; and if the experiment is done at night one can see a blue flame at the points. In this connection a very interesting occurrence was related to me on July the 19th. During a thunderstorm one night not long ago, a dealer was talking to an unbeliever in lightning rods. They stepped outside to watch the storm and to their surprise saw a streak of blue flame two or three feet long shooting off each lightning rod point. The unbeliever bought lightning rods for his own barn next day. The names of both these parties will gladly be supplied to anyone wishing to make personal enquiry. Since electricity leaks off points, rods if properly installed will prevent strokes in most cases by reducing the potential below the breaking point. Sometimes owing to special conditions a building becomes charged so suddenly that the points cannot allow the charge to leak off quickly enough to prevent a stroke. In such cases the rods if properly installed will carry off the flash without damage.

Lightning Travels on Surface

Fifthly, not only do charges reside on the surface, but when there is a lightning flash, to a rod the current of electricity travels on the surface, not through the body of the rod.

Another law of electricity that is very important from a lightning rod standpoint is that some substances "conduct" electricity very readily. They are, therefore, called "con-

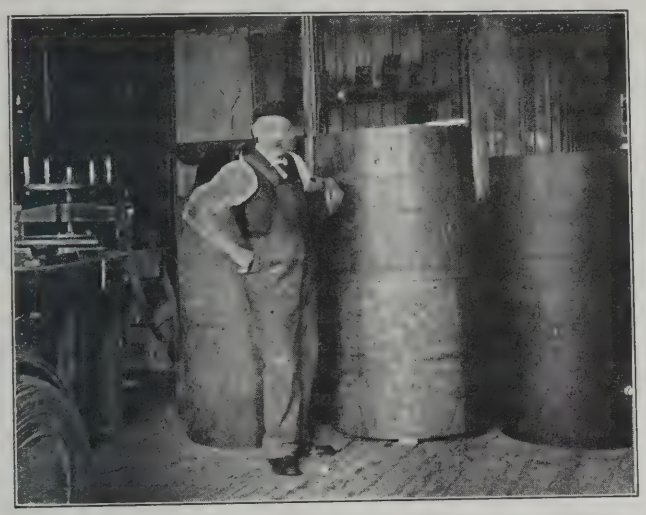
ductors." Others, like air, offer great resistance to the passage of electricity and hence are called "non-conductors." Wood is a conductor, but a very poor one, so much so that it is often called a non-conductor. Copper, for example is about six or seven times as good a conductor as iron.



On July 9th, 1916, I was driving an automoible on the 8th line of the Township of Maripose, Victoria County. Just as we reached the place we were going to visit, a very violent thunderstorm came on. I drove the car into an open shed under one corner of the large barn. It began to rain so heavily that I decided to wait till the storm slackened. While waiting I went to tighten a nut and just when the wrench was about an inch from it, a flash of lightning occurred some distance away, and to my surprise I received a distinct shock from the car and saw the spark about an inch long. The car, on rubber tires, was insulated, and the flash induced a charge on it, which passed to the ground through the wrench and my body. If the wrench had been in contact when the flash occurred I would neither have experienced a shock or seen a spark. If there had been gasoline fumes or other highly inflammable material where that spark occurred, there would have been a fire. It is to prevent these sparks by induction that we advise connecting up metal portions of the structure. Induction is momentary, it occurs only while the original current is starting and liekwise while it is stopping. Induction plays a very important part in devising a scientific system of rods for a building.

One step further we must go: Not only does a lightning flash produce induction on metallic bodies in the vicinity, but when a flash starts along a conductor it induces a momentary back current in the conductor which is carrying the original current itself and hence is called "self-induction." Likewise when the flash is stopping there is self-induction. Self-induction is a very contrary sort of chap—he acts against the main current when it is starting, thus being somewhat similar to resistance, and holding the main current back; but when the main current tries to die out then self-induction switches round and acts with it, thus actually increasing the intensity of the discharge.

The chief function of lightning rods is to prevent strokes. For this the fundamental principle is to use a scientific rod put on scientifically so that the charge on the building can most easily pass to the rod and leak off the points quietly into the air where it is attracted upward to join the positive in the cloud. In all cases where the building tends to charge up gradually, it is possible to prevent strokes, but when the building charges instantaneously as is sometimes the case, then the points haven't time to let the charge leak off, and a flash occurs. In such cases it is necessary to have the system so designed that from every part of the building the rod forms the easiest path to the earth. When it is so designed the flash is just as harmless as if it had never occurred.

The old system of rodding buildings consisted in placing cable along the peak and running straight down the gable from the peak into the ground at one or both ends. Scientifically this is wrong. To be sure it will give some protection but not the best. Even when dry the roof is a conductor though a poor one. Lightning does not always strike the highest points, as already instanced. Suppose it strikes the eave, or part way between there and the peak it will not go up the roof against nature to get on the rods, but will follow the poor conducting wood to the eave, along the eave-trough and down the water spout, whence it jumps to the ground. If there is water coming out of the spout the flash may follow it to the ground and escape harmlessly, or if it finds an easier way by jumping into the basement, along pipes to the floor it will do so.

Scientific rodding will always ground from the eaves, and

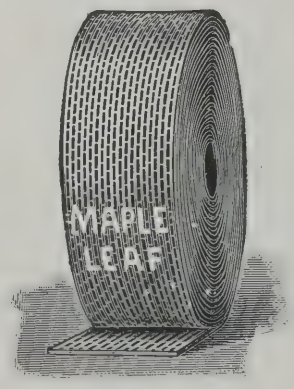
connect the cable with the eave-trough and the bottom of the water spout. Then whether the flash occurs to the peak, the slant roof or the eave it finds a conductor to take it into the ground. On an oblong building at least two grounds are necessary at diagonally opposite corners. On complicated buildings the number varies with the design of the buildings.

For complicated buildings it is not an easy matter to design a scientific system. Every important metallic part of the structure that is near the cable, such as roof gutters, eave-troughs, water pies, structural steel, must be considered and connected up and grounded in accordance with the laws of science in order to give the best protection. The induction on any of them during a stroke may cause a spark and fire the building if not scientifically protected; or they may form part of a path for the main charge, which would then have to jump a gap, again causing damage or fire. Hence the only safe course is to make them all a part of the system.



On wooden, slate or patent roofs it is necessary to run the cable from the grounding up to and along the peak, with a point every 20 to 25 feet. Flat roofed buildings should have cable placed around the roof, with points at suitable intervals. And all prominent features such a cupolas, chimneys, dormers, etc., should have points on them, all connected to the cable. On metal roofs it is not essential to run the cable over the roof, but simply connect it to the metal at the eaves and then run it into the ground deep enough to reach permanent moisture. Since the metal roof has such great electrical capacity, it is advisable to use more groundings than with the wooden roof. On very large buildings it is often customary to attach a copper plate to the end of the grounding cable and bury this deep in a bed of powdered charcoal which has a high affinity for moisture and insures a great electrical capacity for the grounding.

Copper rods are the best because more durable than iron or aluminum, and scientists, e.g., Sir Oliver Lodge and Dr. Steinmetz, claim that flat conductors are better than round becausce they have more surface; one property of electricity being that high potential currents like that in the lightning flash travel on the surface, it necessarily follows that a flat cable has a much greater carrying capacity than the same strands twisted in a round cable. Besides there is less self-induction on a flat cable than on a round, hence less resistance, and hence less danger of side flash from it in case a stroke does occur to it.

In Michigan a number of companies insuring farm buildings have divided them into "rodded" and "unrodded" classes assessing each class for its own losses. They find the assessments in the rodded class are about one-third less than on the rodded. The Mutual Fire Prevention Bureau, Oxford, Michigan, which is an association of ten companies insuring mills, elevators and warehouses throughout the United States reports that in eight years lightning has been responsible for more losses to members of the association than any other single cause. To induce their patrons to protect their buildings they give a reduction in premium of 10 cents per $100.00 of risk. What lightning rods do for farm buildings, mills and elevators, they will also do for other classes of buildings.

Members of the Association who are contemplating a visit to the old country are invited by the *Canadian Export Pioneer*, Craven House, 113, Kingsway, London, W.C. 2, to make use of their office for the forwarding of correspondence. A line to the editor of the *Pioneer*, advising him of their intention and probable date of arrival would facilitate the arrangement.

Labor's Requests and the Government's Answer

Continued from Page 86

203-204, Congress Proceedings, 1919. The importance of good housing is now generally recognized and whilst many of the suggestions incorporated in the report would be subjects for Provincial enactment and administration, yet it is urgently requested that consideration be given to the suggestions so far as they are within the scope of Federal enactment or legislation, in order that the fullest assistance may be given to workers to secure their own homes.

RURAL MAIL CARRIERS

During the past year requests have been made for improvements in the conditions under which rural mail carriers work. The Trades and Labor Congress of Canada, at its Hamilton convention, endorsed the requests of the Dominion Rural Mail Carriers' Association for improved conditions as embodied in Resolution 107, page 209, and Resolution 72, page 212, Congress Proceedings, 1919. We, therefore, request that legislation be enacted in order that the terms of service can be altered, abolishing the contract system, and allowing for payment to men engaged in this service an adequate remuneration and assuring them of security of service so long as they satisfactorily perform their duties.

INTERVENTION AND SELF DETERMINATION OF NATIONS

Resolutions 68, 110, 111, page 221, Congress Proceedings, 1919, voiced protest against any policy interfering with the self-determination of nations and the decision of the Congress is reported as follows:

"That this convention go on record as protesting against military intervention in countries which, after the termination of the world conflict, change the form of their social structure, and further expresses itself in favor of the self-determination of nations."

HALIFAX DISASTER RELIEF COMMISSION

Representations have been made from time to time to the Congress for further consideration of the grants made to the sufferers of the Halifax explosion. The Congress endorses these requests, which are detailed in Resolution 113, page 210, Congress Proceedings, 1919, and solicits your sympathetic consideration.

FINDINGS OF MATHERS INDUSTRIAL RELATIONS COMMISSION AND NATIONAL INDUSTRIAL CONFERENCE

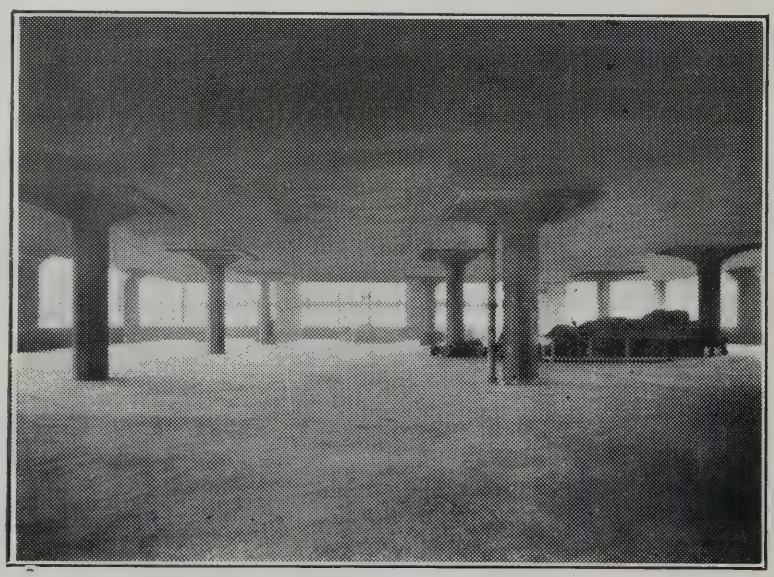
We request that immediate steps be taken to bring into effect the recommendations of the majority report of the Mathers Industrial Relations Commission on subjects which we have not otherwise presented to you, and we would also ask that the recommendations made by the National Industrial Conference on the above subjects should be given full consideration and immediate action taken to bring them into effect. (Resolution 36, page 211, Congress Proceedings, 1919.)

PENALTY FOR FAIR WAGE CLAUSE VIOLATIONS

We reiterate our previous request that the Fair Wage Clause should be amended to provide penalties against contractors wilfully violating fair wage clauses.

CIVIL SERVANTS' BONUS AND EQUALITY OF PAY

Objection is taken to the method of distribution of the bonus by the Civil Service Commission and demands made that men and women doing equal work should receive equal salary and bonus. (Resolution 24, page 189, Congress Proceedings, 1919.)



SOREL SHIP YARDS

Resolution 79, page 214, Congress Proceedings, 1919, incorporates a request that the Government consider the advisability of increasing the work done in these yards, so as to cope with the unemployment situation.

AGE LIMIT OF NATIONAL RAILWAYS

It has been reported to the Trades and Labor Congress that the management of the Canadian National Railways

Hand Your Building Problems to "Sparling Service"

Interior of New Factory of Grahams Limited, Belleville, Ont.

"Sparling Service" shoulders the entire responsibility and by unity of command and concentrated effort your building is completed on schedule time.

"Sparling Service" uses the Richards Patent Truss System in one-story buildings, saving you 20% of the cost of your buildings. This system eliminates 50% of the columns.

Each department of "Sparling Service" is in charge of an expert. The Mechanical Engineering Department being in charge of Mr. C. N. Sparling, who has had 18 years experience in Mechanical Engineering with Bennett & Wright.

"Sparling Service" guarantees Speed, Efficiency and Economy in building construction.

Call "Sparling Service" to your councils. You will get what you want when you want it.

is developed in Canada with Jones Underfeed Stokers. The widespread use of the Jones in modern boiler plants is a sure indication of its efficiency.

The JONES UNDERFEED STOKER

can be relied upon to accomplish fuel savings running between 15 and 25%.

It does this by giving better combustion---getting the maximum quantity of heat units possible from every grade of fuel.

With a Jones you not only save fuel but increase the capacity of your boiler plant; maintain a steady steam with fluctuating boiler loads; eliminate smoky chimneys, thus saving the heat waste that usually goes away in the smoke.

Get the facts. They are convincing and can be easily verified by yourself---often by inquiring of Jones users in your immediate neighborhood.

have adopted a policy of refusing to employ men who have reached the age of forty-five. Strong protest is entered against such policy being adopted and a declaration by the Government sought on this question. The text of this protest is found in Resolution 51, page 124, and committee's report, page 214, Congress Proceedings, 1919.

CUSTOMS TARIFF ON PATTERNS

Stricter enforcement of the tariff regulations regarding patterns coming into Canada is requested, and additional regulations sought which will prevent patterns being admitted into this country free of duty, by being classed as models, and also would make the import duty applicable to all molders; patterns and core boxes for same, therefore keeping the pattern-makers of Canada more employed. (Resolution 35, page 125, Congress Proceedings, 1919.)

PROTECTION OF CAR BUILDERS AND REPAIRERS

This request for the erection of suitable buildings to protect men engaged in the above-mentioned work has been previously presented and is reiterated in Resolution 58, page 124, Congress Proceedings, 1919.

The Government's Reply

The written reply of the Government to the foregoing representations took the form of a letter from the Acting Prime Minister to the Secretary of the Trades and Labor Congress, as follows:

Prime Minister's Office,
Ottawa, Ont., March 4th, 1920.

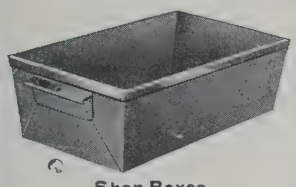
Dear Sir—

The subjects presented to the Government by a delegation representing the Trades and Labor Congress of Canada, a short time ago, have been carefully reviewed. It is not usual to make an official reply to submissions of this nature, further than to promise consideration of the questions submitted. Without establishing any precedent, I am in this case briefly expressing the Government's views on the various subjects you have submitted for its consideration.

The permanent military forces have not been increased from five to ten thousand, as you intimate. Parliament authorized an increase to ten thousand, should necessity require, which I think was a wise precaution. The present establishment is less than five thousand men, the authorized pre-war basis. The Royal Canadian Mounted Police Force is not up to its authorized strength of 2,500 men, even including the Dominion Police, which have been absorbed into it, and both forces have been brought under one administrative head, which will promote both efficiency and economy in this service. Estimates for the maintenance of these forces will necessarily show some increase because of the increased rates of pay.

The Orders-in-Council to which you allude were purely war measures to restrain aliens and others from conduct the effect of which would have tended to curtail and retard Canada's war effort. No loyal citizen had anything to fear from them and a number of these orders were distinctly favorable to labor interests. Your observations regarding possible misinterpretations or misapplication of the amended Criminal Code are noted. The law, in my opinion, is not susceptible of the interpretation complained of, nor has it been so judicially interpreted.

With regard to immigration, the Government has already adopted the principle of careful selection of all immigrants, and the number of rejections and deportations reported for the current year is a clear indication of the care being exercised in carrying out the policy.



Your suggestion for representation on a Central Empire Board to deal with problems of immigration will not be lost sight of should such a board be created.

Your further suggestion respecting Oriental immigration and certain deportation provisions of the existing Immigration Act will be carefully considered with a view to determining what action, if any, should be taken in the general national interest.

The Government will also make further inquiry with a view to assisting Canadian theatrical mechanics in the direction intimated.

In regard to the right of organization, the Government has clearly stated its policy in this connection, so far as industrial workers are concerned. But employees in the

LARGE STOCK OF STRUCTURAL MATERIAL AT ALL PLANTS

service of the Federal Government are in a different category, inasmuch as there is no incentive from the standpoint of money profit to cause the employer, which in each case is the public, to impose unfair or onerous working conditions or rates of pay. Parliament representing all the people, labor included, has as well made provision for the fair determination of any grievances complained of. It cannot be conceded that public service employees shall be subject to control of any organization or federation of industrial workers, and become thereby liable to be involved in industrial disputes. In the administration of the Department of Labor, the Minister of that Department has on more than one occasion recognized the wisdom, on the part of both employers and employees, whether individual cases or as groups within a given industry, of meeting together and negotiating with a view to the settlement of differences existing between them.

Attitude on 8-Hour Day

As you are aware, the Peace Treaty, the terms of which the Parliament of Canada has already approved, together with the action of the Labor Conference at Washington, recommends the adoption internationally of a forty-eight-hour week or an eight-hour day. It is our firm purpose to give loyal adhesion to the terms so agreed upon. The necessity in this connection of having regard to the progress made by other countries must be apparent to all. The further question as to whether the necessary legislation is within the jurisdiction of the Federal Parliament of Canada, or of the Provincial Legislatures, is now being investigated with a view of reaching an understanding with the provinces on the subject.

The Government is glad to know that the legislation passed respecting technical education is endorsed by labor.

Referring to suggested co-operative legislation, I may say that any proposed legislation to enable workmen to buy co-operatively will receive careful attention.

In connection with the observations of your delegations respecting the registration of union labels, if you will be good enough to state generally the terms of such legislation as, in your opinion, would meet the need, the Government will be glad to give it consideration. Page 127, Congress Proceedings, gives no information on the subject.

Concerning the revision of the Industrial Disputes Act, the Minister of Labor, at our conference extended an invitation to the Congress Executive to submit its proposals in concrete form. Some amendments to the Act are under consideration by the Department of Labor and any suggestions you may desire to make will be gladly received.

Your representations respecting health regulations for painters will be referred to and inquired into by the Department of Health.

The matter of proportional representation and other amendments to the Election Act are being considered by the Federal Government, as intimated by the Prime Minister in 1919. To make election days holidays would entail great loss to the country in production and a heavy loss in wages to the workers; consideration, will, however, be given to your proposal to extend the closing hour of polls.

The Federal Government has made substantial provision for aiding the provinces in improving housing conditions.

Rural mail carriers are engaged by tender and contract. There is no present intention of bringing them within the Civil Service, as such action would clearly not be in the public interest.

Findings of Mathers Commission

Consideration is being given to the findings of the Mathers Industrial Relations Commission; also of the National Industrial Conference.

Your request concerning an amendment to the Fair Wage Clause in Government contracts is noted and the Government would be pleased to have your Executive submit its specific proposals in this connection.

As to civil servants' bonus and equality of pay, the government does not agree with your observations concerning alleged inequality in distribution of bonus to civil servants. It does agree that equal salary for equal work should be paid civil servants. It does not agree that a bonus designed to aid its employees over an emergency period should be based on the same principle. Employees with dependents needed and re-

File Money Should Bring Results

You want your money's worth in files just as in anything else.

To get it, specify Famous Five Files.

A special formula for the steel used, scientific methods of cutting the teeth, and thorough hardening, have produced files recognized for over fifty years as the standard.

Long efficient service is assured if you use Famous Five Files.

They are:

ceived more substantial aid than others who had only themselves to support.

Respecting the Sorel shipyards, no representations have been made to the Government indicating any abnormal unemployment situation in Sorel. The Minister of Marine will be asked to report on the question of prospective work for Sorel yards.

Referring to the question of age limit on National Railways, there is no age limit prescribed by law regulating the employment of railway employees. The Canadian National Railways are being operated under a corporate management, who bear the same responsibility towards the employees as is the case on privately owned lines. The Government has declined to interfere in any way with the details of operation as regards the employment of men or discipline, but hold the management responsible for efficient service.

The railway employees are largely organized, and have their duly elected representatives to present their requests to the officials. There would seem, therefore, to be no necessity for legislation on the subject named. If an altered regulation is desired by the employees, they should first submit their request to the management for adjustment by negotiation.

Referring to customs tariff on patterns, the Ministers of Customs and Finance are inquiring into the question of importation of patterns duty free, as models, and will act according to the nature of the information received.

The question of protection of car builders and repairers would seem to be a matter proper to be taken up with the railway managements. If the railways have been approached and have declined consideration of your request, it would seem then to be a matter within the jurisdiction of the Board of Railway Commissioners, who give attention to the equipment and appliances necessary for the safety of the employees.

Your views on the Welland Canal question will receive due consideration.

The Prime Minister recently made a pronouncement on the subject of representation on National Boards of Railway Directors, which, I think, constitutes a satisfactory answer to your representations.

Yours very truly,

GEORGE E. FOSTER,
Acting Prime Minister.

P. M. DRAPER, ESQ.,
Secretary, Trades and Labor Congress of Canada, Ottawa.

Assisting Industry

Provincial Government of British Columbia has a Department to Help in Establishing New Industries

During 1919 the British Columbia Government established a Department of Industries for the purpose of investigating industries in need of financial assistance, and for the making of loans to such concerns when the project was considered feasible and the promoters deserving. Major D. B. Martyn, D.S.O., M.C., was appointed by the Government as Industrial Commissioner to administer the new department.

The first report of the Department of Industries has just been made public, and this report shows that a total of 222 applications have been made to the department for assistance, and of these applications 19 have received assistance; the loans varying, in individual cases, from $500 to $200,000, the latter sum having been loaned to the Canada Western Cordage Company, a concern promoted and managed entirely by returned soldiers, and which is now building a plant at New Westminster for the manufacture of rope. Other industries which have been assisted include one toy factory, two furniture factories, and a returned soldiers' canning company. The majority of concerns which have received assistance are managed or promoted by returned men.

The Department of Industries is also doing a good work in making known abroad, principally in the British Isles, the industrial requirements and openings in this province.

72 QUEEN ST. E. TORONTO

Lumbering in British Columbia

(*Continued from page 75.*)

is estimated to be $200,000,000. This is largely controlled by investors in Eastern Canada, Great Britain and United States.

The prices for lumber since the war have been abnormally high, but despite this, the demand has been strong, and mill operators of British Columbia were able to take advantage and profit from the premium on the United States dollar, exporting large quantities of lumber across the boundary line. On the other hand American investors took the opportunity offered by the exchange rate to make extensive purchases of timber limits.

The prospects for the future of the pulp and paper industry are unusually bright. The Oriental market is increasing rapidly, while Australia is a customer of increasing importance.

The paper shortage, not only in Eastern Canada, but in Europe, is bringing more forcibly than ever the great wealth of British Columbia pulp woods before capitalists and manufacturers. Recently representatives of British newspapers came west to survey the prospects for the establishment of paper mills to insure an adequate supply of newsprint for the journals they represented. It is confidently expected that within the next two or three years additional mills will be in operation. Water power for such plants is available on numerous streams close to the spruce limits of the coast.

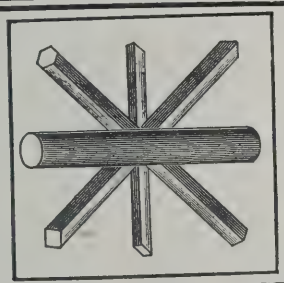
In 1901, the Provincial Government as an encouragement to the industry, granted 2-year leases of pulp wood areas to bona fide applicants on generous terms, and as a result several companies were formed to start operations. They selected 354,399 acres. The conditions attached to the leases were that mills should be equipped and operated in the Province with a daily output of not less than one ton of pulp or half a ton of paper for every square mile included in the lease. The merchantable timber on these leases may be cut and manufactured under special timber leases. The rental in these regulations is two cents an acre and a royalty of 25 cents a cord on the pulpwood cut. This law was repealed in 1903.

The Mining Industry of British Columbia

(*Continued from page 79.*)

than 2,000,000 pounds monthly. Actual ore blocked out on these properties are in excess of 9,000,000 tons, while "possible and probable" tonnage has not yet been computed. It has been definitely established, however, that the ore reserves of this great property will guarantee a production of 3,000 tons daily for the next thirty or forty years—and from that on, indefinitely.

The Britannia Mine is another instance of the reward of enterprise. This mining camp was about to be deserted in 1911, when the late Mr. Grant B. Schley, of New York, took a chance on it, and by progressive methods firmly established it as the premier mine of its kind in the empire.



The Canada Copper Corporation at Copper Mountain, near Princeton, in the Similkameen Valley, is another low grade copper property with immense reserves which have been proven capable of maintaining production over a long term of years. Construction and development work are being rapidly pushed ahead on this property. Last year a concentrating mill was built at Allenby, where the ores from the mountain property will be treated.

It would be an impossibility in limited space to even briefly touch upon the outlook for the hundreds of mining

properties in British Columbia, or to review the resources of the different districts, but that the future is one filled with promise may be gathered from another reference to Government files:

"There is every reason to believe that 1920, will be most important to the Province in point of mining development."

Industrial New Westminster

(*Continued from page* 84.)

of these, with the exception of the Small-Bucklin Company, operate also shingle mills, and there is the Dominion Shingle Mill and a number of smaller plants. Across the river, on the south shore, is the plant of the Timberland Lumber Company.

Manufacturers of lumber products include the Laminated Materials Company, the B.C. Manufacturing Company, and the Lumber Products, Ltd. The first-named has just taken a lease from the city of a thousand feet of water front on which to build an additional plant, while the second is already building its new plant, to have double the capacity of its original equipment. Phenomenal success has attended the box industry, and the product of the Fraser River in this line has been shipped all over the world in competition with both European and Asiatic concerns.

The manufacture of lumber is carried to a still higher pitch by the Brooks Woodworking factory and the Westminster Furniture Company. The former makes a very high grade of wooden fittings, and the latter is engaged in turning native hardwoods into serviceable furniture for the home, an enterprisce for which there is a great field.

So much for the products of the forest. Turning to metal, the Heaps Engineering Company operates in New Westminster what is said to be the best equipped machine shop west of Winnipeg, together with an iron foundry; the Westminster Ironworks is also a machine shop and foundry, specializing to some extent in ornamental ironworks. Then there is the Westminster Foundry Company and a small plant making a high grade of tool steel, probably the only plant of its kind in Western Canada.

The smaller industries of the city are numerous and of a diversified nature. They include salmon canneries and cold storage plants, a fruit cannery, a plant for evaporating vegetables, a distillery making grain alcohol for industrial purposes, a brewery, a grain milling plant, a wooden shipyard and several smaller yards building tugboats and barges, and so forth.

At the time of writing two plants are under construction, in one of which particularly considerable interest centres. This is the plant of the Canada Western Cordage Company, which will manufacture rope, binder twine, and similar products. It is the only cordage plant in Western Canada, and in its inception met with determined opposition from interests which were obviously willing to spend considerable money to see the project die stillborn. The other plant is that of Cut-to-Fit Buildings Company. Plants of this kind have been established in the United States and Eastern Canada, and have grown to large proportions.

As for the industrial future of New Westminster, a volume might be written by anyone having a knowledge of the natural and artificial advantages of this port, and a grain of optimism in his mental make-up. The advantages are undoubted. Along both banks of the Fraser River and on the flat lands of its delta there is room for many great industries, with deep water. The river offers the advantages of cheap transportation, either for bringing in the raw material or shipping out the finished product, or both. The cargo ships of the world can come into the Fraser. Railway transporta-

tion is also offered in no stinted fashion. The lines of four great railway systems converge on New Westminster. It is on the C.P.R., the C.N.R., the G.N.R., and the N.P.R. The electric line of the B.C.E.R. Company runs from New Westminster out through the Fraser Valley. All of these railways have interchange facilities. Much of the water front within the city is owned by the city. There is an abundance of electrical power and water. The city owns its own water system and electric light distributing plant.

The possibilities of establishing new industries in New Westminster and its immediate vicinity are manifold, and it is confidently expected that an era of industrial expansion is well within sight.

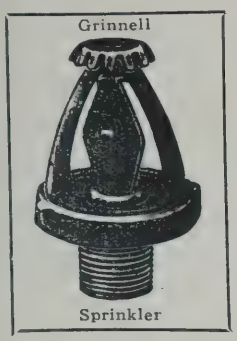
Charm of Victoria and Vancouver Island

(*Continued from page* 83.)

shingle mill. Lumbering for the Chemainus mills is carried on in the woods behind Ladysmith.

At Cassidy's or Granby, as it is called, the operating company constructed a model town for their employees. Here every convenience has been provided for the workmen, and the workers are housed in homes that are fitted in every way possible for their comfort.

South Wellington is another mining camp near Granby where there is a large production of coal, shipments being made to Boat Harbor.



Nanaimo, where British Columbia's oldest collieries are located, is a seven mile run from South Wellington. It is a progressive city of 8,000 inhabitants, with well paved streets, modern business blocks and fine homes. Four coal mines operate here, while limber mills and herring fisheries add to the commercial activities of the city.

Nanaimo was one of the Hudson's Bay Company's first posts in the Province, and the old blockhouse built to give protection against hostile Indians is still standing in the business section of the city. Its main streets followed the walls of the stockade which at one time stood about the blockhouse, bearing testimony for all time to the hardihood and daring of the early day adventurers who established the community.

From Nanaimo, the Island Highway passed through the old Town of Wellington, abandoned by the old Wellington Collieries Company when the coal seams gave out. Passing Oarksville the road leads through a picturesque woodland to the scenic glories of Cameron Lake, a placid body of water cupped between towering mountains.

It is on the road from Cameron Lake the famous "big timber" is encountered. This stand of trees is of such magnificence that a strong public sentiment is pressing upon the Government the desirability of acquiring the tract from the private owners to be kept as a forest park. The giant trees, from six to ten feet in diameter, and towering hundreds of feet in the air, are the delight of all travellers over the highway.

Dropping down from the ridge of the centre of the island the road leads to the two towns at the head of Alberni Canal, the one bearing the name of the inlet, the other, two miles distant known as Port Alberni. This is the largest and most enterprising settlement, being an incorporated city. Fisheries and lumber mills are the principal industries. It is the trade centre for the canal, Barclay Sound, forty miles away and a considerable portion of the west coast of Vancouver Island. It is also the terminus of the branch line of the E. & N. Railway, which extends along the east side of the island, paralleling the highway which has been briefly described here.

Deaths Among Prominent Manufacturers

Was Welfare Worker

Late Dr. Daniel Strachan, of Imperial Oil Limited, Held Important Post

Many members of the Canadian Manufacturers' Association had come to know and esteem the late Dr. D. Strachan during his brief tenure of office as head of the welfare work of Imperial Oil, Limited. For many years a clergyman in Hespeler, Brockville and Toronto, he was selected by the late Hon. W. J. Hanna to take charge of the welfare work of the big oil corporation. This brought him into touch with the C.M.A., and his voice was frequently heard at meetings and conferences, where his fine personality and bright and humorous speeches were much appreciated. His death occurred after a brief illness on March 3.

The Late G. R. Munro

Second Vice-President of Peterboro Company, had Promising Career in Prospect

Peterboro lost a good citizen in the death on March 1 last of George Reid Monro, second vice-president of the Wm. Hamilton Co., Limited, and grandson of the founder of the company. Mr. Monro was an engineer by profession and after graduation from the School of Practical Science, Toronto, was with the preliminary survey of the Hudson Bay Railway. He was later on the staff of Kerry & Chase, Toronto, returning to Peterboro in 1911 to become engineer of the Wm. Hamilton Co. He was a member of the Engineering Institute of Canada and the first president of the Peterboro Branch of that Society.

A Pioneer Manufacturer

Late Wm. H. Frost, of Smith's Falls, was Oldest Maker of Malleable Castings in Ontario

Wm. H. Frost, president of the Smith's Falls Malleable Castings Co., Limited, who died on March 18, in his 73rd year, was the oldest malleable castings manufacturer in Ontario. He started the business in 1878 in a small way, developing it into one of the largest industries of its kind in the province. Two brothers, deceased, were heads of the Frost & Wood Co., and the family has played a leading part in the industrial life of Smith's Falls.

Stove Manufacturer's Death

Adam Hall, President of Adam Hall, Limited, Peterboro, was Successful Business Man

The death occurred at Peterboro on March 15 of Adam Hall, president of Adam Hall, Limited, stove manufacturers. Mr. Hall, who was 74 years of age, came to Peterboro in 1878 and opened a retail stove and tinsmithing business, which he conducted successfully until 1910, when he entered the manufacturing field. The stove industry, which he built up, developed into a large and flourishing business. Mr. Hall was an active and public-spirited citizen of Peterboro and had many interests in the city. Two sons, William T. and A. L. F. Hall, are vice-president and secretary-treasurer respectively, of the company.

Lord Leverhulme says:

"Now I hold strongly that the best investment for surplus profits is to expend them on judicious advertising, wisely and carefully planned, and executed with originality and forcefulness.

"These same surplus profits invested wisely in advertising then become a real 'gilt-edge' security, and a solid reserve of strength to meet days of difficulty, and to overcome, quietly but surely, the most frenzied of competition, and the business thus provided with reserve strength stands four-square to meet and overcome every attack."

The Trap That Keeps the Radiator Hot

Any kind of a boiler will shove the steam up to a radiator. But it takes a mighty good trap to let all the air and water out without letting steam into the return line.

The Dunham Trap has been doing it since 1903—and doing it so well that you don't see many old-style traps nowadays. Everybody is busy pushing thermostatic disc traps. But do not forget that the Dunham was the FIRST radiator trap of this type.

The ***first*** of its kind—and the ***best*** of its kind according to many, many engineers, and to architects and heating contractors who know that quality counts above all else.

Our new booklet, "Data on Dunham Heating" tells some heating facts in an interesting way. May we send you a copy?

STAYBOLT TAPS

The Better the Man, the More He Appreciates Them—

Not only good when new, but heat treated and seasoned to maintain this goodness. Can be ground on face of cutting edge without affecting their size. That's why you'll find Pratt and Whitney Stay Bolt Taps on the job long after cheaper "just as good" tools are buried in the scrap pile.

Threads accurately and cleanly cut, with the least expenditure of time and effort, are favorites in the shop.

If you've used them before, you know just how good they are. If you haven't, send us your first order—we know you'll be back for more. They're carried in stock in our sales rooms in all large cities.

Efficient Transfer Cases

Do you ever send your stenographer or secretary to find some last year's correspondence and have her, in turn, get the office boy and wade through the old type of filing case? Perhaps they have to lift down several cases to get at the right one—and in the meantime you wait. With the

MEADOWS STEEL TRANSFER CASE

you have no such trouble, no waits. Your last year's correspondence is ***just as accessible as your daily mail of this season.***

There is only the first cost. Meadows Steel Transfer Cases will not wear out or break under every day working conditions. They will stand an unusual amount of rough handling. Best of all they are the efficient case—dustproof, fireproof.

You can buy one Meadows Transfer Case and add more as you need them. They interlock, one above the other, to any height desired. They are sturdily built, are free running and take up little floor space.

VERY COMPACT

The frame is constructed of flat steel bars, welded to withstand any unusual strain. Note the measurements and compare with other makes.

INTERLOCK WITHOUT BOLTS

Meadows Steel Transfer Cases interlock without the use of bolts. A notch in the back leg of each case hooks into the one below and prevents the case from tipping when the drawer is pulled out. This gives a rigid construction to the stack.

LARGE SPACE FOR FILING

Each drawer has 26 inches of filing space—the most clear filing space of any case on the market. This point is well worth considering.

SPECIFICATIONS

Letter size, 12″ wide, $10\frac{3}{4}$″ high and 26″ deep. Outside measurements, $12\frac{3}{4}$″ wide, $12\frac{1}{8}$″ high and $26\frac{1}{4}$″ deep. A stack of four crated for shipment weighs 125 lbs.
Prices will be sent on receipt of information as to the quantity you can use.

STELLITE

Not Steel—But its Master

A WORD TO MANUFACTURERS

Maximum production is the aim of all manufacturers of to-day. Owing to the high cost of raw materials the manufacturer must produce to the capacity of his plant to keep his product on the market, and without Stellite tools this means a continual struggle.

With Stellite tools you can increase your production from 30% to 50% without increasing your overhead expenses. Think what this means to-day.

Write at once for a demonstration and be convinced.

DODGE

Shafting Hangers Pulleys

Every considerable town has a stocker carrying a reasonable quantity of Dodge Shafting, Hangers and Pulleys.

Our factory men continuously call upon these stockers to see that stocks are kept up.

Stockers' standing instructions are that orders that cannot be filled immediately from stock must be wired to the Toronto or Montreal warehouse for shipment that same day.

We rarely fall down. As a result this very simple organization has built up a sound reputation for deliveries.

When a firm wants Transmission equipment they are usually in a mighty big hurry for it---in fact would have liked to have had it yesterday.

Therefore, we tell stockers that the one sure way to hold the good will of customers is to do the next best thing---ship the order to-day.

We advertise continuously where we have stockers so that local buyers may know who these men or firms are.

We tell you this because we want you to know the way we work so that you can call upon us with assurance when the time comes.

Jenkins Valves

MADE IN CANADA

The Mark of the "Diamond" is the Symbol of Service

Fig. 141

The Jenkins Diamond, the distinguishing mark of unvarying service, is on the body of all Jenkins Valves, Brass, Iron and Cast Steel.

These include types and sizes to meet all requirements.

The man who sees and knows Valve performance makes sure of the Jenkins "Diamond" mark. He has seen genuine Jenkins Valves "on the job" year in and year out---he knows they are made to meet the test of service---and do.

Over fifty years of Valve-making is behind the genuine Jenkins Valve. Stocked by all dealers.

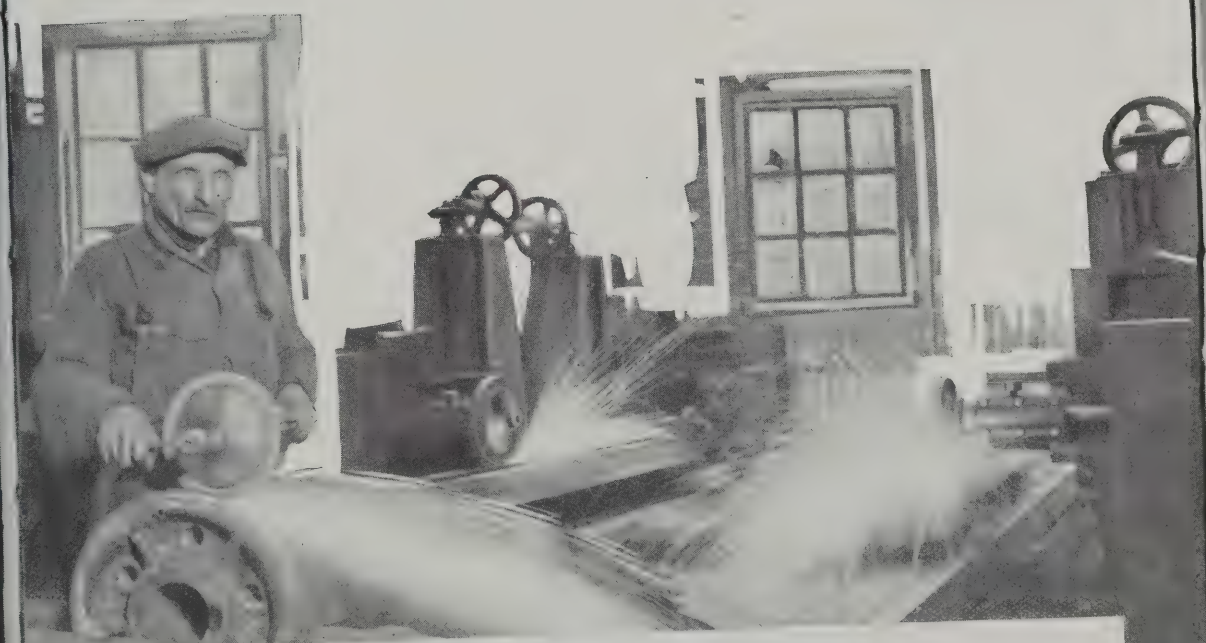
Snagging With An Alundum Wheel

For snagging or surfacing manganese steel castings Alundum grinding wheels have proved their worth.

The crane wheel shown below has rough burrs and ridges left by the moulding. These are effectively and quickly removed with an Alundum wheel, grain 24, grade R.



The surface grinding of manganese steel crusher segments on planer type machines is another severe operation for the grinding wheel. Alundum vitrified wheels, grain 24, grade M, do this work successfully.

Such rough grinding operations call for a free, rapid, cool cutting grinding wheel. ALUNDUM WHEELS HAVE THESE QUALITIES. Why not try them?

It has taken 35 years of hard work to develop the organization making National Cash Registers

STARTING with two employees in one little room, The National Cash Register Company now has a making organization of over 7,000 people working in 21 big buildings.

It has taken 35 years to develop this tremendous organization.

Many obstacles had to be overcome in those years. Money, time, and energy were thrown into the enterprise by large-visioned men who believed that cash registers were a necessity in stores of all kinds.

Slowly but surely the business grew. Building after building sprung up to house the expanding organization.

The National Cash Register factory of to-day is the result. It is built on a foundation of faith in the cash register as a business necessity. It is dedicated to the making of a labor-saving machine that helps merchants, clerks and customers.

Reduce Your Overhead

THE proper use of selected lubricants is a sure means of reducing overhead expenses and of eliminating unnecessary operating costs. *Perfectly-lubricated machinery gets less wear and lasts longer.* Repair bills are smaller and fewer; depreciation is kept at the lowest possible figure when lubricants are chosen with an eye to mechanical needs and service conditions.

Imperial Lubricants are designed to meet definite needs and conditions. Made from the best crudes they are formulated and designed for real service. They are Canadian-made and readily obtainable everywhere in Canada through our extensive distribution system.

There is a "just right" grade of lubricant for each type of machinery and for each moving part—railroad, marine, power plant, factory and mill. The right use of Imperial Lubricants will reduce your overhead.

Imperial Lubrication Engineers are at your service for consultation. Their co-operation and recommendation for better lubrication are part of Imperial Oil Service.

Write us at 56 Church Street, Toronto, or at any of our branches, for an appointment or for further information.

PILLAR BRAND PLASTER
The Superior Material

PILLAR BRAND Wall Plasters are unusually rich, carries the maximum amount of sand, spreads well under the trowel, gives uniform satisfaction in working qualities, and ultimately results in a finished wall---hard as a rock---that lasts as long as the building.

PILLAR BRAND Wall Plaster covers the interior wall of the building with a closely knit crystallized body--Rock Gypsum that resists leaks, fire, and the wear and tear of occupancy.

PILLAR BRAND Wall Plasters adhere equally well to wood or metal lath, Plaster Board, Gypsum Tile, Clay Tile, Brick or other plastering surfaces. It has wonderful adhesiveness and strength, greatly increasing the durability of the walls.

PILLAR BRAND Line includes all Gypsum Plasters.

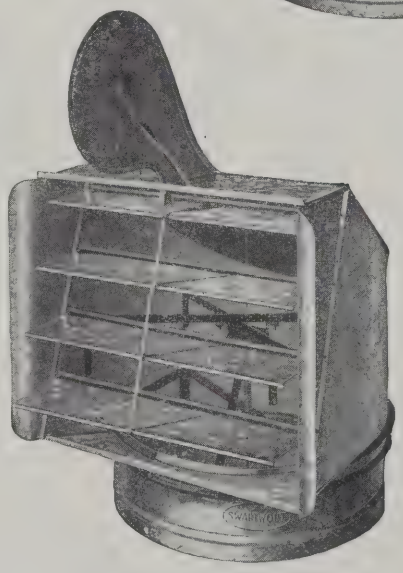
Ormsby-Swartwout



Rotary Ball Bearing Ventilators for Fresh Air Insurance

Patented April 15, 1913 May 28, 1913 Other Patents Pending

ORMSBY-SWARTWOUT Rotary Ball-Bearing Ventilators put the wind to work to provide constant and adequate ventilation without operating expense. Rotating on sensitive ball-bearings and controlled by an ample vane, an "Ormsby-Swartwout" responds to the slightest wind-current, always facing *away from* the wind. The passing breeze creates a continuous suction which pulls out the bad air from below.

Our 24-page handbook, **"The Gospel of Fresh Air"** giving authoritative facts and figures on ventilation, mailed to executives on request.

Side and front view of standard type. The adjustable louvers are shown in open position. Note both the unobstructed passage for air and the ample size of vane controlling rotation.

A Solvent for Metal Troubles

You use steel for Strength
Bronze to resist Corrosion

Monel metal

for both

Stronger than Steel

MONEL METAL is a natural alloy (by direct smelting) of Sudbury Nickel Ores. Its COMPOSITION approximates 67% nickel, 28% copper, 5% other metals.

MONEL METAL combines three predominate features—the strength of steel, the utmost resistance to corrosion, and a bright, white, nickel finish.

These properties have led to its adoption in many fields of industry.

For example :

In POWER HOUSES it is used for valve parts, turbine blading, and for liners and rods in feed water pumps.

Better than Bronze

In STEEL PICKLING it is used for pickling crates and pins, tie rods, bolts, washers, nuts, etc.

In DYE HOUSES it is used for tanks, yarn racks, spiders, shafting, etc.

In CHEMICAL PLANTS it is used for tanks, agitators, filter cloths and parts of acidulators, washers, evaporators, pumping machinery, etc.

In PACKING HOUSES it is used generally for equipment coming in contact with brine and salt.

MISCELLANEOUS applications for MONEL METAL include ink handling machines, window screens, refrigerating machinery and refrigerators, laundry machinery, etc.

These are the phosphor bronze Contact Springs

There is no flimsy mechanism in a Hubbell Wall Receptacle. The cap blades are gripped securely by strong phosphor bronze contact springs.

Arcing, sputtering or burning, due to weak connections, are impossible, for there are no weak connections; and each spring is firmly affixed in its own porcelain chamber, so that short circuiting is prevented.

The patented T-slot admits any standard cap blade, whether it is parallel, tandem or polarized.

It is this fine care for details in plan and construction that characterizes all Hubbell Electrical Specialties. Standard Plugs, Caps, Flush Receptacles, Sockets, Lamp Guards—send for illustrated literature.

GOODYEAR

MADE IN CANADA

Where Belts Meet Dampness!

Goodyear Extra Power Belt Delivers Power and Lasts

Damp or wet belts usually slip more easily than dry belts.

Water and moisture form a thin film between pulley and belt.

Here "Extra Power" Belting especially displays its advantages.

Where there is water, moisture or steam—around the beaters in paper mills, for instance—Goodyear Extra Power delivers the power load just as under more favorable conditions.

Because Goodyear Belting has a rough friction surface which bites through the film of water and clings to the pulley, costly slipping is overcome.

Moisture rots belts, if it gets into them.

Goodyear Extra Power is rubber-sealed against moisture.

Not just enclosed in a rubber envelope.

The high-grade rubber in Extra Power is forced through and through the fabric, surrounding and protecting every strand, making the belt practically a solid unit.

That Goodyear Extra Power Belting is just as efficient and just as economical in damp or wet places as in other transmission uses, is proved by these satisfied users:

> The Provincial Paper Mills of Thorold got 16 months' service from Goodyear Extra Power on a Jordan Pump where they had been getting about one month's service. They also say: "In the room where our beaters are located, the air is constantly damp. Here we have found Extra Power so superior that we use it exclusively."

Some other firms who will be glad to tell you of the satisfactory service of Goodyear Extra Power under damp conditions are:

Mattagami Pulp and Paper Co.,
Smooth Rock Falls, Ont.
Port Arthur Pulp and Paper Co.,
Port Arthur, Ont.
North West Laundry Co., Winnipeg, Man.
Dominion Pulp Co., Chatham, N.B.
Bathurst Lumber Co., Bathurst, N.B.
Gloucester Lumbering and Trading Co.,
Bathurst, N.B.

If you use belting, it will pay you to hear about the Goodyear way of supplying it. It will cost you nothing to have a Goodyear man call and show you how to overcome your problems. Phone, wire or write the nearest branch.

The Goodyear Tire & Rubber Co. of Canada Limited

EXTRA POWER BELTING

Tough as a Tire Tread—
This Hose Cover

IN mines, quarries, tunnel work, shipyards and structural steel work, the tough cover on Goodyear Air Drill Hose and Goodyear Pneumatic Tool Hose has resulted in more work and a lowering of hose cost.

The life of hose in this work depends about 75% on the cover. Dragged over rock and ore and steel girders, tramped on and run over, it takes a tough and well-designed hose to give any length of service.

We have records of Goodyear Air Drill Hose in constant service for 18 months to 2 years.

The cover of white rubber is as tough as a tire tread. It is extra thick. It wears long, even under rough handling.

To balance such a good cover is a specially developed, oil-resisting inner tube; and fabric of extra strength.

So good are Goodyear Pneumatic Tool Hose and Goodyear Air Drill Hose that five-ply is found as satisfactory as six or seven-ply of old-style hose.

The thoroughness with which Goodyear Air Drill and Pneumatic Tool Hose has been designed and built, is paralleled in every kind of Goodyear Industrial Hose. The problems of each industry have been studied carefully. The solution to those problems has been worked out in the Goodyear laboratories. The Goodyear Industrial Hose man has a mighty interesting story to tell to industrial executives. No obligation on your part if you have him call. Just phone, wire or write the nearest branch.

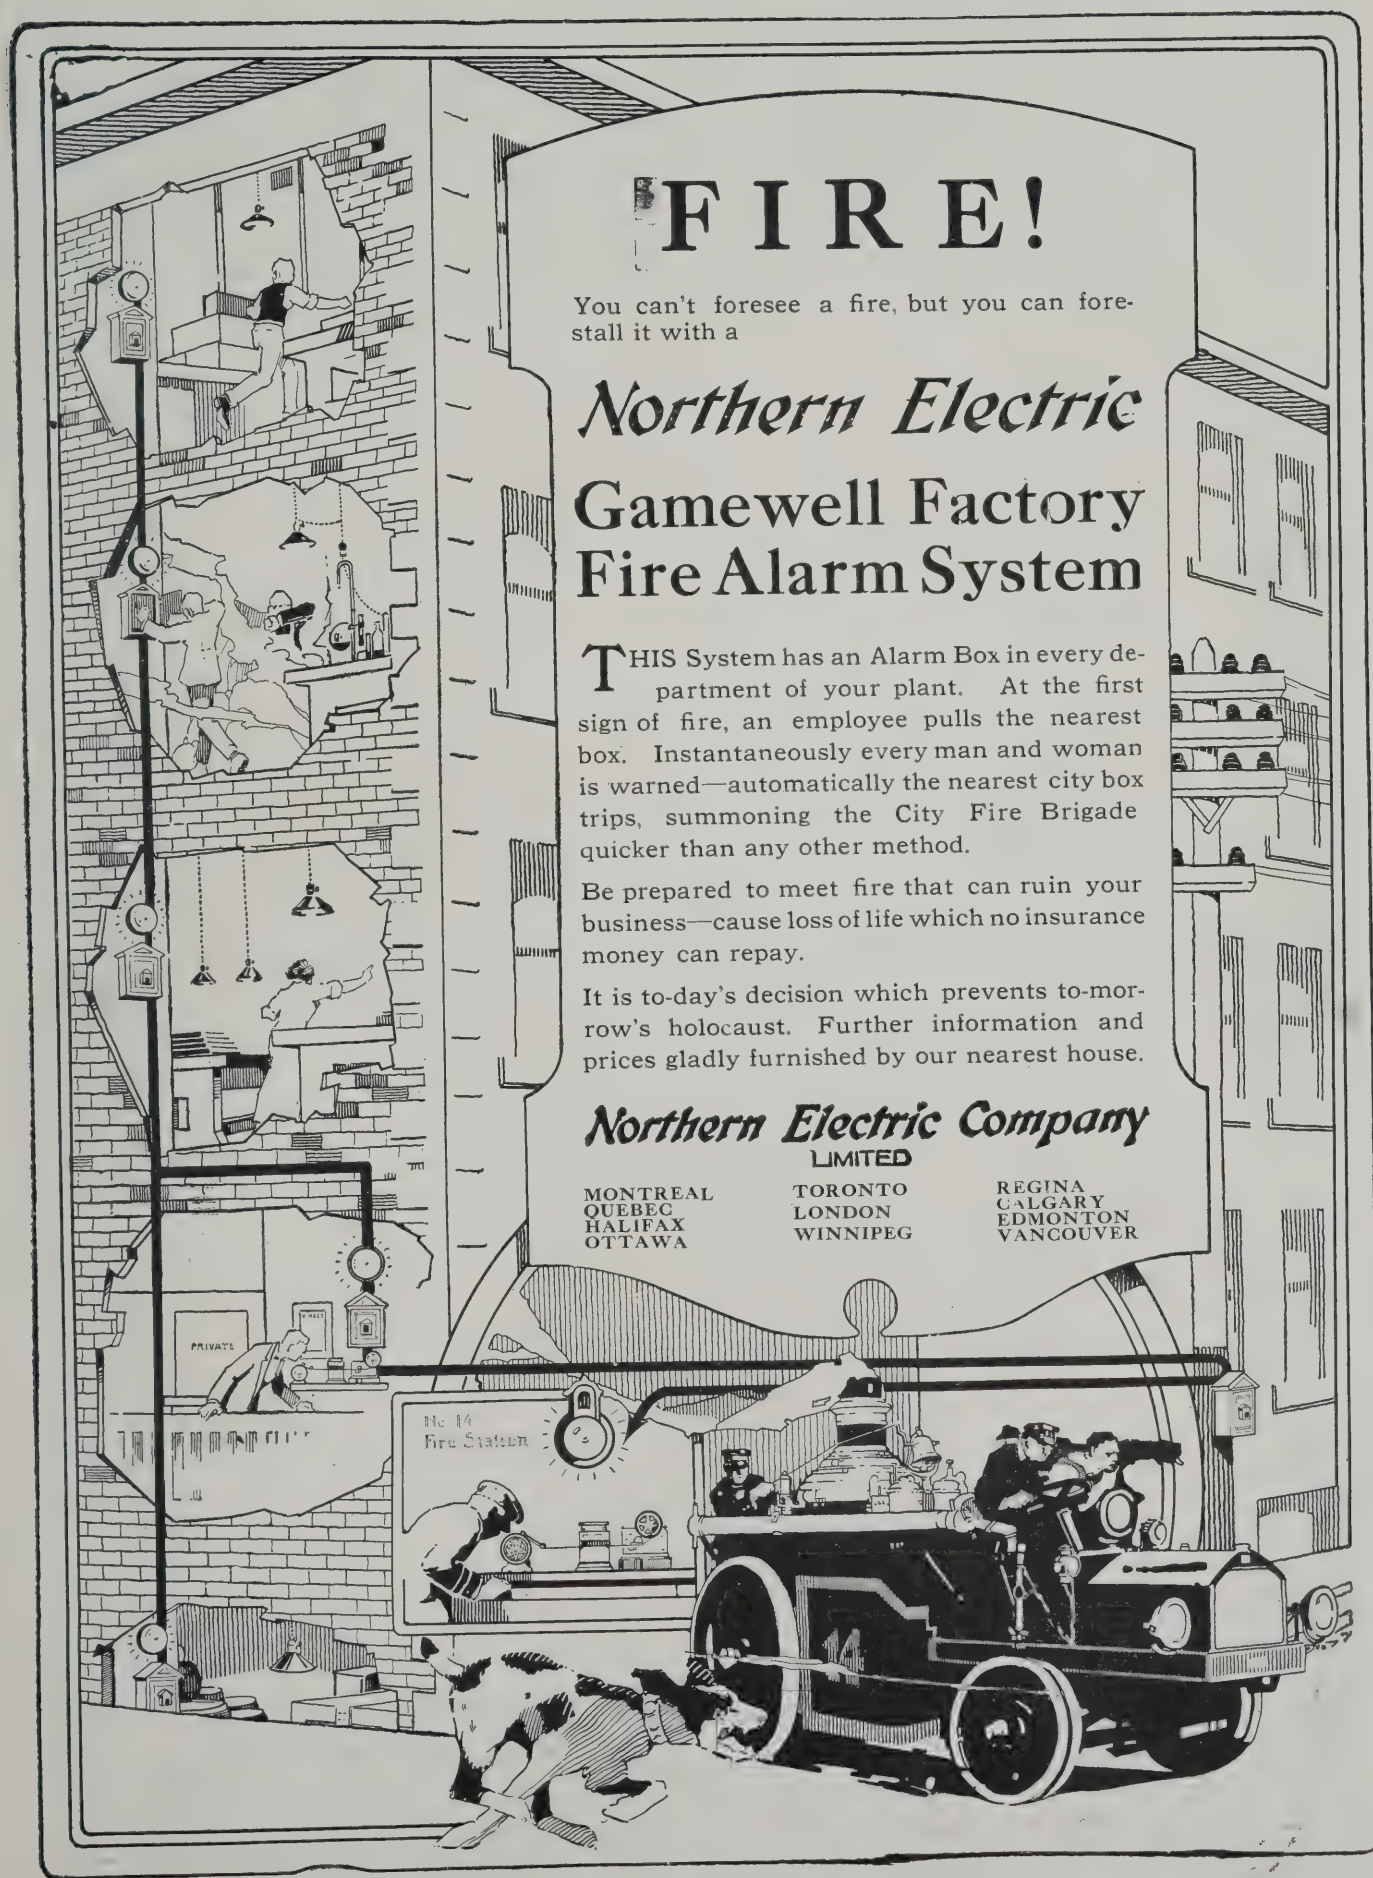
UNITY BUILDING - MONTREAL, CANADA

Diamond Fibre is a super-material that combines great strength with light weight (lighter than aluminum). It is dense, tough and hard; high in dielectric, compression, shearing and tensile strength---does not splinter, split, crack, or break.

Diamond Fibre is absolutely free from grit and all foreign matter and, therefore, takes extreme machining with but little wear on edge tools. It can be sawed, bored, drilled, stamped, turned, tapped, threaded, milled, punched, bent, or worked into almost any conceivable form.



Superior to metal, rubber, porcelain, wood and leather for a great variety of purposes. Made in sheets, rods, tubes and special parts machined to your specifications.

Prices, samples and complete information upon request

A Human Production Accelerator!

We are an organization built upon most practical lines and upon common principles—functioning in such a manner that the regularity of your plant is not altered, nor are radical changes made in your policy.

Our efforts are directed toward the viewpoints of your workers—we learn what they think and why they act *destructively;* then we change those viewpoints into proper productive channels. They learn the truth about fundamental industrial economics and *play the game with you.*

Through *rubbing elbows,* by word of mouth, we further "understanding." We simply answer questions at the right time and in the right place.

We deal solely with *viewpoints*—your ideas and theirs. Energetic industrial activity that results in increased productivity of worker and plant is our objective; labor turnover is diminished, waste lessened, and production quality and quantity stabilized.

Our work is basic, our efforts worth while, and the results noticeable, in that disputes are scarce and harmonization, constantly being carried on, makes all hands happy.

We will gladly send you our literature or tell you personally.

The Cozy-Glow Radiator

Throws the heat in any direction, just like an electric fan throws the breeze

To Dealers

To insure spring and summer delivery order your requirements immediately

The Cozy-Glow kills the chill on frosty mornings in the bathroom, nursery or bedroom.

The heat unit is protected by a stout copper-wire guard, which can be removed when cleaning the reflector.

These vessels of the Canadian Government Merchant Marine, Limited, are being operated under the direction of Canadian National Railways. The two combined—rails and ships—constitute Canada's great adventure in public ownership. If shippers in Canada support their own box cars and vessels, as they deserve to be supported, the adventure will certainly be crowned with success.

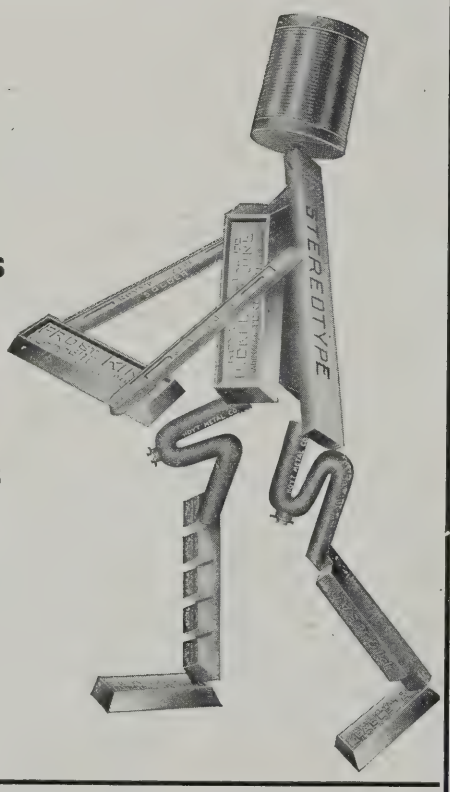
GET THE "NATIONAL" HABIT

Any Canadian railway agent can furnish information about rates and space, or
D. O. WOOD, Traffic Manager, Export and Import Dept., Canadian National Railways, Toronto, Ontario.

Canadian National Railways

365. Wire Nails, Bolts and Nuts.—A Glasgow firm are interested in importing the above.

366. Machine and Engineer's Small Tools.—A Glasgow firm are interested in the above.



367. Wire Nails.—A Glasgow firm asks to be placed in touch with exporters of the above.

368. Clothes Pegs.—A London Company would be glad to hear from Canadian manufacturers of clothes pegs and spring clips who can fill orders.

369. Timber.—A firm established in London for 25 years would like to secure the London or English agency for timber or general building material. They use a great deal of these commodities, and feel confident they could find a ready market for the same.

370. Greece.—A Greek shipping owner of good standing is anxious to assist in the development of trade between Canada and the Balkans. He has resided in Roumania for 26 years and knows the markets of the country. He is desirous of getting in touch with Canadian concerns wishing to extend their trade to the Balkans.

GROUP INSURANCE
LIFE, SICKNESS AND ACCIDENT

Group Sickness and Accident Insurance is an outgrowth of Group Life Insurance, and is written on a separate contract.

The benefits being direct to employees, and during their life time, may make the protection more attractive to them than a Group Life Policy.

The contract covers employees against sickness of all kinds, and all non-occupational accidents, thus, in conjunction with the Workmen's Compensation Act, furnishing adequate protection, particularly if combined with a Group Life Insurance Policy.

The particular contract we recommend is one paying a weekly indemnity of 50% of individual employee's weekly wage, after a seven-day waiting period and for a maximum of 26 weeks.

The premium is based on the annual pay roll, and the low rate we can quote will surprise you.

Why not have our representative call?

CANADIAN CONSOLIDATED RUBBER CO. LIMITED
DOMINION RUBBER SYSTEM
AND ASSOCIATED COMPANIES

For business as well as pleasure—for service and economy, equip your pleasure cars and delivery trucks with DOMINION TIRES.

DOMINION TIRES and ACCESSORIES are distributed through DOMINION RUBBER SYSTEM BRANCHES and sold by the Best Dealers throughout Canada.

For Economy and Convenience, Use---

THOMPSON & NORRIS CORRUGATED BOXES

PAPER PRODUCTS FOR EVERY PACKING PURPOSE

YOU can cut out the hammering and nailing in your Shipping Room and get quicker, better and safer packing by using our Corrugated Paper Shipping Cases.

Wood is wasteful as a shipping box material for hundreds of different products. Corrugated boxes are better and cheaper in every way.

They are lighter in weight, yet will stand up under more rough usage than wood. They protect the contents from odors, moisture and pilfering.
